(*c*) In the course of the period under review an extremely useful series of triangles was observed by officers of the Land Survey serving with the King's African Rifles. The area covered is to the West of Lake Rudolf from the Turkwell River north to the Soudan Boundary and was about 20,000 square miles in extent with a triangular error of about 30″. Twenty-nine points were fixed by triangulation.

Topographical Work.

From June, 1914, to the outbreak of war the plane tablers were employed on the survey of the Kericho sheet, and had completed about one-third of the sheet when they were mobilized These sheets are still incomplete.

In the course of the military operations a considerable amount of new survey was carried out between Kajiado and Mount Kilimanjaro.

In the Turkana District, west of Lake Rudolf, a useful series of topographical sheets was surveyed and drawn, based on the Turkana triangulation mentioned under Trigonometrical Work.

Drawing and Compilation for Printing.

The following sheets have been sent to the War Office for printing during the period under review :—

1 : 250,000 $\frac{\text{S.A.37}}{\text{B.}}$ Kenya. (Final Sheet.)

1 : 500,000 $\frac{\text{N.A.36,}}{\text{E. \& F.}}$ $\frac{\text{N.A.37.}}{\text{W.\&X.}}$ In one sheet covering 4 square degrees.

Thanks to the courtesy of the Commandant, King's African Rifles, and his loan of two non-commissioned officers, the whole of the sheets in the Northern Frontier District were recompiled early in 1919. The new compilation is still far from satisfactory, but it is hoped that a second revision of this compilation which is now in progress will produce a set of sheets which will be worth printing.

XI.—GAME.

Revenue from Licences was only £1,909, the lowest figure during the last ten years.

No Sportsman's Licence was issued during the year ; but there was a slight increase in the number of Residents' Licences due to the return of many of the local residents from the front.

GAME RESERVES.

Northern Reserve.—The Northern Reserve has been heavily poached by the Turkana and other hunters, and, at present, it is quite impossible to do anything to prevent it.

Southern Reserve.—The reports on elephant in the Southern Reserve are most satisfactory ; the herds driven in by war conditions seem to have settled down in their new quarters.

Satisfactory reports of the number of young animals have been received, and it looks as if a good breeding herd had taken up its abode in the Reserve.

Satisfactory reports have been received as to the numbers of rhinoceros, giraffe, buffalo, eland and various other animals.

GAME OUTSIDE THE RESERVE.

Considerable damage has been done by elephants on the Coast, but, generally, it may be said that elephants have been less troublesome than usual. The increase is still maintained and, though there is not a great amount of heavy ivory, there are certainly more warrantable bulls than there were a few years ago. Rhinoceros have probably decreased in numbers. Roan continue to increase slightly. Hippopotami have suffered badly in the Athi and Tana Rivers, where they fall an easy prey to the native with poisoned arrows. The ordinary game is still plentiful, though, naturally, there is a considerable decrease in numbers in all settled areas.

XII. PUBLIC WORKS.

The expenditure of the Department during the year amounted to £174,671, of which sum "Major Works" accounted for £31,310. The principal item of expenditure under the latter head was the sum of £10,598 expended upon the enlargement and equipment of the Veterinary Pathological Depot at Kabete. Among other outstanding works may be mentioned additions to the European School at Nairobi; school buildings on the Uasin Gishu; an extension to the High Court at Nairobi, and work at the Infectious Diseases Hospital, Nairobi. Quarters for Government Staff at Nairobi and Mombasa were provided to a total value of £3,604, and various engineering works in the Native Reserves cost £2,299. Work was begun upon additions to the Lunatic Asylum, Nairobi.

Among "Minor Works" may be mentioned a branch Veterinary Laboratory in the Masai Reserve; a new Police Station on the West side of Nairobi; Mycological Laboratory; extension to Chemical Laboratory; a wing comprising quarters for nursing sisters at the European Hospital, Nairobi; additions to European School, Nakuru; additions to the Arab School at Mombasa; and preliminary work in connection with a Cottage Hospital, Eldoret.

On New Roads and Bridges expenditure occurred on 28 small items to a total value of £11,022. Expenditure for the maintenance and repair of roads and bridges amounted to £35,146. The administration of the Mombasa Water Supply remained in the hands of the Department, and the revenue accruing from the operation of this project more than sufficed to pay interest and sinking fund on the Loan Vote for the project, and to maintain existing works satisfactorily.

XIII. POPULATION.

The estimated European population of the East Africa Protectorate on the 31st December, 1918, was 5,570. Of these 2,493 were adult males, 1,523 were adult females, and 1,554 were children of both sexes. Of the adult males 2,276 were British and 217 were of foreign nationalities. They were classified as follows :—

Government Officials	598
Planters and Farmers	1,195
Commercial	498
Missionaries	123
Professional Men	57
Unclassified	22

The population according to Provinces is set out in the following statement :—

Province.	Europeans.	Indians.	Goans.	Arabs.	Other races.	Natives.	TOTAL.
Jubaland ..	17	301	17	1,284	16	13,316	14,951

No. 1089.

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE* FOR 1919-20.

(*Colonial Office Note :—Now known as the Kenya Colony and Protectorate.*)

I.—FINANCIAL.

(*a*) General Revenue and Expenditure.

The total expenditure sanctioned amounted to £1,752,965 Owing to a decrease in Railway Revenue during the first part of the year, it was considered necessary to recast the Estimates after the second reading and the Appropriation Ordinance, 1919, was not passed until 19th January, 1920. No Supplementary Estimates were prepared.

The total actual expenditure amounted to £2,024,861, exclusive of £190,172 estimated for the King's African Rifles.

For purposes of comparing the total expenditure with the estimate, of £1,752,965, there must be added to the expenditure the sum of £274,698, made up of the £190,172 estimated for the King's African Rifles and £84,526, the unexpended balance of votes on uncompleted works, which is to be carried forward to be expended in the year 1920–1921. £82,900 must be deducted, being the amount of expenditure sanctioned to be met from surplus balances, which is made up of £43,557 expenditure against unexpended balances of votes carried forward from previous years, £33,262 for expenses of Somali, Masai, Elgeyo and Turkana Operations in 1918–19, which was debited too late for inclusion in the accounts of that year, and £6,081 for Acquisition of Land. The resulting figure £2,216,659, is £463,694 in excess of the

DOCUMENTS DIVISION

estimate. Of this excess £427,885 is accounted for by War Bonus to the staff.

The total Revenue for the year amounted to £1,726,435, including £23,461, the proceeds of sales of farms and town plots, which was earmarked for special purposes and was not available for meeting general expenditure. This was £70,720 more than the estimate and an increase of £177,732 over the Revenue of the previous year, which had been the highest previously recorded. It was, however, £298,425 less than the expenditure.

The following table shows the Expenditure and Revenue for the last six years :—

	Expenditure.	*Revenue.*
	£	£
1914–15	1,151,730	984,756
1915–16	1,072,917	1,165,561
1916–17	1,197,396	1,533,783
1917–18	1,490,571	1,368,329
1918–19	1,570,705	1,548,703
1919–20	2,024,861	1,726,435

Financial Position on March 31st, 1920.—The excess of Assets over Liabilities on 31st March, 1920 was £135,868. This figure is arrived at in the following manner :—

		£
Net Assets on 1st April, 1919		434,294
	£	
Expenditure 1919–20	2,024,861	
Revenue 1919–20	1,726,435	
Excess of Expenditure over Revenue		298,426
		£135,868

From this surplus the following amounts must be deducted in order to ascertain the financial position :—

	£
Unexpended balance of votes for works sanctioned but uncompleted	84,526
Estimate of Military Expenditure for 1919–20	190,172
Balance of Stand Premia Fund	24,008
	£298,706

This leaves a deficit of £162,838. It was estimated when the Estimates for 1919–20 were compiled that the year would close with a balance of £77,996 in hand. The charge for War Bonus, for which no provision was made in the Estimates, covers more than the difference.

All conversions in the accounts between Sterling and Rupee figures have been made at the rate of 1s. 4d. to the Rupee.

(*b*) CURRENCY

The total value of the Currency Note circulation on the 31st of March, 1920, was Rs. 1,10,88,000, a decrease of Rs. 6, 25,500 from the circulation on the same date of the previous year.

The following new Legislation relating to Currency was passed during the year :

On 7th November, 1919. *Proclamation under the Customs Amendment Ordinance,* 1915.—The exportation of One Rupee notes of the Government of India was prohibited in order to prevent a shortage of currency, further supplies being unobtainable from India.

On 23rd December, 1919. *Proclamation under the Customs Ordinance,* 1910.—The importation of gold coins coined at the Royal Mint and its branches, was prohibited, in order to prevent unjustifiable profits on sovereigns, of which the legal tender value in the Protectorate was Rs. 15 each, and which could be obtained outside at a cost of approximately Rs. 8/50.

On 11th February, 1920. *The Gold and Silver Currency Ordinance,* 1920.—This prohibited the melting down, and using otherwise than as currency, of any gold or silver coin which was current in the Protectorate, or in the United Kingdom, or in any British Possession.

On the same date. The Bank of England and Treasury Currency Notes Ordinance, 1920.—By this measure such notes became legal tender in the Protectorate at the rate of £1 sterling for Rs. 8/50. The object and immediate effect was to keep the sterling exchange rate of the Rupee at 2s. 4d., and to break away from the Indian rate, which had risen to 2s. 7d.

On the 2nd of March, 1920. *The East Africa and Uganda Currency Order in Council,* 1920, provided for suspension of encashment of Currency notes by Proclamation, confirmed the validity of the Bank of England and Treasury Notes Ordinance, laid down that settlement of debts contracted in terms of Rupees and before the 21st of November, 1919, could be effected with Bank of England and Treasury notes at the rate of one pound for every Rs. 9/25 instead of Rs. 8/50, and that notes of florin denominations should be legal tender.

On the 23rd March, 1920. *Proclamation under the East Africa and Uganda Order in Council* 1920.—By this the obligation of the Currency Commissioners to exchange notes for coin under Article 14 (3) of the East Africa Order in Council 1905 was suspended with a view to husbanding the supply of coin in the Protectorate.

Rate of Exchange.—At the beginning of the year the sterling rate of exchange for the Rupee quoted by the Banks stood at 1s. 6d. The following rises took place during the year: 16th May, 1919—1s. 8d.; 11th August, 1s. 10d.; 17th September, 2s.; 27th November, 2s. 2d.; 12th December, 2s. 3d.; 19th December, 1919, 2s. 4d. At this point the rise was checked by the passing of the Bank of England and Treasury Currency Notes Ordinance 1920 and a reduction to 2s. was effected on March 31st, when the intentions of the East Africa and Uganda Order in Council (No. 2) of 1920 were made known.*

II.—TRADE AND SHIPPING.

(*a*) TRADE.

Particulars under this head refer to the total trade of the East Africa Protectorate and Uganda, whose Customs Departments are amalgamated.

Gross receipts from imports and exports amounted during the year under review to £338,377, from which should be deducted the sum of £63,338 refunded in respect of goods in transit, re-exported, etc. The net Customs revenue therefore amounted to £275,039, a small increase of £4,477 over the previous year; of this amount two-thirds is credited to Kenya and one-third to Uganda.

The actual receipts from Import and Export duties during the year under report exceeded the Estimate by £24,439.

Imports.

The total value of trade imports during the year decreased from £3,397,810 to £3,119,536, *i.e.*, £278,274 or 8 per cent. This decrease is more apparent than real owing to the increased value of the rupee conversion having been made throughout at the rate of fifteen rupees to the pound sterling.

The following statement shows the principal articles of merchandise imported into the East Africa and Uganda Protectorates during the year ended 31st March, 1920, and the percentage of the United Kingdom in relation to the whole of manufactures and produce :—

---

* This Order provided for the replacement of the Indian rupee as the standard coin by a British East Africa florin, with a fixed sterling value of one-tenth of a pound sterling.

Description.	Total value.	Value of imports from the United Kingdom.	Percentage of the United Kingdom's share to the total value.

All other sorts	387,342	161,165	42
Total	£3,119,536	£1,218,666	39

Cotton piece goods continue to constitute the most important class of imports. They were valued at £747,614 and represent 24 per cent. of the total trade imports.

As compared with the previous year the decrease in value is one of £164,853 or 18 per cent., and in quantity 797,222 yards or 3 per cent. This means an average decline in price of 15 per cent.

Speculation and overstocking of cotton goods have been taking place and a slump in imports must therefore be expected.

Of the various descriptions of cotton textiles, unbleached piece goods to the value of £491,185, or 73 per cent. of the total value, were imported, by far the greatest proportion (£311,085) originating in India. The second largest importer was the United States of America (£111,253), followed by Japan (£38,028), and the United Kingdom (£28,552). Imports of other varieties of cotton fabrics amounted in value to £242,442, showing a decrease of £371,240 or 60 per cent., as compared with the previous year's imports: 92 per cent. of this amount is represented by goods originating in the United Kingdom, which totalled £223,087.

The second largest item of value is grain, which forms only 7 per cent. of the total trade imports. The quantity declined by cwts. 188,921 or 50 per cent. and the value by £173,309 or 45 per cent. This disparity between the two figures shows a rise in price to the extent of 10 per cent.

Rice as usual takes the first place in quantity as well as in value and represents 45 per cent. in quantity and 47 per cent. in value of the total grain imports. The decrease is one of cwts. 129,576 or 60 per cent. in quantity and £120,381 or 55 per cent. in value.

The second place is occupied by "flour and wheat meal," which shows a decrease of cwts. 15,907 or 17 per cent. in quantity and £17,123 or 16 per cent. in value, as against the importations in the past year.

In other varieties of grain there is also a decrease of cwts. 43,438 or 61 per cent. in quantity and £35,805 or 59 per cent. in value, the difference between the two ratios of percentage marking a rise of 5 per cent. in specific value.

Eighty-four per cent. of the total quantity of grain imported during the year came from India. The fall in importation must be attributed to high prices prevailing which compelled natives of Africa who had acquired a taste for imported rice to fall back on local produce.

The third group in order of value is "Machinery and Parts thereof."

The consignments show an increase of £35,404 or 31 per cent. over the past year's imports, and are the highest on record. They are seven times as large as those of 1910. These figures show that development on a large scale is contemplated.

The share of the United Kingdom in the supply was £128,160 or 86 per cent., followed by £13,765 or 9 per cent. from the United States.

The imports of vehicles and parts thereof show an increase of £47,072 over the previous year, the total value being the highest on record.

The share of the United Kingdom amounted to 46 per cent., that of the United States 41 per cent.

Spirituous liquors, including wines and spirits, ale and beer, come sixth in order of value with a total of 164,523 gallons, valued at £140,813.

The quantity of sugar imported decreased by 21,486 cwts. or 24 per cent.; 36 per cent. of the total quantity came from Java, 25 per cent. from Mauritius, 21 per cent. from Portuguese East Africa and 16 per cent. from the Union of South Africa.

Importations of agricultural implements showed an increase of £34,309 or 41 per cent. over the previous year; 66 per cent. (£77,685) of the total was imported from the United Kingdom and 29 per cent. (£34,261) from the United States of America.

Tobacco, cigars and cigarettes show a decrease of 724,888 lbs. or 52 per cent. of the total quantity and £72,741 or 39 per cent. in value. Cigarettes represent 64 per cent. of the total imports in value and 41 per cent. in quantity. The demand for cheap cigarettes amongst the natives is increasing in a remarkable manner.

The United Kingdom contributed 39·07 per cent. of the total value of imports of private merchandize; British Possessions 36·31 per cent.; the United States of America 9·73 per cent.; Japan 3·01 per cent., France 1·40 per cent., and Holland 1·37 per cent.

The value of imported goods subsequently re-exported amounted to £757,730, a considerable advance on any previous year. This was mainly due to large quantities of stocks being sent to the Tanganyika Territory. £381,876, or more than half the total, is represented by cotton piecegoods.

Transit traffic increased from £425,583 to £801,180; the latter amount includes £123,827 being produce imported from the hinterland of the conquered territory of German East Africa and the Belgian Congo.

These figures should be considered together with the figures for "re-exports," a very considerable amount of goods being now re-exported from the Protectorate to the Lake Districts of the Tanganyika Territory.

Exports.

Since April 1st, 1917, the exports of produce originating in the East Africa and Uganda Protectorates, have been shown under one heading, exports of produce originating in the conquered territory of German East Africa,* the Belgian Congo and the Sudan being registered separately.

Produce of the East Africa and Uganda Protectorates to the value of £3,006,997 was exported during the year under review as against £2,231,827 in 1918-19, an increase of £775,170 or 35 per cent. From German East Africa produce to the value of £509,937 was exported from this Protectorate, as compared with £231,590 during the previous year.

The relative importance of shipments of produce during the last two years is as follows :—

Cotton heads the list of combined exports from the two Protectorates and represents 47 per cent. of the total exports.

As compared with the previous year, there is an increase of cwts. 35,672 valued at £361,682. The average lowest price was 5½d. in 1916, while the highest average price of 21d. per lb. was reached during the year under review. With the exception of cwts. 645 the produce of East Africa, all cotton originated in Uganda.

Cotton to the value of £947,724 was consigned to the United Kingdom and £412,905 to India and Burmah, as compared with £540,648 and £522,535 respectively in 1918-19.

Shipments of hides and skins take the second place in order of value and represent 16 per cent. of the total.

The large increase of £338,791 or 226 per cent. over the previous year is partly due to the high prices ruling during the year but mainly due to better shipping facilities and cessation of war restrictions on exports.

Seventy-four per cent. of the quantity of hides were shipped to the United Kingdom, 13 per cent. to Italy, and 11 per cent. to France. 46 per cent. of the total shipments of sheep skins went to the United Kingdom and 30 per cent. to the United States, who purchased from us for the first time: 35 per cent of goat skins were consigned to the United Kingdom, and 59 per cent. to the United States.

Shipments of coffee take the third place in order of value.

The trifling decrease of cwts. 16,942 in the exports is not due to diminished production but to the fact that in the previous year accumulated stocks held, owing to war restrictions, were shipped, thus increasing abnormally the shipments during that year.

The declared value averages 69s. 3d. during the year as against 47s. 4d. in the previous year.

---

* Now known as the Tanganyika Territory.

Cwts. 107,676 or 88 per cent. of the quantity were consigned to the United Kingdom, and cwts. 6,711 or 6 per cent. to the Union of South Africa and the balance among various countries.

Maize is again figuring prominently in the list of exports. Cwts. 145,554 were exported during the year, valued at £51,491. With better means of local transport, reduced freights, both Railway and Steamer, and reduced costs of handling and shipment at the port, there is a promising future for the export of this product from East Africa.

Of the total quantity, cwts. 102,190 or 30 per cent. were exported to the United Kingdom followed by cwts. 94,666 or 28 per cent. to the British Possessions and cwts. 104,953 or 37 per cent. to Italy and Italian East Africa.

Carbonate of soda has taken the fourth place in order of value.

Cwts. 93,260 or 44 per cent. were exported to Norway and cwts. 87,953 or 41 per cent. to Japan.

Fibre, which includes sisal fibre and flax, represents 4 per cent. of the total exports. The quantities and values exported were, Sisal, cwts. 83,920 (£122,558); Fibre—other sorts, cwts. 2,925 (£4,053); Flax, cwts. 8,155 (£11,577).

As compared with the previous year there is a decrease of cwts. 22,442 or 19 per cent. in quantity and £96,626 or 41 per cent. in value.

All fibre was consigned to the United Kingdom.

Sisal has proved itself as an East African product. It will grow almost anywhere and it is hoped that it will be able to continue to compete successfully with hemp obtained from outside the Empire.

The increasing importance of flax-growing in the East Africa Protectorate is very noticeable. The enhanced value obtained from 1918 to 1920 undoubtedly encouraged development which was carried out on a large scale.

The value of combined exports was distributed in the following proportions among the various countries trading with this Protectorate:—

United Kingdom, 59·2 per cent.; British Possessions, 22·5 per cent.; France, 4·8 per cent.; Italy, 4·2 per cent.; United States of America, 3·9 per cent.; Japan 0·5 per cent.; other foreign countries, 4·9 per cent.

General Summary of Trade.

Total trade imports amounted to £3,119,536, a decrease of 8 per cent. as compared with the previous year. Trade exports were valued at £3,563,724, or 43 per cent. above the figures for

1918-19. A balance of trade has thus been obtained in favour of East Africa amounting to £444,188 or more than 12 per cent. The adverse balance of trade during 1918-19 was 26 per cent., and in 1917-18 was 38 per cent.

Fluctuations in the exchange value of the rupee are estimated to have caused a reduction of the value of trade imports by 20 per cent. to 30 per cent. At the same time stocks of produce accumulated during the War, were exported owing to improved shipping facilities and the high prices which could be obtained at the time.

(*b*) SHIPPING.

There was a satisfactory increase in shipping facilities during the year as compared with the previous twelve months: the tonnage of vessels which entered and cleared in the ports of the Protectorate being 911,018, as compared with 455,916 tons in 1918-19.

A regular service of steamers between Bombay and Durban, calling at Mombasa en route both ways, was maintained by the British India Steam Navigation Company.

Vessels of the Union-Castle Steamship Company, British India Steam Navigation Company and Messageries Maritimes called at irregular intervals to and from Europe, whilst steamers of the Marittima Italiana made 13 calls, and cargo steamers of the Clan-Ellerman-Harrison line 33 calls, at Mombasa.

III.—INDUSTRIES AND MINES.

(*a*) INDUSTRIES.

From the point of view of agriculture the year has been prosperous owing to favourable seasons and considerable development has taken place: regarded from the stock-owner's point of view the outlook is unpromising owing to the wide-spread ravages of disease.

An interesting feature is the erection of a Natalite factory. The attempt to institute a meat canning factory has so far been unsuccessful, no satisfactory tenders having been received.

Generally there are signs of revival and expansion after the stagnation caused by the War, though whether these will survive the depression consequent upon a lengthy period of hostilities remains to be seen.

No innovation in native industries has occurred during the year under review, but the normal development in agriculture has occurred. Native herds, in particular those of the Masai, have suffered severely from cattle diseases.

(*b*) MINES AND MINERALS.

Up to 31st March, 1920 there was little active prospecting carried on. The mining rights over the mica area previously worked for the Ministry of Munitions were sold, but the purchaser has been absent from the country, and the mineral has not been further exploited.

The mica mines at Sultan Hamud, which were also worked for the Ministry of Munitions, were closed down.

A discovery of manganese was reported near Takaungu but no developments have taken place.

Graphite has been mined in the locality of the Thwaki River, east of Machakos, and has been reported to exist in quantities which would repay working.

During the year six graphite claims were registered in the Nyeri District, one graphite claim in the Machakos District, and two mineral lime claims were registered at Mile 38 of the Magadi Railway in the Naivasha District.

IV.—AGRICULTURE AND STOCK-RAISING.

GENERAL.

The East African Agricultural and Horticultural Society was formed during the year with a view to the control and management of Agricultural Shows and allied activities. The first post-war Agricultural Show was held in October, 1919. In collaboration with this Society the Department of Agriculture started an East African Stud Book. Preliminary steps were taken towards the preparation of an Agricultural Census.

(*a*) CROPS.

The year was a good one for farming operations, good yields were obtained from the chief crops, and no serious diseases or pests were noticed.

Coffee.—Coffee trees revived after the severe drought of the previous year and the almost entire destruction of the foliage by "thrips." A record yield was obtained and the quality of the crop was remarkably high. The highest price realised was £202 per ton for pea berry. It is estimated that the area under coffee has increased to 22,000 acres of which 13,000 are in the Kyambu District.

Flax.—The flax industry was stimulated by the high prices obtained, and a large amount of capital has been invested in it. A large quantity of the seed sown in 1919 led to unsatisfactory results; many growers suffered loss and the industry thereby received a setback.

Maize.—The shortage caused by the 1917–18 drought was more than made up, and a surplus was available for export. The quality of maize produced on European holdings compares favourably with that produced in other countries.

Wheat.—In some districts wheat of good quality is grown and the efforts of the Agricultural Department and private enterprise have succeeded in producing rust-resisting varieties. The supply from local sources, however, remains insufficient for local consumption.

Sisal.—Companies and individuals who are in a position to operate on an extensive scale are increasing the area planted.

Sugar Cane.—The area planted is extending, and steps have been taken to establish a sugar factory near Kibos.

Coconuts.—The area planted with palms on estates under European ownership is being extended along the coastal belt.

Citrus and other Fruits.—The supply of fruit of different kinds for local consumption has increased, but there is at present no promise of an export trade being established.

(*b*) STOCK.

Cattle.—The position in respect of stock-breeding cannot be regarded as satisfactory. There is no assured market for a supply of beef cattle beyond the limited needs of local consumption. The dairying industry is progressing but it cannot achieve large proportions until an export trade has been established.

Eighty outbreaks of rinderpest occurred on European holdings. These were, except in a few cases, successfully dealt with by double inoculation and the use of anti-rinderpest serum. This disease is widespread throughout the Native Reserves. 30,102 head of cattle were treated with double inoculation before being permitted to move on to European areas. The average mortality was 2·5 per cent.

Serious outbreaks of pleuro-pneumonia occurred in Native Reserves and spread among European-owned stock.

In three districts which had hitherto been regarded as free of East Coast fever, six outbreaks occurred. Experience has shown that on farms where dipping is carried out efficiently the losses from this disease are not of serious consequence. Progress is being made with the erection by the Government of public dipping tanks along the main stock routes. Twenty-four have been completed or are in the course of erection.

Investigations show that outbreaks of trypanosomiasis in areas where tsetse fly were not to be found were due to mechanical transmission by means of other blood-sucking flies.

A fair estimate of the needs of the country in respect of meat for local consumption is shown by the returns of animals slaughtered in the towns of Nairobi and Mombasa. The figures are as follows :—

	1919–20.		1918–19.	
	Nairobi.	Mombasa.	Nairobi.	Mombasa.
Cattle	7,025	3,232	5,567	3,712
Sheep and Goats	23,422	8,335	19,930	11,714
Pigs	493	Nil.	427	Nil.
Camels	Nil.	6	Nil.	36

Equines.—Ninety-five horses and 41 mules were reported to be infected with ulcerative lymphangitis during the year. Treatment with vaccine gave good results in the early stages of the disease but few cures were obtained in cases of old standing. Eighteen cases of epizootic lymphangitis came under observation. More than 40 deaths occurred from horse sickness, mostly in the months of May and June in the Nairobi and Lumbwa Districts.

Pigs.—Three outbreaks of swine fever occurred, two in Naivasha District and one on the Uasin Gishu Plateau. In other respects pig-breeders had a successful year.

Poultry.—Fifteen outbreaks of Kikuyu fowl disease occurred resulting in each case in heavy mortality. Fowls can readily be rendered immune against this disease ; but some time elapses before immunity is produced, and the results of vaccine treatment are not very satisfactory in flocks already infected.

Brands.—One hundred and twenty-five brands were registered during the year. Six were transferred, 50 were cancelled and 252 branding irons were issued.

Research Division.—The Research Division has been engaged chiefly on the production of serum and vaccines. The Veterinary Pathologist has succeeded in elucidating the causes which were responsible for heavy mortality in rinderpest inoculation, and has improved the means available hitherto in respect of pleuro-pneumonia inoculation by the production of a vaccine from a pure culture virus.

Outbreaks of heartwater and blue tongue in sheep and tuberculosis in cattle from Uganda were also investigated.

235,617 doses of anti-rinderpest serum, 3638 doses of pleuro-pneumonia vaccine, 18,740 doses of anthrax vaccine, 12,360 doses of blackwater vaccine, and 10,905 doses for Kikuyu fowl disease were produced in addition to other vaccines.

Entomology.—Investigations were made upon outbreaks of trypanosomiasis along the Nzoia and Rongai Rivers and in the Kericho District. Work has also been done on the flax caterpillar. Favourable reports were received from the Imperial Institute upon the cocoons of mulberry silk-worms.

(*c*) EXPERIMENTAL FARMS.

A hostel was erected with the aid of two memorial grants at Kabete. Courses of instruction in agriculture and allied subjects were given for the benefit of new settlers.

The Naivasha Stock Farm has not yet recovered from the severe drought of the previous year. Two sales of stock took place during the year and cattle, sheep, goats and donkeys to the value of £6,896 were sold.

Meteorological.—Observations were made at 180 Rainfall stations and 21 Temperature stations.

The Rainfall for the year 1920 at the following stations was :—

Mombasa	55·28	Inches.
Lamu	42·03	,,
Kismayu	9·79	,,
Voi	19·80	,,
Makindu	44·78	,,
Nairobi	47·16	,,
Fort Hall	46·72	,,
Meru	44·97	,,
Nyeri	50·46	,,
Rumuruti	25·04	,,
Nakuru	34·23	,,
Lumbwa	32·71	,,
Eldoret	43·79	,,
Kisumu	41·65	,,

V.—FORESTS.

During the year the policy was initiated wherever possible of calling for tenders for the exploitation of forest areas. This ensures greater fairness in the disposal of such rights and a larger revenue to the colony from the sale of forest products at proper market rates.

Timber.—The demand for local timber increased largely during the year and several new mills began operations.

The quantity of timber sold including the output of the mills working the forests, the subject of the Grogan licence for the calendar year 1919, amounted to 810,932 c.ft. as compared with 459,944 c.ft. in the previous year.

The quantity of timber issued free to Government Departments, free-timber permit holders and natives increased by

9,000 c.ft. over that issued free the previous year, but the number of poles showed a decrease of 71,000 owing to the cessation of the demand for military purposes.

Twenty-nine free-timber permits were issued, 11 permits lapsed on the expiration of the period for which they were issued, and there were 94 permits in use at the end of the year.

There were 21 saw-mills operating in the Government forests at the end of the year.

Firewood.—The total quantity of firewood sold was 1,233,706 c.ft. an increase of 52,731 c.ft. over the previous year.

The quantity supplied free to Government and Military Departments shows a great reduction from 345,368 c.ft. to 82,481 c.ft. owing to the practical cessation of the military demand. The supply to the Kilindini Base was also discontinued, and the fuel camp at Mwachi was closed.

Railway Fuel.—As the labour supply became more normal and contractors were in a position to maintain the supply of wood fuel to the railway, the Departmental camps were closed, at Escarpment in October, Mau Summit in December and Molo at the end of March.

During the year the total quantity of wood cut by the Department was 942,393 c.ft. of which 760,189 c.ft. were taken over by the railway. The balance had not been taken over at the end of the year.

The total quantity of wood fuel taken over by the railway from all sources during the year was 8,242,145 c.ft. as compared with 5,433,912 c.ft. in 1918-19.

Forest Fires.—During the dry season numerous fires were reported, but in nearly every case, where they occurred in forests in charge of Foresters, were got under control before serious damage was done.

Silviculture.—The policy has been continued of planting as far as possible the more valuable indigenous timbers such as cedar, podocarpus, mueri, muhugu, in preference to exotics. Unfortunately these trees are rather uncertain seed-producers so that it is not possible to raise them every year in anything like sufficient quantities, and the balance of the area to be planted has to be completed with exotics such as eucalypts. With the object of spreading the stock of indigenous plants over as large an area as possible they are being planted with various exotics as nurse trees, but such mixtures are still in the experimental stage as to the best nurse trees and the best method of mixing.

The total area planted during the year was 1,049 acres of which 718 acres were re-afforestation of areas cut out for railway fuel.

SURVEYS.

A detailed survey of the southern part of Tinderet Forest, comprising 117 square miles was made.

A similar detailed plan was made of the Ngong Road Forest.

TROUT ACCLIMATIZATION.

The hatchery remained closed throughout the year but the buildings and all ponds, overflows, etc., were kept in good order.

The trout in the Gura River in the Nyeri Native Reserve below the Forest Boundary have increased largely in numbers.

REVENUE.

The total cash revenue for the year amounted to £15,875 as compared with £11,911 in the preceding year; an increase of £3,964. The revenue derived from the sale of timber shows an increase of £4,579.

EXPENDITURE.

The total expenditure for the year amounted to £15,361 as compared with £13,788 for the year before.

VI.—COMMUNICATIONS.

(*a*) RAILWAYS.

Uganda Railway.—The gross revenue from the Uganda Railway and branches during the year 1919–20 amounted to £592,391 (as against an estimate of £779,000), whilst the expenditure totalled £529,809 (as against an estimate of £572,836), giving a net revenue of £62,582, which is £143,582 less than estimated net revenue.

The drop in receipts is accounted for by the decrease in military traffic owing to the cessation of the War, and the rise in expenditure was due to the increase in cost of materials and stores.

Owing to the increased cost of working the rate of interest on capital outlay, as represented by the net savings, has been dropping steadily during recent years, and for 1919–20 was under one per cent., as compared with over five per cent. a few years ago.

No increase in railway rates has yet been introduced, but a surcharge on all imports carried on the railway produced a sum of Rs. 1, 641,118, which has not been included in railway revenue.

The total tonnage lifted on account of public merchandise decreased from 237,976 tons in 1918–19 to 233,844 tons in 1919–20, but the total ton mileage rose from 53,437,269 to 54,218,334, and the earnings per ton mile from 8·88 to 9·37 cents.

There was a slight decrease in the cost per train and engine mile due to decreased consumption of coal, wood-fuel being more plentiful than in the previous year.

Coaching receipts decreased from Rs. 3,208,135 in 1918–19 to Rs. 2,115,560 in 1919–20, a falling-off of over a million rupees. Goods traffic on the other hand brought in Rs. 5,227,579 as against Rs. 4,922,994 in the previous year, an increase of over 300,000 rupees.

The length of open line including the Thika branch remained the same as in the previous year, viz: 618 miles. The Magadi Railway, 91 miles in length, is also maintained by the Uganda Railway Administration, making a total of 709 miles. The line generally has been kept in good running order.

A shortage of power rendered it difficult to deal with the traffic, but the arrival of 34 new locomotives towards the end of the year, relieved the situation considerably and enabled a daily service throughout the whole line to be instituted.

An increase in the supplies of wood-fuel from 53,512 tons to 69,647 tons enabled a reduction to be made in the consumption of coal, of which 12,869 tons was used as compared with 15,531 tons in the previous year. Experiments were begun in equipping locomotives with an oil-burning installation.

LAKE STEAMERS.

Traffic on Lake Victoria has not yet reached the pre-war volume and has been easily handled by three steamers only of the fleet.

The mileage run amounted to 71,598 as against 62,858 in 1918–19.

Earnings increased from Rs. 882,254 to Rs. 952,315, although there was a considerable drop in the passenger traffic receipts.

(*b*) POST AND TELEGRAPHS.

The East Africa and Uganda Post and Telegraph services comprised 121 Post Offices and Agencies, distributed between the two Protectorates as follows :—

	Post Offices and Agencies.	Money Order Offices.	Telegraph Offices.
East Africa	95	30	88
Uganda	26	11	28

The total Post and Telegraph revenue of the two Protectorates amounted to £92,686, an increase over the previous year of over

23 per cent. The total departmental expenditure for the same period, including the cost of telegraph and telephone construction and maintenance in both Protectorates, was £88,545, showing an increase as compared with 1918–19, of over 29 per cent. A sum of £33,344 expended on War Bonus is not included in the above total of expenditure, but on the other hand the receipts do not include the value of free official services, estimated at £42,419 for the year.

The East Africa Protectorate was responsible for 85 per cent. of the revenue and 80 per cent. of the expenditure of the department, and the Uganda Protectorate for 15 per cent. and 20 per cent. respectively.

Postal Matter.—The number of letters, post-cards, newspapers and book packets dealt with during 1919–20 is estimated at 7,172,959, of which it is computed that 1,539,922 were official and free letters.

The increase in the postal revenue, which amounted to 39 per cent. over that of 1918–19 was mainly due to an increase in postal rates, viz: from 6 cents to 10 cents per half ounce in respect of inland letters and letters addressed to countries included in the Imperial Penny Postage Scheme, and a clearance fee of 50 cents levied on parcels imported through the post and detained by the Post Office for Customs examination.

Parcel Post.—During the year under review 98,569 parcels were dealt with, an increase of 5 per cent. Of this number 73,111 were posted or delivered in East Africa, a decrease of 3½ per cent., and 25,458 in Uganda, an increase of 42 per cent. Parcels from the United Kingdom decreased in number considerably, but the resumption of the Parcel Post service from India in July, 1919, resulted in a large increase in parcels from that country.

Parcels imported from abroad were valued at £189,846, an increase over last year of nearly 11 per cent. The Customs Duty collected by the Post Office amounted to £18,024.

Money Orders.—The value of money orders issued totalled £402,230 as against £320,627 in 1918–1919. This increase was mainly in respect of remittances to India, 17,655 orders amounting to £204,012 having been issued, and is attributed to the fact that for a time the local banks refused to issue drafts on India.

During the year the rate of exchange as between rupee and sterling currency rose from 1s. 8d. to 2s. 9d., and to avoid loss to the East Africa Protectorate and to stop exchange profiteering, the issue of money orders was suspended towards the end of the financial year.

British postal orders to the value of £25,625 were issued and paid during the year, an increase in value of 88 per cent. over the preceding year.

Post Office Savings Bank.—As in the two previous years the amount withdrawn exceeded that deposited. This is attributed to the favourable rate of exchange as between East Africa and countries having sterling currency, which caused heavy withdrawals for the purpose of remitting to the United Kingdom and South Africa.

At the end of the year there were 3,481 active accounts open with a balance due to depositors of £57,748.

Ocean Mail Service.—The uncertainty of steamer movements has resulted in an unsatisfactory overseas mail service. Various routes were tried and that via Bombay was adopted during the earlier part of the year; but advantage was taken later of the fact that vessels sailing from Durban with South African coal for Red Sea ports called at Mombasa on the return journey, to revert to the pre-war arrangement of landing at Aden the mails brought from Europe by the P. & O. vessels.

It is to be hoped that an aerial mail service via the Nile route may prove to be a practical possibility in the not far distant future.

Inland Mail Services.—The resumption of a daily passenger train service on the Uganda Railway permitted of an augmentation of local postal services by the inclusion of a travelling post office on every passenger train between Nairobi and Kisumu. This facilitated the sorting and distribution of correspondence addressed to destinations en route.

Telegraphs.—An interuption of the submarine cable between Mombasa and Zanzibar during the first three months of the year resulted in a considerable decrease in cable traffic, which, however, was more than made up by the increase during the remaining nine months, the result for the whole year being an increase of nearly 11 per cent. over the previous twelve months.

Charges for cablegrams were reduced, first to Rs. 1/70, and later to Rs. 1/40, a word for messages to the United Kingdom and the Continent of Europe.

Government Cable Traffic showed a decrease, due to a reduction in the number of military messages. The same applies, in greater degree, to Government inland telegraph traffic, which showed a very marked diminution.

Paid inland telegrams in the two Protectorates increased from 206,228 in 1918–1919 to 213,802 (East Africa 159,384 and Uganda 54,418) in 1919–1920.

Steps have been taken to increase the supply of trained Native African Telegraphists by establishing telegraph classes at Mission Schools, and the results have proved satisfactory.

Telegraph construction work during the year comprised the erection of a fourth wire from Naivasha to Nakuru, and a fourth wire between Kisumu and Kibigori. A line from Eldoret to Soy was also constructed.

Wireless Telegraphs.—The wireless stations at Mombasa and Kismayu worked satisfactorily throughout the year. Plant for four additional stations is available, but has not yet been erected.

Telephones.—Expansion of public facilities was undertaken in the East Africa Protectorate on a limited scale, 57 additional telephones being installed for private subscribers and 33 for Government Departments.

VII.—PROVINCIAL ADMINISTRATION.

The influx of new settlers brought an increased demand for native labour which was well met.

Rumuruti, the administrative centre on Laikipia, was re-opened after an interval of six years, and a new station was opened in the Trans-Nzoia District.

Registration of natives commenced, 19,204 being registered in the Ukamba Province, 14,803 in Nyanza, and over 6,000 in the Kenya Province. The Turkana District was placed under military control.

VIII.—CLIMATE AND HEALTH.

(*a*) PUBLIC HEALTH.

On the whole the year 1919 was more favourable to the health of all classes than the preceding year, 1918, when famine and pestilence wrought much havoc. Though the total number of cases treated in the various hospitals and dispensaries is practically the same, the number of deaths recorded declined by over 60 per cent., as shown below :—

Year	Cases	Deaths
1918	122,643	2,030
1919	122,901	1,253

Amongst officials, European and non-European, the daily average on sicklist has declined, but it is to be regretted that the number of invalidings and deaths of European officials increased, the numbers being 38 invalidings and 15 deaths, as against 33 and 10 respectively in 1918. The ravages on health caused by military service, and the heavy strain occasioned by overwork on account of the service being understaffed during the War, can be considered as contributory causes of the increased invaliding and mortality amongst European officials during 1919.

The number of patients treated in the two European Hospitals at Nairobi and Mombasa increased from 396 in 1918, to 500 in 1919. Of this latter number 209 were officials and 291 belonged to the general European population.

Malaria was the principal cause of admission to hospital. The number of deaths of European Hospital patients declined from 33 in 1918 to 24 in 1919; of these latter 8 were officials.

The total number of Europeans, officials and non-officials, medically treated was 3,588, of whom 1,273 were treated as in-patients.

In Native civil hospitals and dispensaries 14,371 in-patients (a decrease of nearly 3,000 compared with the previous year), and 95,574 out-patients were treated. Deaths numbered 1,112, as against 1,706 in 1918.

DISEASES.

Plague.—An outbreak occurred in the Kisumu area in May, 1919, and up to the end of the year 182 cases, of which 159 were fatal, were noted in the Lake Province. A few cases occurred also at Nairobi and Mombasa. The total for the Protectorate was 207 cases with 175 deaths. The total number of prophylactic inoculations was 31,046 as compared with 37,430 in 1918.

Small-Pox.—This disease appeared sporadically in all parts of the Protectorate, and 543 cases with 168 deaths were reported, as compared with 2,576 cases reported in 1918. Of these 543 cases 8 were Europeans, with no deaths.

The total number of vaccinations performed was 263,829 as against 428,079 in 1918.

The Vaccination Ordinance is now operative in practically the whole of the country. Native vaccinators are trained at the Health Office, and then detailed for duty wherever their services may be required. Financial restrictions have precluded the appointment of trained overseers whose services would be of great advantage, as hitherto little opportunity has been afforded of estimating the results of vaccination in out districts and of correcting faulty technique in the operators. Trained Native vaccinators working under proper supervision would exert a beneficial effect in conferring immunity on the general population.

Owing to the same cause (financial restrictions) it has been found impossible to conduct experiments in preparation of a suitable vaccine strain or to estimate the causes that undoubtedly influence the potency and immunity conferring powers of any one strain or groups of strains.

Influenza.—Though the pandemic practically ended in December, 1918, localized outbreaks occurred in 1919; but generally speaking the type was not severe and the death rate was only 47 per 1000. The total number of cases reported was 2,278 with 111 deaths.

Dysentery.—As in previous years the prevalence of this disease calls for comment.

Dysentery of bacillary origin is responsible for by far the larger number of cases.

It is interesting to note that since the cessation of hostilities in this country two years ago bacillary dysentery is steadily declining.

Cerebro-Spinal Meningitis.—The prevalence of this disease is declining, there being a marked dimunition in its incidence since the pandemic of 1913.

Enteric.—77 cases with 17 deaths were recognized during the year; of these 35 cases with 7 deaths occurred in Nairobi.

Voluntary inoculation against enteric is not popular in the Colony: only 22 persons submitted themselves for inoculation during the year.

(*b*) SANITATION.

Sewage Disposal.—No schemes for water-borne disposal are in operation in any of the towns as a general measure; though in Nairobi there is a growing tendency for private individuals to use the septic tank system.

A movement is on foot to dispose of the sewage from the new factory and godown areas in Nairobi by means of a water-borne system and septic tank disposal and subsequent irrigation.

Sewage is in the majority of cases disposed of by dumping in the sea, trenching, incineration, cesspool collection or distribution on the ground.

Water Supply.—The supplies in the principal towns are controlled by Government. During the year it has been impossible to effect any improvement with regard to storage treatment (filtration or chemical) or in protecting gathering grounds or intakes.

Drainage.—No new masonry drains were constructed at Kisumu or Mombasa; in Nairobi 5,771 yards.

Special gangs of workmen are employed at the principal towns whose duties include those of cleaning drains, regrading, and general repairs. The necessity for this becomes more obvious year by year.

Bush Clearing.—This is another activity largely dependent on the Health Office. Grants are made from the Sanitation Funds to Administrative officers in certain centres in order to undertake the work.

Housing.—Areas for native and Asiatic locations are being included in all town-planning schemes, but the development of these locations has not yet been possible for financial reasons.

Inspection of commercial premises is part of the duties of the Health Officers who issue licences prior to occupation. In addition the Sanitary Inspectors are regularly employed in general inspection of all premises in townships.

During the year 4,900 samples of mosquitoes were brought into the Health Office for identification: the percentage of anopheles in relation to the total number of samples was 2·25.

General.—A large amount of work was performed by the Health Department in the way of inspection of slaughter houses, aerated water factories, dairies and milk supply, and food supplies, and in the disinfection of premises, ships and dhows, railway trucks, carts, hides and skins, etc.

Bills of Health were issued to 193 steamers and 787 sailing vessels at the ports of Mombasa, Lamu and Kisumu.

IX.—EDUCATION.

(*a*) GOVERNMENT SCHOOLS.

The following Government Schools were in operation during the year:—

	Average Number on Roll.
European:	
Nairobi "A" School..	180
Nakuru "A" School..	48
Eldoret Central School	58
Indian:	
Nairobi "B" School..	167
Mombasa "B" School	141
Arab and Native:	
Mombasa Arab School	69
Machakos Native School	70

The average number of pupils on the rolls of Government Schools has decreased slightly as compared with the previous year. A large number of pupils were withdrawn from the European School at Nairobi to complete their education in England or South Africa. Lack of accommodation prevented the admission, to any considerable extent, of children under seven years of age to European and Indian Schools, while the majority of children are removed at 14 years of age, either for the purpose of continuing their education elsewhere or of earning wages.

The general cost of education per pupil has increased very considerably.

The revenue from tuition fees shows an increase over the preceding year, but amounted to less than 5 per cent. of the expenditure, as against 7 per cent. previously.

The average cost per pupil in all schools amounted to over £20 as compared with £14 odd in the Transvaal, South Africa.

The total expenditure, including grants in aid to private and mission schools, was Rs. 293,852.

(*b*) MISSION AND PRIVATE SCHOOLS.

The Nairobi High School (European) which had an average attendance of 23 pupils, received a grant in aid of Rs. 3,250. Dutch Schools on the Uasin Gishu Plateau received grants totalling Rs. 4,390.

Twelve African Police Schools, with a total average attendance of 364, received grants amounting in all to Rs. 1,892.

Grants-in-aid totalling Rs. 29,870 were made to Native Technical and Industrial Schools maintained by various Mission societies. At these Mission schools, in addition to general elementary education, pupils are trained in carpentry, masonry, brickmaking, tanning, printing and other trades.

In addition there is a large number of native schools under the ægis of various mission societies all over the Protectorate, the teachers at which are natives educated at Mission centres.

X.—LAND AND SURVEYS.

(*a*) LAND.

Revenue and Expenditure.—The estimated revenue in respect of rents was £25,000. The amount estimated was £27,157.

The estimated revenue from land sales was £50 in respect of " freehold and homesteads " and £4,200 from " stand premia on farms and plots." The actual sums obtained were £142 and £23,319 respectively.

The total revenue for the year was £50,618 and the total expenditure £9,162 or £940 less than the estimate.

Alienation of Land.—The total number of alienations for 1919 was 118, area 181,502 acres, compared with 89 grants the previous year, totalling 177,435 acres.

Of these 118, 88 represent grants in substitution for licences, agreements, old conveyances of farms and plots, and subdivisional new leases for which new titles were issued in 1919, so that the actual number of new grants was only 30, representing 64,529 acres.

The total area alienated is now 4,285,235 acres.

Ex-Soldier Settlement Scheme.—An ex-soldier settlement scheme was undertaken during the year. Selection boards were established in London and Nairobi to examine the military record and financial qualifications of applicants. The scheme provided for the alienation of 1,053 farms on a purchase system and of 257 small free farms, covering in all an area of 2,500,000 acres. Alienation was also made to syndicates of four or more qualified applicants. More than 2,200 applications were received and dealt with.

This scheme covered probably the whole of the land available for allotment and as a period of one year has been allowed for the selection of farms by successful applicants no statement of land remaining available can be made.

Revenue.—The total Revenue collected from fees amounted to Rs. 15,025 as against Rs. 31,953/50 in 1918-19.

The decrease in Revenue is accounted for chiefly by a falling off of receipts of certificates and survey fees. Very few certificates were issued pending the application of "The Registration of Titles Ordinance, 1919."

Expenditure.—The expenditure under all headings was Rs. 54,223/04 as against Rs. 55,015/99 the previous year.

(*b*) SURVEYS.

During the year under review the Trigonometrical and Topographical Branch was separated from the Cadastral Branch of the Survey Department.

The Trigonometrical and Topographical Survey became a separate department.

The Cadastral Branch was attached to a remodelled Land Department as the Land Survey Branch of the Department.

The Trigonometrical and Topographical Survey Department carried out major and minor triangulation in the Voi-Taveta and Teita areas.

XI.—GAME PRESERVATION.

An increasing interest on the part of settlers in game preservation is apparent.

There is no indication of any serious reduction in numbers of game by disease, and no evidence that pleuro-pneumonia, which has caused serious losses amongst cattle, attacks game.

Lions appear to be numerous ; also elephants in the northern area. Rhinoceros have been reduced in numbers probably owing to the high price which their horns command.

XII.—PUBLIC WORKS.

The authorized expenditure as sanctioned in the Estimates was £189,041, of which sum a programme of scattered major works accounted for a total of £19,503. These included a Cottage Hospital at Eldoret, additional work on the Veterinary Pathological Depôt at Kabete, additions to the Lunatic Asylum, additional buildings to the Reformatory at Kabete, further preparation of the site for the new Native Quarter at Nairobi, additional staff quarters at Mombasa, and further work on the distribution system of the Mombasa Water Supply. A new workshop was provided for the Department's African apprentices whose former depôt had been taken over for military purposes.

On new roads and bridges work was done on 22 different projects at a total expenditure of £18,499. The principal items were a bridge of nine spans and of 297 feet total length on masonry piers and with a concrete deck across the Athi River, a bridge over the Nzoia River (£1,090), a bridge over the Thika River (£1,406), the macadamising of some two miles of the main coast road to the north of Mombasa and of a portion of Corporation Road Mombasa. Work on the maintenance of existing roads cost £42,389. This was a larger grant than in any previous year, and allowed of a distinct measure of improvement being exhibited on many of the roads.

The Mombasa Water Supply was maintained in a satisfactory condition at an expenditure of some £2,142, while the revenue accruing from the sale of water reached the figure of £7,156, a higher total than in any previous year. From this sum payment of interest and sinking fund on the loan for the work was made to the amount of £4,050.

The Transport Department was this year absorbed into the Public Works Department in the form of separate Animal Transport and Mechanical Transport Branches. The fleet of Government cars distributed in various localities, numbered 61. A central garage and workshops were built in Nairobi.

XIII.—POPULATION.

The estimated European population of the East Africa Protectorate on the 31st December, 1919, was 5,914. Of these adult males numbered 2,924, adult females 1,543, and children 1,447. Of the adult males 2,742 were British and 182 of foreign nationalities. They were classified as follows :—

Government Officials	671
Planters and Farmers	1,188
Commercial	833
Missionaries	110
Professional men	91
Various	31
Total	2,924

The total estimated population of the Protectorate was as follows :—

	Dec. 1918	Dec. 1919
Europeans	5,570	5,914
Indians	15,407	16,706
Goans	2,020	2,393
Arabs	7,468	9,567
Other Races	236	237
Natives	2,596,379	2,684,847
Total	2,627,080	2,719,664

No. 1122.

ANNUAL REPORT ON THE COLONY AND PROTECTORATE OF KENYA* FOR THE YEAR 1920-21.

I.—FINANCIAL.

A.—General Revenue and Expenditure.

The sanctioned expenditure for the year 1920-21 amounted to £3,192,327, and the actual expenditure to £2,976,960. Before comparing the latter figure with the former, account has to be taken of the fact that the King's African Rifles expenditure for the last three months of the year, estimated at £43,277, is not included. The sum of £91,166 has also to be added to the expenditure, and £126,781 deducted therefrom, the former amount representing the unexpended balance of votes on uncompleted works to be carried forward to 1921, and the latter being a similar item carried forward from 1919-20 to 1920-21. After taking these factors into consideration the resulting figure is £2,984,622, a saving of £207,705 on the sanctioned estimates.

The total Revenue for the year amounted to £2,978,785, being £389,133 more than the previous year, but £213,542 short of [illegible] estimated Revenue.

The following table shows the Expenditure and Revenue for the last six years:—

	Expenditure. £	Revenue. £
1915-16	1,609,375	1,748,341
1916-17	1,796,094	2,300,674
1917-18	2,235,856	2,052,493
1918-19	2,356,057	2,323,054
1919-20	3,037,291	2,589,652
1920-21	2,976,960	2,978,785

---

* *Colonial Office Note.*—Formerly known as the East African Protectorate. By the "Kenya Annexation Order in Council, 1920," the territories outside the mainland dominions of the Sultan of Zanzibar were recognised as a Colony. This Order in Council came into operation on the 23rd of July, 1920, and henceforth the Sultan's mainland dominions are styled the Protectorate of Kenya, whilst the remaining territory is known as the Colony of Kenya.

A sketch map will be found in the Report for 1914-15 [Cd. 8172-7].

(6873) Wt. 9155/451 625 7/22 Harrow G.75

Financial Position on 31st March, 1921.

The Assets exceeded the Liabilities on 31st March, 1921, by £205,627, the figure being arrived at as follows:—

		£
Net Assets on 1st April, 1920		203,802
Revenue, 1920-21	£2,978,786	
Expenditure, 1920-21	£2,976,961	
Excess of Revenue over Expenditure, 1920-21		1,825
		£205,627

In order to ascertain the actual financial position the undermentioned contingent liabilities must be taken into consideration, and, after doing so, the result is a deficit of £240,049. Compared with 1919-20, there is a slight improvement, as the deficit as at 31st March, 1920, was £244,257.

	£
Unexpended balance of votes for works sanctioned but uncompleted	91,166
Estimate of Military Expenditure for 1919-20 for which no debits have been received	285,258
Outstanding debit for King's African Rifles Expenditure for last three months of 1920-21, based on proportion of the past nine months	43,277
Balance of Stand Premia Fund	25,975
	£445,676

B.—CURRENCY.

Under the East Africa and Uganda Currency Order in Council (No. 2), 1920, the Indian rupee was replaced by a British East African florin, ten being the equivalent of one pound sterling. Conversions between sterling and local currency in the Colony's accounts prior to 1920-21 were made at one shilling and fourpence to the rupee, but from the 1st April, 1920, onwards at two shillings to the rupee or florin, and when comparing the sterling figures of the year under review with those of previous years 50 per cent. should be added to the latter in order to obtain a correct comparison.

The figures quoted in this Report have been so treated.

Under Clause 9 of the Order in Council referred to above, the East African Currency Board, London, were empowered to take over the powers, rights, duties and obligations of the local Currency Board, and the transfer was effected on the 31st July, 1920. The new Board also took over from the Treasurer the liabilities in respect of subsidiary coinage, and the whole currency of the Colony is therefore in their control.

The following new Legislation relating to currency was passed during the year:—

ON THE 26TH APRIL, 1920, THE EAST AFRICA AND UGANDA CURRENCY ORDER IN COUNCIL (No. 2), 1920.

This Order provided for the coining of a British East African Florin to be the standard coin, and for references to rupees or to pounds sterling in contracts, etc., to be interpreted as if these were substituted references to florins at the rate of one florin to one rupee or ten florins to one pound. It provided also for subsidiary coins, for transferring the powers and duties from the existing Currency Board to a new Board, when constituted, and for the repeal of former currency legislation with a proviso that existing arrangements remained in force until others, to take their place, were completed. This Order was not published in the Colony until June, 1920, and was brought into force by a PROCLAMATION UNDER THE ORDER DATED THE 19TH JULY, 1920.

ON THE 11TH MAY, 1920, PROCLAMATION UNDER THE EAST AFRICA AND UGANDA CURRENCY ORDER (NO. 2), 1920.

New Currency notes of the East African Currency Board, of denomination of one rupee, were made legal tender for payment of any amount.

ON THE 19TH JULY, 1920, PROCLAMATION UNDER THE CUSTOMS ORDINANCE, 1910.

The importation of the silver rupee of British India and of notes of the denomination of one rupee issued by the Government of India was prohibited, because the exchange value of the rupee in India fell below two shillings, the exchange value given for the rupee in Kenya by the Currency Board.

ON THE 4TH AUGUST, 1920, PROCLAMATION UNDER THE CUSTOMS AMENDMENT ORDINANCE, 1915.

Restrictions on the exportation of gold coin and bullion were removed in order to give holders of gold coin, which were no longer legal tender, opportunity for disposing of them.

ON THE 27TH AUGUST, 1920, PROCLAMATION UNDER THE CUSTOMS AMENDMENT ORDINANCE, 1915.

Restrictions on the exportation of Indian one rupee notes were removed, there being no longer the necessity for conserving the supply of this form of currency as one rupee notes of the East African Currency Board were available.

ON THE 27TH OCTOBER, 1920, PROCLAMATION UNDER THE EAST AFRICA AND UGANDA CURRENCY (NO. 2) ORDER, 1920.

Treasury Notes and Bank of England Notes ceased to be legal tender.

ON THE 29TH DECEMBER, 1920, THE CURRENCY NOTES ORDINANCE, 1920.

This made provision for the issue of currency notes by the East African Currency Board on behalf of the Government, to be expressed in terms of florins or pounds at the rate of ten florins to the pound.

ON THE 29TH DECEMBER, 1920, THE BANK OF ENGLAND AND TREASURY CURRENCY NOTES REPEAL ORDINANCE, 1920,

repealed the Ordinance by which Bank of England and Treasury Currency Notes had been made legal tender for any amount at the value of Rs.8.50 for one pound.

ON THE 7TH FEBRUARY, 1921, PROCLAMATION UNDER THE EAST AFRICA AND UGANDA CURRENCY (No. 2) ORDINANCE, 1920.

One rupee notes of the Government of India ceased to be legal tender.

II.—TRADE AND SHIPPING.

A.—TRADE.

The Customs receipts during the financial year amounted to £660,112, and the refunds to £63,609, calculated at fl.10 to £1. The net revenue from Customs duties therefore amounted to £596,503, an increase of £183,944, or 45 per cent., as compared with the previous year, and it includes £45,250 due to an enhanced rate of specific duty on spirituous liquors brought into force on 5th May, 1920, from five florins to fifteen florins per gallon.

Imports.—The total value of commercial imports during the year under review increased from £4,679,304 to £6,911,858. It shows an increase of £2,232,554, or 48 per cent., over the previous year.

Cotton textiles still continue to constitute the most important and largest class of imports. They were valued at £1,353,490, and represent 20 per cent. of the total trade imports. As compared with the previous year, the increase in value is one of £232,069, or 21 per cent., and in quantity the decrease is one of 1,036,902 yards, or 5 per cent., thus giving an average rise in price to the extent of 27 per cent.

The imports of other varieties of cotton fabrics, such as bleached, printed and dyed manufactures, amounted to £433,092, showing an increase of £69,429 over the previous year.

Of these imports, 81·3 per cent. came from the United Kingdom; India occupied the second place, being represented by £43,699, or 10·1 per cent.; Holland the third, being represented by £22,181, 5·1 per cent.

The second largest item in order of value is the group of "Machinery and parts thereof," which form 9 per cent. of the total imports.

Eighty-three per cent. of the total machinery came from the United Kingdom, followed by 12 per cent. from the United States.

The third group in order of value is that of "Vehicles and parts thereof," valued at £468,015, and represents 7 per cent. of the total merchandise. The increase as compared with the previous year is one of £244,479, or 109 per cent.

Importation from the United Kingdom amounted to 59 per cent., and from the United States 29 per cent.

The imports of "Building materials" increased from £112,484 to £377,531, or 236 per cent. as compared with the previous year.

The value of imports of private merchandise (excluding Government and Railway importations, goods in transit, telegraph materials and specie) was distributed among the United Kingdom, British Possessions, and foreign countries in the proportion of 51 per cent., 26 per cent., and 23 per cent. respectively.

The share of the United Kingdom, prominent as it was in the past years, has since the War increased enormously with a value of £3,516,075.

The imports of £6,911,858 are the highest on record. Had it not been for general trade depression in the latter part of the year under report, the figures would have been still larger.

Exports of Imported Goods.—Consignments of imported foreign goods which are subsequently re-exported to foreign ports are allowed full drawback of duty previously paid.

The trade is chiefly carried on through the port of Mombasa, which continues to act as a receiving and distributing centre between East Africa and the neighbouring territories of Tanganyika, Zanzibar, Italian East Africa, Uganda, and the Belgian Congo.

The re-exports during the year under report receded from £1,136,595 to £685,267, a decrease of £451,328 as compared with the previous year, and represent 10 per cent. of the total imports.

Transit Trade.—The imports under this heading decreased from £1,201,770 to £670,650; the latter amount includes £31,454, being the value of produce imported from the hinterland of the Tanganyika Territory.

Exports.—Prior to April, 1917, Uganda collected its duties on produce, and hence statistics were recorded separately. Since then Kenya and Uganda have become one for Customs purposes, and exports of produce from the two Dependencies are shown under one heading.

Produce from the Tanganyika Territory (formerly German East Africa), the Belgian Congo and the Soudan is registered separately.

The combined exports from Kenya and Uganda during the year amounted to £4,699,498, a rise of £189,003, or 4 per cent., over the previous year.

Cotton heads the list of combined exports from the two Dependencies and represents 67 per cent. of the total value.

As compared with the previous year, there is an increase of 38,528 cwt., or 26 per cent., and £1,056,641, or 49 per cent., in value, which means a rise of 18 per cent. in specific price. The average price in 1916 was 5½*d*. per lb., while during the year under report it reached to 25*d*. per lb.

With the exception of 1,615 cwt., which was produce of Kenya, all cotton originated in Uganda.

Fifty-nine per cent. of the total quantity was consigned to the United Kingdom, 35 per cent. to British Possessions, and 6 per cent. to foreign countries.

The second largest item in order of value is coffee, which represents 12 per cent. of the total exports.

The quantity increased from 122,462 cwt. to 158,267 cwt., or 29 per cent., but the value declined from £635,820 to £574,884.

The average declared value was 48*s*. 5*d*. during the year under report, as against 69*s*. 3*d*. in the previous year.

Eighty-two per cent. of the total quantity was consigned to the United Kingdom, 8 per cent. to the Union of South Africa, and the balance to various countries.

The third largest item of export is the group of grain and oil seeds, representing 448,915 cwt., valued at £275,789.

The increase in quantity is one of 106,571 cwt., or 31 per cent., and in value £23,882, or 9 per cent.

Twelve per cent. of the total quantity was exported to the United Kingdom, and 64 per cent. to British Possessions.

The fourth largest item of export is fibre, valued at £205,710, representing 4 per cent. of the total exports.

The shipments of fibre are classified under the headings of "sisal," "fibre, other sorts," and "flax," representing 114,045 cwt. (£183,683), 5,628 cwt. (£8,787), and 8,094 cwt. (£13,240), respectively.

Shipments of hides and skins, which played a prominent part in the exports in previous years, received a set-back, and the value decreased from £733,204 to £149,339 during the year under report.

Eighty-one per cent. of the total quantity was shipped to the United Kingdom, 15 per cent. to Italy, and 3 per cent. to France.

The quantity of carbonate of soda increased from 210,880 cwt. to 256,579 cwt., but the value decreased from £220,063 to £107,166 during the year under report.

Seven per cent. of the quantity was shipped to the United Kingdom, 26 per cent. to India, 37 per cent. to Norway and Sweden, and 19 per cent. to Japan.

The exports of ivory originating in Kenya and Uganda declined from 1,006 cwt. to 428 cwt. during the year under report.

Twenty-four per cent. of the quantity was shipped to the United Kingdom.

Shipments of rubber show a decrease of 126 cwt., or 5 per cent., in quantity, and £1,367, or 6 per cent., in value as compared with the previous year.

Chillies, a semi-wild crop, thrive exceedingly well in Uganda, 3,793 cwt., valued at £13,735, being exported during the year.

The exports of copra receded from 33,219 cwt., valued at £58,506, to 9,343 cwt., valued at £13,681, during the year under report.

Twenty per cent. of the quantity was exported to the Union of South Africa, 27 per cent. to Zanzibar, and 46 per cent. to France. Besides copra, there was an export of 114,938 coconuts, valued at £835, chiefly to India, the Union of South Africa, and Arabia.

The by-product, coconut fibre, remains practically unutilized, although coir rope, which might be made locally, is being imported from India.

The export of wool declined from 3,071 cwt., valued at £21,864, to 1,362 cwt., valued at £13,345.

Shipments of potatoes amounted to 29,449 cwt., showing a decrease of 2,198 cwt. as compared with the previous year; 5,810 cwt. were shipped to India, 6,698 cwt. to Zanzibar, and 3,073 cwt. to the Union of South Africa.

The exports of mangrove poles (locally known as borities) decreased from £23,204 to £7,550.

Seventy-nine per cent. of the total originated in the Lamu District, 8 per cent. in the Malindi District, and the balance mainly from Vanga and Kismayu.

Seventy-three per cent. of the total was consigned to Arabia, 18 per cent. to India, and the balance to Italian East Africa.

B.—SHIPPING.

Mombasa has been served by five lines of steamers from Europe during the year ending 31st March, 1921,—the Union-Castle, British India Steam Navigation, Messageries Maritimes, Marittima Italiana, and Clan Ellerman Harrison. The Marittima Italiana's service has been increased by extra steamers which now proceed as far as Durban, calling here both ways.

A new line of steamers from Europe, the "Dutch East Africa Line," began to call here in January, and have continued to call monthly. It is expected that this service will be increased.

The British India Steam Navigation Company's steamers still maintain a regular service with Bombay and Durban.

The coast traffic was carried out by the vessels of Messrs. Cowasjee Dinshaw Brothers, and has been fairly regular. The Zanzibar Government steamers also made thirty calls.

III.—INDUSTRIES AND MINES.

A.—Industries.

See under Heading IV, Agriculture and Stock-raising.

B.—Mines and Minerals.

Considerably more interest has been shown by the general public in mining matters during the past year than has previously been the case.

Nine hundred and seventy-four prospecting licences were issued, and 322 claims registered; of the latter, 166 were gold and 93 precious stones.

Apart from a small quantity of graphite, no minerals have been produced, except for assay purposes.

A gold rush occurred north of Mount Kenya in April, and a diamond rush near Donyo Sapuk in May of the same year. Activity has now ceased in both localities.

There is every evidence of great prospecting activity, which can be gathered from the fact that from 1912 to 1920 only 81 claims were registered in all, while for the past twelve months the figure is 322.

IV.—AGRICULTURE AND STOCK-RAISING.

A.—General.

Considerable activity in agricultural development was witnessed in the early part of the year. A number of new settlers arrived to take up agricultural holdings, chiefly under the "Discharged Soldiers' Settlement Ordinance." Much new capital was introduced into the country, estimated at £4,000,000 between March, 1920, and February, 1921. The effect of this was to create a sense of prosperity, but towards the close of the year depression set in, the influx of fresh capital ceased, primary products could only be sold at greatly reduced prices, and in some cases, notably in that of flax, trade had become so stagnant that land could not be sold even at low prices. Nor at any time when values had greatly decreased was relief obtained in the high costs of marketing through a reduction in ocean freights, which in several cases represented too high a proportion of the selling price of the product.

The first impression made upon the producer by these reduced values was that in some cases the Colony's chief agricultural products could no longer be produced at a profit. The abnormally high prices, which ruled during the War and for some time afterwards created rather false hopes, were responsible for an outlay in capital expenditure and working costs which, in the light of subsequent events, was not justified. In some cases, too, land was bought at a price too high to enable it to be made a sound proposition, notably in the case of holdings upon which development had already taken place and which had reached the producing stage. The period of depression will not be without its benefits if it has taught land-holders and managers the lesson of economy. There is already evidence that that result has been achieved, and costs of production have been much reduced. In the end, the question of agricultural production in Kenya will resolve itself into whether or not the Colony can compete with other countries on the oversea markets. The advantages which it possesses in respect of soil fertility, favourable climatic conditions, and cheap unskilled labour can only point to the conclusion that in respect of its main crops the settler can compete favourably with producers in other countries of coffee, sisal, maize, flax, and certain oil-seeds, provided always that he is not handicapped by railway and ocean freights. The trade in agricultural exports is passing through a somewhat difficult, unsatisfactory, but, it is hoped, transient stage. The practice of the producer shipping his own produce directly or indirectly obtains to a degree which is not in the best interests of the agricultural industry. Under these conditions more capital is required or has to be raised to finance the proposition, and the view is held that the farmer should concern himself solely with the production of the primary product and that marketing of it should remain in the hands of those who understand the business. Not until the farmer is able to sell his produce at its full market value, delivered, say, f.o.r. at his station, and receives payment in cash when the goods are delivered, will the trade be on a satisfactory basis.

The scale of production has hitherto been so limited that firms have not been disposed to establish buying agencies in this Colony, but there is evidence of a movement in this direction, and it may be expected that conditions and facilities offered will improve in the future.

In respect of certain products, *e.g.*, bacon and dairy produce, the Colony has recently reached the stage when it has been able to satisfy local demands, and there is a small and growing surplus available for export. Here again a difficulty obtains which can only be overcome when the volume of the trade increases and becomes substantial. In the case of dairy products it is desirable that consignments of uniform and reliable quality be exported, but in the absence of central or co-operative butter and cheese factories this cannot be achieved. The bacon industry is in a fair way to establish an export trade. During this transition period such markets as can be secured in supplies to ships and to ports along the eastern coast are being developed, but the demand from these quarters is comparatively small.

Economic Surveys.—Economic surveys were made of the areas covered by the projected new railway lines from Nakuru to Soy and from Thika to Nyeri.

The Agricultural and Horticultural Society.—A successful show of agricultural products was held at Nakuru. The Society has undertaken the compilation and publication of a " Stud Book " for the different classes and breeds of pure-bred farm live stock, and the first volume has been published.

Agricultural Census.—The Statistical Ordinance of 1918 was applied in respect of agricultural, dairying and pastoral industries, and a Statistical Branch of the Department was created. The first report on the Agricultural Census has been published.

The total area of land available for European settlement was 6,060,000 acres on 30th June, 1920. On that date 3,157,400 acres, or 52 per cent. of the total, were in occupation. Since then there has been a considerable increase in the area occupied. The total area under cultivation was on that date 176,290 acres, representing 5·58 per cent. of land occupied and 149 acres of cultivated land per occupier. It should be noted that large tracts of land are devoted solely to stock-raising.

The total number of European owners, occupiers or managers in occupation of land, and owners of live stock, was 1,182 on 30th June, 1920. A number of new " soldier settlers " to whom land was allotted in 1919 are not included. The total number would appear to be small, but it should be noted that partnerships, syndicates and companies working one or more holdings are enumerated singly for purposes of this census.

Agricultural Legislation.—The Cleansing of Cattle Ordinance passed its third reading in 1920, but in the absence of funds out of which loans could be granted for the construction of dipping tanks, as provided in the Ordinance, it cannot be put into operation. A Bill dealing in comprehensive manner with the grading and inspection of agricultural export produce has been introduced into the Legislative Council. For financial reasons it was found impossible to apply the Coconut Preservation, Coconut Trade, and Native Liquor Ordinances. Attention is being given to a revision of the Diseases of Animals Ordinance of 1906 and 1908, and the rules thereunder. Steps are being taken to draft an Agricultural Pests Ordinance, which will deal with the control and eradication of plant diseases and insect pests, and will provide means for the inspection of nurseries and plantations.

B.—CROPS.

In respect of crop yields and quality the farming year under review has varied considerably in different areas of the country.

The area under the principal crops on land in European occupation on 30th June, 1920, was as follows:—

	Acres.		Acres.
Maize	32,109	Wheat	4,613
Sisal	30,698	Barley	586
Coffee	27,813	Oats	484
Flax	24,174	Beans and Peas ...	925
Wattle	11,565	Potatoes	177
Coconuts	9,272	Lucerne	342
Sugar-cane	691	Rubber	2,381
Cotton	459	Fruit	2,081

Coffee.—The earlier crop of coffee was abundant and of high quality, but on account of dry conditions and tree exhaustion the later crop was light and of low quality. The actual yield of "clean" coffee for the year 1919–20 was 71,970 cwt.

Flax.—Generally throughout the Colony the flax crop was good, but in some districts considerable areas suffered from caterpillars. The expectation of high prices caused a large increase in the area of flax sown. As at 30th June, 1920, 24,174 acres were sown with this crop. During the previous twelve months 9,297 acres had been sown and harvested. The average yield per acre from that area was:—

Flax	1·70 cwt.
Tow	2·35 ,,
Linseed	1·32 bags of 180 lb.

Sixty-eight flax mills, representing 1,274 scutching wheels, have been erected to deal with the crop. A great deal of capital has been invested in the flax industry, but on account of the depression in the flax trade further progress has been arrested, and many growers have deferred the scutching of the previous season's crop.

Maize.—The crop of maize harvested at the end of 1919 and early in 1920 was probably a record one for the Colony. A surplus of 164,000 bags was exported for the year ending June, 1920. Unfortunately, the yield from the 1920–21 crop in the chief area of European production was low, and the surplus available for export in that year from both European and native areas was considerably reduced. For the year ending June, 1921, 75,000 bags of maize were exported. From an area of 32,167 acres planted and harvested during the year ending 30th June, 1920, the high average yield of 9·87 bags (200 lb.) per acre was obtained.

Sisal.—The total area under this crop at 30th June, 1920, was 30,698 acres, of which 16,693 acres were under three years of age. Twenty-one sisal factories, with a capacity of 52·5 tons of fibre per diem, have been established. During a period when prices fell considerably, production in the factories was restricted, but growers have given close attention to reducing costs of production, and the industry now seems to be fairly profitable, despite the fall in values.

Wheat.—The wheat crop did not suffer as much as in other years from rust, and consequently the yield was higher and the quality better than usual. During the year ending 30th June, 1920, 5,614 acres had been harvested, but a further area of 4,613 acres had been sown as at that date. Within the farming year the total area sown with this crop was about 10,000 acres. The average yield from the areas harvested was only six bushels (loads) per acre, the low yield being due chiefly to rust and drought, which were prevalent in many districts. The succeeding crop harvested during the period under review gave a higher yield, but in regard thereto figures are not yet available. The local production of wheat is short of the present needs for consumption by about 60,000 bags. The difficulty at present is not one primarily of production but of milling.

Beans and Peas.—The export trade fell off considerably on account of the heavy drop in prices, but with lower costs of marketing attention may again be given to these useful rotation crops.

Sugar-cane.—An area of land extending to 6,000 acres and situated near Kibos has been alienated for the purpose of sugar production, and a mill is about to be erected of a capacity sufficient at least to meet the total needs of the Colony and neighbouring territories in respect of " crystallized sugar."

Coconuts.—As at 30th June, 1920, 421,186 coconut palms were planted in European-owned plantations. For the most part they had not yet reached the bearing stage, but within the next few years there should be a considerable increase in the production of copra. The area under coconuts in the hands of non-Europeans is considerable.

Cotton.—The high prices ruling for cotton in 1919 and early in 1920 caused some attention to be given to this crop by European farmers, and 459 acres had been planted at 30th June, 1920.

Citrus and other Fruits.—Fruit-growing is receiving comparatively little attention. The demand is restricted to the needs for local consumption.

The manufacture of lemon squash and lime-juice was started, but unfortunately the enterprise was not successful and operations ceased. Efforts are, however, being made to manufacture citric acid in a concentrated form for export, and there is promise that growers of lemons and limes, who are not far distant by road or rail from the factory, will find a ready market for these fruits.

Labour Supply.—The average number of native labour employed monthly on European holdings during the year ending 30th June, 1920, was 45,005 men, 3,917 women, and 4,787 children; total, 53,709.

C.—NATIVE AGRICULTURE.

It will be understood that native agricultural production can only be estimated. The estimates furnished by District Officers in respect of produce sold by non-Europeans are as follows:—

Maize	750,000 bags
Sorghums, Millets, etc., M'tama	475,000 ,,
Sim-sim	20,000 ,,
Rice	5,200 ,,
Other grain	490,000 ,,
Pulse	200,000 ,,
Potatoes	40,000 ,,
Cotton	1,000,000 lb.
Copra	1,500 cwt.
Bananas	5,000,000 bunches.

The remarkable fertility of the soil of the areas comprising the native reserves is evidence of great potential production. Considering that, exclusive of the pastoral area of fully nine million acres, the area occupied by the native tribes is approximately eight times as great as that in European occupation, viz., 24,280,000 acres and 3,157,000 acres respectively, it will be seen that in order to develop the agricultural resources and wealth of the Colony and Protectorate it is essential that native agriculture should be fostered.

In any circumstances progress must inevitably be comparatively slow among tribes which have so recently come into touch with civilization and whose methods and outlook cannot be easily changed. To succeed in effecting a substantial improvement in native agricultural practice and in increasing production a large number of instructors will be required.

An increase in native production should be directed towards an output of produce which can be exported. Crops such as maize, sorghums and millets, ground-nuts, sim-sim, cotton, beans and peas, fall under that category, while in respect of rice there is large scope for production to satisfy the local demand.

Rice.—A considerable quantity of seed of the best varieties was procured and distributed among native growers. Attention has also been given to growing the crop in the Meru and Kavirondo districts. The coastal belt is undoubtedly capable of producing large quantities of rice, particularly the Tana and Sabaki valleys. Extensive irrigation works and an increase in the present native population would, however, be necessary to make any such scheme practicable.

Cotton.—A large extension of the area under cotton was made in the Kavirondo Native Reserve. A considerable quantity of seed was imported from the United States of America and distributed among growers.

D.—LIVE STOCK INDUSTRY.

Interest has for a few years past chiefly centred around the establishment of a Meat Canning and Freezing Works. Government offered an extensive area of land situated in a good pastoral area, but all attempts to get firms to interest themselves in the project failed, chiefly because of the absence of an assured market for the output of the factory.

Farm accounts prove that the future of the cattle-breeding industry lies in the development of the dairying industry, for which the pastoral and climatic conditions of extensive areas of the settled portion of the Colony are suited, rather than in beef-raising. Sheep-breeding, whether for wool or mutton production, is not likely to be pursued on an extensive scale when compared with certain other countries. The areas suited to sheep are restricted to parts of the Rift Valley and to the plains of West Kenya and northward into hitherto unsettled portions of the Colony. Experience shows that in most flocks there is a heavy mortality from parasitic diseases, and in some seasons blue tongue is a contributory cause. With the facilities now being afforded by Government in respect of blue tongue vaccine and a specific against parasitic diseases the losses should, with good management, be considerably reduced. The demand for horses and mules is so restricted that the breeding of them is not likely to be largely pursued. Pig-breeding, rearing and fattening has made marked progress during the last year. Pigs thrive remarkably well in most parts of the country, though individual owners occasionally suffer a heavy loss from an outbreak of swine fever.

The total heads of stock of different kinds as at 30th June, 1920, was as follows:—

	European owned.	Non-European owned (estimated).	Total.
Cattle	137,604	2,372,037	2,509,641
Horses	1,269	71	1,340
Mules	996	279	1,275
Donkeys	902	31,578	32,480
Camels	—	103,152	103,152
Sheep	101,256	2,426,554	2,527,810
Goats	2,654	3,576,055	3,578,709
Pigs	9,450	—	9,450
Poultry	29,354	—	29,354

E.—VETERINARY SERVICES.

Rinderpest.—Outbreaks of rinderpest on " European " holdings numbered 54, as against 80 in the previous year. In connection with these outbreaks 7,726 head of cattle were either " double inoculated " or treated with " serum alone."

In the Kikuyu Reserve, 19,619 head of cattle were double inoculated again, with a low mortality of 9 per cent. A new departure was made in carrying out " double inoculation " against rinderpest and inoculation against pleuro-pneumonia simultaneously. Apparently the results were entirely satisfactory.

Pleuro-pneumonia.—Thirty-six outbreaks of this disease were detected in five districts in the settled areas, and the disease is believed to exist in six of the native reserves. The number of cattle inoculated during the year against pleuro-pneumonia was 44,042. With the use of the " pure culture " vaccine now being used, the mortality has been reduced to about 1 per 1,000.

East Coast Fever.—With the exception of the Northern Frontier District the area of the Colony in which east coast fever is not widely spread is comparatively small, and there is reason to believe that those so-called " clean areas " are liable to become infected. Until dipping is systematically practised throughout the country and circumstances allow the " Cattle Cleansing Ordinance " to be put into operation, it is feared that little progress can be made against this disease.

There is little change to be recorded in respect of other diseases.

Research Division.—Experiments and investigations were undertaken on :—

1. Rinderpest immunization.
2. The utilization of sheep for supplying virulent blood at centres distant from the laboratory.
3. The preparation of Pleuro-pneumonia vaccine in bulk.
4. Immunity conferred by inoculation—Exposure experiment —Pleuro-pneumonia.
5. Serum diagnosis of Pleuro-pneumonia.
6. The preparation of a vaccine against Anaplasmosis of cattle.
7. Swine diseases.
8. Dipping of sheep and goats.
9. Curative treatment of Ulcerative Lymphangitis in equines.

The quantity of sera and vaccines issued during the year amounted to some 303,484 doses.

A noticeable advance has been made in the reduction of losses from inoculations against rinderpest and pleuro-pneumonia to a negligible percentage.

F.—ENTOMOLOGY.

Research Work.—Special attention was paid to :—

1. Insects and stored products.
2. Sericulture.
3. Flax caterpillars—particularly regarding measures for combating.
4. Coconut beetle—trapping experiments—life-history.
5. Insects affecting coffee—parasitizing of.
6. Garden crop insects, particularly—
    The Diamond-back Moth.
    The Bagrada Bug.
    The Turnip Saw-fly.
    Cutworms.

G.—MYCOLOGY.

A number of farms were visited to make observations of conditions prevailing where certain diseases were reported and for the purpose of giving advice.

H.—STOCK AND EXPERIMENT FARMS AND STATIONS.

Naivasha.—A large number of female stock have been culled and sold, and as far as financial provision has permitted they have been replaced by pure-bred stock. A considerable improvement has consequently been effected in the quality of the stock.

Kabete.—Educational.—Courses of instruction in agriculture, including the following subjects:—Agriculture, including special instruction in Coffee, Flax; Stock—Veterinary science, Agricultural chemistry, Entomology, Plant Diseases, Horticulture, Dairying, Building Construction, Medical Hints and Hygiene, were held and were well attended chiefly by newly arrived ex-soldier settlers.

Crops and Experiments.—The main crops of the farm are flax, wheat, maize and coffee. In all, 200 acres are under cultivation.

Stock.—Most of the cross-bred stock has been sold, and there have been established small herds of pure-bred Friesland and Ayrshire cattle, transferred from Naivasha farm, and Berkshire and Large Black Pigs, chiefly imported from South Africa.

Eldoret.—Two holdings in extent 3,510 acres have been reserved for purposes of this farm. Circumstances prevented operations being commenced until November, 1920, when land was cleared for cultivation and a beginning was made in laying out the farm.

Mazeras.—The Mazeras farm, which serves the coastal area, has been remodelled, being laid out in divisional sections and plots. Attention is being paid chiefly to economic plants for native agriculture. At present, varieties of muhogo, m'tama, rice, sugar-cane, bananas, pineapples, sweet potatoes, tobacco, beans and coconuts are under propagation and trial.

Plants and seeds are distributed to both European and native growers.

Kibos.—During the season under review weather conditions were unfavourable at Kibos, but the higher parts of Kavirondo, owing to better rainfall, produced excellent crops.

Special attention is being paid to native food crops, and many varieties are under trial prior to recommending generally what to plant. The crops dealt with comprise beans, chillies, maize, rice, ground-nuts, cotton, tobacco, sugar-cane, coffee and fruits.

Distributions of 5,000 lb. of rice seed, 6,000 lb. ground-nuts, and other seeds and plants were made.

There has been established on the farm a lecture-room and housing accommodation for young men from the Native Reserve for the purpose of training them in agricultural practice. Natives of a superior type with some education are being selected, and after two years' training on the Kibos farm will, if required, become native instructors under the Department.

I.—METEOROLOGICAL.

Observations were taken and recorded for 180 "Rainfall Stations" and 21 "Temperature Stations." A Meteorological report for the year 1920 has been compiled and published.

During the year ending March, 1921, 40 new rainfall stations were spread throughout the country, representing 17 districts.

V.—FORESTS.

No new forest areas were proclaimed during the year; certain alterations were made in the forest boundaries, and altogether some 2,000 acres were excluded from the Forest Reserves.

The following estimate of the areas of forest was made:—

Merchantable forest (including bamboo forest)	3,600 sq. miles.
Unprofitable or inaccessible forest	1,500 sq. miles.
Percentage of merchantable forest to agricultural land	7·63 per cent.
Percentage of total land area covered by forest in the Colony	2·08 per cent.

Timber.—The local timber trade was brisk at the commencement of the year, but owing to the general financial depression it slackened considerably. In spite of the slackness of trade prices for local timbers were well maintained.

Saw-mills.—Three new saw-mills were set up in the Government forests during the year, and at the end of the year there were twenty-four mills operating in the forests.

Empire Timber Exhibition.—A collection of twenty-one different timbers of the Colony was exhibited in the Exhibition held in London in July. Much interest was evinced by visitors to the Exhibition in the Kenya Colony timbers and especially in the pencil cedar wood.

Bamboos for Paper Pulp.—A consignment of 500 culms of bamboo having been sent to the Imperial Institute for investigation as a source of paper-pulp material, a very promising report was received, and further investigations as to the growth and areas available for exploitation were in progress at the end of the year.

Silviculture.—A total area of 1,045 acres was planted. A largely increased area was planted with the more valuable indigenous timber trees in mixture with eucalypts; the results of this method so far obtained fully justify its general adoption in all the highland forests.

VI.—COMMUNICATIONS.

A.—Railways.

The estimates for the year's working were based on the assumption that additional revenue would accrue from the introduction of revised rates, but, as it was not thought advisable to increase the rates to the extent considered necessary, the revenue obtained fell considerably short of the amount estimated. The estimates provided for an expenditure of £1,067,488, and a gross revenue of £1,409,974. The actual expenditure for the year amounted to £958,908, and the total revenue was £1,114,825.

The net earnings for the year were £155,916, an increase of £62,043, as compared with the net earnings of 1919–20. They represent a profit of 2·19 per cent. on the capital cost of the railway and steamer service, as against 0·894 per cent. in 1919–20 and 2·33 per cent. in 1918–19.

The total tonnage handled was 258,997, as against 233,844 in 1919–20.

The total goods receipts were £524,022, as compared with £507,898 in 1919–20.

Coaching receipts increased from £211,556 to £253,823.

The tonnage carried by lake steamers decreased from 26,881 carried in 1919-20 to 22,360 during 1920-21.

Two steamers were running on regular services, and these, supplemented by the use of tugs and lighters, proved sufficient for the traffic offering.

The mileage run during the year amounted to 65,075, as against 71,598 during 1919–20.

Owing to the small amount of traffic the s.s. "Sybil," "Nyanza," and "Winifred" were laid up for the whole of the year.

B.—Post and Telegraphs.

The Kenya and Uganda Post and Telegraph Services comprise 126 Post Offices and Agencies, of which 99 are in Kenya and 27 in Uganda. There are 42 Money Order Offices and 122 Telegraph Offices.

The Total Post and Telegraph Revenue of the two countries amounted approximately to £135,879, as compared with £139,027 for the year 1919–20. Departmental Expenditure (including an approximate capital expenditure of £5,027 on new telegraph and telephone lines) was approximately £150,505, as compared with £132,817 for the year 1919–20.

Postal Matter.—The number of letters, post cards, newspaper and book packets dealt with during 1920–21 is estimated at 6,279,468, of which 1,047,542 were official letters. The total represents a decrease of 12 per cent. as compared with the estimated returns for the year 1919–20.

Parcel Post.—117,965 parcels were dealt with, as compared with 98,569 in the preceding year. The increase of 20 per cent. is due to the trade revival, which was particularly marked during the early part of the year but fell away towards its close. The value of parcels imported from abroad was £302,498, as compared with the total of £284,763 for the previous year. Customs duty collected at Post Offices amounted to £30,239.

Post Office Savings Bank of Kenya.—The number of deposits made was 4,765, as against 6,600 for the year 1919–20, a decrease of 28 per cent. The amount deposited was £67,051, as compared with £109,423 (fl.10=£1) for the preceding year. This falling off in the number and amount of deposits is attributed to the existence of more attractive investments elsewhere. Withdrawals numbered 2,959 and amounted to £108,133, as compared with 3,430 and £121,411 during the preceding year. On the 31st March, 1921, the number of active accounts was 2,491, representing deposits to the total of £46,845 and an average of £13 per account. The corresponding figures for 31st March, 1920, were 3,463, £86,623, and £25.

Telegraphs.—The number of inland telegrams forwarded during 1920–21 was 257,255, and the number of cablegrams 51,098. Of these messages 57,086 and 3,028 respectively were forwarded on behalf of Government Departments.

Telephones.—Fifty-seven extensions to existing telephone exchanges were made.

VII.—ADMINISTRATION.

A.—European Areas.

Soldier Settlers.—A large number of soldier settler allottees have taken up their farms in the highlands during the period under review.

Labour Supply.—The supply of labour appears to be satisfactory for the present; a new source of supply has appeared for the East Uasin Gishu by the Marakwet and Elgeyo tribes coming out to work. The initial average wage paid to agricultural labourers is fl.4 per month with food.

B.—NATIVE AREAS.

Administration.—The administration of the native reserves has been put into the hands of a Chief Native Commissioner, who is directly responsible to the Governor.

Land.—Considerable progress has been made in the definition of native reserves, and rules for their internal control are under consideration.

Health and Medical.—There has been no serious outbreak of disease during the period under review. A policy of subsidising medical missions has been extended, and missionary societies have been financially assisted in the institution of medical training schools; there is a marked advance in the work done in native reserves.

Education.—Similarly in education, missionary societies have been stimulated to increased endeavours by capitation grants from Government, and marked progress has been made in Government schools.

Forestry.—Afforestation has been started in the Machakos reserve, and natives of various tribes are being trained in forestry work with a view to spreading a knowledge of its importance through the reserves.

Agriculture.—The native industries are primarily agricultural and pastoral. As far as the Colony's finances permit steps are being taken in the direction of encouraging more modern methods of agriculture and the growing of valuable crops.

Trade.—The trade depression prevailing has resulted in a lack of demand for native products.

Labour.—Due largely to this depression the supply of labour has been greater than the demand throughout the greater part of the period under review.

Missions.—There has been no increase in the number of mission stations.

Departmental—Labour Inspection.—Instructions have been drafted for the care of labour employed by Government Departments. Rest camps are being constructed, and attempts made generally to improve conditions of travel. A considerable amount of inspection work, particularly in fuel-cutters' and other contractors' camps, has been undertaken.

Registration of Natives.—This measure has had a marked effect in reducing desertions and generally steadying employment.

There has been a certain amount of opposition to the measure, but, as a passport, the registration certificate which has to be taken out once only during the native's life imposes on him far fewer restrictions than any system of periodically renewable passes.

VIII.—CLIMATE AND HEALTH.

A.—PUBLIC HEALTH.

The Public Health of the Colony and Protectorate during 1920 again showed an improvement on that obtaining during the War and post-war conditions.

Plague.—Plague problems become increasingly urgent. Epidemics occurred in North Kavirondo, the Kikuyu Reserve, and Mombasa. An organized campaign of rat destruction has been put into operation.

In Kisumu, 41 cases occurred with 28 deaths; 19 of the cases were infected in the town, but the rest were imported. 51,284 inoculations were performed and 12,834 rats killed.

In North Kavirondo it is estimated that at least 1,500 people died of this disease during the year. 38,532 inoculations were done in this district.

Plague appears to be enzootic in the Kyambu District near Nairobi. Cases which occurred in Nairobi from November onwards represent the results of the spread of the epizootic into the town, where by the end of the year 25 cases occurred. Twenty-one cases were also admitted to the Infectious Diseases Hospital from outside the township. 33,000 inoculations were performed in Nairobi, and 7,859 rats trapped.

In Mombasa there were 408 cases and 43,030 inoculations; 152 of these cases occurred among up-country immigrants. Rat destruction has been unsuccessful in Mombasa.

Malaria.—Though this disease occurs throughout the Colony and Protectorate, it is only in the coastal belt, in certain parts of the Nyanza Province bordering on the lake-shore, and in the valleys of the larger rivers, that it is a serious factor affecting the prosperity and development of the population.

Enteric.—Twenty cases occurred among Europeans, but with no deaths; 7 were in Nairobi, as compared with 35 in 1919.

Dysentery.—There was a notable diminution of cases of dysentery, especially in Nairobi.

Cerebro-spinal Meningitis.—Occurred only sporadically.

Typhus.—Though undoubtedly present in the country for some years, typhus or a typhus-like disease was first diagnosed during the year. One case was fatal.

Water Supplies.—The most pressing problems are the increase and treatment of the Nairobi supply and the provision of a better supply for Kisumu. Filtration, and possibly subsequent sterilization by means of liquid chlorine apparatus, will be necessary before any satisfactory result can be achieved.

Native Reserves.—Increase of staff of medical officers has enabled a start to be made in the scheme for medical facilities in the Native Reserves. The policy is being adopted of attacking the infectious diseases of the country at the root rather than to treat cases only in the various townships to which disease has penetrated.

The system consists in the provision of a central hospital with small dispensaries situated in the denser centres of population. By the end of the year two Government centres had been opened with (in North Kavirondo) nine dispensaries.

The Scotch Mission is also doing medical work of great value among the Akikuyu with the aid of a Government subsidy.

Public Health Ordinance.—A comprehensive Public Health Bill has been passed.

IX.—EDUCATION.

A.—ADMINISTRATION, INSPECTION, ETC.

Board of Education.—The Board consisted of seventeen members representing all interests. The Director of Education acted as Chairman and the Senior Inspector of Schools as Secretary. The Board at present has no executive powers and acts as an advisory body to the Governor. All matters bearing on educational policy in Kenya are referred to the Board of Education.

Schools.—The schools under the control of the Education Department include Government Schools for European, Indian, Arab, and Native children, assisted private schools for Europeans and Indians, assisted Mission schools for Natives, and Police schools.

Inspection.—All schools were inspected or examined by the Director of Education and the Senior Inspector of Schools.

The Inspector, Coast Education, was responsible for education in the coastal area, and the Head Masters at Machakos and Eldoret controlled and inspected the schools in their districts.

B.—STATISTICS AND FINANCE.

Number of Pupils.—The average number of pupils on the rolls of schools has increased by 25·4 per cent. in the case of European children, 29·5 per cent. in the Indian schools, and 106 per cent. in the Arab and Native schools, including Police and Apprentices in Government-aided Mission schools.

Revenue showed a slight increase over last year.

Expenditure.—The only items of expenditure which showed an increase were salaries and allowances, grants-in-aid and contingencies.

C.—LITERARY EDUCATION.

European Schools: (1) *Nairobi European School.*—The number of pupils has increased by about thirty. The work of the school has been fairly satisfactory, and pupils will be entered in 1921 for the Cambridge University Local Examinations.

Two new class-rooms were erected and slight structural alterations were made.

(2) *Nakuru European School.*—There was a slight increase in the number of pupils. There is a long waiting list of children who cannot be accommodated until the new school is completed. The work of the school was satisfactory. The new school building has been under construction for three months.

(3) *Central School, Eldoret.*—This school showed an increase of 14 pupils. The progress made during the year was fair. Staff quarters for four Assistant Mistresses were erected, and a School Hospital was also completed.

D.—ASSISTED PRIVATE SCHOOLS AND UNASSISTED MISSION SCHOOLS.

(*a*) *Nairobi High School.*—A Boarding and Day School for girls and boys under 8. The number of pupils increased from 14 to 34. The work of the school was satisfactory.

(*b*) The Parklands and Kilimani Kindergarten Schools were opened towards the end of the year. Each school has about 15 pupils and has started satisfactorily.

Indian Schools.—(*a*) *The Nairobi Indian School* had 223 pupils as against 167 last year, and has done satisfactory work.

(*b*) *The Mombasa Indian School* showed 176 pupils in place of 141 last year, and the work done was satisfactory.

Arab and Native Schools.—*Coastal Area.*—The number of pupils at the Arab School, Mombasa, remained the same as last year, but there was an increase in the number attending the Coastal Vernacular Schools.

At the Malindi School, endowed by the Honourable Sheikh Ali bin Salim, the number increased from 18 to 35.

The work in all the schools was satisfactory.

Police Schools.—These schools did good work, and there was a decided increase in the number of Police attending.

Grants-in-Aid.—Grants for Education were given to the Nairobi High School and the Parklands and Kilimani Kindergarten Schools.

Grants-in-Aid of Technical Education were made to Missions. Grants for Literary Education were made to the Police Schools.

E.—TECHNICAL EDUCATION FOR NATIVES.

Administration.—The Chief Technical Instructor Machakos acted as Inspector of Native Technical Education.

Machakos Industrial School.—The number attending this school increased from 70 to 88. In technical work the progress made was good.

Mission Technical Schools.—The number of apprentices in the four Mission Technical Schools at Maseno, Kikuyu, Tumu Tumu, and Kakamega increased from 195 to 400.

The work done at Maseno was particularly good.

Normal Schools.—Normal Schools for Teachers under European Principals were carried on by the Church Missionary Society at Mombasa and Maseno, and by the Church of Scotland Mission at Kikuyu. The work done in these schools was good.

Unassisted Mission Schools.—In addition to the assisted schools the Missions, both Protestant and Roman Catholic, have maintained their progress in all Provinces. It is estimated that more than 30,000 children are in attendance at the various Mission, Central, and Village Schools.

X.—LAND AND SURVEYS.

A.—LAND.

Alienation of Land.—The total number of grants made during the calendar year 1920 was 74, totalling 392,346 acres, compared with 118 grants during the previous year, comprising 181,502 acres. Of these 74, 51 represent grants in substitution of licences, agreements, old leases and conveyances of farms and plots and subdivisional new leases issued in exchange for titles under the Crown Lands Ordinance, 1915, so that the actual number of new grants was only 23, comprising 14,123 acres; as these included 10 old claims now finally settled, 13 new grants only were made of residential, business, factory, lodge and godown plots.

Land available for Allotment.—Practically all the available land was thrown into the Ex-Soldier Settlement Scheme and allotted, except a small percentage. As the time for compulsory occupation has been extended it is not yet possible to state how many farms will be ultimately relinquished and rendered available for future allotment.

B.—SURVEYS.

During the year the Field Staff has been engaged in completing the survey of the Soldier Settlement farms, Coast Titles Surveys, Road and Township Surveys, and small isolated surveys.

C.—REGISTRATION.

The revenue derived from this Division during the year, amounting to £50,386, shows that there was exceptional activity in the land market during the year.

XI.—GAME PRESERVATION.

Revenue from Licences showed a distinct improvement from £5,595 to £9,279. The number of Residents' and Landholders' Licences showed a large increase from 475 to 618 and Sportsmen's Licences from 15 to 18.

Game Reserves.—Reports from the Reserves are satisfactory.

Principal Game Districts.—Reports from Districts have been on the whole satisfactory, though the drought has considerably upset the movements of game in most of them.

General.—Rapid settlement of the country is driving the game back into the out-districts, otherwise the outlook is good. No species can be said to be in any danger of extermination.

The drop in the price of the rhinoceros horns has tended to reduce the temptation to poach this animal. Zebra, in spite of their removal from the Game Schedule, continue to exist in large numbers and do considerable damage. Elephants are increasing in the Northern Reserve, and continue to do some damage to crops.

XII.—PUBLIC WORKS.

The total of the expenditure of the Department amounted to £303,305, a figure which is 10 per cent. in excess of that of any previous year. In addition to this, further works and services, among which a notable item is the transport expenditure of the Service, were either undertaken or supervised by the Department, and in this connection the Accounts Branch had to scrutinize and pass additional accounts to the value of £103,347, the total value of the year's accounts thus being £406,652.

No individual work of any considerable importance was undertaken, though a contract was let, and work started, for a boarding house at Nakuru School at a cost of £9,700. The aggregate amount spent on works carried out departmentally was £20,090.

A marked degree of improvement was effected in the maintenance and repair of public roads and bridges, on which a sum of £72,789 was spent; and pioneer roadwork was undertaken to improve access to Soldier Settlement farms.

Eight permanent bridges were constructed and the coast ferries were improved; a further small extension of metalled surface was added to the Coast Road north of Mombasa.

The Mombasa Water Supply was maintained at a cost of £1,322. The revenue accruing from the sale of water in Mombasa Island amounted to £13,503. The usual annual instalment of interest and sinking fund on loan money was paid (£4,050).

The number of Government buildings available for the offices and quarters of the staff of the Colony remained inadequate throughout the year, and private premises had to be hired in a large number of localities at a total cost of £18,514.

The Animal Transport Branch, in addition to a large volume of routine work connected with the transfer and movements of officials, handled in Nairobi 99,538 packages or loads, 1,334 tons of sand, lime and other material, undertook local delivery of perishable goods to the hospitals and fuel supplies to Mathari Asylum; cleared and delivered to the General Post Office 17,850 mail-bags and despatched 13,546; and handled without mishap all movements of specie between Banks and Treasury and Railway.

The Mechanical Transport Branch put a further 38 cars into commission, the entire fleet by the end of the year numbering 113. The majority of these were only reconditioned military cars, bought at salvage sales, and their operation was not as economical as could be desired, the average cost of cars and lorries being 1·24 shilling per car mile. This was on an estimated total run of 265,482 miles, speedometers not being available for attachment to all cars and lorries.

A motor mail service from Eldoret through Soy to Hoey's Bridge (32 miles) was opened on 23rd October, 1920, and an additional service from Kisumu to Hoey's Bridge (138½ miles) was instituted on 20th February, 1921, making two double journeys each week.

The Training Depot for African apprentices, which had been seriously interfered with during the war period, was restarted in new premises.

XIII.—POPULATION.

EUROPEAN POPULATION.

The estimated European population of the Kenya Colony and Protectorate on 31st December, 1920, was 7,660. The Census taken in April, 1921, shows that this was an under-estimate, the total Europeans enumerated at the Census amounting to 9,651. This total of 9,651 comprised :—

4,736	adult males.
2,793	adult females.
1,064	males under 16.
1,058	females under 16.

And the following nationalities :—

British	9,025	persons.
American	159	,,
Italian	148	,,
French	77	,,
Russian	62	,,
Swedish	47	,,
Other	133	,,

Occupations were as follows :—

Government officials	956
Military	102
Settlers and farmers	1,893
Professional	204
Commercial	937
Industrial	559
Personal service	182
Missionaries	237

NON-EUROPEAN POPULATION.

(*Non-Native.*)

Excluding natives the estimate of the non-European population as at 31st December, 1920, totalled 30,685. The Census in April, 1921, showed 35,982 enumerated, of which

Indians	22,822
Goans	2,431
Arabs	10,102
Others	627

The principal occupations of the non-Europeans were stated to be as follows :—

	Indians.	Goans.	Arabs.
Government and railway servants	2,482	638	84
Commercial	3,942	426	1,326
Industrial	3,024	357	190
Personal service	726	268	1,475

NATIVE POPULATION.

No Census of the native population has been taken. The total number is estimated at 2,330,112.

COLONIAL REPORTS, Etc.

The following recent reports, etc., relating to His Majesty's Colonial Possessions, have been issued, and may be obtained from the sources indicated on the title page.

No. 1153.

REPORT ON THE COLONY AND PROTECTORATE OF KENYA FOR 1921.*

(1st APRIL TO 31st DECEMBER).

PREFACE.

The territories comprised under the name of "Kenya Colony and Protectorate," until recently known as the East Africa Protectorate, consist of about 248,800 square miles, the eastern boundary of which was defined along the river Juba by an agreement with Italy in 1891, and on the north by an agreement with Abyssinia in 1908. On the west the Colony adjoins the Uganda Protectorate, and on the south the mandated Tanganyika Territory.

The British East Africa Protectorate was proclaimed on 19th November, 1890. In March, 1891, the Imperial British East Africa Company undertook the administration of the country, from which they withdrew on 31st July, 1893, in favour of the Imperial Government. On 1st April, 1905, the administration of the Protectorate was transferred from the Foreign to the Colonial Office; and on 23rd July, 1920, under the Kenya (Annexation) Order in Council, 1920, the whole of the territory, excepting that forming the mainland part of the dominions of His Highness the Sultan of Zanzibar, became the Colony of Kenya. The mainland dominions of the Sultan consist of a strip extending ten miles inland along the coast from the Tanganyika Territory frontier to Kipini, the island of the Lamu Archipelago, and an area of ten miles round the fort of Kismayu, these territories having been leased to Great Britain for an annual rent of £17,000.

PERIOD.

The figures given in this Report are in respect of the period, 1st April, 1921, to 31st December, 1921, (nine months), as the financial year of the Colony has now been changed to correspond with the calendar year.

---

* A sketch map will be found in the Report for 1914–15 [Cd. 8172–7].

I.—GENERAL OBSERVATIONS.

A.—LEGISLATION.

The chief constitutional events of the period under review, viz., 1st April, 1921, to the 31st December, 1921, were:—

(*a*) The Orders-in-Council of the 27th of June, vesting in the Governor, in trust of His Majesty the King, all Crown Lands, Native Reserves being specified as Crown Lands, establishing the Supreme Court, and defining the boundaries of the Colony and Protectorate.

(*b*) The Orders-in-Council of 14th July, reconstituting appeals to the Court of Appeal for Eastern Africa and to the Privy Council.

By the Order-in-Council of 10th August the shilling currency was made legal.

The legislation during the nine months was very heavy; the most important measures were:—

(*a*) Taking of powers to revise the Laws of the Colony and Protectorate.

(*b*) The Public Health Ordinance, which has already shown its great value in many ways.

(*c*) The Specific Loan Ordinance, empowering the raising of a loan of £5,000,000.

(*d*) The Agricultural Produce Export Ordinance, enabling grading and inspection of agricultural produce intended for export by sea, and improved regulations for the preparation and manufacture of exported produce.

(*e*) The Natives' Trust Fund Ordinance.

(*f*) The Territorial Force Ordinance.

(*g*) The Companies' Ordinance.

(*h*) The Native Registration Ordinance, which compiled the Ordinances of 1915 and 1920; and

(*i*) The Game Ordinance.

The Native Punishments and Divorce and Bastardy Laws Commissions were appointed during the year, but did not report before its close.

B.—ALIENATED AREAS.

An increase of magisterial work is noticeable. The Native Registration Ordinance was brought widely in force.

In those parts of the Colony where the division of administration into settled and native areas has taken place, the scheme is reported to be working successfully.

The excellent work of the Nairobi Municipality, particularly in the introduction of a rating scheme, is acknowledged.

In Mombasa much progress has been effected by the Town Planning Authority, the members of which have displayed great energy and foresight in their labours.

It is to be recorded with appreciation that District Committees throughout the alienated areas have continued to give much assistance to the Administration.

C.—NATIVE AREAS.

From all sides an increasing interest in political matters on the part of natives has been observed; in Nairobi there has been started an organization named the East Africa Association, and on the Coast several Arabs have formed an Arab Association. These bodies have not yet declared a definite line of action; in most cases they undergo frequent changes of policy, and they often disappear altogether. The study on right lines of the Colony's concerns is a matter for encouragement, and it is hoped that it will be possible to guide such associations into the path of help, not only to Africans, but also to the Government, the more as an increasing impulse towards education is a strong feature of their demands. Government has sanctioned the institution of Native Advisory Councils in certain districts.

The supply of voluntary labour, augmented by a considerable influx from Tanganyika Territory and Uganda, more than met the demand during the year, notwithstanding the general reduction of agricultural wages. Doubtless the shrinkage of demand due to trade depression contributed to the relief of the labour situation.

The redemption of silver rupees with florin notes, which was carried out during the year, was unpopular with the natives, to whom a paper currency is entirely unsuitable.

Trade throughout the Reserves was dull, and articles of native produce were practically unsaleable.

A raid by a party of Masai on a neighbouring tribe in Tanganyika Territory was the only serious disturbance of the peace.

D.—NORTHERN FRONTIER DISTRICT.

The transfer from civil to military control of the Northern Frontier District was effected in October, 1921.

The general political situation along the Abyssinian frontier was, on the whole, satisfactory. In May. 1921, Dejazmatch Assafou was despatched by the Abyssinian Government to take charge of the border province. This officer's undertaking to pursue peaceful methods has been well kept, though there was a big raid on the Gurre tribe near Neboi, by the Aulihan people, backed by bandit Abyssinians, in August. The raid was frustrated by the King's African Rifles Mounted Infantry.

Towards the end of 1921 steps were taken to move the Turkana people, who for some years had encroached on the Samburu area, back to their own country, and to reinstate the latter, who had been driven south into the Meru district. The Mohamed Zubeir cattle-owning people, who had been moved in 1920 from the neighbourhood of Wajir to the Deshek Wama in Southern Jubaland, drifted back in 1921 to Wajir.

Motor transport in the Northern Frontier District has been reduced, but the value of such transport, especially in cases of emergency, is too great to admit of its abolition.

The collection of taxes was delayed owing to the movement of tribes and the change of administration.

The health of the Northern Frontier District was, on the whole, fairly satisfactory.

E.—POPULATION.

European.

The estimated European population of the Colony on the 31st of December, 1921, was 9,792, which may be classified as under :—

Adult males	4,801
Adult females	2,829
Children	2,162

and by professions as under :—

Government officials	880
Planters and farmers	2,458
Commercial	1,025
Missionaries	171
Professionals	88
Various	179

Non-European.

The estimated population under this head on 31st December, 1921, was 34,888, comprising :—

Indians	22,504
Goans	2,430
Arabs	9,279
Other races	675

Natives.

The estimated native population on 31st of December, 1921 was 2,348,788.

F.—IMMIGRATION.

For reasons of comparison the following figures in respect of 1920 and 1921 are for twelve months, viz., 1st of January to 31st of December :—

Year.	Europeans, Americans and Eurasians.		Asiatics and Goans.		Others, viz., Seychelloises, Cingalese, Natives of Africa, Chinese, etc.	
	Males.	Females.	Males.	Females.	Males.	Females.
1920	3,020	1,685	8,237	1,698	1,005	234
1921	2,635	1,663	5,275	1,215	1,098	239
	Decrease : 407 persons, or 8·65 per cent.		Decrease : 3,445 persons, or 34·67 per cent.		Increase : 98 persons, or 9·75 per cent.	

The total net decrease is 3,754 persons for the year, or 23·64 per cent. less than the figures for 1920.

G.—PUBLIC HEALTH.

Thirteen new appointments of medical officers during 1921 completed the sanctioned staff, and in consequence medical work in the Native Reserves has been largely increased, and the effect in combating infectious disease, as it has occurred, has been striking.

In 1921 the public health has been satisfactory. The close of the year found the whole Colony free from any epidemic disease.

Plague, which was so prevalent in North Kavirondo in 1920, completely died out in the latter half of 1921. Smaller outbreaks in Kikuyu, South Kavirondo, and Nairobi were promptly dealt with, and the disease did not spread.

The year 1921 has seen the inauguration in Kavirondo of a systematic campaign of rat destruction, by which over two million rats were killed. Inoculation is now only performed in the immediate vicinity of an outbreak, and an intensive local rat campaign is organized.

This rat campaign, apart from the consideration of the prevention of disease, will, if sustained, have an enormous effect in the saving of food for human consumption.

Small-pox was reported early in the year on the upper reaches of the Tana river. No figures are available, but it is estimated that 200 natives died. By April the epidemic was over. This was the only outbreak of the disease during the year.

Kala-azar was definitely proved in two cases, one a European, and the other a native. Both were infected in the Northern Frontier District, and both ended fatally.

This is the first time this disease has been identified in the country.

A European child suffering from pseudo-diphtheria was found to be infected by *Monilia tropicalis* (castellani), the first time this fungus has been identified in this country.

The various hospitals have been improved with a view to an increase in efficiency with economy. Special attention has been paid to the treatment of venereal disease, but, as among more civilised communities, much educational work is required before natives can be persuaded to take full advantage of treatment provided for them.

Closer attention to the manufacture of calf lymph has been possible owing to the appointment of a third bacteriologist.

At Mombasa an improvement has been made in the method of sewage disposal by discharge of the night soil into deep water instead of, as formerly, being thrown over the cliff.

During the year the Public Health Bill became law. It has already shown itself to be a useful measure.

The introduction of efficiency bars and compulsory courses of study will be of great assistance in keeping the medical and sanitation services up to date.

Indian candidates for the position of Assistant and Sub-Assistant Surgeons have not been forthcoming. This would be of less importance if facilities existed for the training of Africans for these posts. If possible, an effort will be made in this direction during 1922.

As regards the future it is suggested that in the place of Government medical officers, district surgeoncies should be established in such centres of European settlement as Nakuru and Eldoret. In these districts whole time, fully salaried, medical officers are at present largely occupied in doing non-government work. Unfortunately, so far the prospects for private practioners have not proved to be sufficiently attractive.

Native Reserves.—Two permanent buildings at Kisii and Machakos have been completed. Ample space has been allowed for future extension.

Two new centres have been opened at Chuka and Narok. At the former the buildings are wattle and daub. Within two months the daily average number of in-patients was over a hundred, consisting almost entirely of cases of yaws. It is proposed to establish out-dispensaries in this district, as has been done elsewhere, but at Narok, owing to the nomadic habits of the Masai, it seems advisable to be content with a central hospital. At each of these two stations, as well as at Machakos, a medical officer is in charge.

At Kisii and Kakamega the centres already established have been largely increased. At the former a permanent hospital has been built, and at the latter the accommodation has been brought up to 100 beds. At both stations additional make-shift accommodation has constantly to be improvised to make room for urgent admissions.

The out-dispensaries in the Kakamega district now number eighteen.

Much more work is now being done at the old-established stations at Kisumu and Fort Hall.

At seven out-dispensaries in the Central Kavirondo district, with Kisumu as headquarters, over three thousand patients have been treated during the three months of their existence. At Fort Hall, outside the township, a yaws camp, with accommodation for 100 patients, has been started.

In Central Kavirondo an investigation is proceeding into birth-rate and infant mortality problems. The information gained will act as a guide to measures to be taken to prevent the very large wastage of human life at present existing.

The number of Missions subsidized by Government for medical work has not been increased during the year, and no further applications have been received.

II.—GOVERNMENT FINANCE.

General Revenue and Expenditure.—The sanctioned expenditure for the period 1st April to 31st December, 1921, amounted to £1,828,644, and the actual expenditure to £1,666,785. Before comparing the latter figure with the former, the sum of £27,784 should be added to the expenditure, and £54,231 deducted therefrom, the former amount representing the unexpended balance of 1921 votes on uncompleted works to be carried forward to be expended during 1922, and the latter being the actual expenditure during 1921 on a similar item carried forward from 1920–21. A further deduction of £78,435 should also be made in respect of 1920–21 military expenditure met in 1921. After allowing for these adjustments, the resulting figure is £1,561,903, a saving of £266,741 on the sanctioned Estimates.

The estimated revenue for the period was £1,828,644, but the total receipts from all sources, including £600,000 reimbursement in respect of capital and war expenditure defrayed from revenue, amounted to £1,891,679.

The following table shows the expenditure and revenue for the past six years:—

	Expenditure.	*Revenue.*
	£	£
1916–17	1,796,094	2,300,674
1917–18	2,235,856	2,052,493
1918–19	2,356,057	2,323,054
1919–20	3,037,291	2,589,652
1920–21	2,976,960	2,978,785
1921 (April–December)	1,666,785	1,891,679

Financial Position on 31st December, 1921.—The assets exceeded the liabilities on 31st December, 1921, by £430,521, the figure being arrived at as follows:—

	£	£
Net assets on 1st April, 1921		205,627
Revenue, 1921 (April–December) ...	1,891,679	
Expenditure	1,666,785	
Excess of Revenue over Expenditure, 1921 (April–December) ...		224,894
		£430,521

Currency.—The following new legislation relating to currency was passed between 1st April and 31st December, 1921:—

7th June, 1921.—*Proclamation under the East Africa and Uganda (No. 2) Order-in-Council,* 1920.—This Order provides for the demonetization and redemption of the following coins:—

1. The silver rupee of the late Imperial British East Africa Company.
2. The silver rupee of British India.
3. The half-rupee of British India.
4. The quarter-rupee of British India.

6th September, 1921.—*Ordinance No.* 35, *of* 1921, *relating to the destruction or misuse of currency.*—This Ordinance repeals the Gold and Silver Currency Protection Ordinance of 1920, and provides for the imposition of penalties on persons melting down, breaking up or using otherwise than as currency, any silver coin current for the time being in the Colony or Protectorate.

10*th August,* 1921.—*The Kenya and Uganda (Currency) Order,* 1921.—This Order provides for the minting of a shilling as the standard coin, also subsidiary coins. It revokes the East Africa and Uganda (Currency) (No. 2) Order, 1920, except that, in so far as coins and currency notes are legal tender under that Order, they shall continue to be so until demonetized. In the case of ten cents, five cents and one cent of a florin, it provides that they may be taken to be ten cents, five cents and one cent of a shilling.

7th November, 1921.—*The Kenya and Uganda* (*Currency*) (*No.* 2) *Order*, 1921.—This qualifies the Kenya and Uganda (Currency) Order, 1921, to the extent that ten cents, five cents and one cent of a florin circulate at their face value, and not as ten cents, five cents and one cent of a shilling.

16th December, 1921.—Proclamation under the Kenya and Uganda (Currency) Order, 1921, bringing the Order into operation as from 1st January, 1922.

III.—PROGRESS OF TRADE, AGRICULTURE AND INDUSTRY.

A.—TRADE.

Gross receipts from Import and Export Duty during the period under review amounted to £382,998, from which should be deducted the sum of £35,264, refunded in respect of goods in transit, re-exported, etc.; the net Customs revenue therefore being £347,734, a decrease of £99.643 as compared with the receipts for the corresponding period in 1920.

The total value of commercial imports during the nine months decreased by 54 per cent., viz., £5,183,894 to £2,370,269, as compared with the corresponding period of the previous year. This diminution is due to depression of trade, and in a secondary degree to a fall in the value of merchandise subject to an *ad valorem* import duty.

Imports.

Cotton textiles continue to constitute the most important and largest class of imports, the value of merchandise imported under this heading amounting to 23 per cent. of the total trade imports.

Unbleached cotton piece goods: 44 per cent. of the total value of imports under this heading originated in Japan and 42 per cent. in India.

Other varieties of cotton fabrics, such as bleached, printed and dyed manufactures: 68 per cent. of these goods originated in the United Kingdom; other sources of supply being India, 11 per cent.; Holland, 14 per cent.; other countries, 7 per cent.

Grain and flour represent the second item in importance.

A serious decrease in the value of machinery is that of 71 per cent. as compared with the previous corresponding period. 73 per cent. of the total value of machinery came from the United Kingdom, followed by 12 per cent. from the United States of America.

Provisions: 37 per cent. of this merchandise was received from the United Kingdom.

The value of imports of private merchandise (excluding Government and railway materials, goods in transit, telegraph materials and specie) was distributed among the United Kingdom, British Possessions and foreign countries in the proportion of 40 per cent., 32·60 per cent., and 26·40 per cent., respectively. The share of the United Kingdom is somewhat lower than in most previous years. Japan, for the first time, takes the premier place among the foreign countries supplying goods to this territory, principally on account of the large increase in importation of Japanese cotton goods.

Exports of Imported Goods.

Consignments of foreign goods originally imported for home consumption, but subsequently re-exported to foreign ports, are allowed under certain conditions full drawback of the duty previously paid.

The trade is chiefly carried on through the port of Mombasa, which continues to act as a receiving and distributing centre between East Africa and the neighbouring terrtiories of Tanganyika Territory, Zanzibar, Italian East Africa, and the Belgian Congo.

The re-exports show a slight decrease and represent 21 per cent. of the total imports.

Transit Goods.

The imports under this heading reveal an increase and include £22,673, being produce imported from the hinterland of the Tanganyika Territory.

Exports.

Prior to April, 1917, Uganda collected its duties on produce, and hence statistics were recorded separately. Since then Kenya and the Uganda Protectorate have become one for Customs purposes, and exports of produce from the two Dependencies are shown under one heading.

Produce from the Tanganyika Territory, Belgian Congo, and the Soudan are registered separately.

The combined exports from the two Dependencies during the period under report amounted to £2,111,151, showing a decrease of £1,413,473, or 40 per cent., as compared with the previous corresponding period.

Had it not been for the slump in the prices of local produce owing to the world-wide trade depression, exports would have shown better results.

Cotton heads the list of combined exports from the two Protectorates, and represents 59 per cent. of their total value.

As compared with the preceding period of nine months, the increase in quantity is 91 per cent. and a decrease of 49 per cent. in value, indicating a depression of 73 per cent. in specific value.

Practically all cotton originated in Uganda. Thirty-six per cent. of the quantity was consigned to the United Kingdom, 63 per cent. to India, and 1 per cent. to foreign countries.

The second largest item in order of value is coffee, which represents 12 per cent. of the total exports. The quantity declined by 31 per cent., accompanied by a corresponding decrease of 39 per cent. in value. The average declared value was 64*s*. 6*d*. per cwt. during the period under review, as against 72*s*. 7*d*. per cwt. in the previous year. Seventy per cent. of the total quantity was consigned to the United Kingdom, 9 per cent. to the Union of South Africa, and the balance to various other countries.

The third largest item of exports is fibre, which represents 7 per cent. of the total exports. The shipments are classified under the headings of " Sisal," " Fibre, other sorts," and " Flax."

The quantity of carbonate of soda exported increased largely. One per cent. of the quantity was shipped to the United Kingdom, 14 per cent. to India, and 83 per cent. to Japan.

The fifth item of exports is the group of grain and oil-seeds. The decrease in quantity is one of 35 per cent., or 56 per cent. in value. Of the total quantity, 80,036 cwts. were exported to the United Kingdom, and 35,228 cwts. to British Possessions.

Shipments of hides and skins, which played a prominent part in the exports in previous years, received a set-back. Sixty-nine per cent. of the total quantity of hides and skins were shipped to the United Kingdom, 13 per cent. to Italy, and 14 per cent. to France.

The exports of ivory originating in Kenya and Uganda increased from 321 cwts. to 608 cwts. during the period under report. Fourteen per cent. of the total quantity was shipped to the United Kingdom.

Chillies, a semi-wild crop, thrive exceedingly well in Uganda, and were largely exported during the period under report.

The export of wool increased satisfactorily.

The export of copra receded slightly. Forty-six per cent. of the total quantity was exported to Zanzibar, 43 per cent. to France, and 10 per cent. to India. Besides copra, there was an export of 94,602 coconuts, valued at £392, to India, the Union of South Africa, Arabia, and other places. The by-product of coconut fibre remains practically unutilized, although coir rope, which might be made locally, continues to be imported from India.

Shipments of rubber show a decrease of 64 per cent. in quantity and 69 per cent. in value, as compared with the previous period of nine months.

Shipments of potatoes showed a decrease of 5,593 cwts. as compared with the previous corresponding period. Four thousand and forty-four cwts. were shipped to India, 5,935 cwts. to Zanzibar, and 2,056 cwts. to Tanganyika Territory.

The exports of mangrove poles (locally known as borities) increased. Fifty-seven per cent. of the total quantity exported originated in the Lamu district, 12 per cent. in the Malindi district, and the balance from Kismayu, Vanga, and other places; 58 per cent. of the total quantity were consigned to Arabia, 16 per cent. to India, and the balance to Italian East Africa and Zanzibar.

B.—AGRICULTURE AND STOCK-RAISING.

General.—The depression which had begun in 1919, and continued in 1920, became acute in 1921 in Kenya, as elsewhere. Ocean freights, somewhat late in the day, decreased during the course of the year, but transportation charges generally were higher than the farming industry could afford. Recovery from depression may, however, be anticipated on account of Kenya's remarkable fertility.

The development of bulk export of cheaply produced crops, such as maize, sim-sim, and cotton, on the part of both natives and Europeans, should be aimed at, in addition to increase in the production of crops of high value, such as coffee and flax, with a view to placing the country upon a sounder basis. Government is doing all in its power to bring about this result during the coming year, together with the local production of materials at present imported in large quantities, such as sugar, flour, and rice.

Crops.—The total area under crops in European areas in June, 1921, was 169,685 acres, comprised as follows:—

Maize	53,395	acres.
Wheat	7,858	,,
Barley	1,091	,,
Oats	900	,,
Beans	923	,,
Peas	149	,,
Potatoes	229	,,
Lucerne	391	,,
Coffee	33,813	,,
Sisal	31,050	,,
Flax	14,227	,,
Sugar Cane	2,616	,,
Coconut	10,120	,,
Wattle	10,768	,,
Rubber	2,571	,,
Fruit	2,273	,,
Vegetables	222	,,
Cotton	26	,,
Fodder crops	597	,,
Miscellaneous	586	,,
	173,805	,,
Less catch crops	4,120	,,
Total	169,685	,,

The farming year under review has been a difficult one.

Coffee prospects were good, but not realized. Unpropitious weather conditions in the principal producing areas increased the amount of "Buni" (dried coffee berries), with a corresponding reduction of the mature crop.

Maize yields per acre were low.

Flax yields showed considerable reduction. The dry weather also prevented the retting of the straw, so that the output of finished flax and tow was abnormally restricted.

Wheat, on the other hand, shows an increased acreage, and, with the general desire for better quality, greater attention is being paid to essentials.

Pastoral conditions for sheep were very favourable; in some districts cattle suffered on account of drought. Losses from disease were normal.

Owing to unfavourable weather conditions in the Native Reserves, a general shortage of return from agricultural work was manifest, practically all being seriously affected. This, coupled with inability to dispose of livestock and hides, owing mainly to bad trade and in a small degree to quarantine regulations, has affected the purchasing power of the native population.

East African Stud Book.—The registration of pure-bred stock proceeded, but no volume was published on account of insufficient entries.

Agricultural Census.—The second Annual Agricultural Census (1920–1921), as required by the Statistics Ordinance of 1918, has been completed, and will form the subject of a separate publication.

The increase in areas cultivated and in live-stock compared with the previous Census figures is generally marked.

On 30th June, 1921, there was a total area of 3,333,106 acres under occupation by 1,346 owners, or their representatives, as against 3,157,440 acres and 1,183 on 30th June, 1920. The total area under cultivation by Europeans has increased by 30,669 acres. This area of 206,959 acres represents 6·21 per cent. of occupied area as against 5·58 per cent. for the previous year. These figures disclose sound progress in agricultural activity generally during the year under review, in spite of very unfavourable conditions.

A further estimated area of some 33,651 acres is under occupation by natives. Estimated production (surplus to district needs) and numbers of livestock owned are included in the Census report above referred to.

Statistics of exports for 1921 show a substantial increase in regard to coffee, sisal, flax and pig products, while for the first time small quantities of butter and cheese were exported. The total value of the principal agricultural exports was higher than in previous years.

Land Settlement.—The number of newly inaugurated farms, though small, shows that, in spite of agricultural depression, faith in the prospects of the Colony is maintained.

The price of land has fallen generally.

A successful Agricultural Show was held in December, under the auspices of the Agricultural and Horticultural Society.

Livestock.—European-owned cattle have increased slightly in number. A tendency to favour dairying as opposed to beef-production is apparent among cattle owners. Cattle owned by natives and Asiatics are estimated at 2,478,714.

Horse Breeding is confined practically to the production of animals for sport. The number of horses shows a steady increase.

Sheep Breeding is restricted to certain areas. Few farmers are interested in the industry, which, however, shows room for more extensive development. The export of wool from Kenya is already significant.

Pig Raising is an industry which is steadily growing; the number of pigs shown in the Census is 15,038, an increase of 59·13 per cent.

Veterinary.—Outbreaks of rinderpest on European-owned lands were less numerous in 1921. Double inoculation was widely carried out.

Pleuro-pneumonia continued to spread, more particularly in native areas. Thirty-four outbreaks occurred on European-owned lands. Fifty-six thousand seven hundred and forty-nine head of cattle were vaccinated by the veterinary staff with highly satisfactory results. About half the cattle population of the Colony is involved by the disease.

A few outbreaks of East Coast fever in clean areas occurred. Owing to the financial situation, encouragement by the Government in the building of dips had to be discontinued, and the Cattle Cleansing Ordinance could not be enforced.

Three outbreaks of Foot-and-Mouth Disease and one of Tuberculosis on a European farm were dealt with.

A Quarantine Station for dealing with imported stock has been erected on the railway near Nairobi.

C.—MINING.

Prospecting.

Interest in mining matters showed a continued increase, although the public showed greater caution in taking out licences and pegging claims. No rushes took place during the period under review. One hundred and fifty prospecting licences were issued.

Claims.—Seventy-nine claims were registered, the nature of which were as follows:—

Graphite	5
Mineral (not specified)	2
Galena	20
Coal	2
Oil	50

The following claims remained uncancelled on 31st December, 1921:—

Mineral (not specified)	31
Graphite	18
Galena	24
Coal	2
Gold	60

Sole Prospecting Licences.—Eight sole prospecting licences were issued for cinnabar, diamonds, and gold. In addition, a special exploration licence over 21,000 square miles along the coast was issued for coal and oil.

Leases.—Twenty-seven leases were prepared up to 31st December, 1921, but were not completed.

Development.—Some 250 tons of graphite, valued approximately £2,500, were mined near Machakos for local consumption.

The Galena Reef at Vitengeni near the coast has been opened up and shows promising signs, but operations are suspended for the time being owing to lack of capital.

D.—FORESTS.

The local timber trade received a severe set-back owing to the general financial depression. Throughout the whole period of the report timber merchants had very many difficulties to contend with; competition was severe, often the prices obtained left very little margin for profit, and outstandings were difficult to collect.

534,854 cu. ft. of timber were sold as compared with 702,183 cu. ft. in the preceding twelve months.

180,063 cu. ft. of timber were issued free to Government Departments, free timber permit holders and natives, as compared with 95,459 cu. ft. in the preceding twelve months.

The current retail selling rates show a reduction of eighteen to thirty-seven per cent. as compared with the prices ruling in the early part of the year.

During the nine months 369 tons of timber, valued at £2,627, were exported; the imports of timber amounted to 1,179 tons, valued at £17,527.

Two new sawmills were set up in the Government forests during the period of the report, and there were twenty-two mills operating in the forests at the end of the year.

The total quantity of wood fuel taken over by the railway amounted to 7,690,073 cu. ft., as compared with 8,147,966 cu. ft. in the corresponding nine months of the previous year. The quantity taken over from contractors cutting in forest reserves was 3,343,867 cu. ft., as compared with 2,538,464 cu. ft. in the corresponding period of 1920.

A trial was conducted by the railway of using blue gum fuel. The result of the trial was considered to be entirely satisfactory and to justify its extended use.

Investigations were continued in connection with the utilization of the East African bamboos for the manufacture of paper-pulp, and the results were embodied in a pamphlet prepared in conjunction with notices inviting tenders for two bamboo concessions.

A report was received from the Imperial Institute on the results of the tests carried out on a commercial scale to ascertain the suitability of using Mutundu (*Neoboutonia macrocalyx*) wood for the manufacture of paper-pulp. The results were entirely satisfactory, but owing to the shortness of the ultimate fibres of Mutundu wood, it was recommended that the pulp should be used in admixture with material of longer fibre. It was pointed out that it is probable that the pulp could be utilized in admixture with pulp manufactured from the East African bamboo, as the latter is composed of fibres of about twice the length of those of the Mutundu.

E.—BANKING.

The following banks operate in the Colony :—

The National Bank of India, Ltd. Head office : 26, Bishopsgate Street, London. Branches at : Mombasa, Nairobi, Nakuru and Kisumu.

The National Bank of South Africa, Ltd. Head office : Pretoria. Branches at Mombasa, Nairobi and Eldoret.

The Standard Bank of South Africa, Ltd. Head office : 10, Clements Lane, London. Branches at Mombasa, Nairobi, Nakuru, Eldoret, Kisumu and Nyeri.

Bank of India, Ltd., Mombasa. Head office : Bombay.

Every description of banking business is transacted.

F.—COMMERCIAL AND TRADING POSITION AND PROSPECTS.

Openings for the Investment of Capital.

During the past year the liquidation of stocks bought at high prices during the boom and sold at sacrifice prices in order to obtain working capital commenced, nor can this liquidation cease until stocks become moderate for a normal demand.

In addition to the openings for capital in agricultural production, openings for capital investment are considered to exist to-day in the following industries : Soap, beer, leather, bags and sacks and fibre manufactures such as rope, and, eventually, common piece goods in connection with cotton production, and cement and pottery production when coal is available.

The manufacture of sugar, jaggery, ghee, tanning extract and leather are in hand.

G.—CLIMATE.

The climatic conditions obtaining in this Colony are many and varied, and thus create a difficulty in framing a précis of weather conditions.

Rainfall throughout the Colony may be summarized as extremely " local," while temperature, affected as it is by altitude, is most varied and only uniform in excessive " range."

In reviewing the year **1921**, the one outstanding feature was the almost universal drought experienced through the Highlands.

Extreme deficiency was established at numerous stations, and this condition seriously affected the agricultural community.

The mean temperature was normal.

IV.—COMMUNICATIONS.

A.—RAILWAYS.

On 1st April, 1921, the railways became financially independent of the Colonial accounts, the arrangement being that the Uganda Railway should bear all the losses, if any, and receive all the profits, if any, on the service in Uganda, and that no profit derived from the combined services would be handed to the Colony, but should be used by the railway for payment of loan charges, and any balance thereafter to be utilized for replacements and betterments.

Under the arrangement mentioned above, the net revenue account for the Uganda Railway shows the following results :—

	£		£
To Interest and Sinking Fund Charges, Uganda Railway..	20,640	By Net Earnings from Uganda Railway Revenue Account ..	48,129
Uganda Railway Extraordinary Expenditure	4,872	Net Revenue Account of Port Bell–Kampala Railway ..	455
Loss on Net Revenue Account of Busoga Railway..	7,189		
Balance—Net Revenue	15,883		
	£48,584		£48,584

The estimates provided for an expenditure of £861,536, and an anticipated gross revenue of £931,214.

The actual expenditure for the nine months amounted to £680,883, and the total revenue was £729,012.

The net earnings for the nine months were £48,129, representing a profit of 0·67 per cent. on the capital cost of the Railway and Steamer Service, as against 2·19 per cent. in 1920–21, and 0·89 per cent. in 1919–20.

The total goods receipts were £354,702, as compared with £540,694 in 1920–21, and the Coaching receipts were £162,582, as against £253,823 for 1920–21.

The total tonnage handled was 204,953, as against 265,221 for the previous twelve months.

The trade depression reached its most acute state during this time and resulted in wholesale cancelling of orders by merchants, which reacted on the tonnage of imports.

The upwards goods traffic, which consists mainly of imports, totalled 74,172 tons, or over 21,000 less than during the corresponding nine months of the previous year.

As the freight charges on imports are much higher than on exports, this fall in tonnage affected revenue to a considerable extent.

The fall in revenue would have been still more serious but for the downward traffic, which consists mainly of exports, reaching the high figure of 121,405 tons, or 16,000 tons more than was railed during the corresponding nine months of the previous year. This is the highest tonnage of downward traffic on record.

The tonnage carried by lake steamers amounted to 46,332, which compares very favourably with the 47,557 tons carried during the previous twelve months.

During the period under review the s.s. "Clement Hill" and "Usoga" carried the whole of the traffic offering, supplemented by two tugs and lighters. The steamer mileage run during the nine months was 64,623, against 65,075 for the previous twelve months.

The s.s. "Sybil," "Nyanza," and "Winifred" were laid up for the whole of the nine months.

B.—Roads.

On the maintenance and improvement of roads and bridges a sum of £59,494 was spent, and a marked degree of improvement was exhibited. The examination and survey of new road alignments was proceeded with so far as funds allowed, and a sum of £12,288 was spent on thirty-one projects of new road and bridge work—none of them of great individual importance. Of this sum an amount of £5,420 was derived from premia on the sale of lands, and was used on the improvement of cart tracks to blocks of farms alienated under the Soldier Settlement Scheme.

C.—Post and Telegraphs.

The Kenya Post and Telegraphs Department operates the postal, telegraph and telephone services in Kenya and Uganda. The total revenue showed a decrease of 8·92 per cent., as compared with the corresponding period of 1920, when the departmental expenditure, including the cost of telegraph and telephone construction and maintenance in Kenya and Uganda, showed an increase of 15·83 per cent.

D.—SHIPPING.

Mombasa has been served by six lines of steamers from Europe during the year ending 31st December, 1921: The Union Castle, British India Steam Navigation, Messageries Maritimes, Marittima Italiana, Clan-Ellerman-Harrison and Holland East Africa Line.

The British India Steam Navigation Company's steamers maintain a regular fortnightly service with Bombay and Durban.

The Coast Traffic was carried out by the vessels of Messrs. Cowasjee Dinshaw Brothers, and also by the new coasting service of Messrs. A. M. Jeevanjee and Company, which started running in May. Both services have been fairly regular. The Zanzibar Government steamers also made several calls.

E.—PUBLIC WORKS.

The total expenditure of the Public Works Department amounted to £312,209; a figure in excess of that of any previous year. The overhead charges of the Department amounted to less than 28 per cent. of the cost of work done, or, if there is included a calculated amount to cover interest on the capital value of the buildings occupied and on the value of unallocated stores held by the Department, the overhead charge is less than 36 per cent. of the value of work done.

The principal major works of the year show expenditure as follows:—

	£
Education	10,889
Health	11,976
Public facilities	9,269
Government buildings	8,313
Housing Government staff	6,141
Other works	14,011
Roads.	
Maintenance and repair	59,494
Survey	12,288

The Mechanical Transport Branch maintained a fleet of over 100 cars in commission, though with increasing difficulty, as they had been heavily used salvage stock when first acquired, and had, in many cases, become almost unserviceable under long continued use. The motor mail service on the Uasin Gishu Plateau was maintained.

V.—EDUCATION.

The Acting-Director of Education arranged for the inspection or examination of all Government and Assisted Schools in the Colony, and personally visited most schools.

The schools under the control of the Education Department include Government schools for European, Indian, Arab, and

Native children, assisted private schools for Europeans and Indians, assisted Mission schools for Natives, and Police schools.

Sessions of the Board of Education were held in June and December, and many valuable recommendations were put forward.

Regular medical inspections were carried out in the European schools at Nairobi, Nakuru, and Eldoret, and in the Nairobi Indian and the Machakos Native schools.

The average number of pupils on the rolls of schools increased by 9·2 per cent. in the case of European children, 192·7 per cent. in the Indian schools, and 48 per cent. in the Arab and Native schools, including Police and Apprentices in Aided Mission schools.

At the Nairobi European school one boy passed the London Matriculation Examination, and three children passed the Junior Cambridge Local Examination. A number of children will be ready to take this examination in 1922.

It will be possible at the Nakuru European school to enter candidates for the Preliminary and Junior Cambridge Local Examination in 1922.

The Central School, Eldoret, showed a slight decrease in the number of pupils due to the increase in school fees.

There were five farm schools with an average of 104 on the rolls.

In Nairobi there exists a High School for boarders and day scholars of both sexes under eight years of age, and kindergarten schools in Parklands and Kilimani (suburbs of Nairobi).

The Government Indian school in Nairobi showed a big increase of attendance, whereas the Mombasa Indian school showed a decrease; particular attention is being given to an improvement of the latter's standards.

Seven assisted private Indian schools for girls and six for boys received grants-in-aid. These schools made a satisfactory start.

The Arab School, Mombasa, nearly doubled its numbers. The increase was apparently due to the abolition of school fees, and the work of the school was good.

At the Ali bin Salim School, Malindi, the number of boys showed a good increase. Out-schools are now carried on at Malindi, Mambrui, Ganda, and Mkau Moto. These schools received satisfactory reports.

There were village schools at Takaungu, Lamu, and Gazi with a total of fifty-two boys on the rolls.

Good progress was made in technical work at the Machakos Industrial School, the average on the rolls increasing from 88 to 121. Thirteen carpentry and masonry apprentices complete their course in January, 1922, and thirty in January, 1923.

A most satisfactory start was made at the Coast Technical School, Waa, which was opened in May, 1921, and had an average of ninety-two on the roll. In addition to carpentry and masonry, rope-making is taught at this school.

Mission technical schools are carried on at Maseno, Kikuyu, Tumutumu, Kakamega, and Butere.

The work of normal schools for teachers under European principals at Mombasa, Maseno, and Kikuyu was continued satisfactorily.

A number of unassisted Mission schools outside the control of the Education Department still exist, and the attendance at such schools is estimated at 30,000.

New premises were added to the Training Depôt for African Apprentices, which is under the control of the Director of Public Works, and work proceeded with satisfactory results throughout the year, full use being made of the available accommodation.

VI.—GAME.

The passing of the new Game Ordinance, 1921, brings into force a regulation that it is possible to enforce. The chief alterations are the increase of the visitors' licence to £100, bringing the residents' licence back to original price, £10. Alterations founded on British laws make the present law more workable. Certain relaxations in case of game which had got too plentiful have been made, including lion.

GENERAL.

The outlying shooting districts continue to give good sport, although the drought again upset things badly.

In the Southern Reserve, elephant, rhinoceros, giraffe, and buffalo show considerable increase. A considerable number of elephant calves have been born.

In the Northern Reserve, elephant, rhinoceros, and giraffe suffered severely at the hands of Turkana and Abyssinians during the disturbances in that part.

Elephant.—Have not been so troublesome of late, probably owing to the drought.

Lion.—Have again given considerable trouble and have been put on the " unlimited " list of the new Ordinance.

Buffalo.—Show an extraordinary increase and have been put on the " unlimited " list.

Grevy's Zebra.—An experiment is being made in the capture and training of these animals.

Waterbuck.—The only species of game that is not doing well, the value of hides to the farmer being the chief cause of reduction.

Greater Kudu and *Roan* are entirely protected over the greater part of the country. *Sable* are entirely protected. All ordinary game are doing well.

In settled areas, as can only be expected, game is much reduced.

COLONIAL REPORTS, Etc.

REPORT ON THE COLONY AND PROTECTORATE OF KENYA FOR THE YEAR ENDING 31ST DECEMBER, 1922*.

GEOGRAPHICAL AND HISTORICAL NOTE.

The Colony and Protectorate of Kenya may be described as situated astride the equator on the eastern side of the continent of Africa. Its coastline on the Indian Ocean stretches from 0° 15′ S. to 4° 50′ S. of the equator; its northern boundary reaches 4° N., and its western boundary runs at a general depth of 500 miles from the sea. The precise boundaries of the territory were proclaimed in the Kenya Colony and Protectorate (Boundaries) Order in Council, 1921. The southern boundary runs from the coast in a north-westerly direction, and those portions of the Colony which are most suitable for European occupation lie in the highlands, from 1° to 2° S. of the equator and, in the case of the Uasin Gishu Plateau, within 1° north.

The *Protectorate* of Kenya is a strip of territory along the coastline up to the Tana River, ten miles broad. It includes also the station of Kismayu, in Jubaland, with a radius of ten sea miles landward from that town. It is 2,200 square miles in extent and forms part of the dominions of the Sultan of Zanzibar, from whom it is leased at a rent of £17,000 a year. Kenya *Colony* comprises the remainder of the territory, viz., 242,860 square miles.

From 1895 to 1920 the whole territory was administered by His Majesty's Government as a Protectorate. Until 1905 the Foreign Office directed the administration, but from that year control has been centred in the Colonial Office. In 1920 the hinterland not included in the dominions of the Sultan of Zanzibar was annexed by the Crown and was declared a Colony. A new Constitution was granted, under Royal Instructions of 11th September, 1920, by which the government of the Colony was vested in a Governor and Commander-in-Chief assisted by an Executive Council of five named ex-

---

officio members and such other persons, not holding office in the public service of the Colony, as the Governor may, in pursuance of instructions from His Majesty the King through the Secretary of State for the Colonies, direct. During 1922, two of the elected European and one of the nominated Indian members of the Legislative Council were appointed to be members of the Executive Council.

Legislation in the Colony and Protectorate is enacted, subject to the assent of His Majesty the King, by a Legislative Council, which is composed of ten ex-officio members and a number, not exceeding seven, of officials in the public service of the country, one of whom is specially appointed to represent the interests of the Arab community, together with eleven elected European and two nominated Indian members. On 11th February, 1922, the number of Indian members was raised by Order in Council to four.

Sir Robert Thorne Coryndon, K.C.M.G., was appointed to be Governor and Commander-in-Chief in succession to Major-General Sir Edward Northey, K.C.M.G., C.B., with effect from 19th August, 1922. He assumed duty on 1st September.

I. GENERAL OBSERVATIONS.

It is made clear in the subsequent sections of this report that the dominant activity of the year 1922 was an effort to stem the tide of depression by economy in Government expenditure and by the encouragement of increased production. The trade depression which overshadowed the country during the preceding year and a large portion of the year under review affected all sections of the community and contributed in some measure to discontent amongst certain native tribes, in particular amongst their younger members. Mention was made in the report for 1921 of the formation of native political associations. The most important of these was the Kikuyu Association. A secession from that association, led by a certain Harry Thuku, started an agitation which was supported by a Young Kavirondo Association. It was found necessary to order the deportation of Thuku to Kismayu. This action by Government was welcomed by the responsible native authorities, to whom Thuku's attitude and ascendancy had afforded grave concern.

The policy of the Government in the administration of the native tribes is to govern through the Native Councils of Elders, the Chiefs and the Headmen, and eventually, in proportion to their proved worth, to entrust these Councils with a measure of local financial responsibility and authority.

MEASURES FOR IMPROVEMENT OF CONDITIONS AMONGST THE NATIVES.

During 1922, native interests have been served in the economic sphere by the dissemination of printed instructions on the preparation of ghee, hides, beeswax; by the distribution of 28 tons of seeds of grains, cotton and rice, and by a nucleus of paid agricultural supervisors, instructors and apprentices, whose duty it is to interpret by practical demonstration the advice offered in the pamphlets and in the Government native newspaper *Habari*.

Particular attention has been devoted to the development of cotton and maize. In the Nyanza Province, near the lake, four ginneries will, it is hoped, be ready to handle the ensuing cotton crop, and assistance is given to natives to market their maize and other crops in good condition and to the best advantage. The trade figures, which are given later in this report, attest the success of these activities.

The pastoral tribes present greater difficulties. The question of cattle preservation has received thorough consideration during the year. Unfortunately, there is still no market for frozen or canned meat from this Colony—the expenses of any systematic campaign against disease and for the improvement of types of native-owned stock are very great. A beginning was made with the inoculation on a fairly large scale of native-owned stock against rinderpest and pleuro-pneumonia, but after 25,267 head had been treated with rinderpest serum and 56,677 head with pleuro-pneumonia serum, there was considerable difficulty in obtaining payment of rinderpest inoculation fees. It was found necessary temporarily to suspend these veterinary measures, and attention was diverted towards instruction in the art of preparing ghee.

The ghee trade has great possibilities. In 1920-21 £40,986 worth of ghee (8,137 cwt.) was imported into Kenya, and there is no reason why locally-prepared ghee should not oust the imported article. Local production has been fostered by the imposition of 1*s.* per lb. customs tariff on imported ghee, and the value of ghee imported in 1922 dropped to 4,557 cwt. (value £15,523). As a conservative estimate puts the number of native-owned cattle at two and a half millions, it is manifest that a trade both local and export of considerable magnitude may be established.

Native stock-owners are also being taught how to treat hides for marketing. The removal of the export duty on hides gave an immediate stimulus to this trade, and efforts are centred on improving the quality.

The literary and technical education of natives is discussed later in the general review of education in the Colony. In spite of the economy and staff retrenchment which was perforce practised this year, medical services in the native reserves were not extensively curtailed, though the closing down of some out-district dispensaries was inevitable. The feature of the medical work was the perfection of an effective and inexpensive substitute for the costly drug novarsenobillon (the relative cost is one-tenth of a penny as compared with three shillings per dose) and the treatment with it of over 24,000 cases of yaws, with remarkable success. The most deplorable aspect of native life is the infant mortality which, from test surveys, is estimated in some districts at not less than 400 per 1,000 live births, and must be attributed to insanitary conditions of life as regards both housing and feeding.

PUBLIC HEALTH.

There was happily no outbreak of any epidemic in 1922. Immediate treatment was accorded to sporadic cases of plague, and the rat destruction campaign was efficiently maintained. The general public health has been satisfactory, but there is, naturally enough in a young and growing community which finds itself at the moment financially embarrassed, ample scope for improvement.

The problem of native housing in the towns is acute, but the year has seen an effort to deal with it. In Nairobi a native location has been laid out under municipal auspices, and at the end of 1922 fifty huts were in course of construction. The scheme will be extended in 1923 and will serve as a model for the other towns. Sanitary inspection is performed by Sanitary Inspectors in Nairobi, Kisumu and Mombasa. For the island of Mombasa a town plan has been prepared and will be submitted to Government in the early part of 1923; while at the port the central board of health has promulgated far-reaching port health rules.

VITAL STATISTICS.

The registration of births and deaths is not compulsory save for Europeans, and it is therefore impossible to furnish reliable figures of the birth- and death-rates amongst Asiatics and Africans. Such figures as there are serve to show that in Mombasa the crude death-rate is 16·7 per 1,000 and in Nairobi 21 per 1,000. The Nairobi rate is capable of analysis and reveals crude death-rates for Europeans, Asiatics and Africans of 12·4, 15·6 and 27·9 per 1,000 respectively. Over the whole country the number of European births and deaths was 261 and 89, giving crude birth- and death-rates of 27·04 and 9·04 per 1,000. The basis of the calculation of these rates is the 1921 census, and it may safely be assumed that owing to trade depression the numbers of non-natives have not increased.

The figures of that census are repeated as of interest :—

Europeans	9,651
Indians	22,822
Goans	2,431
Arabs	10,102
Others	627
Total	45,633

The native population is estimated at two and a half millions.

IMMIGRATION.

In 1922, 10,491 persons of alien origin entered the Colony and Protectorate. European immigration decreased by 1,210, and was 3,088. There was also a decline in Asiatic immigration, viz., 5,966, as against 6,490 in 1921. Unclassified immigrants, such as Seychellois, Cingalese and Africans, increased by 100 to 1,437.

There is no machinery for the collection of emigration statistics, but shipping figures show that 3,260 Europeans and 7,184 non-Europeans left Mombasa Port during the year.

II. GOVERNMENT FINANCE.

The financial position of the Colony over the last six years is reflected in the following table :—

Year.	*Revenue.* £	*Expenditure.* £	*Surplus Revenue.* £	*Expenditure in excess of Revenue.* £
Net Surplus as at 1.4.17			578,538	
1917–18	1,368,329	1,490,571		122,242
1918–19	1,548,703	1,570,705		22,002
1919–20	1,726,435	2,024,861		298,426
				442,670
Net Surplus as at 31.3.20				135,868
			578,538	578,538
Net Surplus as at 31.3.20 converted at Rs. 10 to the £ on 1.4.20			203,802	
1920–21	2,978,786	2,976,960	1,826	
1921 (9 months) ...	1,891,679*	1,666,785	224,894	
1922	1,649,032	1,972,212		323,180
Net Surplus as at 31.12.22				107,342
			430,522	430,522

The Colony's finances thus clearly shared in the ill-effects of trade depression. The tax-paying resources of all sections of the community were heavily strained and relief was imperative. By the exercise of rigorous economy the sum of £532,785 was saved in departmental expenditure. Large retrenchments in staff personnel also were made, but, owing to commitments in passages, leave pay and pensions, the immediate effect was not great; and a further reduction was made in the local allowance paid to the European staff. The abolition of the income tax was considered essential to the revival of production, and a reduction in the native hut and poll tax was demanded by the shortage of ready money in the reserves. These inevitable shortages in revenue were further increased by the considerable drop in the estimated value of the import trade, reflected in customs duty which, until September, was on a complete *ad valorem* basis. There was also a decrease in postal revenue.

---

* This includes an appropriation of £600,000 from the £5,000,000 Loan Funds.

Fortunately, unexpected increases in other sources of revenue reduced the total deficit of the year to £323,180. The Colony's assets include certain unrealizable items, such as unallocated stores, and the surplus has been denuded to such an extent since the end of the War that is was found necessary to borrow from loan funds to finance the Colony's current needs. By the end of 1922 a total sum of £1,304,715 had been borrowed, of which £425,656 represents the amount of 1922 borrowings.

CURRENCY.

It should be noted that on 1st January, 1922, the shilling currency came into effect.

III. TRADE.

At the opening of the year business conditions in the Colony were distinctly bad. A reaction had set in from the boom period which immediately followed the War and traders were forced to face the necessity of securing fluid capital by realizing accumulated stocks of imports even at a heavy loss, and of reorganizing their businesses on a less expensive basis. Producers also were being cramped by a fall in the European market in the prices for their principal exports, by the currency change which had in many cases swelled debtor obligations by 50 per cent., and by the apparent cessation of the flow of capital into the country for development purposes. In spite, however, of these difficulties the reorganization of trade and production was undertaken carefully and generally, and the position had vastly improved by the end of the year. The heavy drop in prices reduced the value of the import trade of Kenya and Uganda to £2,871,240, and of the export trade of domestic produce to £2,780,998. The comparative figures for the broken period of nine months from April to December, 1921, were, imports £2,370,269, exports £2,111,151. The volume of trade was, however, maintained; the adverse balance of trade at the close of the year was but 3 per cent.

The general current of trade sets to and from the Empire. The ratio of the trade between the Empire and Kenya and Uganda, and between foreign countries and Kenya and Uganda is as 2 : 1 for imports and 4 : 1 for exports. Within the Empire the value of the import trade was £1,968,800, of which goods to the value of £1,253,130 came from the United Kingdom and to the value of £548,618 from India. In the export of their domestic produce Kenya and Uganda shipped produce to the value of £1,158,125 to the United Kingdom and of £944,393 to India and Burma out of a total Empire export of £2,269,037.

A second point of interest is the prominence which Japan has been securing in local markets. She is the largest foreign consumer inasmuch as she buys £173,614 out of £260,410 worth of carbonate of soda which is one-third of the total foreign export trade of domestic produce; and since 1919 she has made large strides in the unbleached cotton piece goods trade to Kenya and Uganda. This is the principal component of the cotton piece goods trade and, in 1922, 49 per cent. of it came from Japan as against 9 per cent. in 1919. It would appear that Japan has secured this trade at the expense of Indian manufacturers, though it is the case that a large proportion of imported Japanese "Americani" is purchased in the Bombay markets. Of the total imports of cotton fabrics it is of interest to observe that 28 per cent. comes from the United Kingdom, 26 per cent. from Japan, 23 per cent. from India and Burma and 10 per cent. from America. This trade represents one-fourth of the total import trade and three-fourths of these goods are purchased by Africans.

The year witnessed three changes in the customs tariff. In May and June, as means for the assistance of local production, protective tariffs were placed on rice, grains, timber, ghee, butter and cheese, and to increase revenue tariffs were raised against wines, distilled liquors, tobacco, provisions and motor cars and accessories. In September, as the result of a Customs Conference, specific duties were levied on definite articles and the *ad valorem* rates chargeable on articles not so named were revised and consolidated. Export duties were abolished. Further Customs Ordinances were passed to admit free of duty the produce of Tanganyika Territory and to revise the basis on which customs revenue should be divided between Kenya and Uganda. The net customs revenue for the year was £575,595—including sundry collections such as warehouse, transit fees, crane and pier dues, of which Kenya's share was £387,530.

IV. AGRICULTURE.

The general position of agriculture afforded special concern, and a representative committee, presided over by the Colonial Secretary, Sir Charles Bowring, K.B.E., C.M.G., was appointed by Government in March to advise on the means whereby production and exports could be fostered and increased. The principal steps taken by Government on the recommendations of that committee were the abolition of income tax, the imposition of which was considered to be restricting the free flow of capital into the country; the revision of customs tariffs on a protective basis; the encouragement of the cultivation of low-priced produce (maize), by special reductions in railway freight, which were rendered possible by a Government subsidy to the railway; and the remission to soldier settlers of the purchase price of their farms, in order that they might have a negotiable title on which to raise advances for development. The export duty on hides was abolished, and in September all export duties disappeared.

The action taken to effect enhanced production by natives has already been narrated. Amongst the European colonists the acreage of all the principal crops except flax was increased. In acreage planted, maize still leads with 75,444 acres, followed by coffee with 43,359 acres, and sisal with 37,118 acres. During 1922, 10,593 acres of wheat were harvested, but the yield was poor—nine bushels per acre. It is, however, notable that locally-grown flour is now on the market, and a steady effort to oust imported flour is being made; 1,966 tons of local wheat and wheat flour were carried on the Uganda Railway during 1922. Coffee suffered from drought, and the growing of flax has received a considerable set-back owing to the slump in European markets, although the year's export shows an apparently thriving trade: the increased export was due to a decision by growers to sell for what it would fetch the flax which they had held up in the hope of a rise in the market.

The general state of the livestock industry has not altered since 1921. The glut in the markets for frozen and canned meat continued. Efforts to induce the big canning firms to set up factories in Kenya have not hitherto succeeded. There is, in consequence, evidence of greater attention to dairying. The export of butter and cheese is growing, but must retain modest proportions until factories are established.

The recovery in the wool trade has made the rearing of wool-bearing sheep profitable, and in 1922 the export of wool rose to 5,660 cwt. giving a value of £30,111. The quality of wool is being steadily improved by the use of merino rams, and future effort must be directed towards systematic mating. The generous gift for public purposes by Sir Northrup McMillan of the Scott Sanatorium buildings and some ten acres of land is recorded. The buildings have been converted into the Scott Agricultural Laboratories and it has been possible to continue there some of the work previously done at the Kabete Experimental Farm. For reasons of economy, that farm, the Naivasha Stock Farm and the Mazeras Experimental Station were closed down.

V. LAND.

The alienation of land was held up throughout the year pending a settlement of the Indian question. Figures prepared since the end of the year, but applicable in the main to 1922, may be quoted to show the extent to which land has been alienated and the possibilities of future development. Areas surveyed into farms amount to 11,859 square miles; 7,487 square miles have been alienated and there thus remains an area of 4,372 square miles for future alienation. At the end of 1922, 5,944 square miles were under actual occupation by 1,380 Europeans who had brought under cultivation 214,709 acres, and were grazing 172,397 head of cattle, 139,015 sheep and goats, 16,121 pigs and 4,120 horses, mules and donkeys. These figures are eloquent of the scope for new capital.

In normal circumstances leases of land surveyed into farms are put up to auction at an upset price. Leasehold is granted for 999 years, and for the purposes of rent that term is divided into periods. The first period expires on 31st December, 1945, and during it rent at the rate of twenty cents of a shilling per acre is payable. The second period closes on 31st December, 1975, and the rent payable within it is at the rate of 1 per cent. on the unimproved value of the land assessed in 1945. The third period ends on 31st December, 2005, and for those thirty years rent at the rate of 2 per cent. on the unimproved value of the land assessed in 1945 is charged. Thereafter periods terminate on 31st December of every thirty years to the end of the term and rent at the rate of 3 per cent. on the unimproved value of the land, assessed every thirty years, becomes due.

Present land values differ in every part of the Colony and little guidance can be given.

Mineral development plays no great part in the affair of the Colony. Gold has been found in the Masai Reserve; good assays are reported, but at the end of the year it was not established whether the project would definitely prove to be a paying concern. A revision of the mining law of the Colony is under consideration. Some interest was shown in the manufacture of salt at Mombasa and Lamu, but no practical steps were taken.

The Magadi Soda Company exported 48,710 tons of carbonate of soda as compared with 34,980 tons in the broken period, April to December, 1921, and 12,829 tons in the year April, 1920, to March, 1921. It has already been recorded that Japan is the largest consumer of this commodity. The year's export was the largest since 1919 and pointed to an increasing development of this branch of the domestic export trade, but since the end of 1922 the Company has gone into liquidation. Negotiations for reconstruction are, however, in progress. The Magadi Railway, which serves the soda industry, was run at a loss of £260 on the year's working.

FORESTS.

The forest area of Kenya has not yet been accurately computed, but at an approximation the ratio of forest area to total land area is 2·08 per cent. By comparison with most other countries this ratio is very small and although the industrial use of timber in the Colony will never compare with that of highly industrialized countries, the strict conservation of existing forests and reafforestation of denuded areas is necessary to the processes of normal development. The policy of Government for the exploitation of its forests is to submit to tender the right of extracting timber on payment of the prescribed royalties and, in 1922, 851,104 cubic feet of timber and 3,651,678 cubic feet of wood fuel were cut in forest reserves. These reserves cannot, however, be systematically worked and conserved until proper working plans are prepared. At the beginning of the year there were no working plans and there are no funds for the employment of special officers for this work. The existing staff is, however, attacking the task, and by the end of the year had completed a detailed survey of 127·2 square miles of forest. Reafforestation proceeds each year; during 1922, 1,873 acres were planted, including 290 acres in the almost treeless Ulu Native Reserve.

The commercial timbers of the Colony are cedar (*Juniperus procera*), camphor (*Octea Usambarensis*), Musharagi (*O, Hochstetteri*) and Podocarpus (*Podocarpus gracilior and Podocarpus milanjianus*), but their great defect for building and domestic purposes is that they are put into use before they have been properly seasoned. This defect is being diminished by the use of creosoting and may be eradicated if the ozone process proves successful. Growing attention is being paid to the use of cedar for pencil manufacture. Slats to the quantity of approximately 125 tons—or half the total export of timber in 1922—were exported, and it is considered that with strict conservation and proper management the cedar forests of Kenya Colony should be able to provide large and perpetual supplies of wood for pencils. Kenya cedar pencils are now in use and will be on view at the Empire Exhibition in 1924. Considerable quantities of furniture are being made of local timbers, and local trade has been encouraged by the imposition of a protective tariff of 50 per cent. *ad valorem*. There was, however, imported during 1922 timber to the value of £12,567 and the quantity of 1,836 tons.

VI. BANKS.

Four banks operate in the Colony and transact every description of banking business. They are the National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru and Kisumu; the Standard Bank of South Africa, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, Eldoret and Nyeri; the National Bank of South Africa, Limited, with branches at Mombasa, Nairobi and Eldoret; and the Bank of India, Limited, at Mombasa.

On 31st December, 1922, the Government Post Office Savings Bank had deposits in hand amounting to £31,021—the depositors numbering 1,050 Europeans, 1,819 Asiatics, and 431 Africans.

VII. LEGISLATION.

Mention has already been made of the enactment of customs ordinances and of the repeal of the income tax. A further extension for one year of the restrictions imposed on the entry of former enemy aliens was enacted and, as a corollary, provision was made for the compulsory use of passports by travellers—the aim of which was to effect the least possible interference with personal freedom compatible with the exclusion of ex-enemy aliens. The principle of extending court judgments from the United Kingdom to Kenya and vice versa was followed in the passing of the Reciprocal Enforcement of Judgments Ordinance, 1922, and the Maintenance Orders Enforcement Amendment Ordinance, 1922. Better provision for the regulation of the ports of the Colony and Protectorate was made by a Port Ordinance based in the main on the Indian Ports Act of 1908. An important feature of this ordinance is that all vessels of the measurement of 200 tons net register and upwards are required, when entering or leaving Mombasa Port, to have on board a Government pilot unless especially exempted by the port captain.

Power was also taken in the Specific Loan Ordinance, 1922, to raise a further loan of £3,000,000 for harbour and railway development. The loan was, however, not issued by the close of the year.

VIII. EDUCATION.

There are under the control of the Education Department three Government and three assisted schools for European children; two Government and thirteen assisted schools for Indian boys and girls; two Government schools for Arabs and two Government and eleven assisted vocational schools for Africans.

European children can be educated up to the standard of a middle-grade school in England. The schools at Nairobi, Nakuru and Eldoret are combined day and boarding schools and are attended by 312 children. On the Uasin Gishu Plateau there are also some farm schools at which 74 children, mostly Dutch, receive elementary instruction; and the three assisted schools, two of which are kindergarten, have an average attendance of 58. The net cost to Government of educating these 444 children is £14,105.

The type of education offered meets the present requirements, but indicates that pupils do not remain long after they enter their teens. The main reason for this is that they are removed by their parents to complete their education in England. One pass in the London Matriculation and ten in the Cambridge Junior Local Examination were obtained. There is, however, a growing number of parents who cannot afford an English education for their children who will therefore very soon form the nucleus of a Kenya European clerical service and will fill similar positions in commercial firms.

Indians display an increasing desire for the education of their children, and those who become markedly proficient prefer to sit for English public examinations rather than for those of Indian universities. The whole question of staffing the Indian schools with trained and experienced teachers is under consideration. In 1923 a trained staff will be selected after the inspection visit of the adviser on Indian education to the Indian Education Department. On 1st January, 1923, the Allidina Visram High School was opened. This, as its name denotes, was a gift to Indian education and is the best school building in the country. In Mombasa and Nairobi 526 Indian children attend the Government schools which, with the assisted schools, cost £8,650 net in 1922.

The total cost of Arab and native education in 1922 was £24,420, but Arabs do not appear to have taken advantage of the educational facilities provided for their benefit. At Mombasa the roll showed a decrease of three and at Malindi attendance dropped from forty-eight to thirty-six. In the 1921 census the Arab population appeared as 10,102, of which number 3,461 represent children under 16 years of age, and it is a matter for serious consideration that no more than 135 Arab children receive regular instruction.

The vastly preponderating numbers of Africans present the greatest educational problems. Vocational training is the practice in the two Government schools and in the eleven assisted schools, which in all train in various handicrafts a total of 928 boys. Technical instruction outside the scope of the Education Department is afforded to fifty-eight Africans in the Public Works Department apprentice school, and to a larger but indefinite number in the workshops of the Uganda Railway; nor must the successful training at Maseno and in Post Office schools of African telegraphists for the Post Office and of clerks at the Church Missionary Society, Nairobi, be overlooked.

The present policy of Government as regards native education is co-operation with mission societies, between whom in 1922 the sum of £10,896 was distributed for literary and technical education. The figures quoted above refer to regularly apprenticed boys receiving vocational training, but it is estimated that by the ramifications of mission out-schools some 50,000 natives are given at least rudimentary literary instruction. Results of these forms of education are seen in the growing number of clerks in business offices and in Government service, which will in the near future be extended to incorporate an African Civil Service branch; and of artisans employed by contractors on farms and by the Public Works Department. In 1923 the Colonists' Hall will be built entirely by African labour.

IX. COMMUNICATIONS.

Railways.

The railroad system of Kenya comprises at present the main line of the Uganda Railway from Mombasa to Kisumu and two branch lines, one from Magadi Junction to Lake Magadi and the other from Nairobi to Thika. In the near future the system will be extended in two further directions. Of these the Uasin

Gishu Railway has been under construction throughout the year, and at the end of December, 28·66 track miles and 2·38 miles of sidings had been completed. This line takes off at Nakuru and will tap the forests of Mount Londiani and the great latent resources of the Uasin Gishu Plateau. It will eventually be continued and form the main trunk line from Uganda to the port. The second work, viz., the extension of the Thika branch through the Kikuyu Native Reserve to Nyeri has only reached the stage of reconnaissance surveys.

Further corroborative evidence of the beginning of a general trade recovery is afforded by the financial position and traffic record of the Uganda Railway at the end of 1922. After all charges had been met there was a net profit of £56,785, as compared with a net loss in 1921 of £8,870. The increase in upward traffic was due to large importations of construction material for the Uasin Gishu Branch. Downward traffic, however, discloses an encouraging increase from 156,107 to 183,724 tons; and while it is of interest to record that 42,066 tons of maize and maize-flour, 12,239 tons of coffee, and 46,802 tons of soda were carried to the port for export, it is also a significant sign of latent future downward traffic that 940 tons of rice and 2,473 tons of sugar and 2,383 tons of wheat-flour were this year conveyed up-line.

It may be repeated that from April, 1921, the Uganda Railway, as a financial entity, was divorced from the Colony and now bears all losses and retains all profits on its working and is responsible to the Colony's exchequer for the payment of loan charges on new construction and betterment of present lines. The profit of £56,785 has been carried to a Renewals and Betterment Fund.

Throughout the year work was in progress on the construction of a deep water pier at Kilindini.

SHIPPING.

Reviving trade attracted more shipping to Kenya ports. Taking a comparison over corresponding periods of nine months in 1921 and 1922 it is seen that the gross tonnage of steam vessels entered rose to 1,098,667 from 841,495 tons and the number of ships from 240 to 312. The major lines which serve the Colony from England, India and South Africa are the Union-Castle Steamship Company, Limited, the British-India Navigation Co., Ltd., the Messageries Maritimes, the Clan-Ellerman Harrison and the Holland East Africa Lines.

Coastal trade is carried by two Indian steamship lines controlled by Messrs. Cowasjee Dinshaw Brothers and Messrs. A. M. Jeevanjee and Co., respectively. There are also very numerous dhows plying up and down the coast during the south-west monsoon.

ROADS.

It is possible to motor from Nairobi to Kisumu, Eldoret and Kitale, and to the northern frontier through Fort Hall, Nyeri, Meru, Archer's Post, Wajir and Moyale, and up the coast from Mombasa to Malindi. Outside the towns the roads are earth roads, and travel during the rainy seasons is precarious.

The general condition of these trunk roads has deteriorated during the year because of the urgent need for economy and consequent heavy reductions in funds voted for upkeep. The total mileage of roads and tracks open to motor traffic is 3,545. This figure does not include the many hundreds of miles of roads in native reserves cut by administrative officers and made by the natives under their supervision. At the end of 1922 the total number of motor cars and cycles for which licences have been issued was 2,695, of which 417 were issued during 1922.

POSTS AND TELEGRAPHS.

The Postal and subsidiary services of Kenya show a profit of £10,282 on the year's working, which includes as revenue the value of free services for state purposes. Actual expenditure is, however, in excess of actual revenue by £23,821. Revised rates came into force on 1st January, and though no decrease in the minimum charge for letters was made the unit of weight was raised from half-ounce to one ounce in order to conform to international standard. In spite of trade depression a slight increase in postal revenue of £464 may be cited in support of the thesis that diminished rates will produce increased revenue.

Money order traffic is heavy between Kenya and India. £111,175 was remitted to India by money order in 1922, though this amount represents a considerable decrease on normal traffic. A telegraphic money order system internally and reciprocally with the United Kingdom was introduced this year which permits, on payment of 1*s.* to and from United Kingdom and 50 cents. of a shilling in Kenya in addition to the usual charges, the conduct of speedier remittances. £24,578 was thus remitted, but the great bulk of the traffic was internal.

The general activities of the Post and Telegraph Department may best be illustrated by a few figures. The number of letters, postcards, book-packets, samples and circulars handled in 1922 was 6,542,303, of which 2,941,329 came from overseas. A total of 219,245 inland telegrams in Kenya and Uganda, 72,366 cablegrams and 5,113 radio telegrams for Kenya was dealt with. Telephones in use in Kenya and Uganda number 1,196, and, during 1922, 1,317,279 exchange calls were made. The most remote stations are served with postal communication, and the range of the telegraph system is shown by a wire mileage of 5,330¼ miles.

Special mention should be made of the use of Africans in this Department. At the end of this year there were seventeen postmen and seventy-seven telegraph learners. The latter undertake skilled manipulative telegraph duties. It is also the common practice in Government and business offices to employ Africans as telephone operators.

A new issue of stamps and stationery in the shilling currency was placed on sale on 1st November, 1922, and the old rupee issue was withdrawn from sale on 31st October.

X. CLIMATE.

This review of the activities of Kenya Colony may fittingly be brought to a close with a brief mention of the climatic conditions in which they are practised.

On the coast the year 1922 will live in the memory as the wettest year on record. In Mombasa 41·08 inches were registered in the one month of May. Heavy washaways occurred in the coast section of the railway, and visits to various portions of roads torn up by floods in Mombasa formed for a time a popular diversion. In ordinary years the coast is fairly healthy for the tropics. The heat is a damp heat and never compares with the fierce heat of India.

The long rains fall in the months of April to June and short rains during October, November and December. The hot season is from January to March. In rainfall the Colony is divisible into three parts. In the Northern deserts, in Jubaland and in parts of Tanaland the rainfall does not reach 20 inches in a year. The coastal strip, the Nyanza and Kikuyu Provinces have between 40 and 80 inches and the remainder of the country from 20 to 40 inches.

In the Highlands the heat is seldom oppressive; during the rains fires are welcome at night and the climate generally is temperate, though the heat of the sun compels the wearing of helmets or terai from 8 a.m. to 4.30 p.m.

COLONIAL REPORTS, ETC.

The following recent reports, etc., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page.

No. 1227.

REPORT ON THE COLONY AND PROTECTORATE OF KENYA FOR THE YEAR ENDING 31ST DECEMBER, 1923.*

I.—GEOGRAPHICAL AND HISTORICAL NOTE.

The territories comprised in the *Colony* of Kenya are bounded on the east by the Protectorate of Kenya and the Indian Ocean; on the north-east by the Juba River and the south-western boundary of the Italian sphere; on the north by the Abyssinian frontier; on the west by the Uganda Protectorate and Lake Victoria Nyanza; and on the south by Tanganyika Territory, and include certain adjacent islands in Lake Victoria.

The *Protectorate* of Kenya is bounded on the east by the Indian Ocean; on the north by the northern branch of the Tana River; on the west by a line following the line of coast at a distance of 10 sea-miles from high-water mark; and on the south by the Tanganyika Territory. It includes Kau and Kipini, the Island of Lamu, and the Station of Kismayu with a radius landward of 10 sea-miles, and all adjacent islands between the Rivers Umba and Tana.

The territories now comprised in the Protectorate of Kenya were the subject of many conquests before they were recognised in 1862 by the British, French and German Governments as part of the dominions of the Sultan of Zanzibar. In December, 1886, the limits of the Sultan's mainland dominions were defined by agreement between Great Britain and Germany. The Sultan claimed sovereignty over the hinterland stretching westwards beyond the above limits, but his claims were never recognised by the Powers. Explorers, slave-raiders and missionaries had penetrated into the interior as far as and beyond Lake Victoria Nyanza before the inauguration of a Colonial policy by Germany in 1885 led to a definition of spheres of influence between Germany, Italy and Great Britain in these East African regions. Between Great Britain and Germany the line which is now the boundary between Kenya and the

(16213) Wt. 17442/1179 625 12/24 Harrow G.94

Tanganyika Territory was agreed upon in a Procès-Verbal dated June, 1886, and confirmed in an Agreement dated July 1st, 1890. Similarly, in 1891, the spheres of influence between Great Britain and Italy were arranged and a north-easterly boundary to the British zone was fixed, viz., the River Juba up to 6° of latitude. It was not, however, until 1907 that the northern limit of the British Protectorate of East Africa was set, but in that year an agreement was reached between Great Britain and Abyssinia. This boundary has since been adjusted from time to time.

In the meantime a concession over his mainland dominions within the British zone, that is to say, the territories now comprised in the Protectorate of Kenya, had been granted in 1887 by the Sultan of Zanzibar to an association of merchants, styled the "British East Africa Association," for the administration and good government of those territories subject to his sovereignty. This association also extended its activities in the hinterland within the British zone and made agreements with various native tribes. On September 3rd, 1888, the association obtained from the British Crown an Imperial Charter, under the title of the Imperial British East Africa Company, extending both over the area under concession from the Sultan of Zanzibar and over the hinterland; and on October 9th, 1888, the Company received from the Sultan a fresh concession on substantially the same terms as that given in 1887, save that the Sultan was allotted one founder's share in the Company and a portion of the Company's profits. The Company's posts were spread through the hinterland and into Uganda during the first three years of its Charter, but on August 20th, 1891, it announced its intention of withdrawing from Uganda. This announcement was confirmed on May 17th, 1892, and on June 18th, 1894, a British Protectorate over Uganda was notified.

In 1895 the Company withdrew entirely from East Africa, and on July 1st of that year a Protectorate was declared by the British Government on August 31st, 1896, by means of a public notification that all territories in East Africa then under the protection of Her Majesty, except the islands of Zanzibar and Pemba and the Protectorate of Uganda, were to be included, for the purposes of administration, in one Protectorate under the name of the East Africa Protectorate. By agreement on December 14th, 1895, between Great Britain and Zanzibar, all assets purchased by the Sultan's Government from the Imperial British East African Company at the time of its surrender of its concession became the property of the British Government, which agreed to pay to the Sultan's Government the annual sum of £11,000, as well as a sum of £6,000, representing interest at 3 per cent. on the sum of £200,000 disbursed by the latter for the surrender of the Company's concession, and for the purchase of its assets.

The whole country was thus brought under the operation of the Foreign Jurisdiction Act of 1890. In 1920 those territories in the East Africa Protectorate which lay outside the limits of the Sultan's dominions were formally annexed to the British Crown, with effect from July 23rd, 1920, and named "The Colony of Kenya." The territories on the coast rented from the Sultan were proclaimed as the Kenya Protectorate by the Kenya Protectorate Order in Council, 1920, issued under the Foreign Jurisdiction Act of 1890, and the machinery of Government set up in the Colony of Kenya was applied to the Protectorate.

The first Governor and Commander-in-Chief of the Colony and Protectorate of Kenya was Major-General Sir Edward Northey, K.C.M.G. (now G.C.M.G.), C.B. He was succeeded on September 1st, 1922, by the present Governor and Commander-in-Chief, Sir Robert Thorne Coryndon, K.C.M.G.

II.—GENERAL OBSERVATIONS.

The dominant political feature in the history of the year was the decision upon the status of Indians in Kenya embodied in Command Paper No. 1922, dated the 23rd of July, 1923. This question had been a source of contention for a considerable time, and by the beginning of 1923 had become a matter of Imperial policy. In March the Governor was summoned to England to confer on this question with the Secretary of State for the Colonies, and the European and Indian communities, with the Secretary of State's approval, appointed delegates to accompany the Governor and represent them in the discussions in England.

The history of the various steps which had led to the position in 1923 is set out briefly in the Command Paper referred to above. The following is a summary of the decisions of His Majesty's Government on the various points at issue.

In respect of political status, it was decided that "having regard to all the circumstances the interests of all concerned in Kenya will be best served by the adoption of a communal system of representation." Five seats on the Legislative Council were allotted to the Indian community and one seat to the Arab community all on an elective basis. An enquiry was to be set up regarding Indian representation on the Municipal Council of Nairobi. Segregation in townships was to be abolished; and while the reservation of the highlands for Europeans was maintained, the temporary reservation of land in the lowlands outside the limits of native occupation and requirements was promised for Indians, in order that "it may be ascertained by experience what demand there is for agricultural land on the part of Indians who will give suitable guarantees of their intention to develop the land themselves." As regards immigration, it was made clear that the immigration laws of Kenya had no racial basis.

The decisions rested on the broad basis of the British trusteeship for the African, and it was clearly recorded that the primary duty of the Colonial Government is the advancement of the African.

His Majesty's Government thought " it necessary definitely to record their considered opinion that the interests of the African natives must be paramount, and that if, and when, those interests and the interests of the immigrant races should conflict, the former should prevail "; and further, that the Act of Annexation in 1920 " in no way derogates from this fundamental conception of the duty of the Government to the native races. As in the Uganda Protectorate, so in the Kenya Colony, the principle of trusteeship for the natives, no less than in the mandated territory of Tanganyika, is unassailable."

During the last quarter of the year, after the return of the Governor, the implementing of the Imperial Government's decisions was set in hand, but no legislative enactment was possible before the year closed.

MEASURES FOR THE IMPROVEMENT OF NATIVE CONDITIONS.

The administrative policy of the Government has consistently been to guide native affairs through the hands of their own chiefs and tribal organisations, and gradually to teach them the art of government. This policy was so far successful that the native war record was one of which they and the Administration alike had every reason to be proud. The new experiences, however, which came to hundreds of thousands of natives from their intimate contact with other tribesmen and with Europeans at war, inclined them, on their return to normal conditions of life, to be somewhat impatient of tribal control. In 1921 and 1922, native associations were formed by the younger members of certain tribes, and the trade depression of the latter year lent wings to half-fledged discontent. Fortunately, 1923 has proved to be a prosperous season. The natives may be said to have settled down, not only to field work, but also to work out their own evolution along sound lines. The associations have tended to become a social rather than a political force, and the active co-operation of Government with native aspirations towards material progress has been seen in the wise handling of administrative problems by the Officers of the Administration, who have become in some cases Vice-Presidents of native associations, in the increase of medical facilities, and in the agricultural education given by a growing staff of supervisors. It is difficult to arrive at any exact calculation of the economic output of the natives. Figures are incomplete, and possibly deceptive, and any division of export and transport statistics between natives and Europeans must be to a large degree guess-work.

The success of the methods which have been adopted to increase the earnings of the natives from agricultural sources is shown in later sections of this Report.

Steady progress has been made in the production of ghee, and the possibility of establishing some simple form of creameries for native butter and ghee has been explored. A large number of natives has been engaged and trained as veterinary scouts to detect outbreaks of cattle disease, supervise quarantine areas, and to give instructions in better methods of ghee production, and the preparation of hides and skins. The headway made in the control of disease is shown by a few figures :—

Rinderpest Inoculations	13,061
Contagious Bovine Pleuro Pneumonia ... treated.	82,000

A striking illustration of the change which is gradually coming over the life of the native was seen in January of 1924, when an agricultural show was held in Nyanza Province. This show was attended by about 25,000 natives; 1,500 head of stock of different kinds were exhibited, and about 650 exhibits of produce and some 600 articles in the arts and crafts section were sent in by natives of the district. Mention is made of the show in this Report because it was the culmination of efforts made during the year under review.

The conditions of the live stock industry remained stagnant, unfortunately, during 1923, but it is still hoped that the establishment of canned meat factories will not be long delayed.

Considerable progress was made in the medical work in native reserves during the year. The total number of in-patients treated at hospitals during 1923 was 32,229, as against 37,384 in 1922, but the number of out-patients increased from 165,538 to 245,554 owing to the greater use made of the 46 sub-dispensaries in charge of African dressers, at which 110,509 patients were treated. No new central hospitals were opened in 1923, but some idea of the extent of the activities of the doctors in charge of these African hospitals is obtained by a glance at the figures of the three essentially native reserve stations, and, in order to show how the work has expanded, comparative figures for 1922 are also given.

	In-patients.		*Out-patients.*		*Out-dispensaries and treated by Medical Officer on tour.*	
	1922.	1923.	1922.	1923.	1922.	1923.
Chuka ...	4,470	3,757	552	1,775	Included under out-patients	5,672
Kisii ...	5,624	2,796	3,565	8,306		22,811
Kakamega	2,179	1,105	27,071	9,271		28,017

There was a great extension of the medical campaign against yaws: 64,344 cases were treated, compared with 24,233 in 1922, and this increase has been made possible by the more frequent tours of Medical Officers, and, in the Fort Hall district, by the stationing at the out-dispensaries of African dressers specially trained to give injections of bismuth. The expansion of this campaign was facilitated by the perfection and use of extremely inexpensive substitutes for novarsenobillon, and there has resulted a most marked and welcome change in the attitude of natives to the European doctor. Whereas formerly the doctor and the hospital were feared, now natives have gained confidence from the knowledge that thousands of their fellows have been quickly cured of a widespread crippling disease.

This is shown by the increased number of applicants for admission to hospital, and of those who are willing to submit to prophylactic treatment against such menaces to public health as plague and smallpox. In 1922, 18,737 persons were inoculated against plague, and 57,246 were vaccinated. In 1923 the respective figures were 122,460 and 56,345. The accommodation of the native hospitals at Mombasa, Nairobi and Kisumu has been severely strained (the total accommodation at Nairobi is 190 cases), and during the year extensions were added, e.g., a dysentery ward at Nairobi, at Kisumu a new ward with 20 beds.

The training centre for African dressers is the Nairobi Native Hospital, where quarters for 15 learners have been provided. A beginning has also been made with the training of African dispensers. It is also the case that at the Bacteriological Laboratory six Africans were engaged in 1922, and are making good progress. A curriculum has been drawn up, and in the course of a few years (the normal training will be three years) African assistants will, it is hoped, be ready for drafting to out-stations and be capable of performing all the more ordinary microscopical and other examinations required in the routine work of a hospital.

Attention is directed to the action taken to reduce drunkenness in native reserves by the enactment of the Sugar Ordinance, 1923, the purpose of which is explained later in the section of this Report on Trade and Agriculture.

PUBLIC HEALTH.

Though no epidemic occurred during 1923, there was a disquieting prevalence of small outbreaks of plague. None of these was severe, but it is clear that the range of this disease is spreading, and, as the resources of the country are developed, it may be expected that the incidence of plague will also grow. Further research work into the epidemiology of plague is necessary. Vaccine is now produced locally in the Bacteriological Laboratory.

The incidence of pneumonia during 1923 calls for remark. The figures from five sources outside the reserves show that 1,223 cases were treated, of which 385 terminated fatally, a percentage of 31·5. Included in these are the figures from the Uasin Gishu Railway, where, owing to climatic and other conditions, the incidence and mortality were higher than elsewhere.

Though many more natives applied for treatment for leprosy in 1923, it is not considered that this disease is extending, but rather that confidence in Government doctors is increasing. During the year, 236 cases were reported, as compared with 81 in 1922: the bulk of this increase occurred in Chuka, Kisii and Kakamega. Accommodation for lepers has been provided at these stations. There are also leper settlements at Malindi and Lamu in which respectively 48 and 8 lepers are resident.

The public money available in 1923 was insufficient for the institution of any ambitious schemes of sanitary improvements, but progress on modest lines has been made, more especially in the provision of improved quarters for natives in towns. In Nairobi the Corporation and the railway have commenced the erection of well-built ranges of dormitories of permanent construction, but funds are not yet available for a complete scheme. Meanwhile, the plans have been drawn up in readiness against the time when loans are raised for this purpose. Similarly, in Mombasa a town planning scheme has been provisionally approved, and the provision of loan funds is urgently required in order that final approval may be given and new building work may be possible.

VITAL STATISTICS.

No census of the non-native population has been taken since 1921, and the native population is the subject of a rough estimate only. The registration of European births is compulsory, and the relative statistics for 1923 are as follows:—

Births: 194, or a crude rate of 20·1 per thousand.

Deaths: 65, or a crude rate of 6·6 per thousand.

The respective figures for 1922 were 27·04 and 9·04.

Reliable figures of these rates amongst Asiatics and Africans cannot be given, but, taking the total population of certain towns and the total number of deaths reported, it appears that in Mombasa the crude death-rate was 16·6 per thousand, as compared with 16·7 in 1922; in Nairobi it was 23·5, as against 21 in 1923.

The population figures, as in 1921, are recorded in the Census Report as Europeans, 9,651; Indians, 22,822; Goans, 2,431; Arabs, 10,102; others, 627; i.e., a total of non-native population of 45,633. The native population is estimated at 2½ millions.

IMMIGRATION.

Prior to 1923 there had been no differentiation in immigration statistics between immigrants who remained in Kenya and those who travelled to Tanganyika Territory, Uganda or elsewhere. Similar figures of gross immigration for 1923 record that 3,430 Europeans, 6,075 Indians, 688 Goans and 2,881 Arabs and others passed through Kenya ports. Emigration statistics are compiled from shipping lists, which include also all travellers embarking at Kilindini, whether from Kenya or elsewhere. These lists contain the names of 3,374 Europeans, 4,433 Indians and 582 Goans. A comparison of immigration and emigration must be based on these two sets of figures, from which it appears that in 1923 the balance was in favour of immigration, viz., 56 Europeans, 1,642 Asiatics and 106 Goans. It was possible this year to compile from the available records figures of immigration into Kenya only, from which it was seen that 2,845 Europeans, 4,406 Indians, 583 Goans and 2,670 Arabs and others entered the Colony and Protectorate as new arrivals or returning residents.

Steps are now being taken to secure the more accurate compilation of statistics of immigration and emigration.

III.—GOVERNMENT FINANCE.

The financial position of Kenya over the last six years is reflected in the following figures :—

		£	£
	Net surplus as at 1/4/18	456,296	—
1918/19 ...	Revenue, £1,548,703 (*a*).		
	Expenditure, £1,570,705 (*a*).		
	Expenditure in excess of revenue	—	22,002
1919/20 ...	Revenue, £1,726,435 (*a*).		
	Expenditure, £2,024,861 (*a*).		
	Expenditure in excess of revenue	—	298,426
	Net surplus as at 31/3/20	—	135,868
		£456,296	£456,296
	Net surplus as at 31/3/20, converted at Rs. 10 to the £ on 1/4/20 ...	203,802	—
1920/21 ...	Revenue, £2,978,786 (*a*).		
	Expenditure, £2,976,960 (*a*).		
	Revenue in excess of expenditure	1,826	—
1921	Revenue, £1,891,679 (*b*) (*c*).		
(9 months)	Expenditure, £1,666,785 (*c*).		
	Revenue in excess of expenditure	224,894	—
1922 ...	Revenue, £1,649,032 (*c*).		
	Expenditure, £1,972,212 (*c*).		
	Expenditure in excess of revenue	—	323,180
1923 ...	Revenue, £1,839,447 (*c*).		
	Expenditure, £2,137,633 (*c*).		
	Expenditure in excess of revenue	—	298,186
	Net deficit as at 31/12/23	190,844	—
		£621,366	£621,366

Notes.—(*a*) Including Railways.
(*b*) Including £600,000 appropriated under Item 4 of the Specific Loan Ordinance, 1921.
(*c*) Excluding Railways.

The budget for 1923 was framed so as to provide for a surplus balance of revenue over expenditure of £27,634, and if it had proved possible to limit expenditure to the sanctioned Estimates the year would have ended most satisfactorily, with a surplus of £125,000, as the actual revenue exceeded that estimated by £54,785, and apart from extraordinary charges there was a saving on estimated expenditure of £42,721. Heavy charges which had not been foreseen, and which were of an extraordinary and non-recurrent nature, chiefly arising out of the War, had, however, to be met, and as these amounted to £423,326, the anticipated surplus balance was turned into the large deficit of £298,186. Thus also in the statement of the Colony's assets and liabilities the net surplus of assets over liabilities of £107,342, at December 31st, 1922, was wiped out, and a net deficit registered of £190,844.

There was no change during the year in the public debt of Kenya, which stood at £5,000,000. Of this loan, £913,885 was spent in 1923, bringing the total amount spent up to £3,838,436.

During this decade the Colony has passed through a period of difficulties and financial depression, due in many respects to outside causes, such as currency inflation, over which it had no control, and it is a high tribute to the resources of the country and the energy of all communities in it that its financial position at the end of 1923 was no worse than it was. It was most unfortunate that the heavy unanticipated items of expenditure, to which reference has been made above, should have become necessary this year, with the effect that the surplus, which there was every reason to expect would result from the economy and retrenchment practised in 1922 and 1923, has been converted into a deficit. There is, however, ample encouragement to be drawn from the picture of the trade and development of the country which is presented in the succeeding section of this Report. The advances in production made during 1923 were remarkable, and given productive spending and an avoidance of increased taxation, there is every ground for believing that progress will continue.

IV.—TRADE AND AGRICULTURE.

Kenya and Uganda form one administrative unit for the purposes of customs, and complete freedom of trade between the two territories exists. Customs barriers were removed in 1917, and this removal has without doubt been of considerable value as a means of fostering trade, though it has increased the minor difficulty of ascertaining the respective trade of each country. It will be recalled that in 1922 an Ordinance was enacted to revise the method of division of customs revenue between Kenya and Uganda: it provided that there should "be payable annually to the Government of Uganda a sum which bears the same proportion to the net revenue collected by the

Customs Department as the total net duty collected on goods imported into or exported from Uganda bears to the net total duty collected." Consequently, the greatest care is now taken to ascertain the quantity and value of goods imported through Kenya for consumption in Uganda, and similarly the quantity and value of domestic exports originating from Uganda: and although complete accuracy is not claimed it has been possible to extract a fairly approximate indication of the separate trade of the two countries.

From January 1st, 1923, a modified system of inter-protectorate free trade was adopted, under which the produce of Tanganyika Territory is admitted into Kenya or Uganda free of duty.

The year 1923 is notable for the fact that for the first time in the trade of Kenya and Uganda a favourable balance of trade was recorded. This balance was 19 per cent., and was struck on these figures:—

	£	£
Trade Imports into Kenya and Uganda	**4,257,843**	
Add Imports of Bullion	**44,731**	
Add Government Imports	**1,130,500**	
Add Goods in Bond	**226,595**	
	5,659,669	
Deduct Government Imports	**1,130,500**	
Net Imports		**4,529,169**
Domestic Exports	**3,996,432**	
Add Re-Exports and Exports other than of Domestic Produce	**1,380,690**	
		5,377,122
Balance in favour		**847,953** (or 19 per cent.)

This result of the year's trade is the more satisfactory because it was achieved in a year immediately following one in which trade depression had been severe. The total value of imports, exclusive of bullion and Government imports, rose from £2,871,240 in 1922 to £4,257,843, an increase of 48·3 per cent.; while the comparative values of the exports of domestic produce showed a rise of 43·7 per cent., i.e., from £2,780,998 in 1922 to £3,996,432 in 1923.

The total trade imports (excluding Government imports, bullion and parcels post) amounted to £4,045,065, i.e., £3,130,674 imports for consumption in Kenya and Uganda plus £914,391 re-exports, which, with the importation by parcels post of articles to the value of £212,778, gives the figure of £4,257,843 quoted above. An analysis of the imports for consumption in Kenya and Uganda gives a total of £1,249,548 for Uganda, and of £1,881,126 for Kenya. A similar analysis of the domestic exports' trade discloses a trade of £2,431,477 from Uganda, and of £1,504,955 from Kenya. These figures are quoted in order to afford a reflection of the Colony's trade, but they cannot be considered as more than an approximation. They are, however, sufficiently accurate to show that the export trade of Kenya is but in its infancy.

With the exception of the minor amendments embodied in the Customs Tariff (Amendment) Ordinance, 1923, the Tariff imposed by the Customs Tariff Ordinance, 1922, operated without alteration throughout the year under review and proved markedly successful both as regards general smoothness of working and the yield of revenue. The net revenue rose from £575,595 in 1922 to £779,731, and was considerably in excess of expectations entertained before experience of the effects of the new tariff, the general purpose of which was to substitute specific for *ad valorem* duties, had been gained.

Kenya's share of this revenue was £429,128, as compared with £387,530 in 1922.

IMPORTS.

The heaviest class of imports was again cotton yarns and manufactures which, with a value of £1,342,276, represents nearly one-third of the total import trade of the two countries. This figure includes a trade in cotton piece-goods of £1,087,891, of which Kenya's share is assessed at £347,724. The import of cotton piece-goods provides a reliable index of the prosperity of the native population, for it is estimated that the natives account for three-fourths of this trade. The efforts made during this year towards the increase of production in the Native Reserves, which form one of the most important features of the year's record, will result in a largely increased import of this class of goods, and as the importance of this trade will increase it is as well to observe the sources from which it comes. The largest class of cotton textiles imported is "unbleached cotton piece-goods," and, in this branch of the trade, Japan has improved the position remarked on in 1922, and now has captured 56 per cent. of the trade as against 49 per cent. in 1922 and 8 per cent. in 1920. Of the other branches the United Kingdom supplies 79 per cent. of the bleached, 81 per cent of the printed, 62 per cent. of the dyed piece-goods.

Certain other imports are selected for comment as regards the bearing which the condition of the trade in them has on local production.

(1) *Rice.*—The importation of foods is mainly for consumption by the immigrant races. It is thus natural that rice forms the largest import as it is the staple food of Indian and Arab. During 1923 the import of rice fell from 111,470 cwt. in 1922 to 88,923 cwt., and some £20,000 less was spent on it. It may be estimated that the bulk of the rice imported was consumed

in Kenya, as Uganda imports nearly all its rice from Mwanza in Tanganyika Territory. These figures do not, however, reveal any increase in Kenya production, for Mwanza in Tanganyika Territory is the source of the local rice which holds the market, and it is significant that, though rice grows well along the Tana River and has been grown there in small quantities by the natives, Mwanza rice is sold more cheaply in the bazaar at Lamu. The possibilities, however, of rice production on a large scale, especially along the Tana River, are indisputable, and will attract greater attention when present transport difficulties have been surmounted. It is on the southern banks of a portion of this large river that an area of 100,000 acres was during the year set aside temporarily for exclusive development by Indians. During the year, 1,020 lb. of rice seed were issued in the Nyanza Province, and six tons of rice, sufficient to plant up 25,000 acres, were distributed by the District Commissioner at Lamu amongst the natives along the Tana River. A beginning has thus been made to grow rice on a moderately large scale, and so to supplement the cultivation in small patches which has been practised at the Coast for years. The fact that locally-grown rice can be placed on both local and export markets well ahead in time of the Indian produce should prove a valuable asset in the cultivation of rice in Kenya.

(2) *Sugar.*—Sugar is another food of which the local production is increasing. Its import is discouraged by a specific protective import duty of 12s. per 100 lb. The largest sugar factory is that owned by the Victoria Nyanza Sugar Company, at Kibos, near Kisumu, which handles cane grown in the vicinity, as well as on the Company's land; but sugar is manufactured also, though in smaller quantities, near Thika, and another factory is in course of erection at Muhoroni. These factories, in conjunction with another large mill being erected in Uganda, should within the course of two years give the two Dependencies an exportable surplus.

In certain Native Reserves, especially the Akamba Reserve, there has been prolific cultivation of sugar-cane. The cane was sold to millers, crushed into jagree, and re-sold to the natives, who then allowed it to ferment. Drunkenness increased to so alarming an extent that it became of vital importance to the well-being of the tribe to prohibit the manufacture of jagree. Special powers to this end were taken in the Sugar Ordinance, 1923, enacted on December 14th, 1923, which prohibits the supply to a native directly or indirectly of sugar juice extracted by the use of any machinery designed for or capable of producing sugar juice, and the possession of a mill or other apparatus within proclaimed areas except under permit from Government. Large quantities of cane should therefore become available for the legitimate purpose of being turned into sugar, both for the local and export market.

(3) *Wheat.*—The local production of wheat and wheat flour has also shown an encouraging increase. A protective tariff of 5s. per 100 lb. on wheat in the grain, and of 6s. per 100 lb. on flour, was imposed in 1922, and combined with the local production has resulted in the drop in the import of wheat flour from 59,817 cwt. to 47,599 cwt., valued respectively at £63,775 and £40,362.

(4) *Tea.*—There are signs of activity in the local growth of tea. Experiments in tea planting have been undertaken locally —chiefly in Uganda—and six tons were moved on the railway during the year. The local market is not unattractive, and is capable of very considerable extension, owing to the fondness of natives for tea, when they can procure it.

(5) *Salt.*—The possibilities of producing salt locally occupied attention during the year, but without definite result; though at the time of writing renewed interest is being manifested. The value of the import of salt in 1923 was £12,928, of which 55 per cent. came from Italian East Africa, and the remainder from Egypt and Arabia. There is reason to expect that salt sufficient for the local market could be produced locally, as the climate on the Coast at and north of Lamu is the same as that of Italian East Africa.

(6) *Fuel Oil.*—Before leaving the scrutiny of the import trade, the increase in the importation of fuel oil during 1923 from 2,499,827 gallons in 1922 to 3,558,236 gallons, should be noted. The bulk of this import is still re-exported as fuel for ships using Kilindini harbour, but the increase may in no small measure be attributed to the fact that by the end of 1923 all locomotives on the railway between Kilindini and Voi, a distance of 104 miles, were burning oil.

(7) *Motor Vehicles and Bicycles.*—Finally, the figures for the import of motor vehicles exemplify the necessity of motor transport in this country of great distances and as yet undeveloped communications. During the year, 309 motor-cars, 66 motor-lorries and tractors, 345 motor-cycles, were imported at a cost of £76,443, with accessories to the value of £29,408. Of this trade Kenya's share was £47,801 worth of motor-cars and accessories, and £6,744 worth of motor-cycles and accessories, and an unestimated portion of the £9,700, which was spent on lorries and tractors; further the import of motor spirit doubled itself in 1923, and 684,878 gallons out of 911,869 imported for home consumption were consumed in Kenya. The number of motor-cars and cycles registered in Kenya at the end of 1923 was 2,865, the net increase in licences issued being 170. The proportion of motor-vehicles to the European population is 1 to 4. Evidence of the growing fondness of natives for bicycles is found in the importation of 2,761 in 1923.

EXPORTS.

In commenting as briefly as possible on the chief features of the export trade, it is convenient to include remarks on the agricultural development which has occurred in the production of various raw materials.

(1) *Cotton.*—The largest export is cotton, which originates almost entirely in Uganda. In amount this export was 395,095 centals, the declared value of which was £2,163,253. Uganda was credited with the sum of £2,090,750, and Kenya with but £3,026 (the balance of £69,477 being re-exports from Tanganyika Territory and Belgian Congo). Kenya is, however, setting itself to the cultivation of cotton. The areas in which this crop will grow are limited, as the necessary low altitude combined with suitable soil, humidity and warmth, is found only round the shores of the Kavirondo Gulf and the neighbouring shores of Lake Victoria Nyanza in the South and North Kavirondo districts, and in certain parts of the Embu district, and at the coast. The area on which efforts have so far been centred is the Lake area. For a number of years the growing of cotton had been encouraged by the Administration, but no systematic effort to set the production of this crop on a proper basis, and equip it with the necessary machinery of ginneries and buying posts, was made until 1922. In that year, Agricultural Supervisors were detailed for this duty, and facilities were offered by Government for ginneries. One ginnery was established, but could not cope with all the cotton grown, and natives sold the bulk of their crop in Uganda; consequently, the export value of £3,026 is not an accurate index of the amount of cotton grown; and notwithstanding the number of ginneries now being established, it is to be anticipated that a good deal of the cotton grown during 1923 will also find its way across the border to Uganda, and so be included in the export figures of 1924 as Uganda produce. During 1923, 168,000 lb. of cotton seed, sufficient for 16,000 acres, were distributed by Government, and it is estimated that the matured output of this sowing will be 2,000 bales or 8,000 centals. In comparison with the total export of cotton, this is of course but a trifle, but as the result of little more than a year's effort, it is an encouraging indication of what can be done. At the time of writing there are in situ four ginneries, and another two are in process of erection; arrangements have also been made for the establishment of a further two. On December 14th, 1923, the Cotton Ordinance was enacted, empowering the Governor-in-Council to make rules affecting the selection and distribution of cotton seed, the control of buying and ginning, and the general supervision of the culture of this crop. On the same day another ordinance was enacted to provide for the imposition of a cotton tax of six cents of a shilling per lb. in respect of all cotton ginned

in this Colony. This enactment was necessary in the interests of uniformity with the practice in Uganda, and as Government provides seed, and supervises the cultivation of the crop, its operation is not harsh.

(2) *Coffee.*—The second largest export is coffee. The quantity exported in 1923 was 235,497 cwt., of which 32 cwt. was "prepared coffee"—an increase of 33,127 cwt. on the 1922 output, and of £215,879 on the value of that year's crop, the 1923 value being £760,633. The distribution of the crop was as follows :—

From Kenya...	139,028	cwt. valued at	£491,181	
	32	,, ,,	235	(prepared)
,, Uganda	45,372	,, ,,	129,716	
,, Re-Exports (chiefly from Bukoba) ...	51,065	,, ,,	139,501	
	235,497		£760 633	

The export of Kenya and Uganda produce shows an increase of 43 per cent. on the 1922 figures of quantity, and of 64 per cent. on the relative figures of value. The year was thus a very satisfactory one for the growers. As usual, the largest buyer was the United Kingdom. 8,890 acres were brought under cultivation, chiefly in the Thika, Kyambu, Uasin Gishu and Trans Nzoia districts, and at the end of the year there were in all 52,249 acres under coffee, of which 26,777 were in bearing.

The rapid progress of the coffee-growing industry is indicated by the fact that in a period of ten years the value of exports of coffee originating in Kenya and Uganda has increased from less than £50,000 to its present figure of £620,897.

(3) *Maize.*—The export of maize from Kenya in 1923 was 874,701 cwt. (of which 105,141 cwt. appears to have been grown on the coast), an increase of 123 per cent. on the 1922 figure of 393,769 cwt. Its value is recorded as £249,545, i.e., 68 per cent. more than the 1922 figure of £148,910. The popularity of maize planting amongst European farmers is steadily rising. At the end of 1923, 99,764 acres in European-owned farms were under maize, i.e., 32 per cent. more than in 1922; and for 1924 it is expected that 120,000 acres will be planted. The actual figures of European-grown maize harvested were 517,877 bags of 200 lb. each, i.e., 924,780 cwt., or 2,500 tons more than the total maize export, without touching the heavy output from Native Reserves. In fact, the export comprises European and native grown maize. Compulsory maize grading was instituted late in the year, as the result of a conference of maize growers. The Agricultural Produce Export Ordinance of 1921 was put into operation as regards maize on November 1st, 1923, and on November 28th an amending ordinance was enacted to provide for "block-stacking" by the Uganda Railway. Eight grades of maize were established under Rules of August 28th, 1923, and

arrangements were made for the installation of a maize drying and cleaning plant, which it is hoped will be erected during 1924. The present permitted moisture content is 14 per cent., but revision downwards is contemplated, so as to bring Kenya into line with other maize-exporting countries. Every assistance has been afforded in this matter by the Railway Administration, which provided storage and siding facilities. The export of maize is also encouraged by the provision of the low flat rate of 1s. per bag to consignors, for an average haul of 470 miles; the encouragement being given by Government, which in 1923 paid a subsidy to the railway of £5,355.

It is impossible to arrive at any reliable estimate of the total amount of maize grown by the natives in the Colony and Protectorate. It is one of their staple foods, and such figures as can be obtained refer only to that surplus to their requirements, which is sold both for export abroad and for consumption locally in the towns, and by labour employed throughout the country. 56,482 tons were carried on the railway in 1923, and after deducting 38,478 tons carried purely for export, a balance of 18,004 tons remains, plus an export from the coast districts of 5,257 tons as part of the surplus production of maize consumed locally. The price obtained by natives for their maize varies considerably, according to the place of sale, and it may be possible to introduce the system of buying-posts for maize as for cotton. The cultivation of maize is advancing by leaps and bounds, and within a very few years it appears reasonable to anticipate that export will be on a very extensive scale. At present the oversea market prices encourage production, but, as output increases, and prices tend to drop, costs of production and handling will require to be overhauled, the latter process being simplified probably by the adoption of a grain elevator system.

(4) *Sisal.*—Sisal production in Kenya is now on a thoroughly sound basis; and prices in 1923 were maintained at a level which permits of adequate profits. The acreage in Kenya under sisal increased by 1,908 acres to 39,026 acres during 1923; and the export of sisal and sisal tow for this year was 8,820 tons, at a value of £236,044, as compared with 8,970 tons, at a value of £259,344 in 1922—a slight falling off both in quantity and value—the latter averaging £26 15s. 3d. a ton. The whole of this crop is grown in Kenya.

(5) *Hides and Skins.*—The figures of the trade in hides and skins for 1923 were :—

	From Kenya.	*From Uganda.*	*Re-Exports.*
	£	£	£
Hides	**90,840**	**27,394**	**53,235**
Skins (Sheep and Goats) ...	**27,233**	**7,091**	**14,626**
Skins (other Animals) ...	**340**	**13**	**159**

making totals of hides £171,469, skins £49,462, as compared with 1922 export value of £109,110 and £52,986 respectively.

The bulk of this trade is in the hands of the natives, whom it is very necessary to teach proper methods of flaying, drying and curing. This subject is being taken up by the Administration and by the Veterinary Department, and officers on leave are in some cases taking advantage of facilities for instruction offered by tanning companies in England.

V.—LAND.

The alienation of land by the usual method of public auction was in abeyance again this year until by the settlement of the Indian question in July, the embargo on land sales was raised. It was, however, not possible to hold any sales during the remainder of the year. As a result of the decisions referred to on page 5, two areas of land in the lowlands, in which there was no native occupation, were temporarily ear-marked for development exclusively by Indians.

During the year, 259 titles, 62 representing grants in substitution for licences and agreements, and for titles held under the Crown Lands Ordinance 1902 and 1915, were granted, the majority of which concerned lands alienated under the ex-soldier settlement scheme; the acreage covered by these titles was 459,315, of which 55,048 acres were the subject of the aforesaid 62 titles.

Business in land transactions revived; the number of transactions was more than doubled (11,295 in 1923, as compared with 4,965 in 1922), and revenue from registration fees, stamp duties and conveyancing fees rose from £31,484 in 1922 to £35,492 in 1923. The disproportionate increase in revenue was due to the reduction of the scales for the assessment of mortgages and other instruments, from 1 per cent. to ¼ per cent., which involved a loss of potential revenue to the amount of £9,611. It was also noticed that frequent use was made of memoranda of lien instead of mortgages.

It is of special interest that this year saw the practical completion of the scheme for examining all claims to land in the Protectorate. The legal machinery under which courts of investigation have worked since 1908 is the Land Titles Ordinance, 1908, and an aggregate of some 10,000 titles has been awarded. A small balance still remains, due to the failure of original applicants to proceed further with their claims.

Two laws affecting land were enacted during 1923. The Stamp Ordinance, 1923, was assented to on February 28th, 1923. Its purpose was to consolidate and amend the law relating to stamps, and a prominent feature in it was the adoption of the over-embossing system of stamp-cancellation, which should prevent fraud and leakages of revenue. An amending ordinance was passed later in the year, the object of which was to give a person, presenting a document to a revenue authority to ascertain the duty chargeable, some form of appeal against the authority's decision.

The Land Surveyors Ordinance was enacted on February 28th, 1923, and established on Dominion lines the profession of land surveying in Kenya. It provided for the registration and discipline of licensed surveyors, and made it possible to insist on as high a standard of work as is required in any of the British Dominions.

MINES.

Gold was discovered in certain areas of the Masai native reserve by prospectors in 1921, but little tangible result was achieved, and it is still doubtful whether these discoveries will prove payable. Towards the end of November, 1923, a new discovery was made near the boundary of the Masai reserve and the South Kavirondo District, and during the last few days of the year numerous parties of prospectors set out for this area. 450 prospecting licences were issued, as against 68 in 1922. An amendment to the Mining Ordinance of 1912 was under consideration when the year closed, and until the amendments can be brought into law, renewals of sole prospecting licences already granted under the 1912 Ordinance have been granted for periods of six months: seven of these licences were issued in 1923.

The Magadi Soda Company went into liquidation, with a view to reconstruction, during the early part of the year and, consequently, from April to July there was practically no railway traffic in soda. The total export for 1923 was 31,762 tons, valued at £142,917, of which Japan took 15,519 tons; the 1922 export being 48,710 tons. Owing to the reduced traffic the Magadi Railway was run at a loss of £5,307, as compared with a loss of £260 in 1922.

FORESTS.

It is possible only to estimate the ratio of forest area to the total area of the Colony at 2·08 per cent., which is by comparison with other countries very small. The great bulk of the forests are under Government control, and timber cut in them is subject to the payment of royalties; the Forest Department also sells a certain amount direct to consumers. Twenty-three mills were at work during the year, but only during the latter months were they fully employed, and throughout the year the largest individual concession, the Grogan Licence Forest, turned out very little timber. The total amount of commercial timber cut during the year (on this basis of calculation) was 580,434 cubic feet, of which 57,523 cubic feet were exported, the local trade thus accounted for 522,911 cubic feet, or 10,458 tons. In addition to this consumption of local timber there was an import of 211,949 cubic feet, mostly (196,520 cubic feet) on Government account. Local timber, however, is still used without being properly seasoned. This is a state of affairs which requires careful examination, and at the time of writing it is receiving attention.

Cedar.—The only wood for which separate export figures are given in customs returns is cedar (*Juniperus procera*). The entire export of cedar is from Kenya, and appears as 56,875 cubic feet—out of the total export given above of 57,523 cubic feet. This wood is chiefly exported in the form of slats for pencils, and pencils made of properly selected Kenya cedar are practically indistinguishable from those made of Virginian cedar, except to the expert. The quantity of firewood cut for local consumption amounted to 10,589,400 cubic feet, of which 9,325,941 cubic feet were for railway fuel.

Mangrove.—The balance of forest output consists of mangrove poles and firewood exported entirely to Benadir and eastern ports from the Kenya Protectorate. The number of poles exported increased from 308,102 in 1922 to 364,618, but the increased number produced a smaller return in value, the relative figures being £5,178 in 1923 and £6,222 in 1922.

Timber Tests.—Certain interesting timber tests on samples of Kenya woods were performed during the year at the National Physical Laboratory, Teddington. Sample pieces, which, with two exceptions (Muzaiti and Muhugu), had been stored for a year at the Forest Office, Nairobi, to be dried out, were despatched in December, 1922, to England to be tested for compression, shear, bending, cleavability and moisture determination.

Musaizi (*Weihea africana*) and Musharagi (*Olea Hochstetteri*) gave high results in all tests, and the moisture content of the woods which had been stored in Nairobi varied from 10 per cent. to 15 per cent. Taking all the results into consideration the timbers may be placed in the following order of merit :—

Musaizi (*Weihea africana*).
Musharagi (*Olea Hochstetteri*).
Mueri (*Pygeum africanum*).
Mukao (*Dombeya Mastersii*).
Podocarpus gracilior.
Muhugu (*Brachyleana Hutchinsii*) } equal.
Podocarpus milanjianus
Muzaiti (*Ocotea usambarensis*) (Camphor)
Cedar (*Juniperus procera*) } equal.
Mutati (*panax pinnatum*)

While the results of these tests are most valuable, it should be borne in mind that timber, unlike metal, is not uniform in structure and composition, and there is a considerable range in variability in each species. It has been stated that in testing timbers of the same kind and grade differences of 25 per cent. between individual specimens may be expected in conifers, and as much as 50 per cent in hardwoods.

Re-afforestation.—During 1923 a further area of 1,677 acres was planted, of which 1,034 acres were planted with indigenous species. At the end of 1923 the total area of plantations amounted to 11,726 acres, including 644 acres of planted mangroves. Of this acreage, 7,848 acres are planted with exotics and 3,878 acres with indigenous species. Natural regeneration of Muhugu was also successfully secured in the Nyeri Forest over 18 acres prepared for the purpose. Over 2½ million trees were raised in the nurseries, of which 2 millions were planted out, as compared with 1,772,000 in 1922.

Survey.—The absence of working plans was remarked on in last year's report, and it was stated that the existing staff had succeeded in completing a detailed survey of 127·2 square miles of forest. This work proceeded during 1923, and a further 45 square miles were surveyed. There is still a considerable shortage of staff for this work.

VI.—LEGISLATION.

Mention has already been made of the enactment of the Stamp Ordinance, and of the minor amendments introduced into the Customs Tariff law. It had been decided in 1921 to undertake a revision of the laws; to this end a Revised Edition of the Laws Ordinance was passed in that year. It was not found possible, however, to proceed with revision until 1923, and consequently an amending ordinance was required to authorise the revisers to continue their work up to the end of the year 1923. The remainder of the legislation of this year, which comprised 17 amending and 19 new ordinances, is of local interest only.

VII.—EDUCATION.

Facilities for the education of young European boys and girls up to the standard of a middle-grade English school are afforded in Government schools at Nairobi, Nakuru and Eldoret, the Kenton College at Kijabe, and at farm schools on the Uasin Gishu Plateau. The staff of masters, mistresses and matrons employed at the Government schools for Europeans amounts to 28, and the pupils to 478; the net cost to Government of European education being £14,444.

The children for the most part are between the ages of 7 and 14 years, only approximately 20 per cent. being over 14 years. It follows, therefore, that but a few scholars each year reach the standard of the Cambridge Junior Local and London Matriculation examinations.

A considerable activity in the school committees of the various Indian schools was apparent during the year, and an increase in the number of scholars from 1,298 to 1,403 was recorded. Of this total number of children 620 attend the Government schools at Nairobi and Mombasa, and the remainder are taught at the 12 assisted and 1 unassisted schools, of which there are 5 at Nairobi, 4 at Mombasa, 2 at Kisumu, and 1 each at Machakos and Naivasha. It is of interest to notice that 8 of these Indian assisted schools are girls' schools, with a total roll of 542 girls. Amongst Indians also the large majority (two-thirds) of the scholars are between the ages of 7 and 14. The net expenditure by Government on Indian education was £8,000, and the staff employed comprised one senior headmaster and 25 Indian teachers. The course of study framed in the Indian schools has been based on the curriculum adopted in the schools of Bombay and the Punjab. Some difficulty has, however, been experienced in the bi-lingual character of the media of instruction and in the number of sectarian schools, which increases the cost of administration, and various proposals for co-operation were under consideration by the School Committees at the close of the year.

African education has occupied considerable attention during the year, and though much remains to be done, the year's effort is by no means unsatisfactory. The scope of this effort is reflected in the following figures :—There are in all 939 schools, in which 43,311 pupils receive teaching from 238 Europeans and 1,326 Africans. These figures include every sort of school. The schools which are managed or aided by Government number 314, and at these 14,226 pupils are taught the elements of education, and 742 are undergoing vocational training. The expenditure on Arab and native education in 1923 was £12,637, and an additional sum of £9,865 was distributed as grants to missions. Too great emphasis is not laid on literary education, and especially in village schools the curriculum has been adjusted to promote the improvement of village life, and whatever occupation the native finds in a village has been made the subject of interest in the village school. The measure to which the training of Africans in the technical schools has succeeded is shown in the sections of this report dealing with the Railway and Post Office Departments, and while it is of great advantage to the African to be trained for such specialised work, it is of equal—if not greater—importance to train him to be of greater economic value in his reserve, where his training will be turned to account in improving the conditions of life in the reserves.

On the literary side the supply of Africans fitted for clerical work is now sufficient for the organization by Government of an African clerical service. A scheme has been approved locally and definite terms of service have been drawn up.

VIII.—COMMUNICATIONS.

RAILWAYS.

The Uganda Railway found itself in a very favourable financial position at the close of 1923, and the reduction of railway rates, the construction of the Uasin Gishu line, and the impending extensions of branch lines towards Nyeri, Solai and Kitale, and of the main artery to Uganda reacted upon production. Goods traffic in 1923 exceeded that in 1922 by £150,024, but a decrease in passenger and other traffic reduced the net excess of railway receipts in 1923 over those in 1922 to £145,248. The gross earnings for the year amounted to £1,237,736, the gross expenditure to £822,385, and the net excess of revenue over expenditure to £300,910. This sum has been carried to the credit of the Renewals and Betterment Fund. The greater proportion of this net excess was attributable to the close scrutiny exercised over expenditure, £223,822 (or 21·39 per cent.) less than the approved estimates being spent; and notwithstanding the very much higher scales of wages now in operation, the comparative percentage of expenditure to gross receipts in 1923, viz., 66·44 per cent., was to all intents and purposes the same as it was in 1914-15 (66·42 per cent.). The percentage in 1922 was 87·21.

Although it is necessary to maintain revenue from import traffic, the railway administration has not lost sight of the desirability of a gradual reduction of import rates because of its efforts to assist in building up the agricultural industries of both Kenya and Uganda. Since 1921 reductions have in fact been made in the rates for no less than 210 commodities, of which 158 were effected in 1923.

The route mileage of lines as at January 1st, 1923, was 776—of which 67 only are in Uganda, and in the latter part of the year the first two sections (32 miles) of the Uasin Gishu extension line were completed, and the Voi-Kahe railway, 91 miles in length, was purchased from the Imperial Government. On the Uasin Gishu line there were at the end of 1923 still 108 miles to complete to bring the line to Turbo, and this line is now to be extended to link up with the Busoga Railway, a distance of approximately 165 miles. The extension of the Thika branch railway towards Nyeri, as far as the Tana River—58 miles—was begun during 1923, and other branch lines to the extent of 140 miles in Kenya, and 40 in Uganda, are contemplated; and, if the whole programme is approved according to its present schedule, the mileage of the whole railway system in Kenya and Uganda will be 1,410 miles. The Uasin Gishu railway is being built by contractors—Messrs. Griffiths and Co.—under the control of a resident engineer appointed by the consulting engineers. Work on the Nyeri extension was commenced in 1923, under the direction of the Chief Engineer of the Uganda Railway and his construction staff—the actual construction being in the hands of various small contractors for sections of work at prices fixed after tenders had been invited. It is considered that this method will be more economical.

Concurrently with new construction, the main line of the Uganda Railway between Mombasa and Nairobi is being gradually relaid with 80 lb. rails. This will enable a train to be hauled very much in excess of the present loads. The present 50 lb. rails will be used in the proposed new branch lines.

The bulk of the passenger traffic receipts came from the 3rd class passengers, who in 1923 paid £86,618 out of a total of £169,925 in fares. This sum was received from 576,800 passengers, practically all native—for Indians very seldom, and

Europeans never, travel 3rd class—and clearly illustrates the use of the railway to the natives. First-class fares were reduced in 1923, and, though the number of passengers who travelled during 1923 was greater than in 1922, there was a decrease in revenue from this source of £5,276.

As the native is increasingly the largest traveller on the railway, so is his importance in the internal economy of the railway growing. He has for years done all the manual labour on the line, and in 1923, apart from the labour employed on new construction, 10,207 natives worked as labourers on the Uganda Railway—an increase of 1,798 on the 1922 total. There has been a marked increase in the numbers of skilled native labour employed, viz., from 1,093 in 1922 to 1,559 in 1923; and as a corollary to this fact, it may be noted that recruiting from India has ceased. The employment of natives is of course much more economical than that of imported staff. In the Nairobi workshops the extent to which natives are employed is seen from the decrease in the number of Asiatics from 553 to 271, and from the reduction in the wages bill, which—in December, 1923—was approximately only one half of the expenditure in January, 1923. Some other figures will be of interest. There are 165 native firemen, 73 native goods clerks, 60 native signallers, 32 native engine drivers, and 8 native guards in the regular employment of the railway. The re-installation of the Tyers tablet system of train working between Mombasa and Nairobi, which was effected in June, 1923, has enabled the employment of native train operators for night work at most of the small stations on that section of the line. A system of native apprenticeship was introduced in 1923 with wholly satisfactory results. The native has proved himself an apt pupil, surprisingly quick in picking up mechanical work, and in the opinion of the General Manager there is not the slightest doubt that in the course of a few years the Colony will possess a large body of well-trained, specialized native mechanics. The increase in the numbers of natives employed led to the introduction of a general system of grading in June, 1923, together with standard rates of pay, and regulations governing leave, sick leave and allowances. Shortly after the end of the year the sanction of the Secretary of State was obtained for the utilization of the unexpended balance of the capital grant for the building of new railway offices and staff quarters. Preliminary steps in the drawing out of plans were taken in 1923, and at the time of writing considerable progress has been made in the construction of model African housing: sites for improved subordinate staff quarters and headquarter offices in Nairobi are under consideration. Twenty-four young European apprentices were under training in the railway workshops.

Wharf.—The total tonnage of goods (revenue earning) carried during the year was 378,402 tons—an increase of 52,550 tons on the 1922 figure—and of this amount the principal export commodities account for 134,783 tons, making an increase since 1922 of 23,938 tons. The rapid strides being made in the increase of the exports of Kenya and Uganda amply justify the decision made in 1921 to construct a deep water wharf, and the only question in this regard now in doubt is whether the two-berth wharf as planned will be sufficient. Good progress has been made during the year by the contractors—Messrs. Pauling and Co.—and it is anticipated that the completion of the wharf will be effected in 1925.

In the meantime a certain amount of export cargo has been shipped over the privately owned lighterage pier at Mbaraki.

SHIPPING.

The major shipping lines which serve this country from Europe are the Union-Castle, British India Steam Navigation, Messageries Maritimes, Maritima Italiana, Clan Ellerman-Harrison, Holland East Africa and Deutsch Ost Afrik Companies. The last-named Company commenced a monthly service to England in June. The Scandinavian East African Line also made a few calls during the year. To and from India the British India Steam Navigation Company maintained a fortnightly service, as in former years, while the coastal service of Messrs. Cowasjee Dinshaw and that of the British India Steam Navigation Company continued to operate fairly regularly. The East India Steam Navigation Company (Messrs. A. M. Jeevanjee and Company) ceased to operate in April. The total steam tonnage entering the ports amounted to 1,086,938 tons (in 1922, 983,218 tons), represented by 540 vessels, as against 666 in 1922; and of sailing vessels the tonnage entered in the ports was 66,389 tons, represented by 3,352 vessels, as compared with 81,959 tons and 3,978 vessels in 1922.

On May 31st, 1923, the Port Ordinance, 1922, was applied to the ports of Mombasa, Kismayu, Lamu, Malindi and Kilifi, and under Rules of the same date port dues became payable at these ports: the revenue from this source amounted to £4,078.

ROADS.

The roads in the Colony may be grouped in five classes—metal roads, of which there are 39 miles, including metalled township roads; formed, drained, bridged and culverted roads, provided with a wearing surface of murrum, 108 miles; roads similarly formed and drained, etc., but without a murrum surface, 280 miles; earth roads partially formed, etc., 402 miles; and lastly earth roads provided to a very varying extent with rough or occasionally substantial bridges and culverts and variously graded and drained, especially in hilly country; of these 55 miles were made in 1923, bringing the total mileage of this type up to 2771. There are thus in all 3,600 miles of roads passable for motor traffic during most months of the year.

In Nairobi Township the care of roads was handed over to the Nairobi Corporation as from 1st January, 1923. Government made contributions to the Corporation for the maintenance of both municipal and trunk roads. The figures already given of the number of motor vehicles imported into Kenya indicate the extent of road traffic in this country, and though conditions of travel naturally vary it may be said to be possible during the dry season to go by motor-car almost anywhere in the Colony.

POSTS AND TELEGRAPHS.

The postal and ancillary services were maintained during the year at a net profit of £25,775, compared with £10,282 in 1922, but this profit is realized by calculating as earnings the estimated value of free services to Government Departments; these were calculated at £31,749 in 1923. Thus, on a cash basis, there was a loss of £5,974 (cash revenue £132,287, expenditure £138,261), which was a very satisfactory decrease of the previous year's cash loss of £23,821, and was achieved mainly by the reduction of expenditure by £18,287, due mainly to staff retrenchment and the reduced rate of local allowance paid to officials during the year. The cash revenue fell off very slightly (£440).

The Posts and Telegraph services of Uganda and Kenya are unified under the control of one Postmaster-General resident at Nairobi. The working arrangement between the two countries is that for purposes of administration and discipline the whole staff (with the exception in certain matters of the Uganda engineering branch) is under the control of the Postmaster-General. The Uganda Government, in addition to bearing on its own estimates the cost of its engineering branch, pays a contribution to Kenya based on half the cost of the postal and telegraph and telephone operative staff supplied. In return, Uganda is credited with the revenue accruing in her country from telegraphs and telephones. This is obviously an *ad hoc* arrangement; and a closer form of amalgamation, based on more logical grounds, was adumbrated at the end of the year.

The great bulk of the earnings of this Department originated in Kenya. Thus, out of a total postal revenue of £77,283, Kenya contributed £63,788; of telegraph revenue, £32,962 out of £41,771; and £7,972 of a total telephone revenue of £10,643.

The amount of mail matter handled by a reduced staff in both countries increased by 19·36 per cent., the total number of letters, postcards, and book packets dealt with being 7,808,600, of which 739,908 were under official cover. The total number of parcels handled, 127,789, showed an increase of 6·83 per cent.; of these 96,980 were either posted or delivered in Kenya; 81,135 parcels were received from abroad, valued at £214,637, of which 60,597 were destined for Kenya.

A feature of the parcels service this year was the introduction of a cash-on-delivery service. So far the service extends overseas only to the United Kingdom and from there Kenya received 405 parcels, valued at £1,073, and Uganda 211, valued at £420. The local traffic was: Kenya 160 parcels (£301 value) and Uganda 33 (£56 value).

Another useful innovation was that of a Deferred Letter Telegram service, which was introduced on 1st November, 1923, and permits of the exchange of telegrams written in plain English or French between Great Britain and Ireland on the one side, and Kenya and Uganda on the other. These telegrams are accepted for transmission on any day, except Sunday, for normal delivery 48 hours after the time of acceptance. The rates are approximately one-quarter of the ordinary rates.

The success referred to in last year's report of the scheme for training Africans as telegraphists has been maintained. The bulk of the actual manipulative telegraph work is now being performed by Africans.

The volume of money order business is exemplified in the following figures :—

Money Orders.

	Issues :		*Payments :*	
	No.	*Amount.*	*No.*	*Amount.*
		£		£
Kenya	16,998	146,961	10,584	118,557
Uganda	11,287	147,636	5,303	58,206
Total	28,285	£294,597	15,887	£176,763

The average value of money orders drawn on the United Kingdom and India was £6 2s. 2d. and £10 18s. 6d. respectively.

The telegraphic money order service introduced in 1922 was used to a greater degree as it became more familiar, the total value of such orders issued and paid in both Kenya and Uganda being £43,308 for Kenya, and £53,844 for Uganda, as compared with £24,578 and £28,008 respectively, in the previous year.

Owing to an increase in shipping there was an improvement in the overseas mail service to and from East Africa generally during the year under review.

The wireless service at Mombasa and Kismayu was adequately maintained during the year. A valve receiving set was installed at the Mombasa wireless station with very satisfactory results. The receiving range from ships at sea was increased by about 100 per cent., and, under favourable conditions, the Cairo station and the French high-power stations can be read at Mombasa. It is hoped that the new English high-power station at Rugby, when completed, will also be readable, but whether reception will be on a commercial scale remains to be proved. 7,136 messages were dealt with in 1923, as compared with 5,113 in 1922, of which 734 messages were received from, and 217 transmitted to, ships at sea.

The savings bank had a successful year's working, and for the first time since 1916–17 the number of deposits exceeded that of withdrawals. The deposits this year numbered 3,665 of a total value of £39,539 1s. 0d.; the withdrawals 1,944 to the total of £32,023 14s. 0d.; and at the end of the year the amount on deposit was £39,307 6s. 0d., compared with £31,021 12s. 0d. at the end of 1922.

IX.—CLIMATE.

The rainfall in 1922 over the country as a whole was deficient, though on the coast that year was the wettest on record. In 1923 the rainfall was abundant and well distributed—a fact exemplified no less by the abundance of crops than by the statistics of the various stations. As regards rainfall, Kenya may be divided into three parts. In the northern deserts, in Jubaland, and in tracts of Tanaland, the rainfall is less than 20 inches a year. The coastal strip and the Nyanza and Kikuyu Provinces have between 40 and 80 inches, and the remainder of the country from 20 to 40 inches of rain a year. At the coast the climate is tropical, though the temperature at Mombasa seldom rises above 87° in the shade. Up-country the heat is seldom intense, and in the cold season fires at night are welcome. Throughout the country the direct actinic ray compels the wearing of helmets or terai hats from 8 a.m. to 4.30 p.m.

COLONIAL REPORTS, Etc.

The following recent reports, etc., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page.

REPORT ON THE COLONY AND PROTECTORATE OF KENYA FOR THE YEAR 1924.*

I. Geographical Note.

The boundaries of the Colony and Protectorate of Kenya underwent no actual change in 1924, though a Treaty was signed at London on the 15th of July of that year between the United Kingdom and Italy providing for the transfer of Jubaland to the latter.

The Report for 1923 contained a historical note showing the various steps by which the country attained its present status.

II. General Observations.

The outstanding political event which marked the year under review was the visit of a Parliamentary Commission.

In July the Secretary of State for the Colonies appointed a Commission† to visit East Africa and to obtain information and, upon their return, to report on facts bearing on their terms of reference, which included the consideration of problems, many of which are common to these territories.

The terms of reference to the East African Commission were :—

" To consider and report :—

(*a*) on the measures to be taken to accelerate the general economic development of the British East African Dependencies and the means of securing closer co-ordination of policy on such important matters as transportation, cotton-growing and the control of human, animal and plant diseases ;

(*b*) on the steps necessary to ameliorate the social condition of the natives of East Africa, including improvement of health and economical development ;

(*c*) on the economic relation between natives and non-natives with special reference to labour contracts, care of labourers, certificates of identification, employment of women and children ;

(*d*) on the taxation of natives and the provision for services directed to their moral and material improvement."

---

* A sketch map will be found in the Report for 1914–15 [Cd. 8172–7].

† See Cmd. 2387.

The Commission, consisting of the Honourable Major W. G. Ormsby-Gore, M.P., now Under Secretary of State for the Colonies, Major A. J. Church, D.S.O., M.C., M.P., and Mr. F. C. Linfield, J.P., M.P., arrived in the Colony on the 30th of October, after having visited the neighbouring Dependencies, and remained until the 1st of December. The sympathy with which all sections of the community were heard by the Commission was such as to inspire confidence and was heartily appreciated throughout the Colony. There is every reason to believe that the recommendations of the Commission will prove to be of the greatest value to Kenya.

In the month of December the Colony was honoured by a visit by Their Royal Highnesses the Duke and Duchess of York, who spent a few days in Nairobi before proceeding on a hunting expedition.

MEASURES FOR THE IMPROVEMENT OF NATIVE CONDITIONS.

Government pursued its policy of utilizing native Chiefs and Headmen and tribal institutions under the guidance of Administrative Officers for the government of the natives in their Reserves. A notable advance was made in Native Administration by the enactment of the Native Authority Amendment Ordinance, 1924, which bestows a considerable measure of local self-government upon the Native Councils in regard to the social welfare of the tribes and the management of communal matters such as land, forests and veterinary services. The local concerns of health, education, agriculture, trade and labour recruitment are also brought within the scope of their consideration.

Further, power is given, subject to the approval of the Governor-in-Council, to levy a rate the proceeds of which may be devoted to the above-mentioned objects, and for this purpose the establishment of Local Funds is enabled.

It is scarcely necessary to add that expenditure of these District Funds will be supplementary to and not in substitution for the present contributions from general revenue to these activities.

In most native areas considerable increase in the acreage under cultivation has been effected, and although the rainfall was disappointing, yet in most districts the cultivators were able not only to grow ample crops for their own consumption, but also a considerable surplus for sale and eventual export.

The progress of native agriculture may in some measure be gauged by the fact that the estimated value of agricultural exports of native origin for 1924 was £480,360, against £271,680 in 1923 and £176,000 in 1922, and is a gratifying result of the efforts of the Administration and the Agricultural Department.

Schools have been opened at Bukora in North Kavirondo and at the Scott Agricultural Laboratory near Nairobi for the training of intelligent young natives as future instructors in the Reserves.

European Supervisors are posted in various areas to advise the natives in better methods of cultivation and to issue better seed in selected localities for experiments with likely crops at different altitudes and on different soils. These Supervisors are helped by trained native assistants.

Agricultural Shows have also been organised which have been immensely popular with the natives, and have afforded them an opportunity of seeing high-standard produce and stock and also up-to-date implements such as ploughs, hand-mills, etc., in actual use. It is estimated that over 20,000 natives on one day attended the largest of these shows held on the borders of North and Central Kavirondo.

Native stock has received attention, and the campaign already started in Nyanza Province against pleuro-pneumonia and rinderpest has shown very satisfactory results. The natives appreciate these efforts and realise that there is a ready market for suitably inoculated bullocks for farm and transport work.

The Veterinary Officers and their native assistants have been successful in instructing the pastoral tribes in better methods of curing hides and in making ghee. A flourishing ghee factory, run on profit-sharing lines, has been opened in the Masai Reserve, and other districts propose shortly to follow this example.

There are signs that the importance of growing trees to meet the increasing demand for firewood and for building material for better huts is gradually being realised and satisfactory progress in re-afforestation is taking place in the greater portion of Kikuyu Province: a start has been made in North, Central and South Kavirondo also.

Medical work in Native Reserves was maintained satisfactorily during the year; and, though no new centres of work in Native Reserves have been opened during the year, the re-opening of the hospital at Voi in connection with the reconditioning of the Voi-Kahe Railway has benefited the Teita tribe: and one ward was added to the Kisii Hospital.

The total number of native in-patients treated at hospitals throughout the Colony in 1924 was 25,990 as against 33,229 in 1923. The number of out-patients treated at hospitals was 150,172 as against 245,554; but to this lower figure must be added a further 185,718 (making a total of 335,890 out-patients) treated by Medical Officers at sub-dispensaries, which now number 62, located in the principal native reserves and under the care of African native dressers. The decline in the number of in-patients as shown is due to the fact that a different system with regard to returns has been adopted in certain particulars. In order to give some idea of the extent of the activities of the doctors in charge of African hospitals the figures of three essentially Native Reserve stations are quoted again this year with the comparative figures for the previous year.

Station.	*Staff other than native dressers.*	*In-patients.*		*Out-patients.*		*Out-dispensaries and treated by Medical Officer on tour.*	
	1923–24.	1923.	1924.	1923.	1924.	1923.	1924.
Chuka ..	1 European M.O.	3,757	836	1,775	1,894	5,672	16,452
Kisii	1 European M.O., 1 Indian	2,796	2,772	8,306	10,858	22,811	19,638
Kakamega ..	1 European M.O., 1 Indian	1,105	984	9,271	1,746	28,017	36,190
		7,658	4,592	19,352	14,498	56,500	72,280

The training of Africans as dispensers and laboratory assistants has been continued, and though disappointments are many distinct progress has been made. It is not an easy matter to find candidates for training who are possessed of the necessary preliminary education, and the lack of properly trained dressers is increasingly felt throughout the Colony. A scheme for training has been drawn up in preparation for such time as the financial state of the Colony will allow of an increased staff to undertake it.

PUBLIC HEALTH.

No epidemic occurred during 1924, though a number of small outbreaks of plague occasioned anxiety.

The housing scheme for Africans in Nairobi, which has been under consideration by the Nairobi Municipality for some time, was not carried into effect during 1924. An advance of £16,000 to the Municipality has, however, been definitely sanctioned for this purpose and before the end of 1925 a considerable amount of good and healthy accommodation should be available.

Great progress has been made by the Uganda Railway, not only in Nairobi but at many places on the line, in the provision of African housing, and Government has in preparation plans for the better housing of its employees.

Activity continued throughout the year in the general improvement of sanitation in the larger townships by the staff available for this purpose, and in Nairobi a small Public Health museum has been opened to the public in which are displayed type-plans for African housing, models of septic tanks, &c., and other subjects of public health and sanitary interest which it is hoped will prove of benefit to estates on which large numbers of natives are employed and housed.

VITAL STATISTICS.

No census of the non-native population has been taken since 1921. A fairly accurate count of adult natives is made yearly for taxation purposes but the number of children can only be roughly estimated. The following estimated figures for the year under review collected from the various districts are set out in comparison with those of the 1921 census :—

	1921 *Census.*	1924 *Estimate.*	*Increase.*	*Decrease.*
Europeans ..	9,651	11,002	14%	—
Asiatics (excluding Arabs)	25,880	24,771	—	4¼%
Arabs	10,102	9,753	—	3½%
Africans (estimated)	2,483,500	2,560,983	3%	—
Total ..	2,529,133	2,606,509	3½%	—

The increase in the European population is due largely to immigration, but it may be noted that there is an excess of births over deaths. The births registered numbered 209 as compared with 194 in 1923, and deaths 81 as compared with 64. The European birth-rate was therefore approximately 19 per 1,000.

Reliable figures of these rates amongst Asiatics and Africans cannot be given, but taking the total population in each of the three principal towns and the total number of deaths reported therein a crude death-rate can be estimated. In Mombasa, with a population of 41,968, the crude death-rate for 1924 was 13·4 per thousand as compared with 16·6 in 1923; in Nairobi, with a population of 23,428, the rate was 22·9 as against 23·5 in 1923; and in Kisumu, with a population of 6,141, the rate was 17·9 as against 21·2 in 1923.

It must, however, be remembered that the less enlightened native when taken ill still usually tries to return to his home for treatment by the local medicine man ; otherwise the above figures may give a false impression as to the general state of health in the three towns quoted.

MIGRATION.

During the year 1924 it has been possible to collect more accurate figures of immigration into Kenya than in previous years ; but statistics of emigration from Kenya are lacking and therefore comparative figures of migration can only be given for Kenya, Uganda and Tanganyika Territory combined. These are as follows :—

	Immigrants.		*Emigrants.*	
	1923.	1924.	1923.	1924.
Europeans	3,430	4,079	3,374	3,236
Indians	6,075	7,973	4,433	4,380
Goans	688	890	582	628
Arabs	867	1,044	—	491
Others	2,014	1,871	—	1,589
Totals ..	13,074	15,857	—	10,324

The figures of immigration into Kenya only are :—

	1923.	1924.
Europeans	2,845	3,412
Indians	4,406	5,775
Goans	583	739
Arabs	2,670	970
Others		1,740
Totals	10,504	12,636

It is hoped that the establishment of a Statistical Bureau which will supply accurate figures on this as well as on other important matters will not be long delayed.

III. Government Finance.

The financial position of Kenya during the last five years is reflected in the following figures :—

		£	£
	Net surplus as at 31/3/20 converted at Rs.10 to the £ on 1/4/20	203,802	—
1920/21 ..	Revenue, £2,978,786 (*a*).		
	Expenditure, £2,976,960 (*a*).		
	Revenue in excess of expenditure ..	1,826	—
1921 (9 months)	Revenue, £1,891,679 (*b*) (*x*).		
	Expenditure, £1,666,785 (*b*).		
	Revenue in excess of expenditure ..	224,894	—
1922 ..	Revenue, £1,649,032 (*b*).		
	Expenditure, £1,972,212 (*b*).		
	Expenditure in excess of revenue ..	—	323,180
1923 ..	Revenue, £1,839,477 (*b*).		
	Expenditure, £2,137,633 (*b*).		
	Expenditure in excess of revenue ..	—	298,186
1924 ..	Revenue, £2,111,665 (*b*).		
	Expenditure, £1,861,511 (*b*).		
	Revenue in excess of expenditure ..	250,054	—
	Net surplus as at 31/12/24	—	59,210
		£680,576	680,576

Notes.—(*a*) Including Railways.
(*b*) Excluding Railways.
(*x*) Including £600,000 appropriated under item 4 of the Specific Loan Ordinance, 1921.

The year opened with a deficit of £190,844 ; at its close there was a credit balance of £59,210, the Revenue of the year having exceeded the Expenditure by no less than £250,054. Items of Expenditure of an extraordinary and non-recurrent nature, principally arising out of the War, amounted to £29,986, and but for these payments the surplus on the year's working would have been £280,040. The actual receipts of the year exceeded the estimated Revenue by £175,892 ; whereas the estimated expenditure exceeded the amount actually expended by £48,751.

During the year the Funded Public Debt of the Colony was increased from £5,000,000 to £8,500,000 by a Loan of £3,500,000 from the Imperial Government. This loan is one for transport development and is free of interest for the first five years.

Of the £5,000,000 Loan raised under Ordinance No. 39 of 1921, £4,527,545 had been expended by the close of 1924, the expenditure during the year being £689,109.

Of the Imperial £3,500,000 Loan authorised by Ordinance No. 29 of 1924, £181,394 was expended during the year and £81,459 was earned on the unexpended balance.

The forecast of the Colony's progress made in last year's Report has therefore been fulfilled and the year under review has placed the Colony in a favourable financial position.

IV. Trade and Agriculture.

Kenya and Uganda have since 1917 formed one administrative unit for purposes of Customs, under the control of the Commissioner of Customs resident at Mombasa, and complete freedom of trade exists between the two territories : a general uniformity in Tariffs is now observed with Tanganyika Territory also.

A new Customs Tariff was enacted in the three territories with simultaneous effect from the 1st of January, 1924. It follows closely upon the lines of the former Tariff, the principal alterations being reductions in the rates of duty chargeable on motor cars, motor cycles, candles, corrugated iron, timber and certain other building materials. The free list also has been considerably amplified by the addition of such articles as mining materials, instruments for scientific purposes, and telegraphic and telephonic equipment.

A favourable balance of trade was again recorded for the year, the balance of 18 per cent. being struck on the following figures :—

	£	£
Total Imports	11,070,947	
Less value of Government Imports ..	4,546,625	
Total Trade Imports (including goods imported during the year remaining in bond on 31/12/24)		Net Imports. 6,524,322
Domestic Exports	6,137,009	
Add Re-exports and Exports other than those of domestic produce	1,583,113	
		7,720,122
Balance in favour		1,195,800 (or 18 per cent.)

The total value of imports exclusive of bullion and Government imports, rose from £4,257,834 in 1923 to £6,178,547, an increase of 45 per cent.; while the comparative values of the exports of domestic produce showed a rise of 54 per cent.; i.e. from £3,996,432 in 1923 to £6,137,009 in 1924.

The total trade imports (excluding Government imports, bullion, and parcel post) amounted to £5,914,861.

An analysis of the imports for consumption in Kenya and Uganda, exclusive of parcel post, gives a total of £1,975,307 for Uganda, and of £4,038,914 for Kenya. A similar analysis of the domestic exports trade discloses a trade of £3,897,395 from Uganda, and of £2,239,614 from Kenya. These figures are quoted in order to afford a reflection of the Colony's trade, but they cannot be considered as more than an approximation, and from them it will be seen that the import trade of Kenya increased by £2,157,788 and the export trade by £734,659 during the year 1924, an increase of 53 per cent. and 33 per cent. respectively.

The net yield of revenue collected during 1924 was £1,016,817, and exceeded that for 1923 by £237,086. The sum of £426 was also collected in Excise Duties on the manufacture of beer. The 1923 Beer Ordinance became operative from the 1st of January, 1924, and the collection of Excise Duty is in the hands of the Customs Department.

IMPORTS.

Of the total value of trade imports the British Empire provided 69·18 per cent. and Foreign Countries 30·82 per cent.

Cotton Goods and Manufactures.—As in previous years the most important item in the list of values of Imports is cotton piece-goods, i.e. £1,486,116, and of this amount it is estimated that fully three-quarters is consumed by the native population. In comparison, however, with the total trade imports, the relative importance of cotton piece-goods shows some signs of diminution, the proportion during 1923 being 30 per cent. and during 1924 only 23 per cent., an indication of the broader basis upon which the trade of Kenya and Uganda now rests. In addition to cotton piece-goods there is a comparatively small but rapidly increasing importation of other cotton manufactures, i.e. cotton thread, yarns, curtains, handkerchiefs, &c., which were valued in 1924 at £60,197 as against £41,417 in 1923. The total importation of cotton goods during the year amounted to £1,546,313 as compared to £1,342,276 in 1923.

Kenya, it is reckoned, consumed cotton goods to the value of £741,296 and Uganda to the value of £805,017. Although Japan continues to maintain her progress in the unbleached piece-goods market, Great Britain has advanced as a source of supply of other varieties. The following figures are illuminating, viz., in 1923 Japan provided 56 per cent. of imported unbleached piece-goods, and in 1924, 64 per cent., whilst Great Britain in 1923 provided 27 per cent. of the total imports of all classes of cotton piece-goods and in 1924 furnished 33 per cent.

Tea.—5,301 cwts. of tea were imported as compared with 4,822 cwts. during 1923. Experiments in tea planting continue locally and favourable reports of progress are received from which it is hoped that in the near future supplies for the East African Dependencies will be drawn from the locally-grown product. Areas of considerable extent have been acquired by companies interested in tea production in India and a large amount of tea seed has been imported from India and Ceylon. This is the more satisfactory in that the native demand for tea is steadily increasing.

Sugar.—The importation of sugar once again was lower than in the previous year, the quantities imported being 31,652 cwts. in 1923 and 27,446 cwts. in 1924. This continued decrease is attributable to the increased production of this commodity locally. Considering the opportunities for supplying sugar for local consumption in a market which expands in proportion to the purchasing power of the native population and the suitability of different parts of the country for growing sugar-cane, the rate of progress of the local industry is somewhat disappointing.

Salt.—There is a considerable demand for this commodity among the native population which is illustrated by the following :—

In 1922	81,209 cwts.
In 1923	107,294 cwts.
In 1924	159,033 cwts.

were imported, 63 per cent. being provided by Italian East Africa. Government is fully alive to the possibilities of salt production along the coast of this Colony, and at the time of writing facilities are being offered to encourage local production.

Rice.—The chief item in the list of grain and flour imports is rice : a total of 109,984 cwts. was imported which represents 63 per cent. of the value of the total imports of this class. Increased attention has been paid to the cultivation locally of this crop, but for some time any increase in production will probably do no more than meet the growing demand amongst the native population and imports will continue until irrigation schemes can be undertaken.

Wheatmeal and Flour.—Notwithstanding an expansion in the local wheat-producing and flour-milling industries, imports of flour show a slight increase during the year. In 1924, 48,474 cwts. valued at £40,792 were imported. During this period, however, the area under wheat cultivation locally increased from 15,429 acres to 20,910 acres, and it is estimated that only a further extension of 9,000 acres is required to supply all the demand for flour in Kenya, Uganda, and Tanganyika Territory. Experimentation proceeds side by side with increased acreage with the result that yields per acre are on the increase and better milling wheats are being produced to allow of more perfect blending.

Soap.—The importations of soap show an upward tendency and in 1924 common soap to the value of £64,487 was imported as compared with £54,421 in 1923, whilst the value of imports of toilet soap in the same period rose from £11,964 in 1923 to £21,606 in 1924. Education and an increased purchasing power amongst the natives promise well for the future of the local industry, which exported 209 cwts. of common soap in 1924. Of the imports of common soap, Zanzibar supplied 47 per cent. and Great Britain 44 per cent.

Jute Bags and Sacks.—The import of jute bags and sacks has risen from the value of £78,269 in 1922 to £109,901 in 1923 and again to £173,515 in 1924, and a further rise in the future can be anticipated as development continues throughout the Colony. The bulk of this import trade is at present supplied by India.

Motor Vehicles and Bicycles.—The imports of motor cars during 1924 were more than twice the combined imports of the two previous years : in 1922, 134 cars were imported ; in 1923, 309 ; and in 1924, 945, of which, however, only 121 came from Great Britain. This total increase is attributable to the increased purchasing power of the community, to the extension of road mileage available for motor transport and to the alteration in the basis of assessment of duty on imported cars. At the same time the number of motor lorries and tractors imported rose from 15 in 1922 to 66 in 1923 and 450 in 1924, of which 84 originated in Great Britain. This is a further indication of the development during the year of motor transport as a means of marketing produce and the adoption of mechanical ploughing in the larger areas under cultivation. During the year imports of motor-cycles rose correspondingly and imports of bicycles rose from 2,767 in 1923 to the remarkable figure of 17,430 in 1924, of which 14,874 were made in Great Britain. The increased imports of the latter are mainly due to the demand for bicycles by the natives of Uganda following on the development of the cotton industry of that country, and the Kenya natives are following their example.

Motor Spirit and Fuel Oil.—In 1924, 992,798 gallons of motor spirit were imported as compared with 911,869 in 1923. Imports of fuel oil increased from 3,558,236 gallons valued at £63,018 in 1923 to 5,302,494 gallons valued at £100,411 in 1924, the greater portion being again re-exported as fuel for shipping using Kilindini Harbour, whilst the Railway used oil to the value of £28,862 in oil-burning locomotives.

EXPORTS.

General.—The exports from Kenya are almost entirely of agricultural products, and the 33 per cent. increase experienced in 1924, when the rains were not entirely favourable, indicates not only the planting of a greater acreage, but also better methods of cultivation and marketing.

The prices of the main agricultural products exported were high, and though untoward losses from disease occurred amongst livestock the result is that the year 1924 has been one of prosperity to most sections of the community.

Cotton.—As in recent years, cotton is again the most valuable export. In 1923, 382,897 centals valued at £2,093,776 were exported, and in 1924, 515,095 centals valued at £3,489,329. To this Kenya contributed only 677 centals. The growth of this crop in Kenya is only in its infancy and drought and hail destroyed much of the year's crop. Exports of cotton seed for oil-producing purposes also rose from the value of £54,789 in 1923 to £106,290 in 1924.

Coffee.—The next export in point of view of value and importance is coffee, and this is the main export of Kenya. Uganda and Kenya in 1924 exported coffee to the value of £803,313 as compared with £620,897 in 1923. The value of the amounts produced in Kenya and Uganda respectively was £635,618 and £167,695. Exports for the year ending 31st March, 1914, were valued at £47,438, which compared with the above figures is sufficient to illustrate the rapid progress of the coffee-growing industry. The growing importance to the home markets of coffee produced in the East African Dependencies is clearly indicated in the following Board of Trade figures relating to the total imports of coffee for home consumption in Great Britain :—

Countries whence consigned.	*Quantities. To 31st August* 1923. Cwts.	1924. Cwts.	*Value. To 31st August* 1923. £	1924. £
British East Africa ..	136,092	141,961	617,490	745,747
British India	76,022	32,641	388,569	186,186
British West Indian Islands	3,060	1,520	16,047	10,126
Other British Possessions	2,183	3,362	10,602	16,768
Total Imports from British Empire	217,357	179,484	1,032,708	958,827
Total Imports from Foreign Countries	220,222	318,410	1,074,915	1,891,728
Total Imports for Home Consumption	437,579	497,894	2,107,623	2,850,555

Prices in the London market ruled high for Kenya coffee, the year's average price being approximately £125 per ton, resulting no doubt from the greater experience and skill which is being acquired in the handling and preparation of the crop for market. The area planted during the year increased by nearly 8,000 acres, and 33,000 acres are now in bearing.

Sisal.—The third highest on the list of exports is sisal and the whole of the exports of this product originate in Kenya. A highly satisfactory advance in the quantity exported is to be recorded. In 1923 the export was 8,820 tons valued at £236,044, whilst in 1924, 11,416 tons were exported, and at the high prices ruling its value amounted to £396,777.

Maize.—Practically all the maize exported, to the value of £381,144, was grown in Kenya, as compared with a value of £249,545 during 1923. Throughout the year prices were high. The yield of this crop has been comparatively heavy in settled areas, ranging from 5 to 10 bags per acre, and on individual farms yields of over 20 bags per acre are not infrequently recorded. All maize is inspected and graded by the Department of Agriculture before export and bags are appropriately marked. Of the 689,367 bags received for grading, 35,784 were found to have too high a moisture content to export. Government has voted the sum of £10,000 for the installation of a Maize Conditioning Plant at Mombasa.

Hides and Skins.—The value of hides and skins exported was £253,709 (Kenya's share being £215,161), as compared with £152,911 in the previous year. The majority of these came from the Native Reserves and the result should do much to stimulate the natives to learn the best ways of handling hides. That there is a wide field for expansion in this industry is shown by the estimated number of native-owned stock, which is 3,000,000 cattle, 2,500,000 sheep, and 3,500,000 goats.

Carbonate of Soda.—The main mineral export of Kenya is carbonate of soda, valued at £154,306. It is dredged and refined at Lake Magadi.

V. Land.

The total area of land alienation registered as at the 31st December, 1924, was 5,542,809 acres, as compared with 5,178,399 on the 31st December, 1923. These figures include an area of approximately 192,000 acres, situated in the Kenya Protectorate and owned under Certificates of Title, the exact area of which will be computed in due course. Further grants of lands aggregating about 400,000 acres, consisting for the most part of Soldier Settlement allotments, have also been made but have not yet been registered. The total area of land allotted is, therefore, approximately 5,942,809 acres, of which 516,175 acres are freehold, 5,026,634 acres leasehold, and 400,000 acres not yet registered The acreage registered during the year was 364,410 acres compared with 404,267 acres the previous year.

Sale of leases of land by public auction recommenced during the year, and one such auction was held at which 2,101 acres of agricultural land realised £7,344, representing an average price of Shs.69/91 per acre, and 40,879 acres of pastoral land sold for £20,394, or Shs.9/97 per acre.

In addition to the necessary preparations for the recommencement of land sales, work was continued on the examination of the Native Reserve Boundaries, and much time was also devoted to the compilation of economic maps showing the density of population, stock and, to some extent, cultivation within these Reserves. Economic surveys were also carried out in certain areas, into which it has been proposed to build branch railways, in order to ascertain the amount of traffic likely to support such lines.

A more detailed account of all registration transactions is now maintained, and during the year 11,885 such transactions were registered as against 11,295, including 5,185 arising out of a special effort to complete the Coast Lands in 1923. The revenue derived from Registration fees, Stamp duties, and Conveyancing fees amounted to £44,622, as compared with £35,492 in the previous year. It was not found possible to apply the over-embossing system of stamp cancellation, as adopted under the Stamp Ordinance of 1923, during the year ; but as soon as it is found practicable to utilise the system an increase of revenue derived from stamp duties is assured.

MINES.

Considerable prospecting took place in the Lolgorien area near the border between the Masai Reserve and the South Kavirondo District, but it is still doubtful whether the locality can be regarded as a gold-producing area from a business point of view. During the year, 1268·571 oz. of fine gold were obtained, the value of which was estimated at £5,570. A new Mining Code to replace the Mining Ordinance of 1912 was in course of preparation during the year. The Oil Production Ordinance, 1924, was enacted. The increasing activity in prospecting is illustrated by the following figures. During the year, 2,649 Prospecting Licences were issued, as against 450 in 1923, 11 Sole Prospecting Licences, as against 7, and 2,782 Claims were registered as compared with 3 in 1923.

FORESTS.

The forests, which cover some 5,100 square miles only of the total area of the Colony and Protectorate, viz., 245,060 square miles, are principally under Government control.

The total cash revenue collected by the Forest Department in the form of royalties, timber and fuel sales, and sales of other forest produce was £21,648. The expenditure was £25,274, and the percentage of revenue to expenditure decreased from 86·20 per cent. in 1923 to 85·65 per cent. in 1924. The value of forest produce issued free to Government Departments and natives amounted to £2,376.

The total amount of commercial timber, cut at 23 mills, was 705,081 cubic feet, an increase of 182,929 cubic feet as compared with the year before; 61,352 cubic feet of cedar, 50 cubic feet of other fine woods, 18,813 cubic feet of unspecified timber and 840,400 mangrove poles were exported. Imports for the use of Kenya and Uganda amounted to 79,004 cubic feet, as compared with 211,949 cubic feet the previous year, and of this, 42,651 cubic feet were for Government consumption. Satisfaction is felt in respect of these figures having regard to the fact that, on 1st January, 1924, the import duty on timber was reduced from 50 per cent. to 30 per cent.

Owing to demand for local timber, merchants have up to the present not been able to retain stocks long enough to suffice for the proper seasoning of their timber; but a sign of improvement is now manifest and the Uganda Railway is about to instal drying kilns for the more rapid and efficient seasoning of local timber.

As will be seen from the figures of export the only wood which reaches home markets in any quantity is cedar, and the export, which has increased since 1923, is chiefly in the form of slats for pencil manufacture. An improvement in the preparation of these for the market has been noted.

3,242,549 stacked cubic feet of firewood were sold, as compared with 3,919,210 cubic feet in 1923, by the Forest Department. The Railway took over from all sources 9,975,598 cubic feet, as compared with 9,325,941 cubic feet in the previous year.

During the year under review, further samples of Camphor and Muhogo woods were sent to the National Physical Laboratory at Teddington, the samples sent in 1923 not having dried out before despatch. The results show the very marked increase in the strength of these woods as a result of drying.

In the early part of the year samples of the bark of year-old Cascara trees, grown in the Nairobi Arboretum from seed obtained from California, were forwarded for analysis to the Imperial Institute and the consequent report shows that the production of Cascara Bark might be a good commercial proposition. Further samples are being forwarded to allow of therapeutic trials in order to establish its quality in comparison with that from other sources before steps are taken to extend the cultivation of this tree.

The work of re-stocking the Colony's forest areas is of great importance and re-afforestation has been continued throughout the year. Climatic and other local conditions severely limit the area that can be planted annually, but during 1924 the total area planted was 2,127 acres, as compared with 1,806 acres in the previous year. It is noteworthy that the area planted was the largest so far achieved in any one year and the proportion of indigenous species, viz., 69·5 per cent., was greater than in 1923. The total area, excluding Mangrove, replanted up to the end of the year was 12,530 acres.

In 1924, 2,890,404 seedlings were raised in the Nurseries, of which 1,981,402 were planted out and 329,060 sold or issued free to selected natives who are showing an increasing interest in silviculture and its commercial possibilities.

VI. Legislation.

Mention is made elsewhere in the Report of the Native Authority Amendment Ordinance (No. 14), establishing local Native Councils, and also of the Education Ordinance (No. 17). By the Civil Procedure Ordinance (No. 3), the present procedure, laid down by the Indian Code of Procedure of 1882 as applied to this Colony, will be repealed and fresh Procedure will come into force on such date as may be decided ; no date has as yet been fixed.

The revised Edition of the Laws of Kenya, though not yet published, is now in the press and will contain the Laws in force up to 31st December, 1923. The Commissioners for the Revision of the Laws are now preparing a revised edition of the Rules and Proclamations made under these Laws up till 31st December, 1923.

VII. Education.

The visit to this Colony of the Phelps-Stokes Commission during the year under review was generally appreciated and did much to bring to the fore the various problems connected with education, more particularly of the African. In Kenya, Government schools have been established for the education of four different races, i.e. European, Indian, Arab and African, and the services thus rendered by the Education Department are augmented by private and missionary enterprise. Co-operation between the bodies undertaking the education of the youth of the Colony is of vital importance and a satisfactory step was taken towards its establishment when in 1924 the Education Ordinance was enacted, by which a Central Advisory Committee for the Colony, and District Education Committees, representative of all interests, were constituted and provision was made for the registration and inspection of all schools and the licensing of every teacher. The appointment also of the Colonial Office Advisory Committee signifies a great advance in African education and will bring about the co-ordination of the separate policies of the Education Departments of the various African Dependencies. The progress made during 1924 in Kenya may be summarised as follows, each race being commented on separately :—

European.—The year has been marked by development in the direction of private schools, largely owing to the fact that the existing Government boarding establishments are full and that there is an increasing objection to the co-education of boys and girls over twelve years of age. Kenton College at Kijabe has now nearly fifty boys, eighty girls attend Loreto Convent, and the " Hill " Girls' School at Limoru is increasing in numbers.

Government schools for the education of young European boys and girls up to the standard of a middle-grade English school are established at Nairobi, Nakuru and Eldoret. There are also six Farm schools on the Uasin Gishu Plateau. The children are for the most part between the ages of 7 and 14 years, only some 20 per cent. being over 14 years. It follows, therefore, that only a few scholars each year reach the standard of the Cambridge Junior Local and London Matriculation examinations. In all, 554 pupils were undergoing education in 1924, as compared with 428 in 1923, under a staff of 33.

Indian.—The School Committees of the various Indian schools, Government and " assisted," continue to evince the greatest interest in the schools under their charge, and an increase in the number of scholars from 1,403 to 1,475 was recorded. Of this total, 664 children attended the Government schools at Nairobi and Mombasa, and the remainder were taught at eleven assisted schools of which there are four at Nairobi, four at Mombasa, two at Kisumu and one at Machakos, the one at

Naivasha having been closed during the year. Eight of the assisted schools are girls' schools, and amongst Indians also the large majority of the scholars are between the ages of 7 and 14. The staff remained the same in number as the previous year, namely, one senior headmaster and 25 Indian teachers. The curriculum was not changed during the year, the Indian code in the main being followed in all the lower classes: in the higher standards the pupils are prepared for the Cambridge Local examinations.

Arab.—Government schools for the instruction of Arab children exist at Mombasa and Malindi and are attended by over 200 pupils.

Native.—It is satisfactory to be able to report the united effort being made by all sections of the European community for the improvement of African education. The Central Advisory Committee consisting of four officials, two non-officials and nine Missionaries, met several times during the year and laid down the basis of a policy for Native education, one of the principal decisions arrived at being to erect a Jeanes School at Kabete for the training of itinerant native supervisors of village schools. This school is now under construction. After full discussion, the Missionary Societies have agreed to exempt objectors from attendance at religious instruction, thus throwing open their schools to all natives of the Colony without regard to their religious views. During the year good progress has been made in the system of village education among the Akamba in the Machakos District, and 16 schools are now in existence in addition to the Central Technical School at Machakos. In each village school there are about 80 pupils. In schools managed or aided by Government, 23,164 pupils are being taught the elements of education. In 1924, of the total expenditure by the Education Department of £64,618, the sum of £22,004 was spent on the education of Europeans, £10,664 on that of Indians, and £11,974 on that of Arabs and Africans, whilst grants-in-aid to the amount of £11,972 were made to Missions to assist in the education of natives.

VIII. Communications.

RAILWAYS AND MARINE.

The year's working of the Kenya and Uganda Railway, Marine, and ancillary services shows a favourable financial position at the close of 1924.

The gross earnings of the year amounted to £1,635,189, the gross expenditure to £878,467, and the excess of revenue over expenditure to £756,722. After allowing for contributions to renewals funds, interest charges, &c., the net balance of this excess for transfer to Betterment Funds amounted to £438,139.

Revenue derived from public goods traffic amounted to £1,297,236, and the tonnage carried to 482,840 tons, as compared with £962,284 and 369,062 tons during the previous year. The revenue derived from passenger traffic also showed an increase over that of 1923, viz., in 1924, 830,209 passengers contributed towards a revenue of £197,991, and in 1923 the figures were 646,040 passengers and £169,925 revenue. The use made by natives of travelling facilities offered by the railway is clearly shown by the following figures under different classes :—

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1923 ..	12,951	56,289	576,800	646,040
1924 ..	15,904	57,921	756,384	830,209

Throughout the year there was a steady development in Lake Steamer traffic and the tonnage carried amounted to 149,803 tons, as compared with 106,300 tons in 1923, this being an increase of 40·92 per cent. over 1923 and 118·92 per cent. over 1922.

During the year the Imperial Government sanctioned a loan from the Imperial Treasury to the Government of Kenya for Railway, Port and Lake development in Kenya and Uganda, amounting to £3,500,000.

It is becoming increasingly difficult to obtain adequate supplies of locomotive wood fuel, and during the year coal as a permanent fuel has had to be adopted on a large scale. The following figures show the comparison in the consumption of coal, wood, and oil fuel during the year :—

Coal	16,000	tons consumed at a cost of	£28,000.
Wood	94,430	,, ,, ,, ,,	£43,990.
Oil	6,532	,, ,, ,, ,,	£28,862.

The policy of training and employing as many African natives as possible has been continued during the year with the result that the number of native labourers employed increased from 10,207 to 11,052, excluding those employed on construction works by contractors, and the number of skilled natives from 1,559 to 1,979. The erection of better housing for the native staff continued during the year. Simultaneously, the African Apprenticeship scheme commenced in 1923 has progressed satisfactorily on the whole, particularly in the Printing Press.

There are now 21 European apprentices in the Workshops undergoing a definite system of training in all branches of the Workshops, and it is intended to apprentice ten each year in future. Five Europeans are apprenticed to the Transportation Department.

The total route-mileage of line open at the close of the year was 940 miles, of which 67 miles are in Uganda, two further sections of the Uasin Gishu Railway, totalling 37·16 miles, having been taken over during 1924. The following extensions were in the process of construction :—

	Approximate mileage.
Uasin Gishu Railway from Timboroa to Turbo	73
Thika to Tana River	58
Solai Branch	30
Kitale Branch	45
Total	206

The following additional construction has been approved and will be in progress during 1925 :—

	Approximate mileage.
Uasin Gishu Extension to Uganda (i.e. Turbo to Busoga Railway and branches)	255
Tana River to Nyeri	33
Total	288

Reconnaissances have also been carried out to ascertain the merits of future branch lines towards productive districts.

The progress in re-laying the Coast section of the main line with 80 lb. rails has not come up to expectations, chiefly owing to the difficulty in obtaining the necessary labour, but partly also owing to the large increase in the traffic which has necessarily to pass over the single line during the course of re-laying operations. Thirty miles were completed by the end of the year, and work on a further 150 miles is in hand. The 50 lb. material released from the main line is being used on the Thika-Nyeri, Solai, and Kitale branch lines.

General upkeep has been maintained throughout the year and also a certain amount of re-grading and re-alignment work, chiefly on the branch line from Nairobi to Thika. The reconditioning of the Voi-Kahe branch, which forms a link with Tanganyika Territory, was also carried out, and on this line there now only remains the building of stations and quarters for staff and work gangs. In this re-conditioning a number of creosoted Podocarpus sleepers sawn locally were used as an experiment.

During the year under review shipping tonnages of exports and imports handled at Kilindini Pier totalled 119,734 tons and 141,720 tons respectively, whilst 86,252 shipping tons of export were handled at M'Baraki, a privately-owned lighterage pier. The big increase, i.e. 69 per cent., in the tonnage handled at the two piers as compared with the previous year, is another indication of the manner in which the trade of the Colony has developed. With existing wharves, congestion occurred as a result of this large increase and this difficulty will not be overcome until the completion of the deep water wharf undergoing construction, and even then, judging by the present rate of trade development, the new two-berth wharf may prove inadequate. The work on this new wharf proceeded during the year, but it is not anticipated that the work will be completed before the end of 1925.

SHIPPING.

During 1924 the Port of Mombasa has been served by seven regular lines of steamers from Europe, i.e. the Union Castle, British India Steam Navigation, Messageries Maritimes, Marittima Italiana, Clan, Ellerman-Harrison, Holland East Africa, and the Deutsche Ost Afrika lines. This service was supplemented by a few calls made by steamers of the Scandinavian Line and several miscellaneous oil and coal steamers discharged cargoes.

A regular fortnightly service between Bombay and Durban, calling both ways at Mombasa, has been maintained by the British India Steam Navigation Company. A coastal service maintained by this company and Messrs. Cowasjee Dinshaw has been fairly regular.

The total steam tonnage (mercantile) entered in the Protectorate Ports during the year amounted to 1,165,127 tons net, represented by 504 vessels. These figures show an increase of 78,189 tons or 7·2 per cent., and a decrease of 36 in the number of steamers, as compared to figures for the previous year. The total tonnage of sailing vessels entered in the Protectorate Ports during 1924 was 66,129 tons, represented by 3,545 vessels, a decrease of 260 tons, though an increase of 193 vessels.

The figures for Mombasa alone were 372 steamers of 1,037,631 tons net, against 380 steamers of 946,029 tons net for 1923, an increase of 91,602 tons or 9·7 per cent., and 1,438 sailing vessels of 26,793 tons net, being an increase of 236 vessels and 782 tons over the previous year.

Revenue derived from Port dues amounted to £7,811, an increase of £3,733, partly owing to the increase in tonnage but principally to the fact that 1924 was the first full year during which dues have been collected.

ROADS.

For purposes of maintenance the public roads in the Colony and the Protectorate are divided into township and country roads. With the exception of those within the municipal area of Nairobi and those in private townships, all township roads are maintained out of general revenue by the Public Works Department.

All public country roads are maintained out of general revenue by the Public Works Department, either by direct labour or by contract, according to the nature and situation of the road. Many of the minor public roads in settled areas are maintained by contract with local farmers through the medium of District Road Boards who, by arrangement with the Public Works Department, are responsible for the performance of the contracts. In settled areas also, " roads of access " over which the public has the right of user are maintained by the farmers whose lands are served by such roads at their own expense.

With the exception of portions of main routes, chiefly in the vicinity of Nairobi, which have been provided with metalled or murramed surfaces, all public country roads are of earth. All have been bridged and culverted to a varying degree, but many of the bridges and culverts are of temporary character and require frequent renewal.

The roads of the Colony deteriorate rapidly under cart traffic, but all are passable except during wet weather. Progress of new construction and the improvement of existing roads has been on the whole good during the year.

POSTS AND TELEGRAPHS.

The financial results of the year's working of the Post and Telegraph Service are the best hitherto obtained, and the following comparative statement shows the expenditure, cash revenue and value of free services rendered to Government Departments :—

Year.	*Expenditure.* (*a*)	*Cash Revenue.* (*b*)	*Value of Official free services.* (*c*)	*Excess of* (*b*) *&* (*c*) *over* (*a*). (*d*)	*Excess or Deficit of* (*b*) *over* (*a*). (*e*)	
	£	£	£	£	£	
1922 ..	156,548	132,727	34,103	10,282	23,821	deficit.
1923 ..	138,261	132,287	31,749	25,775	5,974	deficit.
1924 ..	139,790	150,481	33,500	44,191	10,691	excess.

The foregoing statement does not include the value of free services performed by other Government Departments for the Post Office, which are estimated at £14,448.

The Post and Telegraph services of Uganda and Kenya remain unified under the control of the Postmaster-General at Nairobi and during the year a scheme for the closer amalgamation of these services was adopted by both Governments and approved by the Secretary of State. The scheme came into effect on 1st January, 1925.

To the total cash revenue of £150,481, Kenya contributed £119,774 and Uganda £30,707 ; whilst of the total expenditure of £139,790, £98,363 was expended in Kenya and £41,427 in Uganda.

The estimated number of letters, postcards, book packets and samples dealt with during the year was 7,869,568, representing an increase of 78 per cent. over 1923 figures. An increase of 7·47 per cent. is found in the number of parcels dealt with, i.e. 137,334, and an increased number of insured parcels and registered articles was also handled. The bulk of the overseas mail business is with Great Britain.

The value of money orders issued and paid rose in Kenya from £265,518 in 1923, to £310,592 in 1924 and in Uganda from £205,842 to £287,527. An increased use was made also, particularly in Uganda, of facilities provided by the telegraph money order service, which at present extends to no overseas countries except Great Britain and the Irish Free State.

The total number of inland telegrams and cablegrams dealt with during the year was 246,178 and 105,396 respectively, being an increase of 12·39 per cent. and 16 per cent. respectively, over the figures for the preceding year. Of the cable traffic slightly less than half was with Great Britain. The number of telegrams exchanged with South Africa via the overland service totalled 42,257.

The plain language cable letter telegraph service was extended during the year to the following countries:—Canada, Newfoundland, United States of America, and all British Colonies and Dependencies served by the Eastern Telegraph Company and its associate companies.

Direct telegraphic communication was established during the year with the Belgian Congo by means of a land line connecting Fort Portal in Uganda with Irumu in the Belgian Congo, and the wireless service at Mombasa and Kismayu was satisfactorily maintained.

With the exception of normal extensions to existing telephone exchanges, engineering work in Kenya was mainly confined to maintenance services.

In the Post Office Savings Bank deposits exceeded withdrawals by £10,346. The total number of active accounts at the end of the year was 3,671, and the total balance due to depositors was just over £50,000; 519 accounts with a total balance of nearly £4,000, stood in the names of Africans. Special efforts are being made to popularise this bank among Africans and make them familiar with the advantages it offers.

A very large proportion of the manipulative work of the telegraph service is now performed by Africans who, subject to certain limitations—imperfect knowledge of English and some lack of power of sustained concentration necessary in telegraph operating—are doing very good work indeed, and in some instances have attained an exceptionally high standard of manipulative skill. During the year a number were successfully trained in wireless operating.

IX. Climate.

During the year the rainfall was below the average in nearly all districts, though in none was it sufficiently low as to cause famine amongst the native population. Although low, the rainfall was distributed throughout the year in such a manner as to be favourable to crop production.

As regards rainfall, Kenya may be divided into three parts. In the Northern Deserts, in Jubaland, and in tracts of Tanaland, the rainfall is usually less than 20 inches a year. The Coastal strip and the Nyanza and Kikuyu Provinces have between 40 and 80 inches, and the remainder of the country from 20 to 40 inches of rain a year. The wet seasons vary greatly from year to year and in different parts of the Colony, but in the main, up-country there are "long" and "short" rains falling during the months of April to June and October to December respectively, while on the Coast there is more often one rainy season commencing in April and ending in November. Although the direct actinic ray compels the wearing of helmets or "terai" hats in all parts of the country from 8.0 a.m. to 4.30 p.m., the climate in the higher elevations is more invigorating than is usually the case in a country situated on the Equator. The Coastal regions have a tropical climate, but for a greater part of the year the temperature seldom rises above 80° and the nights are cool, except during the hottest months of December to March. In the Highlands on the other hand, the heat is seldom intense, and cool breezes temper the sun's effects, the mean maximum shade temperature at Nairobi for instance in 1924 being 77° and the mean minimum 57°. The nights are for the most part cool, and in the higher regions fires are welcome after dusk.

Appendix I.

The six principal Domestic Exports from Kenya during 1923 and 1924.

	Articles.	*Unit of Quantity.*	*Quantity.*		*Value.*	
			1923.	1924.	1923.	1924.
					£	£

REPORT ON THE COLONY AND PROTECTORATE OF KENYA FOR THE YEAR 1925.*

I. Geographical Note.

On 29th June, 1925, in pursuance of a treaty between the United Kingdom and Italy signed at London on 15th July, 1924, the Province of Jubaland, an area of 36,740 square miles, was ceded to Italy. The area of the Colony and Protectorate was thereby reduced from 245,060 to 208,320 square miles. During the latter half of the year, the new boundary between British and Italian territory was under demarcation by a Boundary Commission.

II. General Observations.

On 10th February, Sir Robert Thorne Coryndon, K.C.M.G., who had been Governor and Commander-in-Chief since 1st September, 1922, died in Nairobi. Mr. E. B. Denham, C.M.G., acted as Governor until the arrival of Lieutenant-Colonel Sir E. W. M. Grigg, K.C.V.O., C.M.G., D.S.O., M.C., who landed at Kilindini on 2nd October and assumed the administration of the Government in Nairobi on the following day.

Sir William Northrup McMillan, Kt., Elected Member of the Legislative Council for Ukamba, died at Nice on 22nd March. On 27th April, the Honourable Reginald Berkeley Cole, Elected Member of the Legislative Council for Kenya, died at Narro Moru, West Kenya.

The Indian Community in Kenya withdrew from the policy of non-co-operation at the end of 1924. On 3rd April, Mr. V. V. Phadke was appointed a Member of the Executive Council; and five Nominated Indian Members took their seats on the Legislative Council at the August Session.

By Additional Royal Instructions dated the 28th of December, 1925, the constitution of the Executive Council was altered, the Director of Agriculture and the Director of Education being appointed ex-officio Members. At the same time the Director of Education became an ex-officio Member of the Legislative Council. The Instructions provided that there should be five Indian Elected Members but that until these had been elected there should be five Nominated Indian Unofficial Members.

---

* A sketch map will be found in the Report for 1914–15 [Cd. 8172–7].

Their Royal Highnesses the Duke and Duchess of York arrived in Kenya in December, 1924, and spent six weeks on a hunting expedition to the north-east of Mount Kenya.

The East Africa Commission, which visited Kenya in November, 1924, presented its Report* in April, 1925.

The Commission was impressed with the need for greater co-operation and understanding, not only between the five Administrations but between unofficial residents in the territories as well. In October the first conference of delegates of the unofficial European communities in the East African territories was held at Kungwe Mission, near Tukuyu, Tanganyika Territory, under the Chairmanship of Lord Delamere. Delegates from Kenya, Tanganyika, Nyasaland and Northern Rhodesia were present at that Conference.

Arrangements were put in hand towards the end of the year for holding the first Conference of East African Governors in Nairobi in January, 1926.

The year has been marked by a recognition of the growing importance of extending educational and medical services throughout the Colony. The Estimates for 1926 reflect the efforts being made to meet future requirements in these directions. The adoption of proposals for erecting hospitals, schools and other buildings out of loan funds has greatly increased the possibility of making progress in establishing such services on a more satisfactory footing.

The Colony has during the course of the year maintained steady progress, as is indicated by the agricultural, trade and railway returns. In certain parts of the Colony there was a shortage of rainfall and its distribution was unusual, but in other parts, particularly the Uasin Gishu Plateau and Trans Nzoia, good rains, combined with the extension of the railway system, have promoted remarkable development.

Building was begun in Nairobi for the Municipal Native Housing Scheme. Progress was continued by the Uganda Railway for the provision of sanitary housing for the native staff over the whole extent of the line.

The Mombasa Town Planning Scheme approached completion. Mr. F. Walton Jameson, an expert from South Africa, was employed to advise on the Mombasa Scheme and on possible town planning for Nairobi.

The Colony received a visit towards the end of the year from Mr. Herbert Baker, the eminent Architect, whose advice is being sought in regard to the design of a number of public buildings, schools and hospitals, which are to be erected out of loan funds.

---

* Cmd. 2387.

Some weeks prior to the cession of Jubaland a local disturbance, between the Mohamed Zubeir and the Herti inhabiting that Province, which threatened to become anti-Government, made it necessary to despatch a large military force to Kismayu. The operations were successful in securing the result desired with very small loss of life. The effect of this expedition on all the tribes along the Frontier has been excellent. During the course of the year the Northern Frontier Province, which has for some years been under military administration, reverted to civil control.

At the end of the year the Colony's Military force was concentrated in Nairobi, and the 5th Battalion, King's African Rifles, was disbanded.

MEASURES FOR THE IMPROVEMENT OF NATIVE CONDITIONS.

Reference was made in the Annual Report for 1924* to the Native Authority Amendment Ordinance of that year, an enactment by which Local Native Councils were established and entrusted with powers, subject to approval by the Governor in Council, to make by-laws, to levy rates and to control local finance. The native tribes throughout the Colony have been quick to take advantage of the measure of local government thus extended to them. The Councils are not yet, of course, models of deliberative or legislative assemblies ; some of them fail to realise their representative status, others are inclined to pass resolutions *ultra vires* their statutory powers, while others, accustomed to a currency of goats and cattle, experience no little difficulty in comprehending financial transactions conducted on a monetary basis. They do, however, take the liveliest interest in their periodic meetings which are of the greatest value to Government as media for the conveyance of native aspirations. A universal desire for a greater measure of medical attention throughout the reserves and for education has been reflected in numerous resolutions asking for Government assistance and voting money from local funds for the establishment of schools and hospitals or for the payment of salaries of dressers and teachers.

The Resident Native Labourers' Ordinance, 1925, defines the conditions on which natives may reside on farms. Its object is to " encourage resident native labour on farms and to take measures for the regulation of the squatting or living of natives in places other than those appointed for them by Government and for the preservation of law and order amongst such natives."

The Masters' and Servants' Amendment Ordinance, 1925, regularises a form of contract of service which is popular among native employees, that is to say, a contract to perform a certain number of days' work within a certain period of contract and determines the ratio of days of work to days of leisure.

---

* Colonial Reports, Annual, No. 1282.

The Witchcraft Ordinance, 1925, provides a greater measure of protection against the evil practices of witch-doctors than did the Ordinances of 1909 and 1918 which it repeals and, by making provision for the deportation of those convicted, prevents further developments that might otherwise occur upon their return to the scene of their former activities.

A situation which has caused growing anxiety for many years is that brought about by the continuous increase in the numbers of native-owned cattle. The general result is that the stock tends to become more numerous than the reserves can carry and among some tribes, notably the Akamba, is rapidly deteriorating. To remedy this situation a Bill was drafted, designated the Crop Production and Live Stock Ordinance, under which the Governor in Council will be empowered to make Rules, *inter alia*, for the disposal of surplus and undesirable live stock and also for limiting the number of stock to be carried on any one area.

Important progress has been made in the delimitation and settlement of the boundaries of native reserves. Provisional boundaries of all native reserves were gazetted in October, and an opportunity was thus given for claims and objections to be lodged which will, when disposed of, lead to a final settlement of this question.

The steps taken to promote native agriculture are discussed in Chapter IV.

The importance of planting trees is being increasingly recognised throughout native areas. It is satisfactory to be able to report that in the entirely deforested Machakos Native Reserve a scheme has been introduced whereby the Forest Department re-plants several large areas and the Local Native Council experiments with the reafforestation of numerous smaller areas scattered through the Reserve. This has eliminated native opposition in that district to the operations of the Forest Department and will be of great educative value to the Native Council.

PUBLIC HEALTH.

At the end of January smallpox broke out in Mombasa, infection being introduced undoubtedly from India. Subsequently the disease appeared in the Teita Hills and in Kikuyu. In all, 239 cases came under observation. The position was at one time very disquieting. A special staff consisting of medical officers, nursing sisters and sanitary inspectors was detached from their ordinary duties in order to cope with the outbreaks. The Laboratory was called upon for a very large increase of vaccine lymph, all of which proved of very satisfactory quality. During the months January to April 260,000 doses of lymph were supplied, more than seven times the ordinary amount. In all, 352,486 vaccinations were performed during the year. In order to carry out vaccination on a large scale a mobile vaccination team under the charge of a European sanitary overseer was established with a native ex-N.C.O. of the King's African Rifles in sub-charge and four native vaccinators. A special drill was devised. The team was equipped with a box-body car for transport, and the necessary tables and basins, etc. So successful did the experiment prove that the team will be maintained until the greater part of the population of the country has been rendered immune.

Plague was reported from Kavirondo, the Kikuyu Province, and the Naivasha District. In Kikuyu the area involved was more extensive than in previous years. It is probable that a large number of deaths occurred but it is impossible to give even approximate figures. The usual routine anti-plague measures were continued in all districts.

VITAL STATISTICS.

A census of the non-native population was taken in February, 1926. No census has yet been taken of the native population. A fairly accurate count is made yearly for taxation purposes but the number of children can only be estimated roughly. The following figures show the 1921 and 1926 census returns for non-natives and the estimates of the native population at the end of 1920 and 1925.

	1921 *Census.*	1926 *Census.*	*Increase. Per Cent.*
Europeans	9,651	12,529	30
Asiatics (excluding Arabs) ..	25,880	30,583	18
Arabs	10,102	10,557	4½
Africans (estimates)	2,483,500	2,549,300	8*
Total ..	2,529,133	2,602,969	8¼*

Figures for births, deaths and marriages among Europeans during 1925 are not yet available. In Nairobi, 108 births were registered during the year as compared with 95 in 1924. Twenty-four deaths occurred among Europeans in Nairobi.

Statistics for Nairobi, with a total population of 23,428, show that the crude annual death-rate for 1925 was 16·6 per thousand living. The crude European death-rate was 10·3, the Asiatic 16·1, and the African 18·3 per thousand. The corresponding figures for 1924 were, European 18·4, Asiatic 16·0 and African 28·9 per thousand.

---

* The native population has been decreased to the extent of approximately 135,000, owing to the cession of Jubaland. For comparative purposes the percentage increase has been calculated on the assumption that the estimate in 1921 also excluded Jubaland.

During the year an attempt was made to ascertain the infant mortality rates among various sections of the population at Kisumu by means of a house-to-house enquiry. The figures, though small, appeared to reflect the result of the improved housing conditions provided by the Uganda Railway Administration for its employees. The rate of deaths under one year per thousand births was 29 in the case of Africans employed by the Uganda Railway and 118 in the case of Africans not so employed, while the corresponding rates among Indians were 63 and 200 respectively.

MIGRATION.

Statistics are kept showing the number of immigrants into Kenya but no machinery exists for the compilation of corresponding emigration figures. The shipping companies at the coast recently assisted the Government by providing figures showing the number of emigrants passing through Mombasa from Kenya, Uganda, Tanganyika, and the Belgian Congo. The comparative figures for these territories combined are as follows :—

	Immigrants.		*Emigrants.*	
	1924.	1925.	1924.	1925.
Europeans	4,079	4,951	3,236	3,844
Indians	7,973	9,540	4,380	4,865
Goans	890	953	628	533
Arabs	1,044	1,225	491	911
Others	1,871	2,076	1,589	1,693
Totals ..	15,857	18,745	10,324	11,846

The figures for immigration into Kenya only are :—

	1924.	1925.
Europeans	3,412	4,212
Indians	5,775	7,161
Goans	739	754
Arabs	970	1,134
Others	1,740	1,907
Totals	12,636	15,168

III. Government Finance.

The financial position of Kenya during the last five years is reflected in the following figures :—

		£	£
Net surplus as at 31/3/21		205,628	—
1921	Revenue, £1,891,679 (*b*) (*x*).		
(9 months)	Expenditure, £1,666,785 (*b*).		
	Revenue in excess of expenditure	224,894	—
1922	Revenue, £1,649,032 (*b*).		
	Expenditure, £1,972,212 (*b*).		
	Expenditure in excess of revenue	—	323,180
1923	Revenue, £1,839,447 (*b*).		
	Expenditure, £2,137,633 (*b*).		
	Expenditure in excess of revenue	—	298,186
1924	Revenue, £2,111,565 (*b*).		
	Expenditure, £1,861,511 (*b*).		
	Revenue in excess of expenditure	250,054	—
1925	Revenue, £2,430,509.		
	Expenditure, £2,339,996(*b*).		
	Revenue in excess of expenditure	90,513	—
Net surplus as at 31/12/25		—	149,723
		£771,089	771,089

Notes.—(*b*) Excluding Railways.
(*x*) Including £600,000 appropriated under item 4 of the Specific Loan Ordinance, 1921.

The year opened with a surplus of £59,210, and closed with a surplus of £149,723, the Revenue for the year having exceeded the Expenditure by £90,513. Items of expenditure of an extraordinary and non-recurrent nature amounted to £260,753, of which the greater part was on account of the writing off of the fictitious asset of £242,347, previously shown in the Balance Sheet under Railway Unallocated Stores. But for these items, and allowing for the appropriation to Revenue of £104,541, the balance of the Reserve Fund Military Expenditure, the surplus in the year's working would have been £246,725. The actual receipts of the year exceeded the estimated Revenue by £270,184, and the actual Expenditure exceeded the estimated Expenditure by £222,771.

No change took place during the year in the Funded Public Debt of the Colony, which remained at £8,500,000.

Of the £5,000,000 Loan raised under Ordinance No. 39 of 1921, £4,857,182 had been expended at the close of 1925, the expenditure during the year being £329,637.

Of the Imperial £3,500,000 Loan authorised by Ordinance No. 29 of 1924, £723,257 was expended during the year, and interest amounting to £131,528 was earned on the unexpended balance.

IV. Trade and Agriculture.

Kenya and Uganda have since 1917 formed one administrative unit for purposes of Customs, under the control of the Commissioner of Customs resident at Mombasa, and complete freedom of trade between the two territories exists ; a general uniformity of Tariffs is now observed with Tanganyika Territory also.

In March, 1925, an Official Conference met at Dar-es-Salaam with the object of securing the closest possible co-ordination in regard to Customs laws and procedure in the three territories of Kenya, Uganda, and Tanganyika Territory. Very considerable progress towards this end was made and virtually identical draft Customs Management Ordinances, suitable for enactment in the three Dependencies, have since been agreed upon, the Zanzibar Government also participating in these efforts towards co-ordination.

Consequent upon the cession of Jubaland to Italy, the Customs stations at Kismayu, Gobwen and Yonte were closed on the 29th June, 1925, the Province thenceforward being treated as foreign territory for Customs purposes. The sea-borne trade of Jubaland in 1924 amounted to £129,767, of which £59,989 represented trade with other parts of Kenya and £69,778 with foreign countries.

The Customs Tariff, enacted with effect from the 1st January, 1924, remained in force during the year with only minor alterations.

Despite an unusual distribution and partial shortage of rainfall, which adversely affected the yield of produce in certain areas, the trade balance of Kenya and Uganda continued to be favourable, relative particulars being as follows :—

	£	£
Total Imports	12,345,379	
Less value of Government Imports ..	3,717,344	
Total Trade Imports (including goods imported during the year remaining in bond on 31/12/25)		8,628,035
Domestic Exports	7,821,844	
Total Re-exports	1,754,309	9,576,153
Balance in favour		£948,118 (or 11 per cent.)

The total volume of import, export and re-export trade, including importations on Government account, specie, and transit and transhipment traffic, was valued at £22,228,380, as against £19,085,587 in 1924, an increase of 16 per cent. Of this total, goods imported and cleared for home consumption represented £8,061,448, as compared with clearances valued at £6,277,907 in 1924, the value of domestic produce of the two territories exported during the year being £7,821,844, as against £6,137,009 in the previous year.

As regards the distribution of foreign trade between Kenya and Uganda respectively, a close analysis shows that foreign trade goods imported into Uganda and cleared for consumption in that territory amounted in value to £2,677,764, as compared with total clearances for home consumption for both territories valued at £8,061,448. The origin of domestic produce exported during the year was in the following proportion—Uganda £5,097,215, Kenya £2,724,629. For purposes of comparison the proportionate figures for 1924 were—Uganda £3,897,395, Kenya £2,239,614. As trade statistics are based on the landed value at the port of importation in the case of imports, and the f.o.b. value at the port of shipment in the case of exports, the port for both territories being Mombasa, the actual trade balances of each country cannot be ascertained with any degree of exactitude, but it is obvious that, quite apart from the wealth derived from export of its own produce, the Colony of Kenya reaps a very considerable benefit by the transportation through the territory of goods valued at approximately 7¾ million pounds sterling in respect of Uganda traffic and approximately one million pounds sterling in respect of Tanganyika Territory traffic.

The net yield of Revenue collected during 1925 was £1,192,920 and exceeded that for 1924 by £176,103. Of the total amount collected, £679,726 accrued to Kenya and £513,194 to Uganda. In addition, Excise duty collected on beer brewed in the territory amounted to £733, as against £426 in 1924.

IMPORTS.

Of the total value of trade imports the British Empire provided 68·99 per cent. and foreign countries 31·01 per cent., this proportion being approximately the same as in the previous year.

Cotton Piece-goods.—The value of trade imports of cotton piece-goods of all descriptions amounted to £1,604,504, the amount of duty collected thereon being £314,402. Imports into Uganda were valued at £947,260, or 59 per cent. of the combined imports of this commodity into Kenya and Uganda, and it is estimated that fully 75 per cent. of these imports are consumed by the native population.

The cotton piece-goods market is naturally an increasingly valuable one, but in comparison with the total trade imports its relative importance continues to diminish, the proportion during 1925 being 20 per cent., as against 23·6 per cent. in 1924 and 30 per cent. in 1923. Unbleached piece-goods show an actual decrease in the quantity and value imported, the reason being that, as a direct consequence of the rapid development of the territories, the native population is now purchasing goods of a wider range and better quality than was the case when grey sheetings constituted the main article of import.

As regards the countries of origin of imported cotton piece-goods of all descriptions, there was some falling off in the value of goods originating in the United Kingdom, India and Burma and Japan, whereas Holland and to a less extent Germany have increased their trade in this market.

Vehicles.—Rapid development of the territories and the continued increase in and improvement of the road mileage possible for wheeled transport have again resulted in abnormal importations of vehicles of all descriptions, more particularly those propelled by motor power.

The number of motor-cars imported increased from 945, valued at £157,963, in 1924, to 1,558, valued at £274,143, in 1925. The United States of America and Canada continue to be the principal sources ot supply, the United Kingdom again securing 13 per cent. of the trade.

Motor lorry and tractor importations show a phenomenal increase. Whereas only 66 were imported in 1923 and 450 in 1924, no less than 1,600, valued at £263,950, were imported in 1925. 85 per cent. originated in America, the United Kingdom providing 8 per cent. Figures relating to the importation of motor cycles, side-cars and tri-cars are more normal, 984 having been imported in 1925 as against 911 in 1924. The principal source of supply continues to be the United Kingdom.

A further considerable advance in the importation of bicycles took place in 1925 when 23,938 machines, valued at £185,024, were imported as compared with 17,430, valued at £134,741, in the previous year. These are principally for the native trade, the main source of supply being the United Kingdom.

Oils.—Following upon the rapid increase in the use of motor transport there has been a very considerable advance in the import trade in fuel oils.

1,979,059 gallons of motor spirit valued at £157,506 were imported during the year, this being more than twice the quantity imported in 1924.

The quantity of kerosene imported amounted to 1,483,106 gallons, as compared with 1,048,546 gallons in 1924.

Importations of heavy fuel oil increased from 5,302,494 gallons in 1924 to 8,217,403 gallons in 1925. The bulk of this oil is either used by the Uganda Railway or is subsequently re-exported as fuel for vessels using the Port of Mombasa.

Three principal oil companies are interested in the importation of oils into the Colony, viz., the British Imperial Oil Company, the Vacuum Oil Company and the Anglo-Persian Oil Company. Heavy fuel oil is imported in bulk and the British Imperial Oil Company have recently erected at the Port a large and up-to-date installation for dealing with bulk importations of kerosene and petrol.

Machinery. A further encouraging sign indicative of development is the rapid advance in the value of imports of machinery. During the year importations of industrial machinery amounted in value to £235,000 ; agricultural machinery imports were valued at £70,763. The total value of machinery of all descriptions imported was £382,287, as compared with £294,863 in 1924.

Food-stuffs.—Despite the efforts in many directions which are being made to increase the local production of food-stuffs, no very marked diminution in the quantity and value of imported food-stuffs is yet apparent, this being due principally to the improved standard of living of a large section of the native population.

Wheat Meal and Flour.—An increased acreage under wheat and the establishment of additional flour mills have not prevented an augmentation of the quantity of flour imported, 53,557 cwt., valued at £56,364, coming from overseas in 1925, as compared with 48,474 cwt., of a value of £40,792, in 1924.

Rice.—The value of rice imported continues to increase, 147,505 cwt., worth £150,315, being imported during the year, as against 109,984 cwt., valued at £106,859, imported in 1924. The markets of Kenya and Uganda provide a valuable outlet for the exportable surplus of rice produced in the neighbouring territory of Tanganyika, 41 per cent. of the total quantity imported originating in that Territory.

Tea.—Favourable reports of the progress made in tea planting in the Colony continue to be received, but the production stage has not yet been reached. 6,934 cwt. of tea were imported during the year, as compared with 5,301 cwt. in 1924. It is hoped that in the near future supplies of tea for the East African Dependencies will be drawn from the locally grown product.

Sugar—The local manufacture of sugar is progressing satisfactorily, 9,951 cwt. (of which 5,560 cwt. originated in Kenya) being exported during the year. The local sources of supply are, however, not yet sufficiently large to satisfy the demand in all parts of the Colony and 27,161 cwt. of sugar were imported in 1925.

Salt.—Facilities for the local production of salt are being afforded by Government to supply the demand for salt, which is large, 146,616 cwt. being imported during the year.

EXPORTS.

General.—Apart from carbonate of soda dredged from a natural deposit at Lake Magadi, the export of which amounted in value to £213,680, the exports from Kenya are almost entirely of agricultural products. Adverse climatic conditions reduced the yield in certain areas, but the increased acreage under cultivation and improved methods of agriculture have more than counterbalanced the ill effects of drought, there being an increase of £1,625,461 in the value of agricultural products of Kenya and Uganda exported during the year. A very large proportion of the local produce exported is shipped to Empire markets, no less than 84·2 per cent. being sent to destinations in the British Empire.

Cotton.—This is again by far the most valuable export, constituting as it does 60 per cent. of the total domestic exports of both territories. 785,849 centals valued at £4,694,359 were exported during the year, as against 515,095 centals of a value of £3,489,329 exported in 1924. Of this quantity 3,836 centals originated in Kenya. The export of cotton seed amounted to 21,958 cwt.

Coffee.—The shortage of rainfall, to which allusion has already been made, adversely affected the export of this important crop although the decrease in quantity exported was more or less compensated for by the high prices ruling in overseas markets during 1925. 177,141 cwt. of a value of £963,920 were exported, as compared with 199,504 cwt. valued at £803,313 in 1924.

Sisal.—Production has continued to increase satisfactorily, 14,363 tons valued at £531,129 being exported in 1925, as compared with 11,416 tons of a value of £396,777 in 1924. There is very little doubt that the sisal fibre industry is likely to be of great and increasing importance to the Colony.

Maize.—A slight increase is recorded in the quantity of maize exported, 1,219,076 cwt. being shipped in 1925, as against 1,164,479 cwt. in 1924. In the case of this commodity also, a shortage of rainfall greatly reduced the yield from the acreage under this crop.

Hides and Skins.—The value of hides and skins exported advanced from £253,709 in 1924 to £358,953 in 1925. The sources of supply are principally the native reserves. A schedule showing the six principal exports of Kenya during the year appears as Appendix I to this report.

AGRICULTURE.

The incidence of rainfall for the year for purposes of crop production was unsatisfactory and crops in many areas suffered from drought, particularly those planted late in the season.

In the native reserves, fears were entertained for a time in regard to food supplies but, with the exception of the Kerio Province and a part of the hinterland of the Coast, no serious shortage took place. The increase in development, particularly in European areas, combined with the varied climatic conditions in different parts of the Colony, decreases the possibility of famine on so large a scale as would necessitate the importation of food supplies, as was done in 1918.

A sense of insecurity is still noticeable in regard to insufficiency of labour but efforts are being made to reduce the number of labour units required on holdings. The year has been noteworthy for the increasing interest taken in the use of agricultural tractors for ploughing and other operations. The high cost of draught oxen, the inefficiency of labour in their use and the higher value of land have all contributed towards a change from the ox to the tractor.

The rapid rate of progress maintained from 1922 to 1924 was partially arrested during 1925 owing principally to the unfavourable season but there is also reason to believe that inadequacy of the labour supply has been an important factor. A decrease of about ten per cent. in the average nunber of units of native labour employed monthly on European farms is recorded between June, 1924, and June, 1925, the numbers decreasing from 87,093 to 78,527.

The total area under cultivation on European farms has, nevertheless, advanced from an average of 214 acres per occupier in 1924 to 232 acres per occupier in 1925. Including the development through live stock on a basis of six acres per head for cattle and three acres per head for small stock the average development for each European occupier is 1,325 acres, a total of nearly 2,250,000 acres out of an occupied area of 4,420,000 acres.

The following are the main crops produced on European holdings :—

Maize.—The acreage under maize increased by ten per cent. in the year to 155,916 acres. Yields show a high average varying from five to nine bags to the acre and there are records of more than 20 bags per acre from comparatively large acreages on individual farms. The maize conditioning plant was put into operation at Kilindini on 1st November. This is designed to deal both with excess moisture and with the destruction of insect life. Maize grading services have been maintained and nearly 620,000 bags were offered for grading.

Coffee.—The acreage under coffee increased by eight per cent. to 65,140 acres. The season was exceptionally dry in the main coffee-producing areas. There was a drop of 25,673 cwt. in coffee exports and the quality both in respect of size and " liquoring " was below standard. The importance of this industry lies not only in the fact that the value of coffee exported amounts to nearly one-third of the total exports from the Colony but also in the fact that forty per cent. of the European owners and occupiers of land are coffee growers.

Coffee plantations have now passed through two extended periods of serious drought during the last ten years and although losses have been suffered from crop failures, experience seems to justify the opinion that any drought likely to occur will not cause permanent loss or damage to the plantations. The industry is in a sound position and, but for the uncertainty in regard to labour supplies, particularly during the picking season, more rapid progress would be made in extending the acreage under coffee.

Sisal.—The acreage under sisal has been increased by seventeen per cent. to 52,872 acres. This industry is in a flourishing condition. Roughly two-thirds of the sisal planted is more than three years old and available for cutting.

Wheat.—Wheat is grown mainly for local consumption. 61,067 bags were harvested in 1924–25, as compared with 55,920 in the previous year. Experience has shown that the higher altitudes are more suited to wheat growing but in these areas further settlement and development are required to secure a substantial increase in wheat production. The yields per acre are still low but are showing an upward tendency. In an area of the Trans Nzoia, where good crops of wheat have been grown during the last three years, " rust " caused great damage even among varieties which had hitherto appeared to possess considerable rust-resisting powers. A great deal of work has been done in hybridisation and selection to secure wheats which are resistant to the three main forms of rust.

Other Crops.—Large increases are recorded in the area put under sugar-cane and barley. The production of sugar is increasing but it is still only meeting a portion of local requirements. It has been proved that " malting " barley of good quality can be grown in Kenya and satisfactory yields have been obtained. The area under flax has decreased. Even in areas where flax has proved to be a suitable crop, growers have given it up largely owing to the depressed state of the market and the low prices obtainable.

Native Agriculture.

Encouragement has been given to the production of economic crops possessing an export value and to the increased production of food-stuffs. The chief crops grown are maize, sim-sim, beans, ground-nuts and cotton. A greater interest is being shown in wheat growing. There has been a considerable increase in the demand for small ploughs and scufflers; a few water-power grinding mills have been erected by natives and about a hundred hand-driven grist mills have been bought.

Maize.—Issues of " Flat White " maize have been continued. There has been a revival of the maize trade from Malindi and Kilifi.

Cotton.—The production of cotton has been stimulated in areas suitable for this crop and there is an increase of 375 per cent. in cotton exports. Drought caused partial failure on the shores of the Kavirondo Gulf and reduced the crop expected from the Sio-Samia area. The low prices paid, in consonance with market prices, caused much dissatisfaction, areas which proved unsuitable to cotton production last year have been eliminated and the area planted in 1925 shows a decrease as compared with the previous year.

Sim-sim.—This crop is gaining in popularity and is tending to displace cotton in Kavirondo country. Efforts are being made to increase the production of sim-sim on the Coast.

General.—Seven Native Agricultural Shows were held during the year, three of them in Coast districts. The educational value of these Shows is increasing yearly and where Shows have been held for the last two or three years the improvement in quality of the exhibits and the voluntary elimination of poor exhibits is marked. The Native Agricultural Schools at Bukora (North Kavirondo) and at the Scott Agricultural Laboratories have been developed during the year. These institutions provide for the training of native agricultural instructors and already their value is felt in the development of native agriculture generally.

Live Stock.—It is estimated that stock in the possession of natives, other than those on European holdings, includes :—

Cattle	3,200,000
Sheep	2,500,000
Goats	3,500,000

Prices realised by sale of stock have advanced considerably. Meat prices for local consumption are higher than they are in other stock-raising countries where the quality is better. Oxen for draught purposes have also reached a price far above their proper value. Some of the native pastoral areas are greatly over-stocked. The " Crop Production and Live Stock Bill " is intended to exercise some pressure in such cases in order to avoid depreciation in value and losses from poverty and old age. During the past two years, natives have come to realise in increasing degree the value of preventive measures against disease. New inoculation stations have therefore been opened in the native reserves and inoculation services have been extended generally.

Instruction has been given in the better preparation of hides and skins but much of this trade is so inefficiently conducted and organised that the native finds that he gets no better price for well-prepared hides. Grading only takes place after the hides have passed out of the hands of the original buyers.

Steps have been taken to stimulate the production of ghee. Demonstrations are given in various markets and three separating stations have been established. A schedule showing the estimated value of the principal agricultural exports of native origin appears as Appendix II to this report.

European Live Stock Industry.

There have been small increases only in the numbers of cattle, horses, sheep and goats. As regards cattle, there is a steadily increasing proportion of " grade " to " native " type on European farms but the proportion of pure-bred to either has not grown. 111 pure-bred bulls and 54 pure-bred cows and heifers were imported during 1925, as compared with 21 and 13, respectively, in 1924.

A new co-operative society was formed during the year for the establishment of a creamery at Naivasha.

Agricultural Shows.

In addition to the Native Agricultural Shows, two successful Shows were held under the auspices of the Agricultural and Horticultural Society of Kenya, one at Nairobi and one at Eldoret. In both cases they took place on new show-grounds.

Financial.

The net cost of services rendered by the Agricultural Department, including the Veterinary and Veterinary Research Divisions, was £67,090. The revenue derived from inoculations against rinderpest, and similar services, which in 1923 amounted to £6,120 and to £11,536 in 1924, rose to £24,520 in 1925, owing very largely to the increased demand for these services among native stock owners.

V. Land.

The total area of land alienated as at the 31st December, 1925, was 5,745,607 acres (as compared with 5,542,809 acres on the 31st December, 1924), of which 516,175 acres are freehold, and 5,229,432 acres leasehold.

The area of grants registered during the year was 317,258 acres, compared with 364,410 acres for the previous year, and the area of surrenders was 114,460 acres.

One auction of farms was held during the year, at which 26,759·8 acres realised the sum of £26,104.

Sales of Township Plots were held at Nakuru, Eldoret, Njoro, Kisumu and Kitale.

The revenue derived from sales and rents of land, survey fees, sale of maps, etc., amounted to £81,706 during the year.

There was a marked increase in the tendency towards closer settlement, many schemes of sub-division having been approved, more especially in the Trans Nzoia district. The area of the surveys submitted by licensed surveyors to the Director of Land Surveys was 292,848 acres, as compared with 216,421 acres in 1924 and 119,346 acres in 1923.

Registration transactions during the year totalled 12,595, as against 11,885 for 1924. The revenue derived from Registration Fees, Stamp Duties and Conveyancing Fees amounted to £57,380, as compared with £44,622 in the previous year. This figure is exclusive of extra revenue expected from the operation of the over-embossing method of stamp cancellation, as non-arrival of staff and other delays prevented the application of this system.

MINES.

The Mining Ordinance, 1925, was enacted in March. Twenty-six Prospecting Licences were issued and 483 claims registered.

FORESTS.

Of the area of forest reserves totalling approximately 5,100 square miles, it is estimated that about 31 per cent. carries a sufficient stock of timber to be considered merchantable, 31 per cent. consists of poor forest and scrub which can be regenerated and converted into good forest, 16 per cent. is pure bamboo forest and 22 per cent. consists of moorland, rock and grassland. Considerable progress has been made with forest surveys and 420,000 acres are now mapped on a scale not smaller than 1 : 25,000.

The demand for timber became exceptionally active during the year and in many districts saw-millers were unable to cope with it, the resulting timber famine causing much inconvenience. Many saw-mills were in process of reorganization at the end of the year. A total of 913,088 cubic feet of timber was cut in the forest reserves, this being by far the largest cut ever recorded in one year.

Exports of timber amounted to 69,425 cubic feet and 638,238 mangrove poles, as compared with 80,165 cubic feet and 840,400 poles in 1924. The value of the mangrove poles was returned at £10,034, compared with £6,446 in the previous year. Imports for the use of Kenya and Uganda amounted to 205,995 cubic feet, compared with 79,004 cubic feet in 1924 ; of this quantity 134,511 cubic feet were for Government consumption.

Of the timber exported 56,151 cubic feet consisted of cedar in the form of slats for pencil manufacture. This trade has not shown the progress that had been hoped for, but a greater number of enquiries were coming in at the end of the year.

3,419,775 cubic feet of firewood were sold by the Forest Department, as compared with 3,242,549 cubic feet in 1924. The Railway took over from all sources 9,009,818 cubic feet compared with 9,975,598 cubic feet in the previous year. The supply of railway fuel was at times inadequate owing to the failure of contractors to fulfil their contracts punctually.

The year was an exceptionally dry one and reafforestation plans had to be considerably curtailed. 2,177 acres were replanted, as compared with 2,127 acres in 1924. In addition, 2,129 acres were successfully treated for natural regeneration, this method proving, in certain types of forest, much more successful than had at one time been thought probable. 4,073,000 young trees were raised in the nurseries, as compared with 2,890,000 in 1924. This will permit of a very great increase in the plantations in 1926 if the weather conditions prove favourable. In some districts progress in reafforestation is still hindered by an insufficiency of labour.

Steps have been taken to begin the experimental planting of the species of trees which yield chaulmoogra oil required in the treatment of leprosy, but it is feared that there are very few districts in the Colony where suitable conditions prevail.

The total cash revenue collected by the Forest Department in the form of royalties on timber, fuel and other forest produce was £25,457, as compared with £21,648 in the previous year. The revenue was the largest in the history of the Department, though sales of fuel and young trees did not come up to expectations. The expenditure amounted to £27,925 and the proportion of revenue to expenditure increased from 85·65 per cent. in 1924 to 91·13 per cent. in 1925.

The value of produce issued free amounted to £1,771, as compared with £2,376 in 1924. From 1st January, 1925, other Government Departments were required to pay for all timber and other forest produce used by them. The free issues were mainly to settlers on timberless farms possessing Free Timber Permits and to natives in certain localities where special conditions prevail.

VI. Legislation.

During the year ten new Ordinances and twenty amending Ordinances have been passed.

The more important Ordinances are :—

- The Mining Ordinance (No. 3).
- The Public Trustees Ordinance (No. 7).
- The Arms and Ammunition Ordinance (No. 8).
- The Witchcraft Ordinance (No. 23).
- The Detention Camps Ordinance (No. 25).
- A Bankruptcy Ordinance on the lines of the English Act was also passed and becomes No. 1 of 1926.

The revised edition of the Laws of Kenya has now been completed and will be brought into operation on the 1st July, 1926.

VII. Education.

Government schools have been established for the provision for education to European, Indian, Arab and African children. Private and missionary enterprise supplements State provision. During the course of the year a Committee considered the question of grants-in-aid to missions and grants have been systematised. The Government inspecting staff has been strengthened.

The Central Advisory Committees demanded by the Education Ordinance, 1924, began to function, and some of the African School Area Committees were provisionally consolidated. More than one thousand schools were registered and several thousands of teachers were listed for licensing.

European Education.—There are Government schools at Nairobi, Nakuru, Eldoret and Kitale. Private schools, notably Kenton College for Boys and Loreto Convent for Girls, maintain a high standard of attendance and attainment. There are six rural schools on farms on the Uasin Gishu.

Proposals have been developed for the erection of school buildings out of loan funds. Money from this source is being found for a secondary school at Kabete, elementary schools at Nairobi and Kitale, and additions to the Nakuru and Eldoret Schools. An elementary school is also to be started at Nanyuki.

The number of children receiving education in European schools rose during the year from 554 to 626. The cost of European education, excluding all administrative expenses, totalled £26,247.

Indian Education.—Government schools are established at Nairobi and Mombasa and there are four assisted schools, one at Mombasa, two in Nairobi and one at Machakos. 933 children are receiving education at the Government schools and 811 at the assisted schools, as compared with 728 and 747, respectively, in 1924. The cost of Indian education in 1925 amounted to £11,943. An Advisory Council on Indian Education was appointed during the course of the year.

Arab Education.—Arab schools are established at Mombasa and Malindi. The attendance advanced in 1925 from 128 to 299, but although these schools are called Arab schools, the majority of the pupils are not Arabs. The attachment of a Koran school to the Mombasa Arab School is beginning to find favour and this section is well supported, 125 children under the age of eleven being in attendance. The Arab School at Malindi is making only slow progress. Parents in that area appear to be indifferent to the advantages of education. It is also difficult to keep Arab boys long at school, for as soon as they attain a very moderate standard they are in great demand in commercial and other circles.

African Education. Government schools exist at Machakos, Waa, Kwale, Narok, Kapsabit and Kericho; schools are maintained by all the principal missionary societies; there are Police schools in many important centres, and there are large numbers of village schools situated throughout the native reserves. In 1925 the Jeanes School for training supervisors of African village schools was opened at Kabete and good progress was made at the Native Industrial Training Depot at Kabete, whose object is to supply the Colony with qualified African artizans. Attendance in Government schools totalled 1,683, as compared with 1,625 in 1924. For African assisted schools no accurate figures for 1925 are obtainable. In 1924 the number was 21,539.

The cost of Arab and African education, exclusive of administrative charges, was £36,017 in 1925, of which £14,803 appeared as grants to missions.

VIII. Communications.

RAILWAYS AND MARINE.

The results of the working of the Kenya and Uganda Railway, Marine, and ancillary services for the year 1925 disclose the progress made by the Railway and the favourable financial position that has been achieved.

Earnings for the year amounted to £1,993,509 and the ordinary working expenditure to £1,090,071—the surplus of receipts over ordinary working expenditure being £903,438. After allowing for contributions to renewals funds, interest charges, etc., the net surplus of this excess for transfer to Betterment Funds amounted to £368,774.

The carriage of public goods provided a revenue of £1,580,642, and the tonnage of this traffic amounted to 534,474 tons, as compared with £1,297,236 and 432,480 tons during the previous year. The revenue derived from passenger traffic also showed an increase over that of 1924, viz., in 1925, 913,640 passengers contributed a revenue of £225,548 as against 830,209 passengers and £197,991 in 1924. Natives continued to use the railway in increasing numbers. The following figures show the number of passengers carried under different classes:—

		1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1924	..	15,904	57,921	756,384	830,209
1925	..	16,745	57,530	839,365	913,640

Lake steamer traffic also showed a steady improvement. The tonnage carried increased from 149,803 tons in the previous year to 197,629 tons, an increase of 31·92 per cent.

The supply of wood fuel for locomotives was again unsatisfactory and the consumption of coal was very heavy in consequence. The following figures show the consumption of coal, wood and oil fuel during the year :—

Coal ..	.. 51,536	tons consumed at a cost of	£88,196.
Wood ..	.. 81,056	,, ,, ,, ,,	£42,135.
Oil ..	.. 9,073	,, ,, ,, ,,	£38,249.

The work of relaying the main line with a heavier (80 lb.) rail in place of the 50 lb. did not progress as well as was anticipated owing to the big increase in traffic which had to be carried over the line while relaying operations were in progress and also to the difficulty experienced by the contractor in obtaining sufficient labour and good supervision for that labour. 106 miles of 80 lb. track were laid during the year.

General upkeep has been maintained throughout the year, and also a considerable amount of re-grading and re-alignment work. The re-grading is almost completed and will give a maximum ruling gradient of 1·18 per cent. compensated against downward traffic between Nairobi and the Coast.

The total route mileage of line open at the close of the year was 1,038, of which 67 miles are in Uganda. The final sections of the Uasin Gishu Railway, totalling 73 miles, were taken over from the contractor during the year. The final cost of the Uasin Gishu Railway, which was built under the direct control of the Consulting Engineers with Messrs. Griffiths and Company as contractors, will be approximately £2,350,000 or over £16,550 per mile. On the Thika-Nyeri branch 25 miles were taken over from construction lines.

At the end of the year the following lines were under construction :—

Kenya—	
Thika-Nyeri Branch	73 miles.
Solai Branch	27 ,,
Kitale Branch	45 ,,
Turbo-Uganda Border section of the Uganda Extension	79 ,,
Uganda—	
Uganda Border—Mbulamuti section of the Uganda Extension	106 ,,
Total ..	330 miles.

Further surveys and reconnaissances were carried out to ascertain the merits of future branch lines towards productive areas.

SHIPPING.

During 1925 the Port of Mombasa was served by seven regular lines of steamers from Europe, i.e., The Union Castle Mail Steamship Company, Limited., The British India Steam Navigation Company, Limited, Messageries Maritimes, Italia Navigation Company, Clan Ellerman and Harrison Line, Holland East Africa Line and the Deutsche Ost Afrika Linie. In addition to these services, a few calls were made by Norwegian and Japanese Lines and miscellaneous oil and coal steamers discharged full cargoes at this Port.

A fortnightly service between Bombay and Durban, calling both ways at Mombasa, has been maintained by the British India Steam Navigation Company, Limited. Coastal services by this Line and by Messrs. Cowasjee Dinshaw and Brothers have been fairly regular.

The total steam tonnage (mercantile) entered in the Protectorate ports during the year amounted to 1,253,552 tons net, represented by 549 steamers. These figures show an increase of 88,425 tons and 45 steamers as compared with figures for the previous year. In gross tonnage, the figures are :—1924—1,781,039 tons, 1925—2,025,629. This is the first year during which the gross tonnage of shipping has exceeded two millions. The total tonnage of sailing vessels entered in the Protectorate ports during 1925 was 61,139 tons, represented by 3,069 vessels, a decrease of 4,490 tons and 476 vessels. On account of the cession of Jubaland to Italy, the 1925 figures for the port of Kismayu are for six months only as against twelve months for 1924.

The figures for Mombasa were 440 steamers of 1,180,493 tons net, against 372 steamers of 1,037,631 tons net for 1924, an increase of 68 steamers and 142,862 tons. The tonnage of sailing vessels amounted to 24,375 tons, represented by 1,283 vessels, a decrease of 2,418 tons and 158 vessels over the previous year.

Revenue derived from Port dues amounted to £10,583, an increase of £2,772 over the previous year, due to the steady increase in tonnage and in the number of ships visiting the port of Mombasa. Corresponding increases have resulted also in Light dues and Pilotage fees.

Approximately 640,000 shipping tons of cargo (346,714 tons inwards and 293,326 tons outwards) were dealt with and 36,764 passengers passed through the port of Mombasa during 1925. 92,777 shipping tons were handled at Mbaraki which was purchased by Government towards the end of the year.

ROADS.

There are approximately 5,800 miles of public roads in the Colony, 2,000 miles of which may be classified as main roads. The roads are practically all earth roads, and many of them are mere tracks, almost impassable during the heavy rains. These tracks are gradually improved from year to year as funds are available, with the object of making them properly formed, graded and drained roads. The average expenditure per mile on maintenance and improvement work during 1925 was £18 for main roads and £13 for other roads. This expenditure includes maintenance and repairs to bridges and culverts, and the provision of new culverts.

The Public Works Department is responsible for all road maintenance work throughout the Colony, with the exception of Nairobi, and for work in collaboration with District Road Boards in the settled areas and with the Administration in the native reserves.

The system of road maintenance by contract continued during the year but was practically confined to district roads. Most of the main roads were maintained by direct labour employed by the Public Works Department but district roads in the settled areas were, when possible, maintained by contract with the local farmers through the medium of the District Road Boards. In a few cases it was, however, possible to arrange contracts for improvement or replacement work with a contractor who was not a farmer.

POSTS AND TELEGRAPHS.

The financial results of the year's working of the Post and Telegraph service established a fresh record. The following comparative statement shows the expenditure, cash revenue and value of free services rendered to Government Departments :—

Year.	*Expenditure.*	*Cash Revenue.*	*Value of Official free services.*	*Excess of (b) and (c) over (a).*	*Excess or Deficit of (b) over (a).*	
	(*a*)	(*b*)	(*c*)	(*d*)	(*e*)	
	£	£	£	£	£	
1922 ..	156,548	132,727	34,103	10,282	23,821	deficit.
1923 ..	138,261	132,287	31,749	25,775	5,974	deficit.
1924 ..	139,790	150,481	33,500	44,191	10,691	excess.
1925 ..	146,309	181,435	15,696	50,822	35,126	excess.

The foregoing statement does not include the value of free services performed by other Government Departments for the Post Office, which are estimated at £14,230.

The reduction in the value of official free services is due to an arrangement, which was introduced during the year, under which all Departments pay cash for telephone and telegraph and certain other special services. This arrangement has resulted in economy in the use of these services.

The Post and Telegraph services of Uganda and Kenya are unified under the control of the Postmaster-General at Nairobi. The scheme for the closer amalgamation of these services, which was referred to in the year 1924, came into operation on the 1st of January, 1925. The scheme has worked with great smoothness and has achieved its object of effecting a division of revenue and expenditure between the two territories on an equitable basis.

To the total cash revenue of £181,435, Kenya contributed £138,413 and Uganda £43,022, whilst of the total expenditure of £146,309, £101,401 was expended in Kenya and £44,908 in Uganda.

The estimated number of letters, postcards, book packets and samples dealt with during the year was 9,041,799, representing an increase of 14·9 per cent. over 1924 figures. An increase of 27·9 per cent. is found in the number of parcels dealt with, i.e., 175,585, and an increased number of insured parcels and registered articles was also handled. The bulk of the overseas mail business is with Great Britain.

The value of money orders issued and paid rose in Kenya from £310,592 in 1924 to £480,967 in 1925, and in Uganda from £287,527 to £505,011. Increased use is being made, particularly in Uganda, of facilities provided by the telegraph money order service, which at present extends to no overseas countries except Great Britain and the Irish Free State. The value of money orders issued increased by £221,370 from £374,841 in 1924 to £596,211, or 59 per cent. Of this increase £164,085 was in respect of inland orders, and £61,534 in respect of remittances to India, an increase in the case of the latter of 53·3 per cent.

The total number of inland telegrams and cablegrams dealt with during the year was 363,851 and 115,502 respectively, being an increase of 47·8 per cent. and 8·5 per cent. respectively, over the figures for the preceding year. The remarkable increase in the number of inland telegrams is mainly due to the reduction of 50 per cent. in rates which came into effect on the 1st January. Of the cable traffic slightly less than half was with Great Britain. The number of telegrams exchanged over the line of the Overland service to South Africa totalled 45,531.

Overseas communications were on the whole expeditiously and satisfactorily maintained. Two interruptions, lasting altogether 32 days, occurred in the Mombasa-Zanzibar cable. Traffic was diverted via the Mombasa and Zanzibar wireless stations and via Dar-es-salaam and sustained no serious delay.

With the exception of extensions to existing telephone exchanges, engineering work in Kenya was mainly confined to maintenance services. The demand for telephone facilities was above normal, the increase in the number of installations being 18·2 per cent. over the previous year. All applications for service were dealt with without undue delay.

In the Post Office Savings Bank deposits exceeded withdrawals by £5,145. The total number of active accounts at the end of the year was 4,012, and the total balance due to depositors was nearly £57,500. 604 accounts, with a total balance of £4,725, stood in the names of Africans. Efforts continue to popularise this bank among Africans and to make them familiar with the advantages it offers.

Africans are still employed largely in the telegraph service as operators and the work of recruiting and training proceeded normally. So far, however, the educated Africans show no desire to enter the Engineering branch of the Department.

The very decided expansion which took place during the year in all branches of the Post Office may be accepted as a reflection of the business and industrial activity which prevailed generally.

IX. Climate.

The general effect of climatic conditions in their relation to crop production has been mentioned under "Trade and Agriculture." Records are compiled at 209 meteorological stations, 134 of which are private stations situated in the farm areas. The following table indicates temperature and rainfall conditions at various stations :—

[TABLE OVERLEAF

Station. 1925.	Shade Temperature.					Relative Humidity % 9 a.m.	Rainfall.		Period of years.	Latitude.	Longitude.

Rainfall during 1925 was generally unsatisfactory with the exception of certain areas of the Coastal and adjacent hinterland and Lowland (Lake) areas where normal to slightly excess precipitation was experienced.

The outstanding feature of the year was the almost universal abnormal rain experienced in January followed by a sequence of months of deficient fall.

Late and bad distribution, however, was reflected rather than abnormal lack of rain as was experienced in 1924.

APPENDIX I.

Six principal exports of Kenya during 1924 and 1925.

REPORT ON THE COLONY AND PROTECTORATE OF KENYA FOR THE YEAR 1926.

I.—GEOGRAPHICAL NOTE.

The Kenya Colony and Protectorate (Boundaries) Order in Council, 1926, defined the western boundary of the Colony and included in Kenya an area on the west of Lake Rudolf and north of the River Turkwel, stretching from Mount Elgon to Mount Zulia on the boundary of the Anglo-Egyptian Sudan, which had formerly formed part of the Uganda Protectorate. The addition of this Northern Turkana district to Kenya (15,854 square miles) has increased the area of Kenya Colony and Protectorate to 225,100 square miles. The land area is 221,089 square miles and the water area 4,011 square miles. The water area includes the larger portion of Lake Rudolf and the eastern waters of the Victoria Nyanza, including the Kavirondo Gulf.

The Anglo-Italian Jubaland boundary was under survey and delimitation during the year.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian Line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East Longitude to 41° East.

The official time used is the zone time 2½ hours fast on Greenwich.

II.—GENERAL OBSERVATIONS.

The Colony and Protectorate were administered throughout the year by the Governor, Lieutenant-Colonel Sir E. W. M. Grigg, K.C.V.O., C.M.G., D.S.O., M.C.

The first Conference of East African Governors was held in Nairobi in January and February, 1926. The permanent organisation of the Governors' Conference Secretariat was approved during the course of the year. The Conference Secretariat is located in Nairobi and its offices will form a part of the new Government House building now in course of construction.

The second conference of delegates of unofficial communities in the East African Territories was held under the Chairmanship of Lord Delamere at Livingstone, Northern Rhodesia, in September, 1926. The conference was attended by delegates from Northern Rhodesia, Nyasaland, Tanganyika, and Kenya, and by a nominee of the Premier of Southern Rhodesia.

The Legislative Council held six sessions and sat on twenty-nine days during the course of the year. Mr. M. A. Desai, one of the Nominated Indian Unofficial Members, died on the 14th July, 1926.

The Legislative Council was dissolved, preparatory to the triennial general elections, on the 21st January, 1927. The elections were held during January and February, 1927, with the following returns :—

Nairobi North, Captain H. F. Ward (i).
Nairobi South, Captain H. E. Schwartze (i).
Mombasa, G. G. Atkinson.
Coast, Major R. W. B. Robertson-Eustace, D.S.O. (i).
Lake, Conway Harvey (i).
Rift Valley, Lord Delamere (i).
Plateau North, Lieut.-Colonel J. G. Kirkwood, C.M.G., D.S.O.
Plateau South, T. J. O'Shea (i).
Kenya, Captain E. M. V. Kenealy (i).
Ukamba, Lieut.-Colonel Lord Francis Scott, D.S.O. (i).
Kikuyu, Lieut.-Colonel C. G. Durham, D.S.O.
Indian Electoral Area, A. H. Malik. (Four vacancies).
Arab Electoral Area, Hamed Mohamed bin Issa (i).

(i) An Elected Member of the previous Council.

The constitution of the Council provided for the election of five Indian Elected Members and provided further that until such Indian Elected Members had been elected there should be five Nominated Indian Unofficial Members. The return of one Indian Elected Member with four vacancies has led to the promulgation of Additional Royal Instructions dated the 28th March, 1927, under which it is laid down that if after a dissolution of the Council less than five persons are elected to be Indian Elected Members, or if at any time the number of Indian Elected Members is less than five, the vacancy or vacancies so arising may be filled by the appointment of Nominated Indian Unofficial Members in the following manner :—

Until the termination of one year from the date of the Additional Royal Instructions, nominations may be made from the Indian community in general. These nominations will last for not more than one year from the date of the Additional Royal Instructions and thereafter nominations will only be made from among those persons whose names are entered on the register for the time being of voters for the election of Indian Elected Members, prepared in accordance with the Legislative Council Ordinance or amendments thereto.

Since January, 1924, when rules were first introduced enabling qualified members of the Indian community to register as voters for the election of Indian Elected Members, a small number only of qualified Indian residents have entered their names on the roll. The Indian register published in June, 1926, upon which the elections were held in January contained some 360 names only. The object of the Additional Royal Instructions is to afford opportunity to the Indian community to make the register of voters representative of the community during the current year with a view to an election for Indian Elected Members being held early in 1928.

A Commission of Inquiry under the chairmanship of Mr. Justice Feetham was appointed in July to make recommendations as to the establishment or extension of local government for Nairobi, Mombasa, and their environs, and for such settled areas as the Commissioners might consider to be suitable for the establishment of local government. The Commission heard evidence in all parts of the settled areas of the Colony and presented its report in March, 1927.

The Colony was visited during December, 1926, and January, 1927, by Mr. W. C. Bottomley, C.B., C.M.G., O.B.E., Assistant Secretary of the East Africa Department of the Colonial Office, who made an extensive tour through native and settled areas in Kenya before proceeding to other parts of East Africa.

The Mombasa Town Plan was passed and brought into operation. By the end of the year a sum of approximately £8,000 had been spent from loan funds on the Town Planning of Mombasa and nearly £36,000 had been spent on improvements and Town Planning in Mombasa Old Town.

A Nairobi Area Town Planning Authority was appointed in March, 1926, with directions to prepare a Town Planning Scheme for the central portion of Nairobi, and was given a general authority over an area comprised in a circle of twenty miles diameter taking Nairobi House as its centre. At the close of the year the initial stages of its task were practically completed.

A Kenya Advisory Committee was established to work with the Advisory Committee in England of the Eastern African Dependencies Trade and Information Office as a channel for regular reports and the latest and fullest information available. The object of the Committee is to give information on land and crops to settlers with capital, to give information about suitable farms to apprentices desiring work on farms, and to provide so far as possible for the filling of appointments which will promote the immigration of the foreman class. The Committee has helped to bring the Colony into touch with such important bodies as the Empire Marketing Board who will, it is hoped, be able to assist industries in this country, in particular the dairy industry. As a result of recommendations put forward by the Kenya Advisory Committee, enquiries are being made as to the possibility of securing loan funds for the formation of a Land and Agricultural Bank, and the Government of the Union of South Africa has offered to give assistance and advice from the result of experience gained in the working of the Land and Agricultural Bank in the Union.

Plans for the investigation of lake fisheries have advanced towards maturity and it is expected that the fisheries on the Victoria Nyanza will be examined during the current year. No suitable arrangements have yet been made for a marine investigation of the coast fisheries, but the South African Government have shown themselves willing to co-operate with East African Governments in the matter and it is hoped that it will soon be possible to report progress.

The year was a satisfactory one financially, the Colonial surplus increasing from £149,723 at the end of 1925 to £362,265 at the end of 1926. The Estimates for 1927, which were passed by the Legislative Council in November, provided for a tax to be levied on the European and Indian communities sufficient to cover the cost respectively of European and Indian education services, in the form of a consumption tax on wines and spirits, accompanied by a poll cess of thirty shillings per head for the European and twenty shillings per head for the Indian adult male population.

Several buildings, to be constructed out of loan funds, were begun during the course of the year. These include Government Houses, Nairobi and Mombasa, and the European School, Nairobi. Loan funds have also been expended on the installation of a maize drying and a cold storage plant at Kilindini, on water supplies at Mombasa, Nakuru, and Kisumu, on the Town Planning of Mombasa, and in advances to the Nairobi Municipality.

Ships came freely alongside the new deep-water berths at Kilindini during the latter half of the year, and the construction of two further deep-water berths has been sanctioned.

Progress was made in the construction of the main railway line extension with Uganda and of the branch lines in Kenya to Nyeri, Solai, and Kitale. The Solai and Kitale branches were completed during the year, and the Nyeri line was opened to public traffic as far as Sagana. The main line reached Tororo, in Uganda, in January, 1927.

Although the trade statistics indicate decreases as compared with the returns of 1925, steady progress has been made in agriculture. There has been a marked increase in the acreage put under wheat, barley, and tea, and considerable increases in European areas in the cultivation of maize, coffee, sisal, and sugar-cane. The rainfall in the densely populated native areas of Nyanza and Kikuyu was above the average, but in Nyanza crops suffered in consequence and yields were low. Fever amongst the inhabitants in Nyanza restricted the amount of work done, particularly towards the end of the year. These factors tended to reduce the output of marketable crops, with the result reflected in the schedule of agricultural exports of native origin contained in Appendix II.

Measures for the Improvement of Native Conditions.

The most important step taken during the year, so far as natives are concerned, was the final delimitation of the native reserve boundaries, descriptions of which were published in the *Official*

Gazette in October. This measure was introduced and approved in 1925 and the necessary action was then taken. Time was, however, given for objections to be raised to the boundaries proposed. Such objections were very few. There still remain a few small areas in respect of which a decision has not yet been taken. The publication of these boundary descriptions has been welcomed, in particular by the native population.

Local Native Councils have made good progress under the presidency of the District Officers, and measures of considerable administrative and social value have resulted from their deliberations. Discussions which took place in the Councils among the more progressive tribes indicate considerable realisation of their duties and responsibilities, and their interest in the extension of educational facilities. During the current year, various Local Native Councils have voted to this end a sum aggregating £5,530. Funds have also been voted for the extension of medical services.

By-laws were passed by the Nairobi Municipality during the year which aimed, *inter alia*, at ridding the town of undesirable natives, while at the same time affording all proper protection to those who come into the municipal area for employment or other lawful purpose. It is hoped that these by-laws will have the effect, not only of reducing crime, but of protecting honest working natives from the importunities of idle relatives who endeavour to live at their expense.

The Native Labourers' (Medical Treatment) Rules, introduced in August, 1926, under the provisions of the Master and Servants Ordinance, make it incumbent on employers of native labour to maintain a supply of necessary medicines on their farms and to provide free medical treatment for their servants for a period of thirty days from the date of commencement of illness, or to the end of the contractual period, whichever is the less.

The Crop Production and Livestock Ordinance, 1926, gives power to the Governor-in-Council to make rules for improving the cultural conditions of any crop and the quality of agricultural produce, for prohibiting the growing of particular kinds of plants, for promoting the improvement of the quality of live stock and the disposal of surplus and undesirable stock. It is hoped that, with careful administration, rules to be made under this Ordinance will improve, *inter alia*, the conditions in overstocked areas, the pasture in which is fast becoming destroyed by excessive grazing.

Tree planting is being carried on in the provinces of Nyanza, Kikuyu, and Ukamba. In the last-named Province, in conjunction with a scheme for the re-conditioning of desiccated areas, some 800,000 young trees were planted during 1926 under the auspices of the Forestry Department and the Machakos Local Native Council.

The arrangements that were in force in 1925 for the leasing of a portion of the Yatta Plains to the Wakamba on payment of a grazing fee were continued during 1926 to enable further improvements to be effected in the Native Reserve. A sum of £1,700 was voted by the Local Native Council for the reconditioning of that Reserve, and this is being carried out by the natives of the area, under European supervision.

Towards the end of the year, arrangements were made to detach a senior officer of the Administration to study native law and customs, in close collaboration with the Governors' Conference Statistician. By means of this organisation it is hoped that the foundations will be laid for acquiring accurate information in regard to vital statistics, birth-rate, death-rate, length of life, and other particulars affecting the welfare of the African community. Questions of land holding and occupancy, the ideas of industry held by the natives, and the economic area which may be adequate for the family unit are also to be the subject of close investigation, with a view to securing a better general insight into factors affecting native welfare throughout the Colony and to obtaining some guidance as to the most promising lines of research.

Public Health.

During 1926 there was a large increase in the personnel of the Medical Department. Provision had been allowed in Estimates for an addition of twenty medical officers to the establishment, and the greater number of these new appointments had been made before the end of the year.

This expansion of the Department had been decided upon after consideration of the inadequacy of the previously available staff to meet the urgent needs of the Colony and after realisation of the necessity for wider and more intensive measures for the treatment of disease and the promotion of the public health among the native population. In order to provide a medical and public health service which should be more adequate to the demands made upon it, a large scheme of expansion had been drawn up during 1925; the actual increase of staff during 1926 represented the fulfilment of the preliminary part of this scheme.

As a result of the additional staff, it was found possible so to augment the headquarters administrative division of the Department as to enable more time and attention to be devoted to problems of public health and departmental supervision and control; to appoint a senior medical officer for the special duty of attention to the health of native labour; to station two medical officers in the coastal area; and to post additional medical officers to four of the larger districts, where previously one medical officer had been attempting single-handed to cope with an overwhelming amount of work. In addition, the health office staff of Mombasa was increased by an assistant medical officer of health to undertake the rapidly growing work of the port, and another sanitation officer was detailed for posting in the new year, for the inauguration of sanitary supervision of the settled areas of Nakuru, Eldoret, and Kitale. The staff of the Medical Research Laboratory was also increased, while the native hospital and other medical institutions in Nairobi were assisted by posting to them newly-arrived medical officers, for a period of training preliminary to the assumption of more responsible duties.

The development of hospital facilities, so urgently required throughout the Colony, has had to wait upon the realisation of the extensive building programme which it is proposed to undertake with loan funds. In the meantime the work of the hospitals has been carried on in the existing temporary and inadequate buildings. The total number of cases admitted to the hospitals of the Department during the year was 29,741, an increase of 3,498 over the corresponding figures for the previous year.

Little extension was possible in the system of dispensaries in the native reserves, since the lack of disciplined and trained native dressers makes it impracticable to establish more dispensaries in any district than can be closely supervised by the medical officer. Provision for a start to be made in the training and organisation of an African Medical Corps was inserted in the Estimates for 1927.

The future of the hospitals in Nairobi has been under consideration throughout the year, and some difficulty has been experienced in selecting a site on which permanent and complete hospital buildings can be erected.

With regard to the public health, the outstanding feature of the year was the severe and widespread epidemic of malaria which occurred during and after the rainy season. This epidemic was more serious in its consequences than any malarial outbreak hitherto recorded in the Colony. 42,972 cases received treatment at Government hospitals and dispensaries, as against 23,250 in 1925. In addition to this, large numbers were treated by private practitioners and many thousands of natives received treatment from their employers on farms and estates. The outbreak was particularly noticeable in Nairobi, partly because the cases were under more immediate observation than elsewhere, partly because Nairobi has in recent years been relatively free from malaria. All races were affected, the disease in Africans being of a severe type with a high mortality. The epidemic was co-incident with an enormous increase in the number of mosquitoes. This recrudescence of malaria has provided an additional incentive to the promotion of anti-malarial measures both in Nairobi and elsewhere.

Its intensity is attributed to an abnormally long and unbroken series of rainy days with a consequent prolonged absence of sunshine.

Plague continued in endemic form in the Kavirondo and Kikuyu Reserves; small extensions of the infection occurred in the settled districts of the Highlands. In this connection the Department has carried out propaganda with a view to improvement in the type of housing for native labour on European farms, and there is already evidence of a definite advance towards more hygienic conditions. Numerous cases of plague occurred throughout the year in Nairobi; they were almost entirely confined to those parts of the town in which housing conditions are notoriously unsatisfactory.

The campaign against yaws continued in those native districts most affected; there is reason to believe that the incidence of the disease is decreasing as a result. Much work has been done towards ascertaining how far the routine treatment by bismuth is effecting permanent cure, although the immediate object is to render cases non-effective. It was found possible to carry out special measures against yaws in the Tana Valley, where previously no medical assistance had been afforded.

Smallpox, with the exception of four cases, was absent from the Colony throughout the year. In order to ensure a continuance of this immunity, the wholesale vaccination of the native population, instituted during the previous year, was continued.

Investigation into the problem of sleeping sickness on the Lake shore was undertaken in connection with, and with the help of, the International Commission on Sleeping Sickness, sitting at Entebbe. A complete census of the Lake shore population was begun with the object of discovering and treating all existing cases and so reducing the risk of the reappearance of the disease in epidemic form.

Special attention was devoted to the question of the nutritional condition of the native population. It has long been thought that much of the sickness and inefficiency of the natives of the Colony may be a consequence of deficiencies in diet. At the instigation of Dr. Orr of the Rowett Institute, the Civil Research Committee took steps in co-operation with the Kenya Government to start a nutritional investigation. One special research officer had arrived in the country at the end of the year.

Vital Statistics.

A census of the non-native population was taken in February, 1926. No such census has yet been taken of the native population. A fairly accurate count is made annually for taxation purposes, but the number of children can only be estimated roughly and the return of native population is therefore a rough estimate only. Examination of the values given from year to year shows that no valid conclusions can be drawn from any figures hitherto published concerning the flow of population from district to district or the increase or decrease of numbers in individual districts.

The following figures show the 1921 and 1926 census returns for non-natives and the estimates of the native population at the end of 1921 and 1926.

—	*1921 Census.*	*1926 Census.*	*Increase per cent.*
Europeans...	9,651	12,529	30
Asiatics (excluding Arabs)	25,880	30,583	18
Arabs	10,102	10,557	4½
	Estimate 1921.	*Estimate 1926.*	
Africans	2,348,788	2,682,848	19*
Totals	2,394,421	2,736,517	19*

Statistics for births, deaths and marriages among Europeans during 1926 are not yet available. In Nairobi 119 births among Europeans were reported during the year, as compared with 108 in 1925. Thirty-six deaths occurred among Europeans in Nairobi.

Statistics for Nairobi, with a total population of 32,864, show that the crude annual death-rate for 1926 was 22.64 per thousand living. The crude European death-rate was 13.5, the Asiatic 30.3, and the African 17.3 per thousand. The corresponding figures for 1925 were: Europeans 10.3, Asiatics 16.1, and African 18.3 per thousand.

Statistics for Mombasa, with a total population of 39,824, show that the crude annual death-rate for 1926 was 19.48 per thousand living. The crude European death-rate was 13.31, the Indian and Goan 23.37, the Arab 19.69, and the African 18.90 per thousand.

Migration.

Statistics are kept showing the number of immigrants into Kenya, but no machinery exists for the compilation of corresponding emigration figures for the Colony alone.

A general increase in the number of immigrants entering Kenya Colony only is reflected during 1926, amounting to 1,137 persons of all races and nationalities, of whom 961, or 84 per cent., were Europeans.

The Principal Immigration Officer has again received much assistance from shipping companies at the Coast in the compilation of statistics relative to emigrants passing through Mombasa from Kenya, Uganda, Tanganyika, and the Belgian Congo.

---

* The native population showed a decrease in 1925 owing to the cession of Jubaland to Italy. For comparative purposes, the estimated native population of Jubaland at the end of 1921 (97,728) has been deducted from the 1921 estimate.

The comparative figures for the territories mentioned are as follows :—

Nationality.	*Immigrants.*		*Emigrants.*	
	1925.	*1926.*	*1925.*	*1926.*
Europeans	4,951	6,058	3,844	4,648
Indians	9,540	9,753	4,865	6,529
Goans	953	974	533	638
Arabs	1,225	1,266	911	622
Others	2,076	2,086	1,693	2,095
Totals	18,745	20,137	11,846	14,532

The figures for immigration into Kenya only are :—

Nationality.	*1925.*	*1926.*
Europeans	4,212	5,173
Indians	7,161	7,271
Goans	754	743
Arabs	1,134	1,223
Others	1,907	1,895
Totals	15,168	16,305

III.—GOVERNMENT FINANCE.

The following figures show the financial position of the Colony during the last five years :—

	£	£
Net surplus as at 1st January, 1922 ...	430,522	
1922.		
Revenue, £1,649,032.		
Expenditure, £1,972,212.		
Expenditure in excess of Revenue...		323,180
1923.		
Revenue, £1,839,447.		
Expenditure, £2,137,633.		
Expenditure in excess of Revenue...		298,186
1924.		
Revenue, £2,111,565.		
Expenditure, £1,861,511.		
Revenue in excess of Expenditure...	250,054	
1925.		
Revenue, £2,430,509.		
Expenditure, £2,339,996.		
Revenue in excess of Expenditure...	90,513	
1926.		
Revenue, £2,627,223.		
Expenditure, £2,414,681.		
Revenue in excess of Expenditure...	212,542	
Net Surplus as at 31st December, 1926		362,265
	£983,631	£983,631

The year opened with a surplus of £149,723, and at its close there was a surplus of £362,265, the revenue for the year having exceeded the expenditure by £212,542. The actual receipts of the year exceeded the estimated revenue by £253,229, and the actual expenditure exceeded the estimated expenditure by £25,928.

No change took place during the year in the Funded Public Debt of the Colony, which remained at £8,500,000.

Of the £5,000,000 raised under Ordinance No. 39 of 1921, the balance of £142,818 which remained unexpended at the beginning of the year was fully expended in the course of the year.

Of the Imperial £3,500,000 Loan authorised by Ordinance No. 29 of 1924, £858,840 was expended during the year, and interest amounting to £107,856 was earned on the unexpended balance during 1926.

IV.—TRADE AND AGRICULTURE.

Kenya and Uganda, since 1917, have formed one administrative unit for purposes of Customs under the control of the Commissioner of Customs resident at Mombasa. Complete freedom of trade between the two territories exists, and general tariff uniformity is observed with Tanganyika Territory. Present legislation permits of the movement, without the imposition of duty in the dependency of consumption, of goods the growth, produce, or manufacture of either Kenya, Uganda, or Tanganyika Territory. Customs Management legislation in the three territories has been co-ordinated and embodied in the Kenya Customs Management Ordinance, 1926, and the Uganda Customs Management Ordinance, 1926. These Ordinances have been passed by the respective Legislative Councils and their simultaneous operation will be effected by proclamation in the Official Gazettes of Kenya and Uganda. Provision has been made for the Governments of Kenya and Uganda to enter into Customs agreements with neighbouring territories, and during the year legislation has been enacted in Tanganyika Territory which will enable that Dependency to take similar action.

The Customs tariff introduced on the 1st January, 1924, and slightly amended by minor extensions of the free list in 1925, has remained in force during the year, without alteration.

The detailed statistics of imports and exports contained in the succeeding paragraphs amply justify the measure of caution exercised in estimating trade prospects for the year under review. An uneven distribution of rainfall reduced the anticipated yield of produce in certain areas, and trading activities generally have been restricted by prevalent conditions in the world's cotton market, a most important factor in relation to the purchasing capacity of the native population of Uganda and of the Nyanza Province of Kenya. The fall in the price of cotton and the shortage in the yield of the maize crop together with a drop in soda exports have had an adverse effect on the import and export trade of the territories, while the industrial unrest in the United Kingdom throughout the year, beginning with the general strike in May, also contributed to the decrease.

Despite these handicaps and the fact that importers generally must of necessity hold large and varied stocks of merchandise in anticipation of trade demands resulting from the disposal of crops, the trade balance of Kenya and Uganda continued to be not unfavourable, relative particulars being as follows :—

	£	£
Total imports	9,071,317	
Less value of Government imports	1,390,740	
Total trade imports (including goods imported during the year and remaining in bond on 31st December, 1926)...		7,680,577
Total domestic exports	6,010,386	
Total re-exports	1,834,295	
		7,844,681
Balance in favour (or 2 per cent)		£164,104

The total volume of import, export, and re-export trade, including importations on Government account, specie, and transit and transshipment traffic, was valued at £17,208,483, as against £22,228,380 in 1925, a decrease of 23 per cent. Of this total, goods imported and cleared for home consumption represented £7,440,649, as compared with clearances valued at £8,061,448 in 1925, the value of domestic produce of the two territories exported during the year being £6,010,386, as against £7,821,844 in the previous year. It should be noted that in cotton exports alone there was a decrease in value of £1,637,399.

As regards the distribution of foreign trade between Kenya and Uganda respectively, a close analysis shows that foreign trade goods imported into Uganda and cleared for home consumption in that territory amounted in value to £1,964,174, as compared with total clearances for home consumption in both territories valued at £7,440,649. The origin of domestic produce exported during the year was in the following proportion : Uganda £3,596,045, Kenya £2,413,341, as against £5,097,215 and £2,724,629 respectively in 1925. As trade statistics are based on the landed value at the port of importation in the case of imports and the f.o.b. value at the port of shipment in the case of exports, the port for both territories being Mombasa, the actual trade balances of each country cannot be ascertained with any degree of exactitude, but it is obvious that quite apart from the wealth derived from the exportation of its own produce the Colony and Protectorate of Kenya reaps a very considerable benefit by the transportation through the territory of goods valued at approximately 5½ millions sterling in respect of Uganda traffic and approximately £1,300,000 in respect of Tanganyika Territory traffic, goods to the value of £52,194 being imported in transit to Tanganyika Territory via Mombasa and goods to the value of £1,250,000 being exported from Tanganyika Territory via Mombasa.

The estimated Customs revenue for the year was £1,120,000, or £120,000 in excess of the amount estimated for 1925. Actual net revenue amounted to £1,150,593, a decrease of £42,327 as compared with 1925 collections, but an increase of £30,593 over the original estimate. Of the total amount collected, £737,657 accrued to Kenya and £412,936 to Uganda. In addition, excise duty collected on beer brewed in Kenya amounted to £1,115, as against £733 in 1925 and £426 in 1924.

Imports.

Of the total value of trade imports the British Empire provided 67.73 per cent. (Great Britain 37.12 per cent., British Possessions 30.61 per cent.) and foreign countries 32.27 per cent., this proportion being approximately the same as in the previous year.

Cotton Piece Goods. — The value of trade imports of cotton piece goods of all descriptions amounted to £1,145,324, the total amount of duty collected thereon being £227,633. Imports into Uganda were valued at £599,687, or 55 per cent. of combined imports of this commodity, and it is estimated that fully 75 per cent. of these imports are consumed by the native population.

The cotton piece goods market continues to be a valuable one, but compared with the total trade imports its relative importance is diminishing, the proportion during 1926 being 15 per cent. as compared with 20 per cent. in 1925 and 23.6 per cent. in 1924. Imports generally show a decrease on the previous year's figures, but this is accounted for by the drop in the output of the Uganda cotton crop and its effect on the spending power of the native population. Cotton piece goods of all classes are mainly supplied by Great Britain, Japan, Holland, and India.

Vehicles.—Motor-cars to the number of 1,403 and of a value of £250,453 were imported during the year, the principal sources of supply being the United States of America 61 per cent., Canada 18 per cent., and Great Britain 13 per cent. 1,135 motor-lorries and tractors were imported, valued at £224,949. 61 per cent. originated in the United States of America, 20 per cent. in Canada, and 10 per cent. in Great Britain.

As was anticipated, the abnormal importations of 1925 have not been continued, but additions to and improvements in the road mileage available for motor transport together with increased agricultural development in Kenya should create a steady demand for the future. Figures relating to the importation of motor-cycles, side-cars, and tri-cars are 602, valued at £95,377, 91 per cent. of the total imports originating in Great Britain.

11,629 bicycles, valued at £94,100, were imported during the year, mainly from Great Britain, comparative figures for 1925 being 23,938 machines valued at £185,024.

The decrease in imports is mainly accounted for by the falling off in the demand for bicycles in Uganda. These machines are imported principally for native trade.

Oils.—As a natural result of the abnormal importations of motor vehicles in 1925 and owing to the continued extension of motor transport facilities and to the increased use of power-driven agricultural and industrial machinery, there has been a steady advance in the importation of fuel oils. 2,570,493 gallons of motor spirit, valued at £158,958, were imported during the year, this being an increase of 591,434 gallons as compared with 1925.

The quantity of kerosene imported amounted to 1,712,266 gallons, as against 1,483,106 gallons in 1925.

Importations of heavy fuel-oils amounted to 5,731,483 gallons, as compared with 8,217,403 gallons in 1925. The bulk of this oil is imported either for subsequent re-exportation as fuel for vessels using the port of Mombasa or for the use of the Kenya and Uganda Railway. The decrease in quantity is accounted for by the diversion from the East Coast route of oil-driven vessels during the coal strike in the United Kingdom.

The importation of oils is principally in the hands of three companies, viz., the British Imperial Oil Co., the Vacuum Oil Co., and the Anglo-Persian Oil Co. Heavy fuel-oil is imported in bulk, and the British Imperial Oil Co. handle bulk imports of petrol and kerosene at their oil installation at Shimanzi, to which considerable extensions have been made during the year.

Machinery.—During the year importations of industrial machinery amounted in value to £134,467, and agricultural machinery imports were valued at £88,372. The total value of machinery of all descriptions imported was £300,592, or a decrease of £81,695 as compared with 1925 figures. It should be observed, however, that importations of agricultural machinery as against those of 1925 show an increase in value of £17,609, an indication that additional areas of land are under mechanical cultivation.

Wheat Meal and Flour.—The continued expansion of the local flour-milling industry has not prevented an increase in importations, which amounted to 58,257 cwt., valued at £57,929, as compared with the previous year's figures of 53,557 cwt., valued at £56,364.

Rice.—The markets of Kenya and Uganda provide a valuable outlet for the exportable surplus of rice produced in Tanganyika Territory. Imports amounted to 142,153 cwt., valued at £145,241, and 48.6 per cent. of this quantity originated in Tanganyika Territory. The quantity imported in 1925 was 147,505 cwt., and the decrease in 1926 importations reflects increased rice production in Kenya.

· *Tea.*—Fairly extensive areas are under cultivation, and drying plant and machinery are in course of installation. Tea imports during the year were 6,901 cwt., valued at £72,761, approximately the same figures as for 1925.

Sugar.—Locally-manufactured sugar to the amount of 23,839 cwt. was exported during the year, and supplies have been available for consumption in Kenya and Uganda. Imports of sugar amounted to 19,567 cwt., valued at £20,865, as against the 1925 figures of 27,161 cwt., valued at £32,475. It is hoped that in the near future supplies of sugar for the East African Dependencies will be drawn from the locally-grown product.

Salt.—Advantage has not been taken of the facilities afforded by Government for the local production of salt in the Kenya coastal area. Imports during the year show a substantial increase, the comparative figures being as follows :—

	cwt.	£
1925	146,616	20.065
1926	177,354	24.579

Re-Exports, Transit, and Transhipment.

The entrepôt trade of Mombasa, including transit and transhipment traffic, is of considerable and continually growing importance, as, apart from the dock and transport facilities available, the geographical situation in relation to neighbouring territories is favourable to the holding of stocks of all varieties of goods, either in bond or duty paid, for sale as opportunity offers in the markets of Zanzibar, Tanganyika Territory, Italian East Africa, and the Belgian Congo. The following are the comparative figures for the years 1925 and 1926 :—

	1925. £	1926. £
Re-exports	1.477.576	1,591.671
Transit	141,081	120,861
Transhipment	165,767	171.624

Exports.

General.—The export trade of Kenya and Uganda consists mainly of agricultural products. Although an uneven distribution of rainfall reduced the anticipated yield of produce in certain areas, steady development can be recorded except in the case of the export of cotton from Uganda. The output of this commodity has been affected by adverse market conditions. A very large proportion of the local produce exported is shipped to Empire markets, 75.7 per cent. being sent to destinations in the British Empire as compared with 84.2 per cent. in 1925. An increase has taken place in shipments to Japan, the percentage figure in 1926 being 7.8 as against 2.1 in 1925. This is explained by the fact that direct shipments to Japan have to a large extent replaced the previous procedure of forwarding produce via Bombay for subsequent transhipment.

Cotton.—Notwithstanding a decrease in quantity from 785,849 centals in 1925 to 724,699 centals in 1926 together with a drop in the market price, this commodity heads the list of domestic exports with a value of £3,056,940, or 50.8 per cent. of the total exports, as against £4,694,339, or 60 per cent., in 1925. 723,438 centals originated in Uganda and 1,261 centals in Kenya. The export of cotton seed amounted to 35,365 tons.

Coffee.—The adverse weather conditions prevalent towards the end of 1925 account for a decrease in the quantity exported during the year, which amounted to 174,131 cwt., valued at £895,080, as compared with 177,141 cwt., valued at £963,920, in 1925. Great Britain continued to be the principal market for this product.

Sisal.—Production has continued to increase in the sisal fibre industry, and 14,928 tons, valued at £579,499, were exported during the year as compared with 14,363 tons, valued at £531,129, in 1925.

Maize.—Adverse weather conditions have resulted in a reduction in the quantity exported during the year, comparative figures being 929,178 cwt., valued at £280,596, for 1926 as against 1,219,076 cwt., valued at £416,964, for 1925.

Hides and Skins.—The value of hides and skins exported during the year was £272,327, as compared with £358,953 in 1925 The principal sources of supply are the Native Reserves.

Agriculture.

The rainfall was generally above normal and on the whole it was a favourable season, although in some districts crops suffered from an excess of rain. The yields of maize were high in most districts, though disappointing in one or two on account of weather conditions.

In the Native Reserves fears were entertained for a time in regard to food supplies, but except in the eastern part of North Kavirondo crops were sufficient to ensure the sustenance of the people until the new seasons' plantings were well advanced.

Market prices of some agricultural exports fell slightly towards the latter half of the year, notably in the case of maize, coffee, cotton, and sisal, making it more than ever necessary that the costs of production should be closely watched. Greater attention is being paid to economy in labour and methods and to timely operations on the land in order to secure the best returns.

Increasing attention is being given to the use of agricultural tractors, power machinery and labour-saving implements and appliances.

The apprehension indicated last year on account of insufficiency of labour has been removed to an appreciable degree. African labourers have been offering their services in increasing numbers and it cannot be said, except in rare cases, that production and development suffered through an insufficiency of unskilled labour. The average number of labourers employed monthly during the agricultural census year from 1st August, 1925, to 31st July, 1926, was 6,084, or 7.75 per cent. more than that of the previous census year.

Towards the end of 1926 the cold storage plant at Kilindini was put into commission, but demands on the part of the public for space are at present small.

Mr. A. D. Lewis, Director of Irrigation in the Union of South Africa, who visited Kenya at the end of 1925, presented a comprehensive report upon the position in regard to irrigation and water supply. Mr. Lewis came to the conclusion that "the immediate possibilities of an extensive irrigation scheme in the country are exceedingly poor," but he considered that "there is a reasonable prospect of finding water by boring over large areas of the country in sufficient quantities to establish water centres for stock purposes and at smaller cost than in any other way." Four boring machines have been ordered and the unalienated area from Sultan Hamud to Makindu has been selected as the area in which work should start with a view to running in the machines and to training the operators to local conditions.

Professor Sir Rowland Biffen, the eminent English wheat-breeder, made an extensive tour of the wheat-growing districts to advise upon the wheat industry, with particular reference to plant-breeding services. He reported very hopefully on the industry, which has been greatly stimulated as a result of Professor Biffen's visit. Steps have been taken to extend plant-breeding services and to open a plant-breeding station for wheat at Njoro.

At the instance of the Committee of Civil Research, Dr. J. B. Orr, Head of the Rowett Research Institute, Aberdeen, visited Kenya with a view to examining the prospects for research work in connection with malnutrition and deficiency diseases. Experiments have been begun at four centres upon the feeding of cattle and sheep.

The number of European holdings under occupation increased from 1,695 in 1925 to 1,809 in 1926. An endeavour was made in the compilation of the Agricultural Census for 1926 to ascertain the total number of Europeans engaged on agricultural undertakings. The returns indicate that 2,324 Europeans are so engaged.

The total area cultivated on European farms advanced from an average of 232 acres per occupier in 1925 to 256 acres per occupier in 1926. In 1921 the figure was 154 acres per occupier. Including the development through live stock on a basis of six acres per head for cattle and three acres per head for small stock, the average development by each European holding is 1,311 acres, a total of 2,370,000 acres out of an occupied farm area of 4,588,000 acres.

The following are the main crops produced on European holdings :—

Maize.—The acreage under maize increased by 24 per cent. in the year to 193,187 acres (some of this increase is accounted for by the alteration of the date of the census return figures from the end of June to the end of July). The average yield of maize over the whole country is about six bags per acre. Greater interest is being taken in the maintenance of soil fertility by means of the application of manures and the introduction of rotations including green manures. 542,852 bags of maize were offered for grading during the year. It is estimated that 22 per cent. of this maize emanated from native sources. An innovation was introduced in the bulk shipment of maize. Maize from 69,000 bags was shipped in bulk. 106,000 bags of maize were conditioned during the year, and the conditioning plant had to be worked at very high pressure during the last quarter.

Coffee.—The season was, on the whole, good, especially in the largest coffee-producing areas. The acreage under coffee increased from 65,140 acres in 1924-25 to 68,950 acres in 1925-26, and the quantity exported was 5,757 cwt. in excess of that for 1924-25, showing an increase in export value from £723,180 in 1924-25 to £747,453 in 1925-26. The coffee industry provides nearly one-third of the total agricultural exports from the Colony. Thirty-nine per cent. of the European occupiers are coffee planters.

The production of coffee has not increased in proportion to the increase of acreage coming into bearing. This may be accounted for by the facts that on some estates a proportion of the crop was lost through shortage of labour, that many acres are not being properly pruned, and that large areas have been stumped and these are non-productive for two years afterwards.

It was decided to carry out trials of " Robusta " types of coffee as well as " Liberica " along the coast in co-operation with planters, and numbers of plants of each type were secured for trial purposes from the Amani Institute.

Sisal.—The acreage under sisal has been increased by 14 per cent. to 60,197 acres. This industry is in a flourishing condition. Three-fifths of the sisal planted is more than three years old and available for cutting. The exports increased from 287,260 cwt. in 1925 to 294,568 cwt., valued at £579,499, in 1926.

Wheat.—The area put under wheat more than doubled between 1925 and 1926. 80,069 bags were harvested in 1925-26, as compared with 61,067 bags in the previous year. Though good yields are obtained in individual cases, the average still remains low. The advantage possessed by wheat in respect of ease of handling and low labour requirements, and the comparatively high prices realised, have greatly stimulated wheat production. Continued progress for another year or two should enable the acreage of wheat planted to satisfy the needs of Kenya and neighbouring territories in respect of wheat and wheat flour. A Wheat Growers' Association was formed during the year. Important work was done in the raising of rust-resistant wheats possessing high yield and good milling qualities. Substantial progress has been made, and it is expected that within a few years the industry will be placed in a more secure position. Eight mills are in operation and 63,511 bags of wheat were milled during the year.

Other Crops.—Large increases are recorded in the area put under barley and tea. The production of sugar is steadily increasing. There was a decrease in the export of copra owing to the greater extent to which copra is used locally for the manufacture of soap.

Native Agriculture.

Mass issues of seed have been made and these seed issues are making their influence felt in native crops, though in some cases irregular use is made of it and there is some wastage. Progress in the use of labour-saving appliances has been noticeable, particularly in the Nyanza province. In that province, 87 ploughs, 227 grist mills, and 23 sets of millstones were procured in 1926 by the more intelligent natives. Some progress has also been made in Kikuyu province in the provision of lorries and ox-carts for the transport of produce to rail and market. There is great scope for the economic and profitable use of implements and transport vehicles in native reserves, but the natives themselves appear to be slow to take advantage of them.

Maize.—The main issue of seed of "Flat White" maize was made in North Kavirondo in order to introduce a good type of maize in an extensive area to be served by the new railway to Uganda. Considerable quantities of maize were exported from Kikuyu country on the new Nyeri Railway. On account of the wet season in both Kikuyu and Kavirondo country, maize from these areas possessed a high moisture content in excess of the limit for export purposes and, with attendant risks of rejection and costs of conditioning, buyers offered lower prices to the native producer. On the coast, issues were made in the Digo and Kilifi districts and good yields were reported.

Cotton.—Great dissatisfaction with the prices paid in 1925 was shown by the native growers, and as a result a much smaller acreage was planted in 1926. Yields were poor owing largely to the general indifference shown by the natives towards this crop.

Sim-Sim.—The acreage under this crop is increasing, particularly in parts of Kavirondo, where it is tending to displace cotton. It is well suited to native agricultural practice and has the added merit of being useful as food. Issues of seed were also made at the coast and the results are promising.

General.—The cultivation of buckwheat is being seriously undertaken. It has proved suitable in the drier areas, and on account of its rapid growth and utility for food purposes it is a valuable crop when famine conditions are threatened. Good yields were obtained from a ton of rice seed distributed in North Kavirondo and an increased acreage was put under rice in the Kilifi area on the coast.

Seven Native Agricultural Shows were held, two in Nyanza, one in Kikuyu, one in Ukamba, and three in coast districts. A marked improvement in the quality of the exhibits was again noticed and, though the average number of exhibits was lower than last year, this was almost entirely due to the elimination of poor exhibits.

Live Stock.—It is estimated that stock in the possession of natives, other than those on European holdings, includes :—

Cattle	3,250,000
Sheep	2,550,000
Goats	3,550,000
Donkeys	35,000
Camels	160,000

The abnormally high prices realised for cattle in 1925, both for slaughter and draught purposes, were not maintained. Natives are taking advantage of facilities afforded for the protection of their cattle against rinderpest and pleuro-pneumonia. The results of veterinary work at stations in native reserves, to which native owners bring their cattle for inoculation, continue to be encouraging.

Instruction in the preparation of hides and skins has been systematically undertaken with great success at one important centre in the Kavirondo Reserve.

Centres have been established for the manufacture of ghee.

A schedule showing the estimated value of the principal agricultural exports of native origin appears as Appendix II to this report.

European Live Stock Industry.

There was a decrease of 1.46 per cent. in the total number of cattle for 1926, there being a drop of nearly 5,000 head in "breeding stock." Importations of pure-bred cattle fell from 164 head in 1925 to 52 head in 1926. Of the 52 head imported, 45 were bulls and seven were cows and heifers. There was an increase of nearly 16 per cent. in the number of wool-bearing sheep and the export of wool has grown from 4,948 cwt. in 1925 to 7,454 cwt., valued at £62,450, in 1926. There has been a small increase in pigs and a substantial increase in poultry.

Agricultural Shows.

In addition to the Native Agricultural Shows, two successful shows were held at Nakuru in January and December under the auspices of the Agricultural and Horticultural Society.

Agricultural Conferences.

The first South and East African Agricultural Conference assembled in Nairobi during August and was attended by delegates from all British South and East African territories, and from Portuguese East Africa, Mozambique, the Belgian Congo, and Italian Somaliland.

Financial.

The net cost of services rendered by the Agricultural Department, including the Veterinary and Veterinary Research Divisions, was £73,370; the revenue derived from inoculations against rinderpest and similar services amounted to £25,320.

V.—LAND.

The total area of land alienated as at the 31st December, 1926, was 6,005,774 acres, as compared with 5,745,607 acres on the 31st December, 1925. 516,175 acres are freehold and 5,489,599 acres leasehold.

The area of grants registered during the year was 332,684 acres, compared with 317,258 acres for the previous year, and the area of surrenders was 72,516 acres.

Two auctions of farms were held at which 34,626 acres realised the sum of £15,588.

Sales of township plots were held at Kibwezi, Nanyuki, Nyeri, Nakuru, and Nairobi.

The revenue derived from sales and rents of land, survey fees, sale of maps, &c., amounted to £104,632.

The area of the 337 sub-divisional surveys submitted during the year by licensed surveyors was 127,900 acres, compared with 292,848 acres in 1925 and 216,421 in 1924.

This marked falling off is not due to a lack of contemplated schemes of sub-division but rather to a temporary shortage of surveyors, many of whom were engaged on the Mombasa Town Planning Scheme for the latter half of the year.

During the year under review the Trans-Nzoia and Uasin Gishu districts formed the main fields of activity, whilst in other parts closer settlement seems generally to follow the new railway routes.

The descriptions of the boundaries of native reserves were published in a special issue of the *Official Gazette* on 13th October, 1926.

Registration transactions during the year totalled 14,137, as against 12,595 for 1925. The revenue derived from registration fees, stamp duties, and conveyancing fees amounted to £59,556, as compared with £57,380 in the previous year.

Mines.

Twenty-one prospecting licences were issued and nine claims registered in Nairobi, as apart from those issued in the various districts.

Forests.

The quantity of forest produce disposed of, the cash revenue, and the number of seedling trees raised and the acreages reafforested all showed large increases over the corresponding figures of any previous year.

During the year the Mount Elgon and Elgeyo-Marakwet forests, totalling approximately 286,000 acres, were finally demarcated and proclaimed as Forest Reserves.

The total area of Forest Reserves is estimated to be 2,503,250 acres. In addition there remain one large forest on Crown land and considerable areas in the Masai, Nandi, and Marakwet Native Reserves still to be demarcated. The area of these may be estimated at 500,000 acres, making a total for the Colony's forest areas of approximately three million acres. Of this area, the potential timber-producing area is estimated to total 1,850,000 acres, the remaining area comprising rock and moorland, summits of the mountains, bamboo and grass glades.

In the established Forest Reserves the area carrying merchantable stands of timber, apart from the question of accessibility, is estimated at 742,000 acres. Of this area, approximately 198,000 acres are subject to existing saw-milling licences.

The local demand for timber continued to be very active and was more satisfactorily met by the saw-millers than in the previous year. The total quantity sold from the Forest Reserves amounted to 1,316,566 cubic feet, an increase of 44 per cent. over the figure for 1925.

The prices of timber remained steady at about the level of the previous year. The average selling prices in Nairobi for sawn timber per ton were :—cedar Sh.240/-, podocarpus Sh.198/-, and camphor Sh.480/-.

Exports amounted to 97,105 cubic feet of timber and 378,600 mangrove poles. The figures for 1925 were 69,425 cubic feet and 638,300 poles. In addition, there is a large and increasing export of Kenya timber to Uganda.

Imports for Kenya and Uganda amounted to 283,000 cubic feet, compared with 206,000 cubic feet the previous year. Of the total import, 133,000 cubic feet were for Government use.

Most local timber is still used in a very green condition. During the year, the Government obtained the advice of the South African Government timber seasoning expert, and as a result of his recommendations work was started on the construction of seasoning kilns for the purpose of seasoning timber required for Government use.

The export of cedar for pencil manufacture did not make the material progress that had been hoped for. Enquiries, however, became more numerous towards the end of the year, especially from Europe, India, and the United States. Firms which formerly rejected the wood are finding that after proper seasoning it is entirely suitable.

The quantity of firewood sold from the Forest Reserves was 5,207,400 cubic feet, an increase of 52 per cent. over the total for the previous year. The Railway Administration used 10,472,600 cubic feet, of which 36 per cent. was supplied from the Forest Reserves as compared with 17 per cent. in 1925.

Mangrove bark suffered a slump during the year, only 189 tons being exported owing to a fall in the demand in Europe. The export of gum copal increased from 25,900 lb. to 38,500 lb. The collection of wild rubber from landolphia vines was greatly stimulated by the rise in prices. Little or none had been collected for many years. The royalty was reduced to ten cents of a shilling per lb., and during the year 28,400 lb. were exported.

Experiments were continued with the cultivation of cascara and chaulmoogra oil yielding trees. The latter proved difficult to propagate. Reports from the Imperial Institute proved that the medicinal properties of the Kenya-grown cascara bark were quite satisfactory.

There were no serious forest fires during the year, though a large quantity of stacked fuel was destroyed by a fire on a fuel area.

The area planted was 3,047 acres. The largest area previously planted in any one year was 2,177 acres. The increase is amply sufficient to replace the timber and fuel cut during the year, but the planting of at least 5,000 acres annually is considered necessary to satisfy timber requirements of the future, with a margin for export.

The planted area was made up as follows :—

	Acres.
Pencil cedar	860
Other indigenous timber species	276
Exotic timber species	274
Fuel plantations	1,195
Mangroves	442

Thirty-nine nurseries were maintained and 4,183,000 plants were raised, an increase of 110,000 over the figures for 1925. A nursery was opened in Kitale township for the sale of plants to the public and with a view to the formation of a large plantation there. The number of trees sold was 472,000, compared with 245,000 the previous year. Approximately four tons three cwt. of seeds were collected, including a large quantity of eucalyptus seed, though the bulk of the requirements of the latter still has to be purchased abroad.

The demarcation of the Mount Elgon, Elgeyo, and Meru forests was completed and the first two were proclaimed as Forest Reserves.

Detailed interior surveys were made and maps prepared of the Kikuyu, South Ngong, Ol Bolossat, and portions of the East Mau, Solai, South-West Mau forests, totalling approximately 136,000 acres on a scale of 1 :25,000 or larger. In addition, many reconnaissance surveys were made and also a detailed plan of the Ngomeni mangrove swamps (8,400 acres).

Large numbers of herbarium specimens of the forest flora were sent to the Royal Botanic Gardens, Kew, and the Imperial Forestry Institute, Oxford, for identification. Specimens of the local timbers were sent to the Forest Products Research Laboratory of the Imperial Forestry Institute, from whom slides and micro-photographs were obtained. To test rates of growth of different species under different conditions, 52 permanent sample plots were laid out in plantations and natural forest.

Forestry in Native Reserves.

There appears to be an awakening of interest by many Native Councils regarding afforestation in their Reserves. In the Machakos Reserve 260 acres were successfully planted by the Forest Department, in addition to considerable areas planted by the Local Native Council. In Meru and Elgeyo the forests were managed by the Forest Department and the net revenue paid into native funds. In the Nyanza province the Administration made strong efforts to encourage planting in each Reserve. It has not as yet been possible to bring the Masai and Nandi forests under any form of management.

Financial.

The cash revenue was £36,938, compared with £25,457 in the previous year.

The expenditure was £29,125, compared with £27,925 in 1925. The revenue was 45 per cent. greater than in any previous year. All revenue heads showed an increase, but the largest was that of timber sales, which increased from £17,747 to £24,635. An appreciable portion of the revenue was produced by plantations made within the life-time of the Forest Department, and such plantations are becoming increasingly remunerative each year.

VI.—LEGISLATION.

The first Revised Edition of the Laws of Kenya was brought into operation on the 1st July, 1926.

Thirty-four Ordinances were assented to during the year, of which the following are the most important :—

1. *The Bankruptcy Ordinance* (*No.* 1 *of* 1926).—This Ordinance repeals the application to the Colony of the Indian Provincial Insolvency Act, 1907. The Ordnance closely follows the Imperial Statute, 4 and 5 Geo. V. Ch. 59.

2. *The Game Birds Protection Ordinance* (*No.* 8 *of* 1926).—The Schedule to the Ordinance contains lists of birds which may not be killed or captured without a Bird Licence or without a special licence. Close seasons may be proclaimed in regard to the whole or any specified part of the Colony. The sale of game birds dead or alive is forbidden. The snaring of game birds or taking their eggs without permission of the Game Warden is prohibited.

3. *The Estate Duty* (*Consolidation*) *Ordinance* (*No.* 13 *of* 1926).—Estate duty is payable on the deceased's immovable property situate in the Colony, and, in case deceased was domiciled in the Colony, on the movable property wherever situate. A rebate is allowed in respect of duty paid in the United Kingdom or a British possession on property there situate passing on the same death. No probate or letters of administration are to issue until the requirements of the Ordinance have been complied with.

4. *The Criminal Law* (*Amendment*) *Ordinance* (*No.* 15 *of* 1926).—Provides that rape shall be punishable with death or with imprisonment for life or for a term not less than three years. A fine may also be imposed.

5. *The Carriage of Goods by Sea Ordinance* (*No.* 16 *of* 1926).—Closely follows 14 and 15 Geo. V. Ch. 22.

6. *The Customs Management Ordinance* (*No.* 25 *of* 1926).—The provisions of the Ordinance follow closely similar legislation in other countries and particularly the Tanganyika Territory Customs

Ordinance, 1922. Powers are conferred upon the Governor-in-Council to enter into agreement with the Government of any territory in Eastern Africa being a portion of the British dominions or a protectorate or a mandated territory for free trade between Kenya and the territory in the products of each.

7. *The Custody of Children Ordinance* (*No.* 27 *of* 1926).—Provides that when a parent has abandoned a child the Court may refuse the parent's application for a writ for the production of the child. Where a child is being brought up by another person the Court may, if it orders the child to be given up to the parent, further order the parent to pay to that person the costs properly incurred in bringing up the child. A parent who has abandoned his child or allowed him to be brought up by another person at that person's expense must satisfy the Court that having regard to the welfare of the child he is a fit person to have the custody of the child. Where a parent has been convicted of certain offences in respect of the child the Court may order the child to be taken out of his custody. The Ordinance is based mainly on the Imperial Custody of Children Act, 1891.

VII.—EDUCATION.

Government schools have been established for the provision of education of European, Indian, Arab, and African children. Private and missionary enterprise supplements State institutions; the latter is largely subsidised from Government funds.

The Administration was strengthened during the year by the addition of a Superintendent of Technical Education and three Inspectors of Schools. The work of these officers has been concerned mainly with Arab and African education, but they have also been used as occasion required in respect of European and Indian schools. Their appointment has enabled the Department to begin an educational survey of the Colony and the division of districts into school sectors on the lines of the organisation adopted in New Zealand and other Dominions. Initial work in this direction was done in the Kyambu area of the Kikuyu Native Reserve, and investigations have been made in the Digo district on the coast.

The Central Advisory Committees have met regularly and have given useful advice.

European Education.

There are Government schools at Nairobi, Nakuru, Eldoret, Kitale, Nanyuki, and Thika. During the year, money was voted from loan funds for the erection of improved and extended school accommodation at the first four of these centres and also for the establishment of a Boys' Secondary School at Kabete. Building on the Junior High School, Nairobi, began during the year.

Private schools, notably Kenton College for boys and Loreto Convent for girls, maintain a high standard of attendance and attainment. There are seven rural schools on farms in the Uasin Gishu, six of which are supported by State funds, while one is State-aided.

The average number of European children in attendance at all European schools during the year was 909. Of these, 604 were at Government schools, 97 at State-aided schools, and 208 at private schools.

The cost of European education, exclusive of administration expenses and the cost of buildings, totalled £24,824 in 1926.

Indian Education.

There are Government schools at Nairobi, Mombasa, Lamu, and Kisumu, and thirteen assisted schools. During the year, money was voted from loan funds for the erection of improved and extended accommodation for the Nairobi Indian school. The erection of this school, which is estimated to cost £60,000, will, it is hoped, begin before the end of 1927.

The average number of Indian children in attendance at all Indian schools during the year was 1,947. Of these, 1,020 were at Government schools, 708 at State-aided schools, and 219 at private schools.

The cost of Indian education, exclusive of administration expenses, in 1926 totalled £14,470.

Arab Education.

Arab schools are established at Mombasa, Malindi, and Mambrui. The average attendance in 1926 was 393.

African Education.

Government schools exist at Kabete, Waa, Nandi, Kericho, Machakos, Narok, and there is a Jeanes School at Kabete for the training of supervisors of African village schools. Schools are maintained by all the principal missionary societies. There are also Police schools in many important centres and large numbers of village schools situated throughout the native reserves.

The average attendance in Government schools during 1926 totalled 1,296. Attendance at the Native Industrial Training Depot at Kabete rose from 82 to 140 during the course of the year. The average attendance in African assisted schools and in private schools, the majority of which are village schools, totalled 53,025. No accurate comparative figure for 1925 is available. That for 1924 was 21,539.

During the year the Alliance High School at Kikuyu was opened for the higher education of Africans with a view to training them for the more abstract work of professional and commercial life.

The cost of Arab and African education, exclusive of administration expenses, during 1926 totalled £53,418.

VIII.—COMMUNICATIONS.

Railways and Marine.

During the year, the High Commissionership for Transport was established, the office of High Commissioner being held by the Officer Administering the Government of Kenya. The Inter-Colonial Railway Council held five meetings during 1926; three in Kenya and two in Uganda.

Earnings for the year amounted to £2,058,710, and the ordinary working expenditure to £1,216,773, the surplus of receipts over ordinary working expenditure being £841,937. After allowing for contributions to renewals funds, interest charges, &c., the net surplus of this excess for transfer to betterment funds amounted to £207,795.

The carriage of public goods provided a revenue of £1,614,399, and the tonnage of this traffic amounted to 573,282 tons, as compared with £1,580,642 and 534,474 tons during the previous year. The revenue derived from passenger traffic also showed an increase over that of 1925, viz., in 1926 991,753 passengers contributed a revenue of £255,511 as against 913,640 passengers and £225,548 in 1925.

Natives continued to use the railway in increasing numbers. Some difficulty was experienced in providing sufficient rolling-stock for third-class passengers owing to delays in delivery of new stock, brought about by the coal strike. Motor-car competition continues to reduce the number of short passenger journeys. The following figures show the number of passengers carried under different classes :—

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1925	16,745	57,530	839,365	913,640
1926	19,272	62,347	910,134	991,753

The tonnage carried by lake-steamer services showed a small decrease, from 197,629 tons in 1925 to 195,830 tons in 1926.

The total tonnage carried by the motor service was 7,915 tons in 1926, as compared with 6,757 tons in 1925.

There was an improvement in the supply of wood fuel as compared with 1925. Reliable forest areas have been obtained in the

Nairobi-Kisumu section, and it is not anticipated that there will be any difficulty in obtaining the total fuel requirements in that area for some years. The following figures show the consumption of coal, wood, and oil fuel during the year :—

	1926.	1925.
	Tons.	*Tons.*
Coal	40,989	51,536
Wood	91,252	81,056
Oil	7,281	9,073

Relaying of the main line with 80-lb. material has been completed from the coast to Makindu, with the exception of Mombasa Island and one or two loops at wayside stations. The latter works were delayed by non-receipt of material owing to the coal strike in England. The work of strengthening bridges and culverts to carry engines with 18-ton axle-loads has progressed satisfactorily.

Rails have been renewed throughout the line as required. Heavy work has been carried out between Nakuru and the Lake, and the renewal programme on the Kisumu section has been completed. Two new diversions of about a mile long were completed and opened for traffic between Magadi Junction and Athi River. These diversions, together with the regrades previously completed, leave a ruling grade of 1.18 per cent. compensated from Nairobi to Kilindini.

The total route mileage of line open at the close of the year was 1,128, excluding loops and industrial sidings. On the Thika-Nyeri branch the section Punda Milia to Sagana was handed over for open-line working during the year. It was decided to make Narro Moru, sixteen miles beyond Nyeri, the terminus for the present of this branch. The completed branch lines to Solai and Kitale were taken over on the 1st July, 1926. Considerable delay took place at the Turbo end of the Uganda extension owing to the failure of certain earthwork contractors to complete their contracts by the specified dates, but towards the end of the year platelaying proceeded more rapidly and the girders over the Malaba River on the Kenya and Uganda border were launched before Christmas. The section from Turbo to Malaba was opened for the carriage of goods traffic, under construction arrangements, on the 15th January, 1927. Railhead reached Tororo towards the end of January, 1927. The section in Uganda from Mbulamuti to the Mpologoma Swamp was opened for traffic, under construction arrangements, on the 1st January, 1927.

The cost of the Uasin Gishu Railway has now reached the figure of £2,375,763, or £16,731 per mile.

At the end of the year the following lines were under construction :—

	Miles.
Kenya.—Thika extension	48
Uganda extension—Turbo to Uganda Border...	79
Uganda.—Uganda extension—Kenya Border to Mbulamuti	106
Total	233

Further surveys and reconnaissances were carried out to ascertain the merits of future branch lines towards productive areas. These include a survey from Tororo through Mbale to Soroti, surveys for alternative routes to Kampala, a survey from Kampala westwards towards Bombo, and a survey of the proposed North Kavirondo branch line.

The figures for 1926 indicate that the progress made in 1925 has been well maintained. Traffic has moved smoothly and rapidly over the whole system. No difficulties are anticipated during the present year. A record maize crop has been dealt with at a rate some two or three times faster than in any previous year.

Port.

Following the recommendations of the Port Commission of Inquiry, which reported in December, 1925, separate financial provision was made for Port Services by means of Port Estimates. No decision had been arrived at by the end of the year under review in regard to the control of the Port, though a decision has subsequently been reached.

For the purpose of control and management during the year 1926, the Port was declared a Railway service as a provisional arrangement in order to enable the Railway to carry on the previous system of control and responsibility. A Port Manager was appointed and steps were taken to put the Port organisation on a sound basis.

The Consulting Engineers have been engaged in preparing a report on the development of Kilindini Harbour. Work on two more deep-water berths has already begun.

Shipping.

During 1926, the Port of Mombasa was served by eight regular lines of steamers from Europe, i.e., the Union-Castle Mail Steamship Co., Ltd., the British India Steam Navigation Co., Ltd., the Messageries Maritimes, the Italia Navigation Company, the Clan, Ellerman and Harrison Line, the Holland-East Africa Line, the Deutsche Ost Afrika Linie, and the Osaka Shosen Kaisha Line.

In addition to these services, calls were made by Nippon Yusen Kaisha, Danish and Norwegian Lines, and several miscellaneous oil and coal steamers discharged full cargoes at the Port.

A fortnightly service between Bombay and Durban, calling both ways at Mombasa, has been maintained by the British India Steam Navigation Co., Ltd. Coastal services by this line and by Messrs. Cowasjee Dinshaw and Bros. steamers have been fairly regular.

The total steam tonnage (mercantile) entered in the Protectorate ports during the year amounted to 1,479,046 tons net, represented by 605 steamers. These figures show an increase of 267,217 tons and 87 steamers, as compared with figures for the previous year. In gross tonnage, the figures are: 1925, 2,025,629 tons; 1926, 2,465,244 tons. The total tonnage of sailing vessels entered in the Protectorate ports during 1926 was 76,524 tons, represented by 3,529 vessels, an increase of 16,346 tons and 508 vessels. The dhow traffic which, owing to trade depression, had slackened during previous years, shows a considerable increase.

The figures for Mombasa were 522 steamers, of 1,444,320 tons net, against 440 steamers, of 1,180,493 tons net, for 1925, an increase of 82 steamers and 263,827 tons. The tonnage of sailing vessels amounted to 34,624 tons, represented by 1,537 vessels, an increase of 10,249 tons and 257 vessels over the previous year.

Revenue derived from port dues amounted to £11,204, an increase of £621 over the previous year. Corresponding increases have resulted also in light dues and pilotage fees. The increases in these dues are the result of the steady increase in tonnage and in the number of ships visiting the Port of Mombasa.

Approximately 635,000 shipping tons of cargo (368,588 tons inwards and 266,140 tons outwards) were dealt with, and 40,579 passengers passed through the Port of Mombasa during 1926.

The first steamer to be berthed at the new quay was the S.S. "Clan Mackenzie" on the 28th July, 1926. This was done for the purpose of landing heavy locomotives. The S.S. "Rietfontein," berthing at the quay on the 29th August, 1926, was the first ship brought alongside for discharging cargo. Since that date the two berths have been in almost constant use, both for passenger and cargo steamers.

Roads.

Excluding the roads in Nairobi township, which are under the Nairobi Municipality, the total expenditure during 1926 on the construction of new roads and bridges of importance was £27,285, and the sum spent on the maintenance and improvement of the existing road system, inclusive of the opening up of new tracks of minor importance, was £96,489.

Of the latter sum, £10,851 were expended on township roads; £49,800 on main roads in European and native areas; £18,121 on district roads in European areas; £5,988 on native reserve roads; £3,395 on unclassified tracks; and £8,244 on the repair and reconstruction of bridges.

There are approximately 4,240 miles of main and district roads of importance, in addition to various tracks and native reserve roads, of uncertain mileage, which are not yet of importance as traffic carriers. The average expenditure per mile on the maintenance and improvement of the main and district roads was about £17 10*s*., including bridge repairs and renewals.

With the exception of the streets in the more important towns and certain main country roads leading into them, the public roads of Kenya have not been provided with special wearing surfaces; they are earth roads, some of which have been drained and formed to camber; most of them are merely tracks, which are passable by wheeled vehicles with facility in dry weather, but only with difficulty during wet weather. They are equipped with bridges and culverts in widely different degrees.

Most of the work on construction, improvement, and maintenance was performed by contract with local farmers and others in European areas, and by collaboration with the Administration in native reserves. District Road Boards in settled areas gave much assistance by arranging local contracts and tendering advice.

The gradual replacement of old bridges of temporary type by structures of a more lasting type of construction was continued during the year, and the improvement of tracks by the adoption of better alignments and by forming and draining progressed. Some extension of the use of mechanical plant for forming and maintaining earth roads took place. Traffic has increased greatly with the development of the Colony and the extended use of motor vehicles.

Posts and Telegraphs.

The scheme under which the Postal and Telegraph services of Kenya and Uganda are amalgamated under the control of the Postmaster-General at Nairobi continued to work smoothly. The scheme was reviewed during the year by a small committee representative of both territories, and certain minor modifications were introduced which had for their object still greater exactitude in the allocation of revenue and expenditure between the two territories.

Although the financial result of the year's work does not reflect the same degree of expansion as in the previous year, it indicates steady progress in all branches of the department, particularly in Kenya. The following comparative statement shows the expenditure, cash revenue, and value of free services rendered to other

Government departments during the year under review and the three previous years :—

Year.	*Expenditure.*	*Cash Revenue.*	*Value of official free services.*	*Excess of (b) and (c) over (a).*	*Excess or Deficit of (b) over (a).*
	(a)	*(b)*	*(c)*	*(d)*	*(e)*
	£	£	£	£	£
1923	138,261	132,287	31,749	25,775	5,974 Deficit
1924	139,790	150,481	33,500	44,191	10,691 Excess
1925	146,309	181,435	15,696	50,822	35,126 ,,
1926	157,390	190,967	16,105	49,682	33,577 ,,

The foregoing statement does not include the value of free services performed by other Government departments for the Post Office, which are estimated at £16,415.

To the total cash revenue of £190,967, Kenya contributed £148,258 and Uganda £42,709, whilst of the total expenditure of £157,390, £110,288 was expended in Kenya and £47,102 in Uganda. Kenya revenue shows an increase of 7.1 per cent. over the previous year and recurrent expenditure an increase of 6.4 per cent. Kenya capital expenditure amounted to £5,135, as compared with £2,560 in 1925.

The estimated number of letters, postcards, book packets, and samples dealt with during the year was 11,451,700, representing an increase of 26.6 per cent. over the 1925 figures. Parcel post work showed an increase of 7 per cent. over the previous year's working, 187,856 parcels having been dealt with. The cash-on-delivery system, which is restricted to Great Britain, Northern Ireland, and the Irish Free State, is increasing in popularity, the articles dealt with showing an increase over the previous year of 27.9 per cent. in number and 31.1 per cent. in value. An increased number of registered articles was also handled.

The value of the money-orders issued and paid in Kenya was £443,379, as compared with £480,967 in 1925, the respective figures for Uganda being £416,236 and £505,011. The decreases shown are wholly due to a falling off in the number and value of money-orders issued in Uganda for payment in Uganda and Kenya, and are attributed to the relatively poor cotton season in Uganda in 1926 as compared with that of the previous year.

The value of money orders issued on other countries rose, in Kenya from £157,391 in 1925 to £171,920 in 1926, and in Uganda from £59,348 to £72,841. Remittances to India increased from £176,979 to £210,080, or 18.7 per cent.

The total number of inland telegrams and cablegrams dealt with during the year was 395,759 and 126,285, respectively, being increases of 8.7 per cent. and 9.3 per cent. respectively over the figures for the preceding year. Cable traffic to and from Great Britain and the Irish Free State represented 46 per cent. of the total overseas traffic. The number of telegrams transmitted over the land lines to South Africa totalled 57,701, an increase of 26.7 per cent. over the figures for 1925.

The rate of demand for telephone service in urban areas showed a tendency to increase and this, coupled with the delay which occurred in the arrival of material from England in consequence of the strike, led towards the end of the year to requests for connections to existing exchanges falling somewhat into arrear. Efforts are being made to stimulate a demand among farmers for "party telephone lines" in the country districts. Specially low subscription rates are granted in cases where farmers are prepared to co-operate with the Post Office in the erection of lines by providing wooden poles and free transport for material. The response so far has not, however, been up to expectations.

Overseas telegraph communications were, on the whole, satisfactorily maintained. Two interruptions lasting 16 days occurred in the Mombasa-Zanzibar cable. Traffic was diverted via the Mombasa and Zanzibar wireless stations and via the land lines to Dar-es-Salaam and no serious inconvenience or delay was caused.

The number of mails despatched to Great Britain totalled 71, as compared with 65 in 1925, and the number received as 79, as compared with 75. The average time of transit between Mombasa and London was 19 days homeward and 21.4 days outward, as compared with 19.5 days and 21.8 days, respectively, in 1925. The number of mails despatched to India and South Africa totalled 32 and 41, respectively, and the number received 26 and 76. Notwithstanding the fact that the number of mails despatched to and received from Great Britain averages well over one per week in each direction, the Colony still labours under the disadvantage of not having a regular mail service with Great Britain.

Engineering construction work during the year was confined almost entirely to telegraph lines required in connection with new railway branch lines and extensions.

The Post Office Savings Bank continues to show a steady development. Deposits, at £65,999, exceeded withdrawals, at £58,246, by £7,753, whilst the total number of accounts at the end of the year was 4,505, an increase of nearly 500 on the figures for 1925. The total balance due to depositors at the end of the year was £64,721, of which £6,539 stood in the names of Africans, an increase, in the case of the latter, of 38 per cent. on the previous year's balance of £4,725.

The progress made in training African telegraphists continues, on the whole, to be satisfactory. The proportion of wastage is high, but this is inevitable. It is a matter for regret, however, that efforts made to induce educated Africans to undergo training for service in the engineering branch of the Post Office and Telegraphs Department are still proving unsuccessful.

IX.—CLIMATE.

The outstanding feature of the climatic conditions of Kenya is the very considerable daily range of temperature amounting at times to 40° Fah. and more. The relation between climatic factors and crop yields has not been scientifically investigated, but it seems probable that the great variety in Kenya agricultural produce depends largely on this factor. Steps are being taken to organise an efficient East African climatic survey which, it is hoped, will include returns from all Colonies comprising the East African Territories.

There are two rainfall areas in Kenya, separated by the Rift Valley. The eastern plateau has two centres of moderately heavy rainfall, one in the vicinity of Mount Kenya, the other between Naivasha and Nyeri on the Aberdares. The greater part of the western plateau has a rainfall of over 60 inches. Nairobi is within the rainfall contour of 30 to 40 inches.

The distribution of rainfall is being carefully analysed and the records of the various stations reduced to a standard period of twenty years—1906 to 1926.

No accurate wind directions or velocities have been secured in any part of the Colony. So far as can be judged from pilot balloon observations made since December, 1926, a calm zone exists above the surface trade wind currents at an altitude of about 2,000 metres. Above this calm zone a strong north-easterly current is observed, and it appears that the altitude at which this current is encountered varies according to the weather types which pass over the Colony. Occasionally, and for short periods, the north-east wind blows with considerable strength over the Highlands of Kenya.

Records are compiled at 209 meteorological stations, of which 134 are private stations situated in the farm areas. The following table indicates temperature and rainfall conditions at various stations :—

Station. *1926.*	*Shade Temperature.*					*Relative Humidity at 9 a.m.*	*Rainfall.*			*Latitude.*	*Longitude.*

PREFATORY NOTE.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian Line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East Longitude to 41° East. The land area is 221,089 square miles and the water area 4,011 square miles, making a total area of 225,100 square miles. The water area includes the larger portion of Lake Rudolf and the eastern waters of the Victoria Nyanza, including the Kavirondo Gulf.

The official time used is the zone time three hours fast on Greenwich.

The physiography of Kenya may be broadly conceived as consisting of :—

(1) A low-lying region, less than 3,000 feet in height and comprising about three-fifths of the total area of the Colony. This region extends from the sea to approximately the 38th degree of East Longitude. Apart from the Coast strip, which is essentially tropical, it is poorly watered and mostly covered with thorn scrub.

(2) A plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet and extending in a westerly direction for about 200 miles to the 35th degree of East Longitude. It continues in the south across the boundary of Tanganyika Territory and in the north to about the 2nd degree of North Latitude. This plateau is characterised by extensive open plains such as those of the Athi River and the Uasin Gishu Plateau.

(3) The great Rift Valley formed by the subsidence of a portion of the elevated plateau and containing Lake Rudolf and numerous smaller lakes, some of fresh water and others impregnated with soda, and many extinct volcanoes. It extends in a direction generally north and south, the eastern wall formed by the Laikipia Escarpment, Aberdare Range, and Kikuyu Escarpment and the western wall by the Mau Escarpment which is known as the Elgeyo Escarpment in the north.

(4) The district near the Victoria Nyanza, the high plateau making a somewhat rapid descent to the shores of the lake where, at an altitude of 3,726 feet above sea-level, a tropical climate is again found. The floor of the Nyanza basin is normally fairly level, but it is intersected by numerous broad and shallow valleys.

From the Mau Escarpment northwards the Nzoia, Yala, Kuja, and Amala Rivers flow into the Victoria Nyanza. Northwards the River Turkwel from Mount Elgon and the Kerio from the Elgeyo Escarpment flow into or towards Lake Rudolf. The southern and eastern slopes of Mount Kenya and the eastern side of the Aberdare Range give rise to the Tana River, which enters the Indian Ocean near Lamu. From the Aberdares also flows the Athi River which, with its principal tributary, the Tsavo, from Kilimanjaro, enters the Ocean as the Sabaki River near Malindi. The Northern Uaso Nyiro traverses Laikipia and flows in an easterly direction north of Mount Kenya to the Lorian Swamp. The Southern Uaso Nyiro from the Mau Escarpment passes southward along the bed of the Rift Valley into Lake Natron in Tanganyika Territory.

Mount Kenya, after which the Colony is named, is 17,040 feet in height and is capped by perpetual snow and ice. Mount Elgon, also an extinct volcano, is 14,140 feet in height and is slightly below the level of perpetual snow. The Aberdare Range contains Settima (13,000 feet) and Mount Kinangop (12,816 feet). The Mau Escarpment attains a height of over 10,000 feet.

The slopes of Kenya and Elgon and of the mountain ranges on either side of the Rift Valley are clothed in forests. The less settled areas of the Colony abound in game and many of the upper waters of mountain streams have been stocked with trout.

There are no marked seasonal changes such as winter and summer. At high altitudes the diurnal variation of temperature is high, being as much as 30° F. in some localities, but the mean temperature varies little from month to month.

The range of temperature between different parts of Kenya is very wide. At Lamu on the coast the mean shade temperature is 80° F. At Mombasa it is 77° F. In Kisumu, on the Victoria Nyanza, is it 72.5° F. In the Rift Valley and highland areas the mean temperature is normally between 58° F. and 65° F.

The rainfall is generally well distributed. Precipitation varies considerably with the physical configuration of the Colony. The average known annual rainfall, taken over a number of years, ranges from 19 inches at Athi River, on the plains some 20 miles south-east of Nairobi, to 86 inches at Songhor in the Nandi Hills east of the Victoria Nyanza. The low-lying districts on the Northern Frontier are dry. The average rainfall occurring in the principal agricultural and pastoral districts is given as approximately 35 to 40 inches, but it is higher west of the Mau Escarpment. The heaviest rainfall is normally experienced from March to June and October to December. Hail is of comparatively rare occurrence and is confined to restricted belts. Frost does not occur below 8,000 feet except in some damp hollows.

History.

The history of the territory now known as Kenya may be divided into four sections. The first deals exclusively with the Coast; the second with the exploration of the hinterland; the third with the partition of Africa among European Powers and the administration of the Imperial British East Africa Company; and the fourth with the administration of the country under the Imperial Government.

(1) It seems probable that Arabs and Persians traded with the East African Coast from the remotest antiquity. The "Periplus of the Erithrean Sea," compiled towards the end of the first century A.D., gives the first account of Zanzibar and the coast of "Azania." In 1331, Ibn Batuta, the Arab explorer, visited Mombasa and found Arabs in undisputed possession of the coast lands. In 1498, Vasco da Gama, with the first Portuguese expedition to round the Cape of Good Hope, sailed along the East African coast. The Coast towns were all under Arab rule and are described as prosperous trading cities. Mombasa, reached on the 7th April, 1498, is referred to as a "great city of trade, with many ships." Vasco da Gama's stay in Mombasa was cut short by an incident which led him, probably without cause, to suspect treachery and he sailed north to Malindi. Of Malindi he writes: "the city was a great one, of noble buildings, and surrounded by walls, and, placed immediately on the shore, it made an imposing appearance."

Cordial relations were established and maintained between the inhabitants of Malindi and the Portuguese, who were able to refit their ships for the voyage to India.

On Vasco da Gama's return to Portugal, a fleet under Cabral was sent to annex India. Cabral looted Mombasa in 1500. In 1505, Francisco Almeyda attacked and destroyed the town and in 1508 Mombasa was formally annexed to Portugal. Twenty years later, as a result of trouble with the inhabitants, the Portuguese under Don Zuna da Cunha captured the city after a siege of four months. In 1586, the city having been rebuilt, a Turkish fleet under Ali Bey visited Mombasa, which placed itself under his protection. The Portuguese retaliated by again burning the town. It was rebuilt only to be burned again by an African tribe known as the Zimba. The Zimba were expelled by the Portuguese who then, in 1594, built Fort Jesus.

In 1630, the inhabitants of Mombasa attacked the fort. The Portuguese capitulated and were murdered. An expedition from India landed and recaptured the fort after a siege of three months. The fort was rebuilt by Xerxas de Cabreira in 1635.

About 1660 the Mazrui, who were the leading Arab clan on the East Coast, entered into an alliance with the Imam of Oman on the Persian Gulf. After a long struggle the Arabs expelled the Portuguese from Mombasa in 1698. Expeditions organised from Lisbon to recapture Mombasa during the following decade were unavailing. In 1728, the Portuguese were again in temporary possession, but in November, 1729, they were finally driven from Mombasa, which came once more under the suzerainty of the Imam of Oman. A Portuguese force sent from India to recapture the town was lost at sea.

Fifteen years later, Mombasa, under a Mazrui named Ali bin Osman, declared itself independent of Muscat. In 1753, the Mombasa Arabs attempted to capture Zanzibar. The attempt failed but Pemba remained under the influence of Mombasa until 1822, when the Mazrui were completely defeated by the Oman Governor of Zanzibar. In the same year, Seyyid Said, who had been declared Imam in 1806, seized Pate and Pemba and threatened Mombasa.

British intervention on the East Coast started in December, 1823, when H.M.S. "Barracouta," commanded by Captain Vidal, arrived in Mombasa during the course of a survey expedition to the East African coast. The inhabitants "begged Captain Vidal to authorize them to hoist the English flag and to place the town and territory in the hands of His Britannic Majesty." This request was referred to Captain Owen of H.M.S. "Leven," who informed them "that provided they would assent to the abolition of the slave trade he would transmit their proposal to his Government for their decision, and that he should have no objection to hold the place in the meantime."

Lieutenant Reitz, third Lieutenant of the "Leven," was appointed Commandant and left in charge of the new Protectorate on the 8th February, 1824. He died of fever after a visit to the Pangani River on the 29th May, 1824, in his twenty-second year. The Protectorate over Mombasa was not confirmed by the British Government. It appears to have lasted about two years, but there is no record of any formal termination.

In 1829, Seyyid Said attacked Mombasa with the consent of the Indian Government. He placed a garrison of 300 Baluchis in the fort but, on his departure to quell a rebellion in Muscat, these were starved into submission by the Mazrui. In 1832, Seyyid Said transferred his Court from Oman to Zanzibar and, with the subjugation of the Mazrui in 1837 and of the Islands of Siu and Patta in 1843, a period of great prosperity ensued along the East African Coast.

Seyyid Said died in 1856. By his will he left the lordship of Oman to his eldest surviving son, Seyyid Thwaini. Zanzibar he left to his next son Seyyid Majid. A dispute arose and the rivals agreed to submit the question of succession to the arbitration of Lord Canning, then Governor-General of India. Lord Canning awarded Oman to Seyyid Thwaini and Zanzibar and the mainland dominions to Seyyid Majid. Seyyid Majid died in 1870. He was succeeded by his brother Seyyid Barghash, whose reign is memorable as witnessing the steady growth of British influence under the care of Sir John Kirk, and the partition of Africa between European Powers.

(2) The history of European endeavour in the hinterland of East Africa centres round the sources of the Nile. Arab explorers had traversed Eastern Africa for many centuries before any information was forthcoming which was accepted as reliable. Their accounts were co-ordinated by early geographers, notably Ptolemy in A.D. 150 and Sanson d'Abbeville in 1635, but it was not until the 19th century that more accurate knowledge was obtained. The Portuguese, during their occupation of the Coast strip, made little effort to explore the hinterland. It was not, indeed, until 1848 that Kilimanjaro was seen by Rebmann. Krapf first saw the snows of Mount Kenya in 1849. The work of these two dauntless missionaries opens the chapter of discovery inland from the East Coast of Africa. It was not until after the discovery of the sources of the Nile that any further progress was made from the East.

The fact that the Nile rises in flood at the driest season of the year presented a problem which had aroused the interest of geographers in all ages. Attempts to solve this problem by a journey up the Nile Valley had failed. The 19th century witnessed determined attempts to reach the head-waters of the Nile from other directions. Sir Richard Burton, in 1854, endeavoured to reach the interior from Berbera, in Somaliland, but his caravan was massacred. Three years later he tried again, this time from the East Coast opposite Zanzibar. With Speke for his companion he reached Lake Tanganyika. On the return journey, at Kazeh, near Tabora, Speke left Burton and, travelling northwards, first saw the waters of the Victoria Nyanza on the 30th July, 1858. His claim that this lake gave rise to the Nile was disputed, and Speke organised another expedition which left Zanzibar in October, 1860. This expedition, led by Speke and Grant, followed the former route to Kazeh and passed round the western side of the Lake. Speke reached the capital of Mtesa, King of Uganda, on the 19th February, 1862. On the 21st January, 1863, Speke reached the Nile and discovered its outlet from the Lake at the Ripon Falls. Later in the same year, Samuel Baker discovered the Albert Nyanza and the mystery of the origin of the Nile was solved.

Certain geographical questions still, however, awaited settlement and twelve more years elapsed before further information became available. Henry M. Stanley placed a boat on the Victoria Nyanza and circumnavigated the Lake in 1875. He was greatly impressed with the possibilities offered by Uganda as a field for missionary enterprise. His appeals for support reached England at a time when a keen interest was being taken in African work, particularly in connection with the slave trade, and they met with a ready response. The first English mission was sent to Uganda in 1876. Shortly afterwards there arrived two Catholic missionaries belonging to the Order of the White Fathers of Algeria. Mohammedan proselytism was already in progress. The field was set for a series of religious quarrels which dominated the political situation in Uganda for fifteen years.

It was the birth of European interest in Uganda that led to the further exploration of the East African hinterland now known as Kenya. Apart from journeys up the Tana Valley by Wakefield in 1865, and New in 1866, and from visits to Kilimanjaro by Von der Decken in 1863, and New in 1871, little had been added to the knowledge gained by Krapf and Rebman before 1850. In 1862, Dr. G. A. Fischer made the first attempt to discover a route to Uganda more direct than that used by Speke and Stanley. He marched to Kilimanjaro from Pangani and succeeded in crossing Masailand to Lake Naivasha, which he reached on the 11th May, 1883, but he was prevented by ill-health and the Masai from continuing his journey.

The distinction of being the first European to reach the Victoria Nyanza from the east rests with Joseph Thomson, who started from Mombasa in March, 1883, and in spite of many difficulties succeeded in reaching the Lake forty-five miles east of the Ripon Falls. Ill-health prevented him from continuing his journey to the Nile, but the practicability of the route was proved and many important additions had been made to the knowledge of East

African geography. In 1888, Lake Rudolf was discovered by Count Teleki von Szek, whose expedition was the first to traverse Kikuyu country.

(3) European intervention in African affairs was stimulated by the reports regarding the slave trade made by Stanley as a result of his journey from Uganda across the Congo in 1877. The organization of the Congo Free State promoted a certain amount of trade and gave European nations an indication of the commercial value of Central Africa. In 1885, the German Kaiser granted a charter of protection to the Society of German Colonization operating on the mainland opposite Zanzibar, an area which had been assigned to the Sultan of Zanzibar by the Canning award in 1861. The amount of mainland territory over which the Sultan was recognized as having authority had never been defined. This point was referred to an international commission which included in the Sultan's dominions a strip of the coast ten sea miles in depth from the Rovuma to the Tana River and certain other areas in the north. The country behind this coast strip was divided into two spheres of influence, the German sphere being south, and the British sphere north, of a line drawn from the mouth of the Umba River past the northern slopes of Kilimanjaro to the point where the first degree of south latitude intersects the eastern shore of Victoria Nyanza. This line is practically identical with the southern boundary of Kenya to-day.

The agreement did not extend to the north of the Tana River and in 1885 Germany declared a protectorate over the independent Sultanate of Witu.

In 1887, Seyyid Barghash, the Sultan of Zanzibar, granted a concession to the British East African Association on the mainland between the Umba and Tana Rivers, and on the 3rd September, 1888, this Association was incorporated under Royal Charter as the Imperial British East Africa Company. In April, 18[illegible], Seyyid Khalifa, who had succeeded Seyyid Barghash in March, granted a concession of the district that fronted the German sphere to the German East Africa Company.

The German claim to Witu, subsequently extended to include Lamu also, was not recognized by the Sultan who, in January, 1889, offered Sir William Mackinnon, as representative of the British East Africa Company, a lease of Lamu and the adjacent islands. An unfortunate controversy followed, the Germans making every attempt to secure a permanent footing north of the Tana River and the British Company resisting all such claims. It was not until the Anglo-German Treaty of the 1st July, 1890, had been signed that the controversy ended. By that Treaty Germany withdrew her claims to Witu and the territory north of the Tana on the understanding that England should secure for Germany the definite cession of the sphere south of the Umba River leased from the Sultan of Zanzibar, and in exchange for the retrocession of Heligoland.

The controversy over Witu was ruinous to the Imperial British East Africa Company. It diverted a disproportionate amount of the new Company's energies and resources to an unhealthy and comparatively unimportant area. Trouble did not end with the signing of the Anglo-German Treaty. A dispute between the Sultan of Witu and a German timber syndicate led to the massacre of a number of German citizens, and a naval brigade under Admiral Sir E. Fremantle was sent against Witu. The Company found itself under an obligation to maintain a strong and expensive garrison in that area and this, in view of the calls on its finances in other more important parts of its territory, it was unable to afford. In 1893, the Company announced its intention of withdrawing from Witu. The supremacy of British interests in Witu had been recognized by Germany as part of the convention by which the British Government waived all rights over Heligoland, and Witu could not be altogether abandoned. The Imperial Government therefore assumed the administration of that district and declared a protectorate over it on the 31st July, 1893.

Two other difficulties impeded the early operations of the Company. A native insurrection broke out in German East Africa immediately on the arrival of the German administration. The Germans found it necessary to blockade their coast and the British Government agreed to blockade the British Company's coast also to prevent traffic in contraband across the frontier. On the British Company, therefore, rested the stigma of preventing trade with its own territory.

The second difficulty was caused by the action of certain missionaries who permitted the mission stations to be used as asylums for runaway slaves. Feeling against slavery was strong, but it was manifestly impossible to admit the right of the missionaries to offer sanctuary to runaway slaves without affecting economic conditions on the coast and alienating the sympathy of the Arab slave owners. Agreement was reached with the Arabs and the missionaries by which the Arabs consented to grant freedom on compensation to all slaves who had already escaped and the missionaries promised that they would not in future give sanctuary to refugees. On the 1st January, 1889, a historic scene took place at Rabai, a mission station founded by Krapf, 10 miles inland from Mombasa. By the payment of £3,500 the Imperial British East Africa Company secured the liberation of 1,442 slaves.

The early activities of the Imperial British East Africa Company were mainly concentrated on the Coast. The districts intervening between the Coast and the Victoria Nyanza, though known to have great potential resources, were regarded as practically valueless under existing economic conditions. It was realized that the exceptional conditions of natural fertility, climate, and general accessibility would respond to the application of European capital and enterprise but, apart from the Coast, the area next in importance appeared to be Uganda, and the Company was unwilling to extend its operations so far afield until it had consolidated its work on the littoral. International complications forced the Company's hand and it became necessary for the Company to take part in the administration of Uganda before it was fully equipped to do so.

In 1889, the Company despatched a considerable caravan under F. J. Jackson to explore the interior, establish and mark out stations, and make treaties with the various tribes. Jackson founded a Company's station at Machakos, proceeded by way of Kikuyu, Naivasha and Sotik, and reached Mumias on the 7th November, 1889. While there he was begged by Mwanga, King of Uganda, to enter Uganda and assist him to regain his throne. A commerce monopoly was offered to the Company. As he was under instructions to avoid Uganda, which was known to be in a state of revolution, Jackson felt unable to accept the offer, and went north to examine the country towards Lake Rudolf. On his return to Mumias on the 4th March, 1890, he heard that Dr. Karl Peters, in charge of a German expedition, had passed through on his way to Uganda a month previously.

In October, 1888, it had become known that Lieutenant Wissmann and Dr. Peters had been appointed leaders of an expedition which was to proceed up the Tana River with the ostensible object of relieving Emin Pasha, the Governor of the Equatorial Province of the Sudan who, after the fall of Khartoum, had been cut off from all communications for four years. News of the relief by Stanley of Emin Pasha reached Europe in January, 1889. In the following month Peters left Berlin. His passage through German East Africa was forbidden by the German Government and a British Naval Squadron endeavoured to prevent his landing on the coast of the British sphere. Peters succeeded in avoiding the blockade, landed near Lamu, organized his caravan at Witu, then in German occupation, and started up the Tana Valley towards the end of July. A representative of the British Company, J. R. W. Pigott, had explored the valley of the Tana early in 1889 and had entered into treaties with the natives. Peters destroyed these treaties wherever he could find them. He destroyed the Company's stations and pulled down its flag. As he passed he annexed the country in the name of Germany. He had several encounters with the Kikuyu and with the Masai in Laikipia and on entering Uganda he negotiated a treaty with Mwanga. He then returned to the coast, passing down the western side of Victoria Nyanza, only to find that his labours had been in vain. The Anglo-German Treaty of the 1st July, 1890, had assigned Uganda to the British sphere of influence.

Jackson entered Mengo, the Capital of Uganda, on the 14th April, 1890. He signed a treaty with Mwanga under which Uganda was included in British territory. He then returned to the Coast leaving his companion, Ernest Gedge, as the Company's representative in Uganda.

Meanwhile Captain F. D. Lugard had joined the Company's staff and had founded a chain of posts connecting Mombasa with Machakos. In 1890, he founded a station on the borders of Kikuyu country at Dagoretti. He was then ordered to Uganda and, by forced marches, succeeded in reaching Mengo on the 18th December, 1890. During the ensuing year he was straining every nerve to reconcile opposing political factions in Uganda. By the end of 1891 the British position in that kingdom seemed at last to be secure. Then came the news that the Imperial British East Africa Company was finding the cost of administering Uganda excessive and had determined to evacuate the country. This order was cancelled in January, 1892, on a private guarantee being given by Sir William Mackinnon to subscribe funds to pay for a year's administration of Uganda. Representations were made to the British Government that they should help the Company. This the Government felt unable to do, but a Government mission under Sir Gerald Portal was eventually sent to report on Uganda and on the advisability of establishing a British Protectorate over it. Instructions were also given for a preliminary survey to be made of a railway from the Coast to Uganda.

Uganda proper was informally placed under the control of the Foreign Office on the 1st April, 1893. The formal proclamation of a protectorate was issued on the 19th June, 1894.

Meanwhile, negotiations had been proceeding between the British Government and the Imperial British East Africa Company for the transfer of the Company's responsibilities in East Africa to the Imperial Government. The Company's withdrawal from Witu in 1893 has already been mentioned. On the 1st July, 1895, a British Protectorate was declared over the Company's territory between the Coast and Naivasha, the territory west of Naivasha having been included in the Uganda Protectorate. The Company received £200,000 for the surrender. The boundaries of the East Africa Protectorate were defined by proclamation on the 31st August, 1896.

The last days of the Company's administration witnessed a rebellion among the Mazrui section of the Coast Arabs, which implicated the inhabitants of most of the Coast towns from Vanga to Kipini.

In February, 1895, a dispute arose as to the succession to the post of Liwali of Takaungu. The rightful heir according to Mohammedan law was Mbaruk, the son of the late Liwali's elder brother. On being passed over in favour of his cousin, who had stronger British inclinations, Mbaruk withdrew to Gonjoro and threatened rebellion. A Naval brigade was despatched against him and the Mazrui, all sections of whom had now combined, were defeated. Mbaruk fled to Gazi and established a forest stronghold at Mwele. Mwele was taken but the Mazrui then maintained a guerilla warfare with considerable success. Isolated posts and caravans were harassed and the rebel successes encouraged the revolt to spread. Before the end of 1895 practically the whole of the British East African coast lands were in rebellion. Mombasa was never in danger but Malindi was looted. It was not until April, 1896, that the Mazrui leaders, after a series of defeats in small engagements, abandoned the struggle, fled across the border and surrendered to the Governor of German East Africa.

(4) Under Article I of the Brussels Act of 1890 the Signatory Powers included among the means for counteracting the slave trade the construction of railways. The construction of the Uganda Railway developed out of this suggestion. Its early construction was prompted by the desire to obtain a cheap and rapid means of communication to Uganda. A preliminary survey had been made in 1892-3. The first rails were laid in 1895, and by the end of 1901 there was a weekly train service between Mombasa and the Lake. The metre gauge was chosen owing to the facilities so afforded for procuring rolling-stock from India in emergencies. Indian labour was used owing to the scarcity of African labour along the route taken by the railway. The headquarters of the railway were transferred from Mombasa to Nairobi in 1899, and the line to Nairobi was opened in August of that year. The s.s. "Winifred" was launched on the Victoria Nyanza on the 12th December, 1902. The cost of the line up to the end of September, 1903, amounted to £5,317,000.

In 1897, an expedition was organized to explore the country between Abyssinia and Fashoda. The caravan assembled at Eldama Ravine in September and was to be escorted by three companies of Sudanese troops, remnants of Emin Pasha's force, who had seen much recent active service in Uganda. Two days out from Ravine they deserted in a body, passed through Nandi, looting the Government station, and were joined by the rulers of Uganda and Unyoro. The mutiny was quelled in the middle of 1899, but not without the loss of valuable British lives.

Early reports gave the following impression of what was then the East Africa Protectorate. The Protectorate was divided into four Provinces, Jubaland, Tanaland, Seyyidieh, and Ukamba. Its western boundary was the foot of the Kikuyu Escarpment; Jubaland was inhabited by turbulent Somalis; Tanaland, with large potential resources, suffered from lack of population. The fertile coast lands of Seyyidieh were falling off in production. Arab influence was on the wane and the prosperity of this area was being gravely affected by the abolition of the slave trade. Ukamba was administered from Machakos and Kitui, but little was known of the Kikuyu.

Little economic importance was attached to the country between the coast and Uganda. Until the Uganda Railway was built, one of the principal functions of the Administration was to act as forwarding agents for Uganda. There were no towns up-country apart from Machakos—where the establishment of an administrative post led to the settlement of a number of Indian traders—until Nairobi was founded as a railway changing centre in 1898. In three years the population of Nairobi had grown to 8,000.

Mission stations were to be found in all the Provinces. Slavery did not exist outside the Sultan's dominions, where the law still recognised the institution of domestic slavery.

Two important steps in the development of the East Africa Protectorate were taken early in the present century. The western boundaries of the Protectorate were altered in April, 1902, so as to include the Eastern Province of Uganda, stretching as far as the Victoria Nyanza, and including the Mau Escarpment, and the Nandi, Lumbwa and Kavirondo country. In the same year laws were passed defining conditions under which land could be alienated to colonists. By April, 1903, there were nearly 100 Europeans settled in or near Nairobi.

During 1903 numerous applications were received for land in the Rift Valley. The grazing grounds on both sides of the Uganda Railway in the Rift Valley near Naivasha were at that time used by the Masai pastoralists. Agreement was reached with the Masai in 1904 that they should be placed in two reserves, one in Laikipia, some 60 miles north of the railway, and the other to the south of Nairobi, towards German East Africa. Nine years later, under a subsequent treaty, the Masai moved from Laikipia to an extended southern reserve flanking the German border.

On the 1st April, 1905, the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief was appointed under an Order in Council, dated the 9th November, 1906, and an Order in Council, dated the 22nd October, 1906, constituted Executive and Legislative Councils. All Foreign Consular Jurisdiction was transferred to the British Court during the year 1908.

During the years preceding the war the economic importance of the Protectorate steadily developed. The European population of the Colony was 5,438 in 1914 and the Indian population 14,131. The value of the export trade had risen from £124,727 in 1902-03 to £443,624 in 1913-14, new industries having sprung up in the form of coffee, fibre, and wool, and a considerable advance having been made in the exports of grain and hides. The Government revenue had grown from £95,284 in 1902-03 to £1,123,798 in 1913-14 and the Government expenditure from £311,469 to £1,115,899. Grants-in-aid from the Imperial Exchequer, which had been necessary in the early days of the administration, were discontinued in 1913.

On the outbreak of war a prompt response was made to the call for volunteers. Defence forces were formed at Mombasa, Nairobi, and Kisumu and three volunteer units were formed, the East African Mounted Rifles, the East African Regiment, and the East African Transport Corps. These measures served to ward off attacks from German East Africa until an Expeditionary Force arrived from India. The southern border was frequently violated by the enemy during 1914 but no permanent damage was done. A period of comparative inactivity followed. In September, 1915, a mass meeting was held in Nairobi at which a resolution was passed placing at the Governor's disposal the entire resources of the country. This was followed by the formation of a War Council and the compulsory registration of all European personnel. In December, 1915, an Ordinance was passed providing for compulsory military and other service. This Ordinance was applied in March, 1917, each case being considered by the War Council and District Committees. Of the 3,145 adult male Europeans in the Protectorate on the outbreak of war, 1,987 served in a military capacity during the war.

The number of African troops was also largely increased. Before the war, one battalion only of the 3rd King's African Rifles had been recruited in the Protectorate. During the war, the 3rd and 4th King's African Rifles raised three battalions each, while the 5th and 7th King's African Rifles raised part of one battalion. The total number of East Africa Protectorate natives serving in these regiments finally amounted to 8,486. In addition, 1,157 Africans were recruited for the Arab Rifles, the Police Battalion, and Police Service Battalion.

A remarkable response was made by the African community in providing men for non-combatant service such as the Carrier Corps, Maxim Gun Porters, and Stretcher Bearers. More than 200,000 enlistments for these purposes are recorded.

During the course of the war, in order to facilitate military operations, a railway line was constructed from Voi to Taveta near the boundary of German East Africa. Thence the line was linked on to the German railway near Moshi.

Although in the early days of the British administration it was found necessary to undertake punitive expeditions against refractory tribes, the history of Kenya has, apart from the war in German East Africa, been comparatively peaceful. Small expeditions were despatched against the Nandi in 1900, 1903, and 1905-06, owing to the depredations of the tribe along the railway line. The Ogaden Somalis were punished in 1901 for the assassination of the Sub-Commissioner, Mr. Jenner, in November, 1900. A patrol was despatched into Sotik in 1906 and a force visited Marakwet in 1911. Patrols visited Northern Jubaland in 1912 and 1914. Disturbances broke out among the Giriama tribe towards the end of 1914, which necessitated a punitive expedition. There were two campaigns in Turkana, in 1915 and 1917, and the murder of Mr. Elliott at Serenli by the Aulihan Somalis led to punitive measures in Jubaland in 1916 and 1917.

Unofficial members first sat on the Legislative Council in 1907. Such members were nominated by the Governor until 1919 when the principle of elective representation of Europeans was recognized. The first elections were held in February, 1920. In 1923 the principle of elective representation was extended on a basis of communal franchise to the Indian and Arab Communities. Unofficial members first sat on Executive Council in 1920.

By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony. This Order in Council came into operation on the 23rd July, 1920. The Sultan's mainland dominions are now styled the Protectorate of Kenya, whilst the remaining territory is known as the Colony of Kenya. On the 29th June, 1925, in pursuance of a treaty between the United Kingdom and Italy signed at London on the 15th July, 1924, the Province of Jubaland was ceded to Italy. By the Kenya Colony and Protectorate (Boundaries) Order in Council, 1926, an area on the west of Lake Rudolf and north of the River Turkwel, stretching from Mount Elgon to Mount Zulia on the boundary of the Anglo-Egyptian Sudan, which had formerly formed part of the Uganda Protectorate, was included in Kenya.

The Uganda Railway, which had been operated from the date of its construction as a State Railway under the Government of the East Africa Protectorate, was constituted in April, 1921, as a separate financial entity under the control of a Central Railway Council. In February, 1926, under the provisions of the Kenya and Uganda (Transport) Order in Council, 1925, the Office of High Commissioner for Transport was established. The High Commissioner is the Officer Administering the Government of Kenya. He has control of the transport services owned, controlled, or managed by the Governments of Kenya or Uganda, including railways, ports, wharves, and steamships. The Administration is now known as the Kenya and Uganda Railways and Harbours Services. An Inter-Colonial Railway Advisory Council and a Harbour Advisory Board have been constituted.

Languages.

The principal African language in use in Kenya is Swahili, a language evolved from Arab contact with Bantu tribes, which has become a medium of conversation with and between Africans of different tribes not only in Kenya but over a wide area in East and Central Africa. There are numerous native languages of local importance. Among these are :—

Hamitic Languages—Somali, Galla, and Boran.

Lowland Bantu Languages—Nyika (including Giriama) Rabai, Ribe, Jibana, Chonyi, Kauma, Kambe, Digo, Durama, and Pokomo.

Highland Bantu Languages—Kamba, Kikuyu, Embu, Chuku, and Meru.

Lakeland Bantu Languages—Bantu Kavirondo and Kisii.

Nilotic Languages—Masai, Samburu, Turkana, and Nilotic Kavirondo.

Nilotic-Hamitic Languages—Nandi, Lumbwa, Kamasia. Elgeyo, Suk, Elgonyi, and Marakwet.

Currency.

The currency originally consisted of the Indian rupee as the standard coin, with smaller local coins and notes of higher denominations, all expressed in terms of the rupee; the British sovereign was also legal tender at Rs.15. The exchange value of the rupee, after being maintained for many years by the Government of India at 1s. 4d., began to rise in 1917, and early in 1920 reached 2s. 9d. It was then decided to fix the rate in the East Africa Protectorate, the Uganda Protectorate, and the Tanganyika Territory at 2s. sterling to the rupee, and to issue a new currency in local rupee coin and notes, but subsequently it was decided that the new coinage should be expressed in terms of florins, instead of rupees, the 50 cent piece being alternatively termed a shilling. Some rupee notes were introduced but no rupee coins. Later the shilling was made the standard coin instead of the florin, and arrangements were made to withdraw the Indian rupee, which was demonetized from July, 1921, from circulation. The nickel-bronze coins (1, 5 and 10 cents of a rupee) have been withdrawn from circulation, and new copper-bronze coins (cents of a shilling) have been introduced.

The old Local Board of Currency Commissioners has been abolished, and the currency of the Colony and Protectorate is now in the hands of the East Africa Currency Board in London, represented locally by the Treasurer.

Weights and Measures.

The weights and measures in use in the Colony are the same as those used in Great Britain.

I.—GENERAL.

From the 22nd January until the 25th August, 1927, the Government of the Colony and Protectorate was administered by Sir Edward Denham, K.B.E., C.M.G., in the absence of Lieutenant-Colonel Sir Edward Grigg, K.C.M.G., K.C.V.O., D.S.O., M.C., who was engaged in the discussion of certain important questions in England, in representing Kenya at the Colonial Office Conference, and in the investigation of other matters of interest to this country in the Union of South Africa and in Rhodesia.

The Legislative Council held four sessions and sat on 23 days during the course of the year. The Council was dissolved, preparatory to the triennial general election, on the 21st January, 1927. The elections were held during January and February, with the following returns:—

Nairobi North, Captain H. F. Ward.*
Nairobi South, Captain H. E. Schwartze.*
Mombasa, G. G. Atkinson.
Coast, Major R. W. B. Robertson-Eustace, D.S.O.*
Lake, Conway Harvey.*
Rift Valley, Lord Delamere.*
Plateau North, Lieut.-Colonel J. G. Kirkwood, C.M.G., D.S.O.
Plateau South, T. J. O'Shea.*
Kenya, Capt. E. M. V. Kenealy.*
Ukamba, Lieut.-Colonel Lord Francis Scott, D.S.O.*
Kikuyu, Lieut.-Colonel C. G. Durham, D.S.O.
Indian Electoral Area, A. H. Malik (four vacancies).
Arab Electoral Area, Hamed Mohamed bin Issa.*

The constitution of the Council provided for the election of five Indian Elected Members, and provided further that until such Indian Elected Members had been elected there should be five Nominated Indian Unofficial Members. The return of one Indian Elected Member with four vacancies led to the promulgation of Additional Royal Instructions dated the 28th March, 1927, providing that for a period of not more than one year from the date of those Instructions any vacancies so arising might be filled by the appointment of Nominated Indian Unofficial Members from the Indian community in general. At the close of that period, such nominations were only to be made from among those persons whose names were entered on the register of voters for the election of Indian Elected Members.

Since January, 1924, when rules were first introduced enabling qualified members of the Indian community to register as voters for the election of Indian Elected Members, a small number only of qualified Indian residents had entered their names on the roll. The Indian register published in June, 1926, upon which the elections were held in January, 1927, contained some 360 names only. The object of the Additional Royal Instructions was to afford opportunity to the Indian community to make the register of voters representative of the community during 1927 with a view to an election to fill the vacancies being held early in 1928. The register of voters for the Indian Electoral Area published in 1927 contained 3,700 names. Four Nominated Indian Unofficial Members were appointed in July, 1927, and held their seats until the appointments were terminated on the 31st January, 1928. An election to fill these seats was held on the 3rd March, 1928, but no candidates were nominated.

---

* An Elected Member of the previous Council.

In July, the appointment of a Commission by the Secretary of State for the Colonies to visit the East African Dependencies was announced. The terms of reference were as follows:—

1. To make recommendations as to whether, either by federation or some other form of closer union, more effective co-operation between the different Governments in Central and Eastern Africa may be secured, more particularly in regard to the development of transport and communications, customs tariffs and customs administration, scientific research, and defence.

2. To consider which territories could either now or at some future time be brought within any such closer union, and, in particular, how best to give effect to Article 10 of the Mandate for Tanganyika Territory, which provides that the mandatory may constitute the Territory into a customs, fiscal and administrative union or federation with the adjacent territories under its own sovereignty or control, provided always that the measures adopted to that end do not infringe the provisions of the Mandate.

3. To make recommendations in regard to possible changes in the powers and composition of the various Legislative Councils of the several territories (*a*) as the result of the establishment of any Federal Council or other common authority; (*b*) so as to associate more closely in the responsibilities and trusteeship of Government the immigrant communities domiciled in the country; and (*c*) so as ultimately to secure more direct representation of native interests in accordance with (4) below.

4. To suggest how the Dual Policy recommended by the Conference of East African Governors (i.e., the complementary development of native and non-native communities) can best be progressively applied in the political as well as the economic sphere.

5. To make recommendations as to what improvements may be required in internal communications between the various territories so as to facilitate the working of federation of closer union.

6. To report more particularly on the financial aspects of any proposals which they may make under any of the above headings.

The Commission was constituted as follows:—

Rt. Hon. Sir Edward Hilton Young, Bart., P.C., G.B.E., D.S.O., D.S.C., M.P. (Chairman).
Sir Reginald Mant, K.C.I.E., C.S.I.
Sir George Schuster, K.C.M.G., C.B.E., M.C.
Mr. J. H. Oldham, M.A.

Mr. H. F. Downie, } Secretaries.
Colonel C. W. G. Walker, D.S.O. }

During the month of August delegates from Kenya, Uganda, Tanganyika, Northern Rhodesia, and Southern Rhodesia attended the third East African Non-official Conference at Nairobi. The principal subject of discussion was its attitude towards the appointment of the Hilton Young Commission.

The main conclusions reached are to be gathered from the following Conference Resolutions :—

> " That this Conference unanimously welcomes the appointment of the Hilton Young Commission to enquire into the question of Federation with regard to Kenya, Uganda and Tanganyika and hopes its labours will result in a scheme which will provide adequate safeguards for the state of civilisation which has been reached and which will prove acceptable to our peoples of these three Territories.
>
> " This Conference is of opinion that federation without agreement would be impracticable.
>
> " That this Conference is of opinion that any division of Northern Rhodesia for the purpose of an amalgamation of North-Eastern Rhodesia with Nyasaland would be disastrous to the cause of civilisation in Central and Eastern Africa."

The Conference also expressed its desire for constitutional change in the direction of unofficial majorities in the several Legislative Councils as soon as local conditions should justify such a course. In the opinion of the Conference such " justification exists to-day in Kenya."

A further resolution affirmed the principle that the promotion of civilisation in the territories concerned could only be effectively secured by a large increase in European settlement.

The Local Government Commission appointed in 1926 under the Chairmanship of Mr. Justice Feetham completed its enquiries early in the year. Preliminary steps were taken with a view to carrying out the recommendations of the Commission.

Following upon the delimitation of the Native Reserves in 1926, demarcation was begun during 1927. A resolution was adopted in the Legislative Council on the 11th March, 1927, in the following terms :—

> " That in view of the fact that the Native Reserve Boundaries have now been demarcated and gazetted, this Honourable Council is of the opinion that no change should be made in the boundaries as so gazetted without prior reference to this House."

As a result of discussions undertaken by Sir Edward Grigg in England, an agreement was signed on the 13th April between representatives of the Railway and the Wharfage Companies relative to the methods of working of the Mombasa Port. In view of the acceptance of a revised system of Port control, Lord Inchcape agreed to the cancellation of the lease of Mbaraki, which thus became part of the general Port facilities.

In February, the first aerial mail service was inaugurated between Kenya, Uganda, the Sudan, and Egypt and thence to England by the arrival at Kisumu on the 12th February of a seaplane piloted by Captain Gladstone. Altogether two English air mails were despatched and four received before accidents necessitated the suspension of this experimental air service.

Sir Sefton Brancker, Director of Civil Aviation, visited Kenya in March, and in April a combined Royal Air Force and South Africa Air Force flight met in Nairobi.

The year was a satisfactory one financially, the Colonial surplus increasing from £362,265 at the end of 1926 to £693,260 at the end of 1927. The Estimates for 1927 provided for a tax to be levied on the European and Indian communities sufficient to cover the cost respectively of European and Indian education services, in the form of a consumption tax on wines and spirits, accompanied by a poll cess of thirty shillings per head for the European and twenty shillings per head for the Asiatic adult male population.

Progress was made in the construction of the main railway line extension with Uganda, which was handed over for open line working complete as far as Mbulamuti at the beginning of 1928. The Nyeri branch line was completed as far as Naro Moru in November and construction was begun of a branch line to Mbale and Soroti in Uganda.

No census of the non-native population was taken during 1927. No census has yet been taken of the African population. A fairly accurate count is made annually for taxation purposes but the number of children can only be estimated roughly and the return of African population is, therefore, a rough estimate only.

The following figures show the 1921 and 1926 census returns for non-natives and the estimates of the native population at the end of 1921 and 1927 :—

	1921 Census.	*1926 Census.*	*Increase per cent.*
Europeans	9,651	12,529	30
Asiatics (excluding Arabs) ...	25,880	30,583	18
Arabs	10,102	10,557	4½
	Estimate 1921.	*Estimate 1927.*	
Africans	2,348,788	2,793,963	24*
Totals	2,394,421	2,847,632	24*

* The African population showed a decrease in 1925 owing to the cession of Jubaland to Italy. In calculating the percentage of increase, the estimated African population of Jubaland at the end of 1921 (97,728) has been deducted from the 1921 estimate.

Measures for the Improvement of Native Conditions during 1927.

The outstanding feature of the development of native communities during the year has been a steadily increasing realisation by Local Native Councils, especially among the more progressive tribes, of their duties and responsibilities both to the people and Government, and the keen desire they have shown for social and economic development.

The Councils are also fulfilling a useful purpose by forming a constitutional means of ventilating matters upon which the people desire explanation and discussion.

The increasing native demand for education is reflected in the Estimates of the majority of Local Native Councils which have voted during the current year £5,650 for educational purposes.

Funds have also been voted for a variety of other purposes among which may be mentioned medical services, roads and bridges, buildings, water supplies, and afforestation.

Communications have improved in all Provinces, notably in Kikuyu, where the desire for more and better roads has resulted in marked development and led to the opening of many native-owned shops and flour mills. In Nyanza Province the construction of several new roads has resulted in motor communication with all parts of the Province being now feasible.

The main tracks in the Northern Frontier Province have been extended in various directions, thus enabling use to be made of motor transport, and producing a remarkable increase in commercial motor traffic. This is of special significance in view of the fact that the difficulty of communications in the Province has been one of the main handicaps to progress in the past.

Water supply has received special attention in Masai and Ukamba. In the former a measure of success has attended preliminary experiments in boring, and native appreciation of the steps taken is reflected in the fact that the Masai Local Native Council has voted £1,000 for further bores in 1928. This may prove that boring is the solution of the water supply problem in this Province, though it is as yet too early to prophesy such a consummation with any degree of confidence.

In Ukamba improvements to the water supplies have taken the form of dam construction, which has proved most successful and has been greeted with enthusiasm by the natives. At Migwani in the Kitui District, for instance, where formerly there was no water within 15 miles, there is now a large dam over three acres in extent, in parts more than six feet in depth, providing an ample water supply.

Tree planting has proceeded with vigour. In Kikuyu several thousands of tree seedlings have been distributed. In Nyanza a scheme of afforestation with Local Native Council funds was carried out, and nurseries and small plantations were started. Afforestation was continued in the Machakos Native Reserve. The total area now planted is 1,264 acres, of which 330 were planted during 1927.

The main feature of medical services rendered to the natives has been a campaign by the Medical Department against intestinal worms—more particularly hook-worm—in the Coast Province. The method adopted has been primarily directed towards prevention, and has met with marked success. It is estimated that eighty per cent. of the people are infected with this disease.

The Local Native Councils have shown their appreciation of the necessity for medical aid among the people by voting considerable sums to supplement the amounts provided from public funds for medical services during the year.

Agricultural development has steadily progressed, and in parts of the country cultivation has become so intense as to render the impoverishment of the soil likely, unless steps are taken to ensure a proper rotation of crops or the use of manures.

A Committee was appointed by the Governor to consider and advise as to the lines to be pursued for the better organization of Agricultural Education for Africans, and the funds from which such assistance should be given. This Committee has submitted a Report which is under consideration by Government.

During the year under review no legislation of great importance affecting natives was enacted other than an amendment to the Native Liquor Ordinance designed to secure more effective control of the manufacture, sale and transport of native liquor in townships, on farms, and in the Coast Province, in certain areas of which the extent of intoxication among the native population was such as to demand special methods of prevention.

II.—FINANCE.

The following table shows the revenue and expenditure totals for the five years ended 31st December, 1927 :—

Year.	*Revenue.*	*Expenditure.*
	£	£
1923	1,839,447	2,137,633
1924	2,111,565	1,861,511
1925	2,430,509	2,339,996
1926	2,627,223	2,414,681
1927	2,846,110	2,515,115

The following new methods of raising revenue were introduced for operation during the year 1927 :—

1. Spirits and Wines Consumption Tax, brought into operation from 6th November, 1926.

2. European Education Tax, 30s., brought into operation from 1st January, 1927.

3. Asiatic Education Tax, 20s., brought into operation from 1st January, 1927.

No special alterations were made in the rates of other forms of taxation.

Statement of Loan Position of Colony at 31st December, 1927.

(a) *Public Debt.*—During the year the Funded Public Debt of the Colony had increased from £8,500,000 to £10,000,000 by the floating of a loan of £5,000,000 which contained provision for the repayment of the £3,500,000 loan raised under Ordinance No. 29 of 1924.

The position at the end of the year was, therefore, that the Fund Public Debt consisted of two loans, viz. :—

£5,000,000—6 per cent. Loan of 1921.
£5,000,000—5 per cent. Loan of 1927.

The 1921 Loan, known as the " Kenya Government 6 per cent. Inscribed Stock, 1946-56 " was floated in London in November, 1921, at £95 per cent. The currency of the Loan is 35 years, but the Kenya Government have the option of redemption at par at any time after the 14th November, 1946, on giving six calendar months' notice.

This loan was fully expended at the 31st of December, 1927.

The 1927 Loan, known as the " Kenya Government 5 per cent. Inscribed Stock, 1948-56," was floated in London in November, 1927, at £99 10s. per cent. The currency of the loan is 30 years, but the Kenya Government have the option of redemption at par at any time after 15th of January, 1948, on giving six calendar months' notice.

The loan was raised for the purpose of redeeming the Imperial Government (free of interest for 5 years from 1924) Loan of £3,500,000, and for further Railway and Port Development.

The actual amount raised at the 31st of December, 1927, was £3,245,750.

(b) *Sinking Funds.*—In the case of both the 1921 and 1927 Loans the legislation provides that Sinking Fund contributions shall commence after the expiration of three years from the date of the first issue of the stock, and it is stated in the prospectus that the annual contribution will be not less than one pound per cent.

Contributions to the Sinking Fund established in connection with the 1921 loan are at present at the rate of 26s. per cent. per annum.

Statement of Assets and Liabilities of the Colony and Protectorate of Kenya on 31st December, 1927.

Liabilities.	£	s.	cts.	*Assets.*	£	s.	cts.
Deposits	738,280	10	85	Investments... ...	109,953	0	40

Drafts and Remittances	7,178	6	50	Advances	96,892	6	32
Surplus of Assets over Liabilities ...	693,260	3	71	Unallocated Stores...	83,407	14	35
				Loans to Local Bodies	4,790	19	18
				Cash	563,241	1	66
	£4,648,228	8	78		£4,648,228	8	78

III.—PRODUCTION.

During the year 1927 the rainfall was on the whole below the average and its incidence was irregular, so that some crops suffered from lack of rain at important times. Of the main crops, the yield of coffee, which showed every promise of being above the average per acre, revealed a substantial shortfall, and expectations were not realised, although the total quantity produced was in excess of that of any previous year. The yields of maize which were harvested from the 1926 plantings were slightly above average despite the too heavy rainfall experienced in most districts. The 1927 crop on the other hand is expected to be below average, the rainfall being too light and the incidence of stalk-borer, particularly in the Nakuru District, having caused some loss.

Wheat planted in 1927 was up to average over the country as a whole.

Owing to the drought which was felt generally over the whole country, Native Reserves produced little surplus.

There was a strong movement directed towards the cheapening of fuel oils for agricultural purposes, and legislation was introduced early in 1928 to provide for a rebate in respect of paraffin used for agricultural purposes.

A Conference of Stock Owners was held in February at which the opinion was expressed that early steps must be taken to strengthen the measures previously in operation as a protection against stock diseases. Recommendations made by the Select Committee of the Legislative Council on the Estimates for 1928 aimed at the introduction of legislation providing for compulsory fencing and dipping in certain areas, and steps are being taken to establish a Land Bank from which it is hoped, among other things, to make advances in respect of such work.

An Eastern African Agricultural Show was held in Nairobi in July and August.

The total value of agricultural exports, the produce of Kenya, in 1927 was £2,731,794, an increase of £482,073, as compared with the previous year. The tonnage was 138,412 tons in 1927 against 85,444 tons in 1926.

Main Crops.

On 31st July, 1927, an agricultural census showed the total area under crops in European areas to be 438,035 acres, and the total area under cultivation to be 512,543 acres. For comparative purposes figures for the previous year are given and the percentages of increase and decrease are shown.

Crop.	*1927. Acres.*	*1926. Acres.*	*Increase per cent.*	*Decrease per cent.*
Maize	192,592	193,187	—	0·3
Wheat	63,036	43,765	48·4	—
Barley	4,093	2,644	54·8	—
Coffee	74,662	68,950	8·14	—
Sisal	71,213	60,197	18·30	—
Tea	3,156	1,689	86·09	—
Coconuts	8,113	8,766	—	7·4
Sugar Cane	6,811	6,747	1·00	—
Miscellaneous	17,194	18,525	—	7·2
Total acreage of crops grown ...	442,770	404,470	9·5	—
Less Catch Crops	4,735	3,427	38·1	—
Net area under crops	438,035	401,043	9·2	—

Maize.—The season's figures reveal a decrease of 595 acres in the area planted as compared with the acreage in 1926.

The average yield of maize over the whole country was 7.39 bags per acre.

The following table shows the acreages and yields of maize in past years.

Year.	*Acreage Harvested. Acres.*	*Actual Production. Bags.*	*Bags per Acre*
1922–1923	74,747	518,877	6·23
1923–1924	108,556	833,640	7·68
1924–1925	129,647	893,108	6·89
1925–1926	155,751	826,614	5·95
1926–1927	177,987	1,314,643	7·39

Wheat.—The area planted as at 31st July, 1927, was 65,036 acres, a very significant increase as compared with the previous year. The acreage harvested in each year and the production during the past five years are as follows :—

Year.	*Acreage Harvested. Acres.*	*Annual Production. Bags.*
1922-23	15,158	35,793
1923-24	19,599	55,920
1924-25	23,996	61,067
1925-26	30,627	80,069
1926-27	46,601	120,569

Barley.—Interest is increasing in this crop. It is expected that in the future barley will become one of the main crops grown, particularly as mixed farming advances. In 1927, 4,093 acres of barley were planted as against 2,644 acres in 1926.

Coffee.—The season has been droughty but the quantity of coffee exported was 70,000 cwt. more than in 1926. The export value shows a corresponding increase from £747,453 in 1926 to £1,140,549 in 1927. The total area under coffee is 74,562 acres or 8 per cent. more than in 1926, and the acreage in bearing is now 53,800 or approximately 8,000 more than in 1926. The estimate of production in July, 1927, was 213,000 cwt. and 209,843 cwt. were exported equivalent in value to 42 per cent. of the Colony's total agricultural exports. There are 749 coffee planters in the Colony.

Sisal.—The output of sisal was much increased but, owing to the fall in prices, the value of fibre exported in 1927 was only £468,974 as against £579,499 in 1926. The total area planted as at 31st July, 1927, was 71,213 acres, of which 40,751 acres were over three years old and therefore ready for cutting. The increase in area for 1927 is 11,016 acres or 18.30 per cent. over the previous year.

This industry is energetically pursuing investigations into methods and systems which will tend to decrease working costs and increase acre out-turn.

Coconuts.—There was a decrease in the export of Copra from 22,085 cwt., valued at £25,765 in 1926 to 14,725 cwt., valued at £14,070 in 1927. The time is not far distant when most, if not all, the Colony's productions will be absorbed locally.

Sugar Cane.—Only a small increase is recorded in the area planted under cane, which is now 6,811 acres. The production of sugar is, however, increasing and export of 25,320 cwt. took place during the year. Considerable success has attended the working of sugar estates and mills during the past few years.

Native Agriculture.

As in previous years, the main functions of the Agricultural Officers of the Department of Agriculture have been to give advice to Administrative Officers and instruction in the Agricultural Schools at the Scott Agricultural Laboratories and at Bukura. It has been possible, owing to a larger staff being available, to provide for more direct instruction in the Reserves, both by means of native instructors, demonstration plots, and meetings addressed by officers.

Mass issues of seed and of pure bred poultry were made and instruction was given in the preparation of hides, ghee, and beeswax.

At the Native Agricultural Schools the average number under training was 83: at the Scott Laboratories 38, and at Bukura 45. No pupils completed the course at the Scott Laboratories owing to the course having been lengthened from two to three years. Nine boys finished the training at Bukura and are to be engaged as instructors, and four of the most promising have been kept on for a further year's more advanced course.

Cotton.—The 1926-1927 crop, owing chiefly to adverse weather conditions, was late and small. About 1,045,000 lb. of seed cotton were purchased in Kavirondo as compared with 2,484,000 lb. in the previous season.

The low prices paid for cotton in the previous year did not encourage further plantings but, as a result of special efforts made by the Agricultural Department and the Administration, some 20,000 acres were planted by the end of July. Weather conditions were adverse, however, in the cotton area, with the result that in spite of the larger acreage the crop is not expected to be much greater than that of the previous year.

Simsim.—Good crops of Simsim have been secured on the coast and as a long rain crop in Nyanza. The short rain crops there have suffered and yields will be small. The crop is a popular one in areas suited to it and prices ranged from 20s. to 30s. per 100 lb. Seed was issued in the coast area and was eagerly sought after. The crop is well suited to native needs and well adapted to certain areas. Total exports during the year amounted to 66,580 cwt.

Groundnuts.—Although a suitable crop in many areas, the cultivation of groundnuts does not appeal to the native. Good yields have been obtained at many of the demonstration shambas in the country and issues of seed were made in Central Kavirondo and the coast. Harvesting and shelling is often carelessly done and the resulting seed is poor. There were 24,960 cwt. valued at £22,564 exported during the year.

Wheat.—With the further assurance, provided by the successful growth of Kenya Governor by Europeans, that the crop is not likely to succumb to rust attacks, the growth of wheat has been encouraged in suitable areas, more particularly in the Kikuyu Province. Signs are not wanting that as the crop becomes better known it may replace to a considerable extent maize and mtama in the short rain season in certain districts. Such replacement cannot fail to have a good effect on the fertility of the land, the diet, nutrition, and general health of the native and eventually the export trade of the country. A number of excellent crops have been grown by natives.

The estimated value of agricultural exports of native origin for the last five years is as follows :—

	1923. £	1924. £	1925. £	1926. £	1927. £
Animals	10,000	20,000	16,000	11,000	12,000
Copra and Coconuts ...	10,280	35,000	28,000	20,600	12,000
Cotton	—	11,860	41,000	32,750	15,030
Groundnuts	24,000	26,000	19,000	31,000	22,500
Maize	120,000	130,000	100,000	70,000	75,000
Millets	4,000	300	865	2,750	3,350
Pulse	12,000	15,000	16,800	20,400	19,900
Simsim	22,000	84,000	65,000	76,500	67,350
Hides	60,000	121,000	210,000	140,000	160,000
Skins	3,000	30,000	50,000	51,000	67,000
Oil-Simsim	2,400	2,200	3,000	5,500	3,550
Potatoes	3,000	4,000	4,000	7,250	7,500
Miscellaneous ...	1,000	1,000	1,000	2,000	2,600
	£271,680	£480,360	£564,665	£470,750	£497,780

This statement does not, however, give any indication as to the total agricultural output from native areas. As instances of this the following illustrations may be cited.

54,000 bags of native maize were graded in 1927 but, in addition, 214,300 bags of native maize were shipped to East Coast ports ungraded.

From certain stations on the new line of rail from Thika to Nyeri, at which the collections of produce are practically wholly of native origin, no fewer than 209,000 bags of maize were railed during the year. In addition, from Nyanza over 100,000 bags of maize were sent out either as meal or as grain.

The native maize crop comes in, in part, during the time when there is a large demand for maize meal in this Colony and Uganda, so that by far the greater part of the total crop is consumed locally. The export figures of native maize, therefore, are not comparable with the total sales. This is also true of simsim, groundnuts, and copra. A very much greater local use is being made of these commodities.

Live-stock Industry.

The following table shows the number of live-stock owned by Europeans over a five-year period.

	1923.	1924.	1925.	1926.	1927.
Cattle Total :	190,140	211,381	216,589	213,423	215,650
(*a*) Breeding Stock ...	104,631	110,855	110,547	105,556	107,434
(*b*) Oxen	85,509	100,526	106,042	107,867	108,213
Horses	1,454	1,642	1,846	1,844	2,137
Mules	1,093	985	922	780	719
Donkeys	1,260	1,213	1,336	931	1,046
Sheep (wool-bearing) ...	112,046	133,916	140,725	162,848	209,299
Sheep (native)	35,014	32,132	38,071	45,057	32,972
Goats	6,258	4,618	5,372	4,454	3,697
Pigs	12,120	10,608	8,564	9,125	12,954
Poultry	38,685	38,910	31,150	39,728	43,988

There was an increase in 1927 of 1.04 per cent. in the total number of cattle as compared with 1926. The country is well suited to stock and dairy farming, but it has become clear that without some drastic alteration of conditions the developments of stock raising by Europeans will be greatly hampered. It is hoped that the introduction of fencing and dipping on a large scale such as is contemplated under legislation will provide a measure of protection and a stimulus to the industry.

There has been a large increase in wool-bearing sheep amounting to 28.52 per cent. The value of wool exported in 1926 was £62,450 and in 1927 was £64,561.

The business of pig breeding and feeding is on the increase.

Poultry.—This branch is becoming more popular and is dependent on the quality and cheapness of the supplies of feeding stuffs. In dry and warm districts under careful managements poultry thrives.

The following table gives the quantities of certain animal products sold by Europeans during the last five years.

Year.		*Milk.*	*Cream.*	*Butter.*	*Cheese.*	*Ghee.*	*Wool.*
		Galls.	*Galls.*	*lb.*	*lb.*	*lb.*	*lb.*
1926–1927	...	617,747	92,640	216,863	148,305	124,057	632,088
1925–1926	...	395,031	72,693	291,894	144,070	115,815	670,752
1924–1925	...	371,692	85,557	303,085	92,994	108,153	461,588
1923–1924	...	372,104	107,669	252,990	93,248	112,815	427,266
1922–1923	...	351,920	43,352	246,544	145,452	97,439	445,024

It will be noted that there is a very large increase in the amount of fresh milk sold with, however, a considerable reduction in the quantity of butter produced.

It is calculated that the production of the primary product—milk—has increased from 1,729,470 gallons in 1925-1926 to 2,257,974 gallons in 1926-1927 or 30.5 per cent. This very large increase is the more remarkable since the number of dairy cattle increased by less than 2 per cent. It may be attributed partly to the good rainfall in 1926 affording plentiful grazing in the latter part of that year, and the corresponding maintenance of the milk supply through the dry season, but more particularly to improved methods of production and greater attention on the part of the stock-owner to the care and management of the herds.

The two most noteworthy points in connection with agricultural production during the past year are the increase in the production of wheat which was of sufficient quantity to satisfy the local demand, and which under normal conditions is likely to become an export in 1928, and the quantity of fair quality maize produced in native reserves. Though there are no exact records of these quantities, undoubtedly there has been a very considerable increase.

Future Prospects.—Coffee and sisal are expected to show a considerable annual increase in export during the next few years, apart from the results of increased planting, owing to the large area of plantings of recent years coming into bearing.

The rapid rate of increase in the quantity of maize produced in European areas during the past few years is not expected to be maintained in view of the number of farmers who are planting wheat on old maize lands, and the need for maintenance and improvement of soil fertility by rotation of crops. Though the area under maize is not expected to increase at the same rate as in the past the areas of land still to be brought under cultivation are large and acre yields may be expected to show a gradual increase.

Competition in the world markets as an export trade develops, will necessitate further attention being paid to the yield of wheat per acre and to more intensive methods of cultivation. This and the production of more suitable wheats by the Plant Breeding staff, with the probable increase of area under the crop, will result in a a much increased production as the effects of these influences are felt.

There is an increasing tendency to complete the early stages of manufacture in the country noticeably in the case of the oil producing crops, e.g., simsim, which is being crushed locally, and in the case of the coconut to complete the process by the manufacture and local consumption of soap.

Directions in which openings occur for the beneficial use of capital are varied; the small investor may profitably undertake mixed farming in many areas, coffee calls for investment on a more extensive scale, whilst larger concerns operate plantation crops such as sisal and sugar.

A schedule showing the quantity and value of the main agricultural exports yearly during the last five years is attached as an Appendix to this Report.

Forestry.

Steady progress was made in exploitation, afforestation and forest investigation during the year.

Timber sales increased from 1,316,566 cubic feet in 1926 to 1,566,400 cubic feet in 1927.

Firewood sales increased from 5,207,403 cubic feet in 1926 to 8,108,890 in 1927; this latter figure is more than double that sold in the year 1925.

The Kenya and Uganda Railways and Harbours used 6,250,000 cubic feet of fuel from Forest Reserves out of a total of 13,250,000 cubic feet used by them during the year.

697,157 poles and bamboos were sold compared with 605,277 in the previous year.

The number of trees raised in Forest Department Nurseries was increased from 4,000,000 to 5,500,000 and of these 548,672 were sold, an increase of 76,428 over the previous year.

1,422 lbs. of seed were sold during the year.

The year was a difficult one for planting operations and of a total area planted of 3,253 acres only 2,959 were sufficiently established to be counted as plantations at the end of the year.

The plantations established by the Department during the year consisted of 1,150 acres of timber species, 1,407 acres of fuel, and 402 acres of mangroves.

The produce from these plantations will fully cover the amounts of produce exploited during the year.

The total area of the Forest Reserves at the end of the year was 2,552,240 acres which, as the result of investigations carried on during the year 1927 and previous years, is classified as follows :—

	Acres.
Merchantable timber area	749,000
Fuel and unmerchantable timber area ...	772,620
Bamboo	353,350
Moorland, rock, grass, and snow	677,670

Enumeration surveys on a small scale were proceeded with, three areas being enumerated during the year. From the figures at present collected the following estimates of timber were made :—

	Million cubic feet.
Conifers, merchantable timber	651
Broad-leaved, merchantable timber	292
Broad-leaved, unprofitable or inaccessible ...	306
Total	1,249

Exports.

	1927.		*Average for last five years.*	
	Cubic feet or No.	*Value £*	*Cubic feet or No.*	*Value £*
Cedar	13,548	5,400	46,682	14,779
Other Timber ...	48,293	9,119	46,892	4,175
Mangrove Poles ...	373,548	4,830	518,937	6,537
Mangrove Bark ...	51 tons.	306	308 tons.	1,848
Gum Copal ...	15 tons.	30	9 tons.	20

It will be noticed that there was a considerable drop in the export of pencil cedar, which was due chiefly to local difficulties. This trade is being fostered and steps will be taken to assist and increase it as soon as enumerations and working plans can be prepared.

Two officers were appointed for working plan preparation. It is proposed that they should pay particular attention to the cedar forests with a view to encouraging the use of East African Pencil Cedar for the manufacture of pencils.

The quantity of timber imported decreased. Taking one-third of the imports for Kenya and Uganda as destined for Kenya, 181,718 cubic feet valued at £37,144 were imported, compared with 282,981 cubic feet valued at £59,929 in 1926.

The total cash revenue collected by the Forest Department was £42,101, an increase of £5,163 over the figure for 1926, and the total expenditure was £32,751, an increase of £2,896 on 1926 expenditure.

Fisheries.

It is known that a great variety of fish is prevalent in the sea waters on the coast of Kenya. Some species are caught in large numbers by the primitive methods at present in vogue.

At present about 40,000 lbs. of fish, valued at £3,900, are caught. There are 212 boats, 442 canoes, 175 fish traps, and 1,755 persons employed in fishing.

The potentialities will be further investigated in 1928, when arrangements for a preliminary survey of the sea fisheries have been concluded.

A very considerable fishing industry is also carried on along the shores of Lake Victoria, both by Africans and Indians, and in several of the Lake shore locations the natives depend very largely on fish for their food owing to the uncertainty of the rains.

The methods employed by the natives are very varied and include drag nets, weirs, traps, harpoons, long lines, and, to a very small extent, fishing rods.

Most of the fish caught by the natives is not eaten fresh, but dried, and large quantities are carried up by those dwelling on the Lake shore to markets in the hinterland and exchanged there for grain.

More modern methods of fishing by means of imported nets are employed by Indians at various fishing stations in the Kavirondo Gulf.

There are three Indian fishing villages in the Gulf, at Seme, Asembo, and Nanga. The last is only three miles south of Kisumu and is the only one near enough to supply fish for the Nairobi market.

All persons fishing for sale or barter are required to register yearly. The fee is 300s. per annum for persons other than natives of Africa.

As it was feared that the fishing industry was declining it was decided to bring in an expert to make a survey of the Lake, and in September, 1927, Mr. Michael Graham, of the Home Fishery Department, arrived, and was still investigating the problem at the end of the year, assisted by Captain R. E. Dent, of the Game Department, and Mr. E. B. Worthington.

Mines.

Twenty prospecting licences were issued and four claims registered during the year. Gold to the value of £2,302 was exported, representing the work of holders of 77 claims.

IV.—TRADE AND ECONOMICS.

General.

Kenya and Uganda being one administrative unit for purposes of Customs, complete freedom of trade between the territories exists. For this reason and on account of the very intimate trade relations of the two countries, a detailed examination of the external trade of Kenya alone is a matter of considerable difficulty, particularly in view of the fact that virtually the whole of the imports and exports of both Dependencies pass through Mombasa, the principal port in Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £661,615 was transported through Kenya and shipped at Mombasa during the year.

Since 1st January, 1923, the movement, without the imposition of duty in the country of consumption, of goods, the growth, produce or manufacture of Kenya, Uganda, or Tanganyika Territory has been allowed. Following co-ordination of the Customs laws of the three territories, barriers to inter-territorial trade have been further lowered by a tripartite agreement permitting the free interchange of imported goods, the Customs duty involved being credited to the consuming territory by inter-departmental entry. The advantages to trade consequent upon this agreement have already been amply demonstrated as apart from obviating the necessity for double payment of duty, merchants are now enabled freely to transfer their stocks to meet seasonal requirements in any of the three territories. In this manner the dangers of over-stocking in a particular area are rendered considerably less serious and the whole basis of trading in imported goods in Eastern Africa is improved accordingly.

The net amount of duty collected in Kenya and Uganda on behalf of Tanganyika Territory from the 1st August, the date of inception of the new agreement, to 31st December, 1927, amounted to £33,933, a sum of £2,869 being credited by the Tanganyika Territory Government to the Governments of Kenya and Uganda in respect of traffic in the reverse direction during the same period.

The Customs tariff remained unaltered during the year under review, the net yield from Customs duties being £1,176,077, as compared with £1,150,593 collected during 1926. Of this total amount, £828,091 accrued to Kenya in 1927, as against £737,657 in the previous year.

Trading conditions in Kenya and Uganda during 1927 were unfavourable owing to the decreased purchasing power of the native population, due in a large degree to the disappointing yield from the 1926-7 cotton crop. In the early part of the year the position occasioned some anxiety, but despite severe losses to merchants engaged in the native trade and particularly to importers allowing long credit terms, the markets as a whole have proved surprisingly resilient, and a gradual recovery attended by absorption of accumulated stocks has taken place. This process was undoubtedly assisted by the extension of the "Free trade area," which now includes Tanganyika Territory, and at the close of the year stocks of imported goods on hand in Kenya and Uganda were relatively small.

So far as the immediate future is concerned, the rapid development of the territories, not only as regards the area being brought under cultivation, but also in connection with local handling and transportation, trading and marketing, afford reasonable anticipation that if crop conditions are not definitely unfavourable, a marked increase in the external trade of the territories will be recorded.

The total volume of import, export and re-export trade, including importations on Government account, specie and transit and transhipment traffic was valued at £16,334,190, as compared with £17,208,483 in 1926, a decrease of 5 per cent. of this total. Goods imported and cleared for home consumption represented £7,697,180, as against £7,440,549 in 1926, an increase of £256,531, or 3.3 per cent. The value of domestic produce of the two territories exported during the year was £5,397,216, as against £6,010,386 in 1926, a decrease of £613,170; this contraction is more than accounted for by the fall of £1,364,372 in the value of cotton exported.

As regards the distribution of foreign trade between Kenya and Uganda, respectively, a close analysis shows that foreign trade goods imported into Uganda and cleared for home consumption in that territory amounted in value to £1,819,961, as compared with total clearances for home consumption in both territories of £7,697,180. The value of domestic produce originating in Kenya exported during the year was £3,086,916, indicating a very satisfactory increase of £672,575, or 27.8 per cent. over the value of Kenya exports in 1926.

Imports.

Of the total value of trade imports, the British Empire supplied 63.91 per cent. (Great Britain 38.34 per cent. and British Possessions 25.57 per cent.) as compared with 67.73 per cent. in 1926 (Great Britain 37.12 per cent. and British Possessions 30.61 per cent.). The decrease in the percentage value of goods originating in British Possessions is accounted for in part by a contraction in the value of goods imported from Tanganyika Territory for ultimate shipment overseas.

Trade in goods originating in the United States of America and Japan appears to have been stimulated by the inauguration of direct steamship services between these countries and Mombasa.

The following is a summary of the main items from the principal sources of supply, values in respect of the year 1926 being given in brackets :—

Great Britain.—Cotton Piece Goods £326,608 (£319,167), Machinery £223,999 (£206,406), Motor Vehicles and Bicycles £128,806 (£195,234), Galvanised Iron £126,115 (£119,090), Tobacco and Cigarettes £108,366 (£98,010), Provisions £101,239 (£97,353), Wines and Spirits £81,324 (£93,194), Cement £79,440 (£44,470), Wearing Apparel, etc., £62,121 (£67,637), and Tyres and Tubes £53,767 (£49,515).

India.—Jute Bags and Sacks £159,541 (£231,895), Cotton Piece Goods £125,608 (£133,123), Rice £78,458 (£73,214), Wheatmeal and Flour £58,196 (£57,929) and Tea £49,910 (£54,636).

Canada.—Motor Vehicles £119,887 (£53,676).

United States of America.—Motor Vehicles £275,178 (£301,920), and Cotton Piece Goods £76,737 (£52,923).

Holland.—Cotton Piece Goods £131,002 (£103,616), Blankets £110,673 (£107,827), and Tobacco, etc., £73,813 (£96,172).

Japan.—Cotton Piece Goods £245,783 (£241,369).

Cotton Piece Goods.—The value of trade imports of cotton piece goods of all descriptions amounted to £1,124,113, the total amount of duty collected thereon being £231,800 or 19.86 per cent. of total net duty collections. Transfers to Uganda were valued at £506,057. Imports during the year show a small increase, the average landed value per yard of imported cotton piece goods declining from 7.5d. in 1926 to 6.2d. in 1927. Blankets also show a continued decrease in value from 2s. 2.96d. to 1s. 11.25d.

Great Britain continues to be the main source of supply of the better qualities of cotton piece goods, Holland providing the bulk of imported cotton blankets, while unbleached cotton piece goods are supplied principally by Japan and the United States of America.

Vehicles.—1,585 motor cars valued at £275,010 and 1,282 motor lorries and tractors of a value of £256,655 were imported during the year, both classes showing satisfactory increases. Of these Great Britain supplied 235 motor cars and 86 motor lorries and tractors, Canada being the source of 501 motor cars and the same number of lorries and tractors. The United States of America continues to be the main source of supply although not to the same extent as in previous years.

The number of imported motor cycles decreased from 602 valued at £25,377 in 1926 to 493 valued at £20,603 in 1927. A very large share of the motor cycle trade is in the hands of British manufacturers.

Importations of bicycles showed a further large decrease, 4,852 being imported in 1927 as against 11,629 in 1926 and 23,938 in

1925. The contraction of this market is due to the diminished purchasing power of the native population and, as bicycles for native use are still on the borderline separating essentials from luxuries, the volume of trade in this article furnishes an accurate indication of the relative prosperity of the native population. Of the total number imported, 3,133 bicycles valued at £22,497 were cleared for consumption in Uganda. Great Britain continues to hold a commanding position in this trade, supplying 4,724 bicycles out of the total number of 4,852 bicycles imported.

Consequent upon the rapid development of motor transport and the extension of mechanical ploughing, etc., large increases in the quantities and values of imported fuel oil, petrol and kerosene were recorded during the year under review.

Notwithstanding local activities the trade statistics show increased importations of rice, wheat, meal and flour, ale, beer and stout, and timber, but a satisfactory indication of local progress in sugar and soap production is reflected in large decreases in importations of these commodities.

Re-Exports, Transit and Transhipment.

The entrepôt trade of Mombasa (including transit and transhipment traffic) is of increasing importance as, apart from the shipping and transport facilities available, the geographical situation in relation to neighbouring territories is favourable to the holding of stocks of all varieties of goods, either in bond or duty paid, for sale as opportunity offers in the markets of Zanzibar, Tanganyika Territory, Italian East Africa, and the Belgian Congo. The following are comparative figures for the years 1926 and 1927 :—

	1926. £	*1927.* £
Re-Exports	1,591,671	1,555,502
Transit	120,861	143,538
Transhipment	171,624	200,723

Exports.

The domestic exports of Kenya and Uganda are almost entirely agricultural. Adverse climatic and marketing conditions resulted in a fall of £1,364,372 in the value of raw cotton exported, shipments in 1927 amounting to £1,692,568 as compared with £3,056,940 in 1926 and £4,694,339 in 1925. This factor tends to obscure the position so far as development of the export trade in other domestic products is concerned, as, excluding the value of raw cotton exported, the domestic exports of Kenya and Uganda increased in value from £2,953,446 in 1926 to £3,704,648 in 1927.

A large proportion of local produce exported is shipped to Empire markets, 70.6 per cent. of the value being sent to destinations in the British Empire as compared with 75.7 per cent. in 1926. A considerable increase has taken place in shipments to Japan, 11.2 per cent. of the total domestic exports being sent to that country as compared with 2.1 per cent. in 1925 and 7.8 per cent. in 1926, this being largely due to the inauguration of direct steamship services between Japan and Mombasa.

The following is a summary of the principal commodities exported to the most important markets, relative figures in regard to 1926 being given in brackets :—

Great Britain.—Coffee £1,115,482 (£728,797), Cotton £448,769 (£1,343,156), Sisal Fibre and Tow £192,438 (£208,196), Maize £262,277 (£110,342), Cotton Seed £163,149 (£177,372), Hides and Skins £142,554 (£131,130), and Rubber £80,560 (£135,254).

India.—Cotton £848,749 (£1,258,368) and Carbonate of Soda £21,275 (£12,415).

Tanganyika Territory.—Maize Meal and Flour £33,289 (£33,068), Sugar £48,614 (£30,711).

Union of South Africa.—Coffee £54,470 (£44,892).

Japan.—Cotton £380,058 (£396,451) and Carbonate of Soda £215,972 (£65,928).

Belgium.—Sisal Fibre and Tow £173,449 (£227,794), Maize £80,123 (£72,668) and Hides and Skins £60,759 (£13,134).

Germany.—Maize £68,652 (£4,467), Sisal Fibre and Tow £34,706 (£26,090) and Hides and Skins £18,739 (£9,209).

Cotton.—The value of raw cotton exported fell from £3,056,940 in 1926 to £1,692,568 during the year under review, these figures representing 724,699 and 527,481 centals respectively, the average declared value per cental being £4 4s. 5d. in 1926 and £3 4s. 2d. in 1927. With the exception of 570 centals, the whole quantity exported originated in Uganda. The export of cotton seed amounted to 29,502 tons as compared with 35,365 tons in 1926.

Coffee.—A marked increase in the quantity and value of coffee exported was recorded in 1927, 253,319 cwt. valued at £1,310,701 being shipped as compared with 174,131 cwt. valued at £895,080 exported in the previous year or an increase of 89,188 cwt. in quantity and £415,621 in value. Of the total quantity shipped 43,514 cwt. originated in Uganda. Coffee is now shipped direct to some thirty countries, Great Britain being by far the largest market receiving in 1927 from Kenya and Uganda, coffee to the value of £1,228,050.

Maize.—Exports, originating wholly in Kenya, amounted to almost twice the quantity shipped during 1926, the quantity exported being 1,787,665 cwt. valued at £505,893 as compared with 929,178 cwt. valued at £280,596 shipped during the previous year. Great Britain was the principal market followed by Belgium, Germany, Italian East Africa, and France in the order named.

Sisal including Sisal Tow.—Also a purely Kenya export, shows an increase in the quantity exported but a decrease in value, the average declared f.o.b. value falling from £38 16s. 5d. per ton in 1926 to £29 12s. 3d. in 1927, as a result of the decline in overseas market prices. The quantity exported was 15,839 tons as compared with 14,928 tons shipped in 1926. The principal markets were Great Britain and Belgium.

Hides and Skins.—Show a satisfactory increase in exports, 77,453 cwt. valued at £262,637 being shipped in 1927 as against 59,270 cwt. valued at £207,781 exported during the previous year. Great Britain was the principal market for hides, the United States of America being the most important destination for skins.

Carbonate of Soda.—Exports of carbonate of soda obtained from natural deposits at Lake Magadi amounted to 56,675 tons valued at £263,129 as compared with 19,427 tons valued at £87,426 shipped in 1926. Of the total 46,499 tons valued at £215,972 were consigned to Japan.

Satisfactory increases are also recorded under wheat meal and flour and refined sugar consigned chiefly to the markets of neighbouring territories, whilst decreases are shown in exports of cedar wood, copra, and groundnuts.

V.—COMMUNICATIONS.

Shipping.

During 1927 the Port of Mombasa was served by seven regular lines of steamers from Europe, i.e., the Union Castle Mail Steamship Co., Ltd., the British India Steam Navigation Co., Ltd., the Messageries Maritimes, the Compagnia Italiana Transatlantica, the Clan Ellerman and Harrison Line, the Holland-East Africa Line, and the Deutsche Ost-Afrika Line. The Osaka Shosen Kaisha Line inaugurated a service with Japan, the Ellerman and Bucknell Line maintained a service with America, and calls were made by the Nippon Yusen Kaisha, and by Danish and Norwegian Lines. Several miscellaneous oil and coal steamers discharged cargoes at the port.

A fortnightly service between Bombay and Durban, calling both ways at Mombasa, has been maintained by the British India Steam Navigation Co., Ltd., and coastal services by this Line, by the African Wharfage Co., and by Messrs Cowasjee Dinshaw and Bros. steamers have been fairly regular.

The total steam tonnage (mercantile) entered in the Protectorate ports during the year amounted to 1,742,006 tons net, represented by 663 steamers. These figures show an increase of 262,960 tons and 58 steamers as compared with the figures for the previous year. The total tonnage of sailing vessels entered in the Protectorate ports during 1927 was 66,828 tons, represented by 3,299 vessels. These figures show a decrease of 230 vessels and 9,696 tons as compared with the previous year.

The figures for Mombasa were 593 steamers, of 1,703,896 tons net, against 522 steamers of 1,444,320 tons net in 1926, an increase of 71 steamers and 259,576 tons. The tonnage of sailing vessels amounted to 30,495 tons, represented by 1,405 vessels, a decrease of 4,129 tons and 132 vessels as compared with 1926.

Approximately 693,000 shipping tons of cargo (369,765 tons inward and 323,036 tons outward) were dealt with at the port of Mombasa, and 42,616 passengers passed through the port during 1927. The largest vessel to enter the port of Mombasa and berth alongside the deep-water quay at Kilindini Harbour during 1927 was the "Franconia," of 20,175 tons gross register, with 400 passengers on board who were on a world cruise.

During the year under review, ships urgently requiring to do so have been brought into and taken out of Kilindini Harbour after dark. Orders have been placed under which, during 1928, the whole of the lighting of the port (part acetylene gas and part electricity) will be completely modernized.

Harbours.

During 1927 the control of all ports and harbours on the coast of Kenya was vested in the High Commissioner for Transport, and a system was introduced whereby the management was placed under the General Manager of Railways and Harbours. A temporary Harbour Advisory Board was set up to advise the High Commissioner on the 22nd August, 1927.

Since the 1st July, 1927, the whole of the shore handling and lighterage of cargo at the Port of Mombasa has been performed by contractors under a ten year agreement. On the 1st July, also, the water-front and transit shed at Mbaraki, formerly worked by a private company, were absorbed into the Kilindini Harbour area, and the portion of the Mbaraki water-front south of the transit shed is now being developed for landing, stacking, and railing coal. On the 1st December, 1927, the contractors also undertook the work of loading and unloading railway trucks within the Kilindini Harbour area.

The year 1927 was the first complete year during which berths Nos. 1 and 2 of the new deep-water quays at Kilindini Harbour were in full use. Shipping came alongside freely, and the need for more accommodation is so apparent that there can be no doubt that when the two additional berths now under construction are completed they will be fully occupied.

Berth No. 3 of the new Kilindini Harbour extension, complete with transit shed, quay and shed electric cranes, rail tracks and roads, is expected to be ready for use before the end of 1928. Berth No. 4 should be ready before the end of 1929.

During 1927 the earnings at the Port amounted to £131,360, and the ordinary working expenditure to £68,687. Interest and redemption charges total £126,165 and depreciation is assessed at £10,023. The loss on port working, after taking all these charges into account, was therefore £73,515 during 1927.

Railways.

The Inter-Colonial Advisory Council held five meetings during 1927; three in Kenya and two in Uganda.

Earnings for the year in respect of Railway Services (as apart from Harbour Services) amounted to £2,126,043 and the railway working expenditure to £1,150,786, the surplus receipts over working expenditure being £975,257. After allowing for contributions to renewals funds, interest charges, etc., the net surplus of this excess transferred to betterment funds, etc., amounted to £401,986. Comparison with the figures for the previous years shows that the Railway earnings for 1927 are £67,333 or 3.27 per cent. in excess of the earnings for 1926, and £132,534 or 6.65 per cent. in excess of those for 1925. As against these increases in earnings, the ordinary working expenditure for the year 1927, notwithstanding an increase of 16.47 per cent. in the tonnage carried, was reduced in comparison with 1926 by 5.42 per cent. The percentage ratio of ordinary working expenditure to earnings was 54.13 per cent. in 1927, as against 59.11 per cent. in 1926 and 87.21 per cent. in 1922.

The carriage of public goods provided a revenue of £1,737,852 and the tonnage of this traffic amounted to 887,076 tons, as compared with £1,634,700 and 641,776 tons during the previous year. The revenue derived from passenger traffic also showed an increase over that for 1926, viz., in 1927, 1,065,225 passengers contributed a revenue of £266,326 as against 991,754 passengers and £256,918 in 1926.

Africans continued to use the railway in increasing numbers and greater use is being made of week-end and excursion tickets. The facilities in connection with steamer call excursions have been extended. It is not now a condition that the passenger must arrive at and depart from Mombasa by the same ship and it is hoped that this modification of the regulations governing the issue of these excursion tickets will induce more travellers to make the journey up-country.

The tonnage carried by Lake steamer services showed a decrease from 193,849 tons in 1926 to 168,094 tons in 1927. This shrinkage was an expected result of the opening of the through railway to Uganda.

The total tonnage carried by the Masindi Port—Butiaba motor service was 7,469 tons in 1927 as compared with 7,500 tons in 1926.

The supply of fuel was satisfactory throughout the year. The following figures show the consumption of coal, wood and oil during 1927 and 1926:—

	1927. *Tons.*	*1926.* *Tons.*
Coal	35,295	40,989
Wood	110,301	91,252
Oil	9,909	7,281

No further relaying of the main line with 80 lb. material between the Coast and Nairobi took place during the year. This work is to be resumed in 1928 and is expected to reach Nairobi by the middle of 1929.

Considerable progress has been made with ballasting from the coast to Makindu and contracts have been entered into for ballasting the Makindu—Nairobi section. The permanent way above Nairobi has been maintained in a reasonable condition throughout.

The work of strengthening bridges and culverts to carry heavier engines was completed by the end of the year.

Work on the new headquarter offices at Nairobi was begun early in 1927 and by the end of the year the walls had reached first floor level.

The work of building a new combined railway and road causeway and bridge between Mombasa Island and the mainland was begun in June, 1927. The estimated cost of the causeway is £77,000. With the exception of a small contract for the supply of coral the whole of the work is being carried out departmentally. The design provides for an earth causeway, protected by coral pitching for a 25 feet road and a 14 feet railway with a bridge of five spans of 54 feet each. The bridge is being founded on 12 feet diameter concrete cylinders, sunk to a solid foundation.

The total route mileage of open lines on the 31st December, 1927, was as follows:—

	Miles.
Main Line (Mombasa to Broderick Falls, via Nakuru)	628
Kisumu Branch (Nakuru to Kisumu)	131
Nyeri Branch (Nairobi to Naro Moru)	127
Busoga Branch	61
Magadi Branch	91
Port Bell—Kampala Line	6
Solai Branch	27
Kitale Branch	41
Kahe Branch	92
Total open mileage	1,204

The total track mileage, including loops and industrial sidings, amounted to 1,357 miles. The route mileage covered by Lake Services is 3,243.

On the Thika-Nyeri branch, the section from Sagana to Nyeri (32 miles) was completed and handed over for open line working on the 15th May, 1927. This hill section climbs 2,000 feet in 15 miles by the free use of 3 per cent. grades. It was built at a cost of £134,830 or approximately £4,214 per mile.

The extension of the Nyeri Branch from Nyeri to Naro Moru was begun in January, 1927, and handed over to open lines on the 1st November, 1927. The cost of this section of 16 miles worked out at £2,055 per mile.

The first section of the Uganda extension, i.e., Turbo to Broderick Falls, a distance of 30 miles, was handed over to open lines on the 1st July, 1927. The second section from Broderick Falls to Mbulamuti, completing the extension, was handed over at the beginning of 1928. The total length of the whole extension from Turbo to Mbulamuti is 184.5 miles.

Construction of the branch line to Mbali and Soroti was begun in 1927. When completed this branch will be 98.5 miles in length.

The construction of a branch line from Gilgil to Thomson's Falls was authorised in December, 1927. It is hoped to have the line completed early in 1929. The length of the branch will be 46.5 miles.

The survey of the proposed North Kavirondo Branch from Kisumu to Yala was completed early in 1927. The construction of this line, 30 miles in length, was begun in 1928.

Roads.

The public road system of the Colony and Protectorate now comprises about 2,578 miles of main road and 6,247 miles of road of less importance, most of which are mere tracks, though quite passable for wheeled vehicles except during heavy rain. The total expenditure of a capital nature on the road system during the year was £39,209, of which the sum of £15,140 was expended on the reconstruction of the Kilindini Road at the Port and the remainder on country roads. Of the total sum, £19,548 was provided from loan and £19,661 from revenue. In addition, the sum of £87,354 was expended on the maintenance and improvement of existing roads and bridges and partly on the extension of the road system.

With the exception of the streets in the more important towns and certain main country roads leading into them, the wearing surface of the public roads is the natural earth of the locality. Gradual improvement is taking place by forming and draining the more important earth roads and by special treatment of portions which become marshy in wet weather, so that most of them are passable by wheeled vehicles throughout the year—though sometimes with difficulty—except on occasional days during exceptional rain. On the minor roads little can be done except to keep the bridges and culverts repaired and to deal with washaways.

Road work in the settled areas is now largely carried out by contract, partly by professional contractors, and partly by local residents. The road-making and transport plant of the Public Works Department was added to considerably during the year. This necessitated an increase of the European personnel for the control and operation of the plant, but enabled a considerable reduction in the native labour force to be made below what would otherwise have been required.

The extension of the Branch Railway system of the Colony during the last few years rendered it possible to take steps to establish the main roads from producing areas to railway stations on their permanent alignments in lieu of the pioneer tracks of the past with certainty that funds would not be wasted on permanent works on temporary road alignments. Much road survey work was done during the year out of the sum of £25,000 provided under loan for the purpose.

Posts and Telegraphs.

The revised scheme for the amalgamation of the Postal and Telegraph Services of Kenya and Uganda has now been in operation for three years. The scheme has worked with great smoothness and the results obtained demonstrate that under reasonably favourable conditions the unification of control of services of this character in adjoining territories presents no practical difficulty and that such unification can be effected without loss of efficiency and with distinct financial benefit to the territories concerned, side by side with public convenience and the independence of each territory in regard to development or extension of services.

The financial results of the year's working were satisfactory and reflect a steady expansion of the Department's activities, particularly in Kenya. The cash revenue for the combined services amounted to £209,487, and the recurrent expenditure to £154,268. These figures represent an increase of 9.7 per cent. and 6.9 per cent. respectively over the previous year. The total capital expenditure was £12,339 as against £13,104 in 1926. The figures for Kenya separately are :—Cash revenue, £165,100; recurrent expenditure, £112,586, representing increases of 11.3 per cent. and 7.7 per cent. respectively over the preceding year. As the value of free services rendered by and to the Post Office very nearly balance, the Kenya figures show that the Department contributed a net sum of approximately £52,500 to the general revenue of the Colony; but it must not be overlooked that in this figure no account is taken of interest and depreciation on capital sunk in telegraph and telephone lines and plant (approximately £200,000), or pension commitments.

There was a noticeable increase, almost entirely confined to Kenya, in the value of money orders issued for payment abroad. Altogether £275,363 was remitted overseas, as compared with £244,761 in 1926. Of the former amount £240,595 or 87.4 per cent. was remitted to India. The amount remitted to India from Kenya totalled £175,069.

The total volume of mail matter dealt with (excluding parcels 190,000) amounted to 13,284,000 items, of which 10,891,000 were dealt with in Kenya. These figures represent an increase over the previous year of 18 per cent. in Kenya and 7.8 per cent. in Uganda. The parcel post still retains its popularity with traders as a means of importing high value light goods. The total value of goods so imported, chiefly from Great Britain, amounted in round figures to £400,000. The increase from 11 lb. to 22 lb. in the maximum weight allowed on parcels from Great Britain is appreciated by merchants and extensive use is being made of it.

Having regard to the fact that there is not a subsidized regular mail service between Great Britain and the East Coast, the English mail services were on the whole satisfactory. The number of arrivals averaged 1.27 per week and despatches 1.35, and the average time taken in transit each way was approximately 20 days. The Indian and South African services have, in addition to other sailings, the advantage of a regular fortnightly service by steamers under contract with the Indian Government.

Two English air mails were despatched and four received by the experimental air service undertaken by the North Sea Aerial and General Transport Company between Kisumu and Khartoum, the onward connection between Khartoum and Cairo being maintained by the Royal Air Force. The total time taken each way was about 11 days. Owing to accidents, the series of flights originally arranged was not completed, and unfortunately as those completed did not work to a fixed time schedule, little information was gained as to the extent to which the public would be prepared to pay special air fees if a regular air service was established. The experimental service had, however, the effect of stimulating public interest in the possibility of a regular air mail service as far as Cairo with all its advantages of speed and regularity. There is little doubt that such a service would be welcomed by the public at large, provided the cost to these territories was reasonably within their resources.

The Colony's main channel of overseas telegraph communication remained via the Eastern Telegraph Company's cables. The service was very satisfactorily maintained throughout the year, there being only one interruption of a few days on the Zanzibar-Mombasa cable. No inconvenience was caused as alternative local routes were available. There was a normal increase in the volume of overseas telegraph traffic, and it may be of interest to record that 44.4 per cent. of that traffic was with Great Britain.

The " Beam " wireless service between Great Britain and South Africa, which was opened on the 1st July, was made available to the home public for telegrams to the Colony at a rate which was slightly cheaper than the cable route, but as the " Beam " route involved transmission from Cape Town over long land lines really unsuitable for handling such traffic, and through a number of separate Administrations, heavy delays occurred. For that reason the route has not become popular, nor has it been made available in the reverse direction from the Colony.

The wireless station at Mombasa, which is mainly a ships' coast station, was efficiently maintained during the year. It dealt with 2,818 radio telegrams as compared with 2,408 in 1926. The station can, when necessary, be used for passing traffic with the Zanzibar and Dar es Salaam wireless stations. Negotiations were opened during the year with the British East African Broadcasting Company, Limited—a local Company—for the establishment of a broadcasting service from a station at Nairobi, sufficiently powerful to transmit to all parts of the Colony, and a licence dated 1st September was issued to the Company under which it is required to establish a service within nine months from that date. Associated with that licence is one for a short-wave wireless installation capable of maintaining a commercial service with a corresponding station in England which the British Post Office authorities have undertaken to provide. The enterprise is entirely at the Company's risk. The proposed rates by this service will be approximately two-thirds of those at present charged by the cable route, and if the service proves successful, the Colony will have at its disposal a valuable alternative and cheaper means of communication with Europe.

Public telephone exchanges are established at Nairobi, Mombasa, Nakuru, Eldoret, Kisumu, and Ruiru, and at each there was normal development during the year. Special provision was made for the reconstruction of the external part of the Nairobi Exchange on the underground system. The cable lay-out has been arranged to conform with town-planning schemes, and the work, when completed, will not only improve the appearance of the town by leading to the removal of heavy aerial wire routes, but additional subscribers can be connected more rapidly and economically than is at present possible. Under encouragement from the Post Office, with the approval of Government, the farming community is becoming interested in the establishment of rural telephone lines on the party line system, and a number of schemes were under consideration at the end of the year. Special rates for such lines have been approved on a basis which just makes them self-supporting, and arrangements exist under which settlers can reduce their annual subscription by co-operating towards a reduction of the capital cost by supplying free poles, transport and labour. A fairly general system of rural telephones would do much to improve amenities on farms, particularly where women and children are concerned. The main difficulty, however, is that only in a very limited number of areas is settlement sufficiently close to make the service reasonably cheap. In sparsely settled areas the length of line required makes the cost of the service rather beyond the means of the average settler no matter how economically the service may be provided.

All the principal business and administrative centres of the Colony are linked up by telegraph. Inland telegraph traffic has increased very considerably during the past few years, and as a consequence some congestion now exists on many of the main routes, particularly that between Nairobi and Mombasa. The question of affording relief on the latter route and at the same time providing for a needed additional facility which is being called for by the commercial community, by constructing a telephone trunk line between Nairobi and Mombasa, is under consideration.

The total telegraph and telephone pole mileage of the Colony is 2,17[illegible], and the wire mileage 8,237.

Post Office Savings Bank.—The results of the year's working of the Post Office Savings Bank indicate fairly considerable development. The amount standing to the credit of depositors rose from £64,721 at the close of 1926 to £78,007 at the end of 1927, representing an increase of 20.5 per cent. Deposits exceeded withdrawals by £13,286, an increase of 71.3 per cent. over the corresponding figure for the previous year. An amount of £1,608 was paid or credited to depositors in respect of interest as compared with £1,374 during the previous year.

The number of European, Asiatic, and African depositors in the Savings Bank at the end of the year was 1,523, 2,716, and 779, respectively, as compared with 1,380, 2,408, and 693 at the close of 1926. In addition there were 32 trust accounts. During the year, 1,039 accounts were opened and 487 closed, as compared with 889 and 396, respectively, during the previous year.

Efforts have been made to popularise the Savings Bank among Africans, but so far without any real results so far as the great mass of the African population is concerned. It is almost inevitable that this should be so in view of the Africans' present state of development. A knowledge of the Bank and its advantages is, however, steadily growing among Africans of the houseboy, artisan, and clerical classes.

VI.—JUSTICE, POLICE AND PRISONS.

Justice.

The total number of civil cases filed in the Supreme Court during 1927 was 645, an increase of 58 over the figure for 1926. Three hundred and seventy-four of these cases were filed in Nairobi.

The number of Probate and Administration cases filed in 1927 was 175, as compared with 211 in 1926; of Insolvency cases 41, as compared with 48 in 1926; of Trust Causes 5, as compared with 1 in 1926. There were 40 civil appeals from Subordinate Courts, 156 original criminal cases committed for trial to the Supreme Court, 46 criminal appeals from Subordinate Courts, 884 confirmation cases, and 152 criminal revision cases, giving a total of 2,144 cases filed in the Supreme Court in 1927, as compared with 1,921 in 1926.

Resident Magistrates' Courts dealt with 13,330 cases, as compared with 11,522 in 1926. Of these, 5,303 were civil cases and 8,027 criminal cases.

The total number of civil cases tried in all Courts in Kenya was 10,898, an increase of 2,049 over the figure for 1926.

A total of 30,367 persons were brought before the criminal courts during 1927. Of these, 1,386 were Europeans, 1,920 Asiatics, and 27,061 Africans; 25,542 persons were convicted, including 1,037 Europeans, 1,393 Asiatics, and 23,112 Africans. The number of convictions is 6,547 greater than the corresponding figure for 1926. This very considerable total increase is not, however, caused by a large increase in serious crime. Convictions for petty offences under Revenue, Municipal, Road, and other laws relating to the social economy of the territory, account for an increase of 5,578 over the figures for such offences in 1926, and convictions under laws relating to the employment of natives (i.e., the Employment of Natives and the Resident Native Labourers Ordinances) account for an increase of 502 over the corresponding figures for 1928. There is an increase of 302 convictions for offences against property other than malicious injury to property and theft of stock and produce. There was an increase of 23 in the number of convictions for malicious injury to property, a decrease of 11 in the cases of theft of stock and produce, and the number of persons convicted of offences against the person fell from 972 in 1926 to 938 in 1927.

A new Civil Procedure Ordinance came into force on the 1st August, 1927. The new procedure seems to work well and smoothly and enables plaintiffs in undefended actions to obtain speedy relief with a minimum of expense and also saves defendants in undefended cases from being mulcted in excessive costs. The new Ordinance and Rules bring the law of Civil Procedure more in line with English law and are a decided improvement on the old Indian Code.

The new Bankruptcy Ordinance, which was modelled on the English Bankruptcy Act of 1914, came into force on 1st March, 1927.

Police.

The duties of the Kenya Police, a force comprising European, Asiatic, and African personnel, in the prevention and detection of crime, are confined in general to the settled and non-native areas of the Colony. Units of Police are also stationed in Native Reserves, where the administration of justice is largely assisted by the Native Authorities.

Housebreaking and theft figure prominently in the crime statistics of Kenya. Closer settlement and the corresponding increase in European dwellings and buildings widen the field and provide opportunities for the commission of offences against property.

By the inauguration of systems of surveillance and patrolling, serious crime of the predatory class has been much reduced in volume.

The Criminal Investigation Department, inaugurated in 1926, continues to make progress. Its scope was extended by the assignment to it of the work of forming a central registry for firearms and ammunition.

Prisons.

The daily average number of persons in custody, including prisons and detention camps, during 1927, has been nearly 18 per cent. higher than in 1926.

As regards the Prisons Staff, improvement has been effected by the employment of European Chief Warders and, more recently, by the appointment of European Technical Instructors to train African convicts as artisans.

The technical training now being afforded to an increasing number of convicts enables the Prison Authorities to secure well-paid employment for them on termination of sentence, thus reducing the probability of recidivism.

The general health of prisoners during the year has been slightly better than in the preceding year.

VII.—PUBLIC WORKS.

The expenditure on works and services controlled by the Public Works Department during 1927 amounted to £656,007. Of this sum, £296,602 were expended on works under execution out of Loan Funds.

The principal new works either completed or in progress during the year fall under three heads, namely :—

(1) Water Works and Drainage.
(2) Roads.
(3) Buildings.

Under the first of these heads Kisumu Water Works were almost completed at the end of the year at a cost of £24,004; Eldoret Water Works were in progress, the expenditure during the year being £21,534, out of an estimated total cost of £30,000, while extensive replacements and additions to Nakuru Water Works were nearly finished by the end of the year at a cost of £8,773. Schemes were prepared for six other township water supplies, and three important drainage products were investigated in detail.

Under the head of Buildings, five works of magnitude were under construction, namely: the Government Houses at Nairobi and Mombasa, Nairobi School, Nakuru School, and Eldoret School, which were in progress during the latter part of the year. A considerable programme of buildings of lesser magnitude, consisting of hospitals, offices, police stations, bungalows, housing for African employees, etc., at various localities were under execution.

As regards the maintenance of existing public works, three town water supplies were administered and yielded a gross revenue of £31,270. The public road system, consisting of over 8,000 miles of road and tracks, was maintained and improved at a cost of £87,354. Public buildings were maintained at a cost of £24,722.

During the last half of the year a service for the purpose of boring for water on farms and in badly watered parts of the Colony was inaugurated on lines which had been found successful in South Africa. The successful results obtained before the close of the year justified the belief that this service would be of material advantage in the development of the Colony.

Towards the end of the year plant for the seasoning of local timber, comprising six kilns having a capacity of 600 tons per annum, was installed near the Public Works Joinery Workshops in Nairobi. It is hoped that by this means the timber of the Colony will be rendered suitable for joinery and the necessity for importing timber for this purpose will be obviated.

Sixty-seven permits for the diversion and use of public water for various purposes were issued by the Public Works Department during the year. Of these 36 were for the development of power but were individually of comparatively small importance, comprising in the aggregate the diversion of 309 cubic feet of water per second for the generation of 354 horse power. Preliminary investigations were made by a local company with a view to the utilisation of one of the principal waterfalls of the Colony for the development of electrical energy.

VIII.—PUBLIC HEALTH.

The most notable event which occurred in the medical history of 1927 is in connection with research, and concerns not only this country but England and elsewhere.

After the visit to this country of Dr. J. B. Orr, of the Rowett Research Institute, in 1926, in connection with the proposed pasture investigation, the Sub-Committee of the Civil Research Committee responsible for the original proposal decided to extend the scope of the investigation to problems of human as well as animal nutrition. With funds provided by the Empire Marketing Board, two special research officers have been employed in the country, not as independent investigators, but working in closest collaboration with the local people. The experiment is proving a success, not only from the value of the information which is being collected, but from the fact that it has been proved that research can be conducted by special investigators working with men on the spot.

The year 1927 saw the completion of the period of digestion and absorption which arose from the appointment of a large number of new officers during 1926.

Two new centres, namely Kitui and Teita, were opened in the Native Reserves.

A Medical Officer of Health has been appointed to Nakuru on account of the considerable development which is taking place in the township, and also because of the urgent necessity of instituting sanitary measures at this centre of the grain trade. Combined with duties at Nakuru the Medical Officer of Health has been responsible for both Eldoret and Kitale.

The first appointment of a Medical Officer of Health to a Native Reserve took place in the latter half of the year. The experiment has proved a complete success.

Work in Native Reserves has progressed generally. Local Native Councils have taken an increasing interest in health matters. Large sums of money are being voted by the Councils for medical and other objects.

On the coast useful measures are being taken against hookworm infestation. The willing co-operation of the people themselves holds out great promise of definite and important results, which will be fraught with economic potentialities.

Throughout the Reserves generally work is being organised so that, combined with the treatment of individuals, information about diseases and instruction in simple hygiene is imparted, while at the same time information bearing on the pathological condition of the population is being collected.

The country has been free from epidemics of serious disease. Plague requires watching, but no outbreaks of any magnitude occurred during 1927.

Smallpox was introduced into Nairobi from India and uneasiness was caused from the fact that cases came under notice from a considerable area, extending as far out as the Fort Hall Reserve. Original cases had remained concealed. Probably owing to the wholesale vaccination campaign which was conducted two years ago the outbreak did not assume any magnitude.

The epidemic of malaria which was experienced in 1926 did not recur, possibly owing to the fact that the rains generally were on the short side. The problem is to be tackled energetically in

Nairobi; the Government has made available a sum of £20,000 to be expended in Nairobi during 1928. The Municipality and Railway Authorities have indicated their willingness to share in the expense.

The International Sleeping Sickness Commission, part of whose labours were conducted in Kenya, has dissolved and its report may be expected before long.

It was possible during the year to conduct a comprehensive population survey of the Lake shore. Over 200,000 individuals were examined and only 380 cases of trypanosomiasis were detected, these mostly being found in three well defined areas. In one small location, consisting of a population of 800 odd, over 100 cases were found. Measures to deal with the most thickly infested areas are being undertaken. The small area referred to as being especially heavily infected is to be evacuated. Other steps will include clearing of the Lake shore, and the construction of watering places. All cases which were found were adequately treated in order to render them non-effective.

Progress in respect of the scheme for the provision out of loan funds of hospitals in various parts of the country has not been as rapid as was hoped. A small hospital at Kitui is almost completed, while work has been commenced on a hospital and other medical buildings at Kakamega Station.

IX.—EDUCATION.

Government schools have been established for the provision of education of European, Indian, Arab, and African children. Private and missionary enterprise supplements State institutions; the latter is largely subsidised from Government funds. There are four Central Advisory Committees which deal with the education of each race, and there are four School Area Committees in connection with European education, four for Indian education, and twelve for African education.

The Administration was further strengthened during the year by the addition of another Inspector of Schools. The work of these officers has been concerned mainly with Arab and African education, but they have also been used as occasion requires in respect of European and Indian schools.

European Education.—There are Government schools at Mombasa, Nairobi, Nakuru, Thika, Nanyuki, Eldoret, and Kitale. Including Farm Schools, there are twenty-five schools for Europeans in different parts of Kenya, twelve being Government schools and two receiving a grant in aid. The erection of three elementary Government schools in different parts of Nairobi was sanctioned towards the end of the year and progress was made with the construction of the schools at Nairobi and Nakuru.

Certain private schools for boys and girls maintain a high standard of attendance and attainment. There are seven rural schools on farms in Uasin Gishu, six of them supported by State funds, while one is State-aided.

There were 1,375 European children attending school at all European schools in 1927. Of these, 644 were at Government schools. The cost of European education, exclusive of administration expenses and the cost of buildings, totalled £36,092.

Indian Education.—The Government assumed responsibility for three Indian schools which had previously existed on a grant-in-aid basis at Machakos, Thika, and Fort Hall, and several other Indian schools were added to the grant-in-aid list during 1927. A number of new private schools were opened during the year. Altogether there were 32 Indian schools in existence at the end of the year, of which nine were Government schools and 12 aided schools.

There were 2,522 Indian children attending school during the year. The average attendance at Government schools was 1,371. The cost of Indian education, exclusive of administration expenses and the cost of buildings, totalled £17,318.

Arab Education.—Arab schools are established at Mombasa, Malindi, Ganda, and Mambrui. The attendance at the two first-named schools was 414 as against an attendance of 393 in 1926. An improvement is recorded in the school work at these schools and the Arab boys are paying more attention to physical culture.

African Education.—Government schools exist at Kabete, Waa, Nandi, Kericho, Machakos, Narok, and Kajiado, and there is a Jeanes School at Kabete for the training of supervisors of African village schools. Schools are maintained by all the principal missionary societies. There are also police schools in many important centres, and large numbers of village schools situated throughout the Native Reserves.

The average roll in Government schools during 1927 totalled 761. Attendance at the Native Industrial Training Depot at Kabete rose from 140 in 1926 to 260 in 1927. There are more than fifteen hundred African schools on the register and the total number of African children attending school is estimated at 82,793, but the figures cannot be determined with precision as it is difficult to get into touch with all existing private schools. Even heads of Missions find it difficult to obtain reliable statistics of some of their more remote village schools and the attendance at those schools is often of a fluctuating and undependable character.

Considerable progress was made in the erection of buildings at the Native Industrial Training Depot and extensions were made at the Jeanes School.

Several groups of boys from the Training Depot were employed under European Leading Artisans on works in different parts of the Colony, and other technical schools, such as Waa, also assisted in public works of importance.

The Jeanes School, at Kabete, continues to do valuable work. A vacation course for teachers was instituted in 1927 with successful results. A reunion of teachers was also held and gave them an opportunity of discussing difficulties met with in their labours in the field.

The cost of Arab and African education, including grants to missionary societies, was £52,429 in 1927.

X.—LANDS AND SURVEY.

The total area of land alienated as at 31st December, 1927, was 6,720,640 acres, of which 516,175 acres are freehold and 6,204,465 acres are leasehold. This land is held under the following titles :—

(*a*) Freehold.

(*b*) Leasehold under the Crown Lands Ordinance, 1902, for a term of 99 years.

(*c*) Leasehold under the Crown Lands Ordinance, 1915, (Chapter 140, Revised Laws of Kenya) for a term of 999 years.

(*d*) Leasehold under the Discharged Soldiers Settlement Ordinance, 1919, which is subsidiary to the Crown Lands Ordinance, 1915.

(*e*) Freehold under the Land Titles Ordinance, 1908, applicable only in the Kenya Protectorate.

The earliest Government titles issued in the country were under the Land Regulations, 1897, but practically all these have been surrendered in exchange for new titles under the Crown Lands Ordinance, 1902, or the Crown Lands Ordinance, 1915.

The Crown Lands Ordinance, 1902, under which a considerable area of land is held, provided for leasehold grants for a term not exceeding 99 years at rentals varying from a minimum of 6 cents to a maximum of 24 cents per acre per annum. The rent is non-revisable for the whole period of the lease, except in the case of titles issued under Rules of 1911, 1912, and 1914, respectively, where the rent is revisable in the 33rd and 66th years. No specific development conditions were laid down except the proviso that the lessee would use and develop the natural resources of the land with all reasonable speed having regard to all the circumstances of the case.

Provision was made under the Crown Lands Ordinance, 1902, for direct freehold grants for areas not exceeding 1,000 acres. Many farms were granted under this provision. The policy of Government, however, gradually tended towards leasehold grants and since 1912 no freehold grants have been made.

(2) The Crown Lands Ordinance, 1915 (Chapter 140 Revised Laws of Kenya), repealed all previous land laws except with reference to titles already granted or promised thereunder.

Ordinary farm leases issued under the Crown Lands Ordinance, 1915, contained the following main provisions :—

(*a*) The term of lease is for 999 years from the date of the grant.

(*b*) The rent is at the rate of 20 cents. of a shilling (2½d.) per acre per annum for the first period, revisable in 1945 and every thirtieth year thereafter, the rate of such revision being :

For the second period, 1 per cent. of the unimproved value of the land.

For the third period, 2 per cent. of the unimproved value of the land.

For the fourth period and each subsequent period, 3 per cent. of the unimproved value of the land.

(*c*) Development conditions are imposed to the extent shown in the following schedule :

Area of Farm.	*Minimum Value of Improvements to be effected within the first three years of the Lease.*	*Nature of Improvements.*
300 acres or under	20*s*. per acre subject to a minimum of 600*s*.	Permanent.
Over 300 acres ...	6,000*s*., and in addition 4*s*. per acre in respect of every acre over 300 acres.	Permanent and permanent or non-permanent.

Additional improvements to the extent of 50 per cent. of the above figures under each heading are to be effected within a further period of two years, and the total development must be maintained for the remainder of the terms of the lease.

(3) Under the provisions of the Ex-Soldier Settlement Scheme in 1919 about 1,000 farms were allotted; the grants are governed by the Discharged Soldier Settlement Scheme Ordinance, 1921—now Chapter 141 of the Revised Edition of the Laws of Kenya—which is subsidiary to the Crown Lands Ordinance, 1915. A small portion of the land available was devoted to free grants divided into areas not exceeding 300 acres each. The major portion of the available land was divided into farms ranging from 300 to 5,000 acres each, the leases of which were sold to allottees at from 3s. to 50s. per acre, according to the class and situation of the land.

Provision was made for the purchase price to be spread over 10 years free of interest or over 30 years with interest at 5 per cent. per annum on the outstanding balance. When, however, the initial stage of development laid down by the Ordinance for the first three years of holding had been completed, the allottee could apply for complete remission of the purchase price. In the majority of cases allottees have taken advantage of this provision. The grants in both cases are for 999 years and are subject to the usual provisions of the Crown Lands Ordinance, 1915, as regards rent and development.

(4) Privately owned land in the Kenya Protectorate (as distinct from the Colony) is chiefly in the hands of Arabs, Indians, and the Coast natives. The Land Titles Ordinance, 1908, which has been applied to the greater part of the area, provides for the hearing of claims and the issue of Certificates of Titles by the Recorder of Titles, whose headquarters are at Mombasa.

(5) Township plots alienated by Government between 1902 and 1915 are held under the Crown Lands Ordinance, 1902. In some townships (notably Nairobi) a number of freehold grants were made, but for the most part plots are held under leasehold conditions. Alienations of township plots since 1915 have been under the Crown Lands Ordinance, 1915. The usual term of leases is 99 years, the lessee covenanting to build within a given period, but many of the earlier leases were for a period of 25 years, with a proviso for extension to 50 years or 99 years respectively, according to the type of building erected.

Land Transfer and Sub-Division.—Land already alienated under any of the beforementioned forms of tenure may be acquired by private purchase subject to certain provisos. Consent to transfer any whole property held under ordinary leasehold conditions is not now required, but the transfer of sub-divisions can be effected only subject to the approval of the Government. Freehold property may be sub-divided and transferred without consent, subject to compliance with township rules, if within a township, or the Public Health (Building) Ordinance if outside a township. In the case of a transaction affecting land between parties of different races the Governor in Council has the power of veto.

Registration of Titles.—Crown titles are now issued under the Registration of Titles Ordinance, 1919, which is an adaptation of the Torrens system of land tenure. Property thus held may be dealt with by the use of prescribed forms on the payment of the requisite registration fees and the stamp duty. Titles issued prior to the enactment of this Ordinance are registered under the Crown Lands Ordinance, 1915, and other registration regulations of earlier date. Upon all transactions affecting the transfer of immovable property stamp duty to the extent of approximately 2 per cent. *ad valorem* is payable.

The year 1927 was comparatively uneventful, as important impending changes in land policy and administration resulted in land alienation in general being held in abeyance; no grants of large or important areas were made during the year. No auctions of farms took place but sales of township plots were held in Kyambu, Machakos, Gilgil, Lumbwa, and Eldoret.

The revenue derived from sales and rents of land, survey fees, sale of maps, etc., amounted to £101,780, an increase of £148 on the figures for the previous year.

The number of documents registered during the year amounted to 5,998, as against 5,542 for 1926. An important change in the method of stamping documents came into force in July by the introduction of the Over-Embossing System. It is anticipated that the scheme will be a considerable financial success by the prevention of fraud with regard to the use of revenue stamps a second time. The revenue derived from registration fees, stamp duty and conveyancing fees amounted to £55,703, showing a decrease of £3,853 as compared with the revenue for 1926.

The Nairobi Area Town Planning Authority under the Chairmanship of the Commissioner of Lands submitted a reconnaissance report in the early part of the year. Detailed work required for the production of a final scheme was commenced in December and steps were taken to secure the continuance of the work in 1928 through the Nairobi Municipal Staff Organisation.

Gradual but definite progress was made during the year in carrying out the Mombasa Town Planning Schemes and Land Acquisition in connection therewith.

During the latter part of the year under review the Kenya Advisory Committee (a local body formed to work in conjunction with the East African Trade and Information Office in London) began the formulation of a Closer Settlement Scheme with a view to increasing the settlement upon the land of local and overseas applicants.

Survey.

During the year 1927 a Survey Branch of the Land Department, under the direction of Land Surveys, was responsible for the control of surveys in the Colony, and the administration of the Land Surveyors Ordinance, 1923. Branch offices under District Surveyors were maintained at Mombasa, Nakuru, Eldoret, and Nyeri.

The activities of the Department were mainly confined to the preparation of schemes for the development of the growing townships of the Colony and to the execution of these schemes on the ground. No trigonometrical or topographical work was done owing to lack of staff and no extensive survey of unalienated Crown land was undertaken.

There were, in addition to the official surveyors of the Department, seven firms of licensed surveyors practising in the Colony, for the control of whose work the Department was responsible. These surveyors were engaged on the sub-division of private estates and in some cases on Government work in connection with the town planning of Mombasa Island.

All surveys sent in, whether by official or private surveyors, were examined by a staff of computers in the office of the Director of Land Surveys.

The existing topographical maps cover the greater portion of the Colony. Those maps are in general fairly accurate but in many cases they are out of date and require revision, enlargement, and extension.

XI.—LABOUR.

In the supply and stability of native labour, in the conditions of its employment, and in the relations between employer and employed the year under review has shown a steady and consistent advance.

The flow of labourers has been continuous and adequate, and although, as must inevitably be the case, there are employers who have not been able to get all the labour that they want, it can be said of the country as a whole that there has been no general shortage during 1927.

It is probable that the easier situation has been assisted by development of the use of labour-saving devices, especially in agriculture.

Where a short time ago land was laboriously hoed, now tractor and cultivator rapidly plough the fields and sweep the weeds away, saving time, money, and labour units as they go, and giving the more intelligent and advanced of the labourers an opportunity of earning improved wages by learning to handle the machinery.

There have been no serious cases of strike or discontent. This is partly due to both the employer and the labourer becoming used to their mutual relationship and partly to the progressively liberal attitude of most employers towards the conditions of employment, an attitude which Government has done much to foster. The personal relationship between employer and labourer is as a rule excellent and the defaults which do occur are chiefly due to incapacity or misfortune, and not as a rule to deliberate dishonesty or bad faith. Continuous progress is being made to improve the material conditions under which labourers live and work, especially by the larger employers. On most estates a better scale of rations is issued; permanent housing is not only contemplated but is being erected; anti-malarial and anti-plague measures are maintained; improvement is manifest in conservancy and sanitation; and better arrangements are made for dealing with the sick.

Better conditions and greater aptitude on the labourer's part for performing his work have led in many instances to increased individual output, and as this is mostly in those kinds of work which are paid for at piece rates everybody concerned benefits.

Squatter labour which is the mainstay of the general farmer is not advancing in efficiency as rapidly as estate labour. Its conditions resemble very closely those of the Reserves from which it comes, and it is of a more conservative type than that which seeks contract employment, and as it is not subject to the inherent risks attending the congregation of labourers in lines or compounds, the measures necessary to avoid these risks are not required.

On the whole the labour conditions of the Colony may be considered satisfactory, and there is no reason to suppose that they will not continue to be so for the immediate future.

XII.—LEGISLATION.

Twenty-nine ordinances were passed during the year, of which the following are the more important :—

Bills of Exchange.—Ordinance 7 represents the English Bills of Exchange Act, 1882, as amended by the Bills of Exchange (Crossed Cheques) Act, 1906, and the Bills of Exchange (Time for Noting) Act, 1917, with such minor adaptations as are necessary to suit local conditions.

Customs Tariff.—Ordinance 9 prescribes the provisions which will apply in regard to the levy and collection of import duty as between the Kenya Government and the Government of any territory with which an agreement has been entered into under section 263 of the Customs Management Ordinance, 1926, whereby the Government of the territory in which duty has been collected will make a payment in respect of that duty to the Government of the territory to which the goods are subsequently removed. The object of an agreement under that section is to avoid the payment of double import duty on goods passing between the territories concerned.

The Ordinance provides that where the tariff of import duties is the same in each territory, goods upon which duty has been collected in the other territory may pass in Kenya without payment of any additional duty. Provision is made, however, for cases in which the import duty upon goods removed into Kenya may be higher than the duty originally paid in the territory from which they were removed. In such a case payment of a part of the import duty is required from the importer. Provision is also made for the cases in which goods are removed from Kenya to another territory in which the import duty may be lower than the duty originally paid in Kenya. In this case a refund of a part of the import duty paid is allowed to the original importer. This refund is necessarily limited to circumstances in which the amount of duty paid can be accurately ascertained and is confined to cases where the removal is effective within a limited time.

European Officers' Pensions.—Ordinance 11 regulates the pensions, gratuities, and other allowances to be granted in respect of the service of European officers in Kenya.

King's African Rifles Reserve of Officers.—Ordinance 12 provides for the establishment of a Reserve of Officers in connection with the King's African Rifles. The object of the Ordinance is that in the event of an emergency arising the battalions of the King's African Rifles may be brought up to strength without delay and in order to provide for the replacement of casualties.

Stamps.—Ordinance 13 amends the Stamp Ordinance so as to co-ordinate Kenya legislation with the law in force in Uganda and Tanganyika as completely as local conditions permit, the rates of duty in Kenya being on the whole lower than those of the territories mentioned.

Railways.—Ordinance 15 provides for the regulation, control and management of railways, ports, harbours, and steamer services in Kenya and for matters incidental thereto. The Ordinance in the main reproduces the East Africa Railways Ordinance. Certain alterations and modifications necessitated by the creation of the office of High Commissioner for Transport have been made.

Ancient Monuments Preservation.—Ordinance 17 provides for the preservation of ancient monuments and objects of archaeological, historical, and artistic interest.

Asiatic Officers' Widows' and Orphans' Pensions.—Ordinance 20 makes provision for granting pensions to widows and children of deceased Asiatic public officers.

Mention may be made of the following ordinances and the Rules thereunder brought into operation during the year :—

> The Civil Procedure Ordinance, 1924, is based on Indian Act V of 1908, but the Rules under the Ordinance are so framed as to introduce, as far as possible, English practice. Both the Ordinance and the Rules came into operation on the 1st August, 1927.
>
> The Bankruptcy Ordinance, 1925, and the Rules thereunder, both of which follow the English law on the subject, came into force on the 1st March, 1927.

A Bill to provide for the organisation of the European inhabitants of the Colony of Kenya for the defence thereof was passed in the Legislative Council on the 14th May, 1927. Proposals for the inauguration of a Defence Force in Kenya were, after discussion at public meetings held throughout the Colony, first placed before the Legislative Council in August, 1921. Owing to the wide powers contained in the Bill it was not then proceeded with. In January, 1923, the Defence Force Bill was again before Council and passed its second Reading without a division in November of that year. Certain amendments to the Bill were suggested by the Imperial Defence Committee and were considered by a Select Committee of Legislative Council. A remodelled draft, based in principle on the Defence Force Bill as passed in 1923, which provided for the compulsory enrolment of male British subjects between the ages of 18 and 50 years, and containing the modifications proposed by the Imperial Defence Committee, was published on the 16th March. Some of the proposals contained in the measure, particularly those regarding compulsory enrolment, met with criticism from a section of the European community, but this criticism received no support in the Council, European Elected Members voting unanimously in favour of the Bill. The Bill ultimately became law on the 2nd July, 1928. Referring to the Defence Force Ordinance in his speech to the Legislative Council on the 30th August, 1927, the Governor said :—

> " I hope that in all parts of the Colony people will now combine to make that measure a success. It will prove invaluable for the morale of such a Colony as this and for the training of generations to come, and I can assure all that it will be so administered as to inflict no loss of freedom or dignity or time on those who have already been trained to arms."

PREFATORY NOTE.

GEOGRAPHY.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian Line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East Longitude to 41° East. The land area is 219,731 square miles and the water area 5,229 square miles, making a total area of 224,960 square miles. The water area includes the larger portion of Lake Rudolf and the eastern waters of the Victoria Nyanza, including the Kavirondo Gulf.

The official time used is the zone time three hours fast on Greenwich.

The physiography of Kenya may be broadly conceived as consisting of :—

(1) A low-lying region, less than 3,000 feet in height and comprising about three-fifths of the total area of the Colony. This region extends from the sea to approximately the 38th degree of East Longitude. Apart from the Coast strip, which is essentially tropical, it is poorly watered and mostly covered with thorn scrub.

(2) A plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet and extending in a westerly direction for about 200 miles to the 35th degree of East Longitude. It continues in the south across the boundary of Tanganyika Territory and in the north to about the 2nd degree of North Latitude. This plateau is characterised by extensive open plains such as those of the Athi River and the Uasin Gishu Plateau.

(3) The great Rift Valley formed by the subsidence of a portion of the elevated plateau and containing Lake Rudolf and numerous smaller lakes, some of fresh water and others impregnated with soda, and many extinct volcanoes. It extends in a direction generally north and south, the eastern wall formed by the Laikipia Escarpment, Aberdare Range, and Kikuyu Escarpment and the western wall by the Mau Escarpment which is known as the Elgeyo Escarpment in the north.

(4) The district near the Victoria Nyanza, the high plateau making a somewhat rapid descent to the shores of the lake where, at an altitude of 3,726 feet above sea-level, a tropical climate is again found. The floor of the Nyanza basin is normally fairly level, but it is intersected by numerous broad and shallow valleys.

From the Mau Escarpment northwards the Nzoia, Yala, Kuja, and Amala Rivers flow into the Victoria Nyanza. Northwards the River Turkwel from Mount Elgon and the Kerio from the Elgeyo Escarpment flow into or towards Lake Rudolf. The southern and eastern slopes of Mount Kenya and the eastern side of the Aberdare Range give rise to the Tana River, which enters the Indian Ocean near Lamu. From the Aberdares also flows the Athi River which, with its principal tributary, the Tsavo, from Kilimanjaro, enters the Ocean as the Sabaki River near Malindi. The Northern Uaso Nyiro traverses Laikipia and flows in an easterly direction north of Mount Kenya to the Lorian Swamp. The Southern Uaso Nyiro from the Mau Escarpment passes southward along the bed of the Rift Valley into Lake Natron in Tanganyika Territory.

Mount Kenya, after which the Colony is named, is 17,040 feet in height and is capped by perpetual snow and ice. Mount Elgon, also an extinct volcano, is 14,140 feet in height and is slightly below the level of perpetual snow. The Aberdare Range contains Settima (13,000 feet) and Mount Kinangop (12,816 feet). The Mau Escarpment attains a height of over 10,000 feet.

The slopes of Kenya and Elgon and of the mountain ranges on either side of the Rift Valley are clothed in forests. The less settled areas of the Colony abound in game and many of the upper waters of mountain streams have been stocked with trout.

There are no marked seasonal changes such as winter and summer. At high altitudes the diurnal variation of temperature is high, being as much as 30° F. in some localities, but the mean temperature varies little from month to month.

The range of temperature between different parts of Kenya is very wide. At Lamu on the coast the mean shade temperature is 80° F. At Mombasa it is 77° F. In Kisumu, on the Victoria Nyanza, it is 72.5° F. In the Rift Valley and highland areas the mean temperature is normally between 58° F. and 65° F.

The rainfall is generally well distributed. Precipitation varies considerably with the physical configuration of the Colony. The average known annual rainfall, taken over a number of years, ranges from 19 inches at Athi River, on the plains some 20 miles south-east of Nairobi, to 86 inches at Songhor in the Nandi Hills east of the Victoria Nyanza. The low-lying districts on the Northern Frontier are dry. The average rainfall occurring in the principal agricultural and pastoral districts is given as approximately 35 to 40 inches, but it is higher west of the Mau Escarpment. The heaviest rainfall is normally experienced from March to June and October to December. Hail is of comparatively rare occurrence and is confined to restricted belts. Frost does not occur below 8,000 feet except in some damp hollows.

HISTORY.

The history of the territory now known as Kenya may be divided into four sections. The first deals exclusively with the Coast; the second with the exploration of the hinterland; the third with the partition of Africa among European Powers and the administration of the Imperial British East Africa Company; and the fourth with the administration of the country under the Imperial Government.

(1) It seems probable that Arabs and Persians traded with the East African Coast from the remotest antiquity. The "Periplus of the Erithrean Sea," compiled towards the end of the first century, A.D., gives the first account of Zanzibar and the coast of "Azania." In 1331, Ibn Batuta, the Arab explorer, visited Mombasa and found Arabs in undisputed possession of the coast lands. In 1498, Vasco da Gama, with the first Portuguese expedition to round the Cape of Good Hope, sailed along the East African coast. The Coast towns were all under Arab rule and are described as prosperous trading cities. Mombasa, reached on the 7th April, 1498, is referred to as a "great city of trade, with many ships." Vasco da Gama's stay in Mombasa was cut short by an incident which led him, probably without cause, to suspect treachery and he sailed north to Malindi.

Of Malindi he writes : "The city was a great one, of noble buildings, and surrounded by walls, and, placed immediately on the shore, it made an imposing appearance." Cordial relations were established and maintained between the inhabitants of Malindi and the Portuguese, who were able to refit their ships for the voyage to India.

On Vasco da Gama's return to Portugal, a fleet under Cabral was sent to annex India. Cabral looted Mombasa in 1500. In 1505, Francisco Almeyda attacked and destroyed the town and in 1508 Mombasa was formally annexed to Portugal. Twenty years later, as a result of trouble with the inhabitants, the Portuguese under Don Zuna da Cunha captured the city after a siege of four months. In 1586, the city having been rebuilt, a Turkish fleet under Ali Bey visited Mombasa, which placed itself under his protection. The Portuguese retaliated by again burning the town. It was rebuilt only to be burned again by an African tribe known as the Zimba. The Zimba were expelled by the Portuguese who then, in 1594, built Fort Jesus.

In 1630, the inhabitants of Mombasa attacked the fort. The Portuguese capitulated and were murdered. An expedition from India landed and recaptured the fort after a siege of three months. The fort was rebuilt by Xerxas de Cabreira in 1635.

About 1660 the Mazrui, who were the leading Arab clan on the East Coast, entered into an alliance with the Imam of Oman on the Persian Gulf. After a long struggle the Arabs expelled the Portuguese from Mombasa in 1698. Expeditions organised from Lisbon to recapture Mombasa during the following decade were unavailing. In 1728, the Portuguese were again in temporary possession, but in November, 1729, they were finally driven from Mombasa, which came once more under the suzerainty of the Imam of Oman. A Portuguese force sent from India to recapture the town was lost at sea.

Fifteen years later, Mombasa, under a Mazrui named Ali bin Osman, declared itself independent of Muscat. In 1753, the Mombasa Arabs attempted to capture Zanzibar. The attempt failed but Pemba remained under the influence of Mombasa until 1822, when the Mazrui were completely defeated by the Oman Governor of Zanzibar. In the same year, Seyyid Said, who had been declared Imam in 1806, seized Pate and Pemba and threatened Mombasa.

British intervention on the East Coast started in December, 1823, when H.M.S. *Barracouta*, commanded by Captain Vidal, arrived in Mombasa during the course of a survey expedition to the East African coast. The inhabitants "begged Captain Vidal to authorize them to hoist the English flag and to place the town and territory in the hands of His Britannic Majesty." This request was referred to Captain Owen of H.M.S. *Leven*, who informed them "that provided they would assent to the abolition of the slave trade he would transmit their proposal to his Government for their decision, and that he should have no objection to hold the place in the meantime."

Lieutenant Reitz, third Lieutenant of the *Leven*, was appointed Commandant and left in charge of the new Protectorate on the 8th February, 1824. He died of fever after a visit to the Pangani River on the 29th May, 1824, in his twenty-second year. The Protectorate over Mombasa was not confirmed by the British Government. It appears to have lasted about two years, but there is no record of any formal termination.

In 1829, Seyyid Said attacked Mombasa with the consent of the Indian Government. He placed a garrison of 300 Baluchis in the fort but, on his departure to quell a rebellion in Muscat, these were starved into submission by the Mazrui. In 1832, Seyyid Said transferred his Court from Oman to Zanzibar and, with the subjugation of the Mazrui in 1837 and of the Islands of Siu and Patta in 1843, a period of great prosperity ensued along the East African Coast.

Seyyid Said died in 1856. By his will he left the lordship of Oman to his eldest surviving son, Seyyid Thwaini. Zanzibar he left to his next son Seyyid Majid. A dispute arose and the rivals agreed to submit the question of succession to the arbitration of Lord Canning, then Governor-General of India. Lord Canning awarded Oman to Seyyid Thwaini and Zanzibar and the mainland dominions to Seyyid Majid. Seyyid Majid died in 1870. He was succeeded by his brother Seyyid Barghash, whose reign is memorable as witnessing the steady growth of British influence under the care of Sir John Kirk, and the partition of Africa between European Powers.

(2) The history of European endeavour in the hinterland of East Africa centres round the sources of the Nile. Arab explorers had traversed Eastern Africa for many centuries before any information was forthcoming which was accepted as reliable. Their accounts were co-ordinated by early geographers, notably Ptolemy in A.D. 150 and Sanson d'Abbeville in 1635, but it was not until the 19th century that more accurate knowledge was obtained. The Portuguese, during their occupation of the Coast strip, made little effort to explore the hinterland. It was not, indeed, until 1848 that Kilimanjaro was seen by Rebmann. Krapf first saw the snows of Mount Kenya in 1849. The work of these two dauntless missionaries opens the chapter of discovery inland from the East Coast of Africa. It was not until after the discovery of the sources of the Nile that any further progress was made from the East.

The fact that the Nile rises in flood at the driest season of the year presented a problem which had aroused the interest of geographers in all ages. Attempts to solve this problem by a journey up the Nile Valley had failed. The 19th century witnessed determined attempts to reach the head-waters of the Nile from other directions. Sir Richard Burton, in 1854, endeavoured to reach the interior from Berbera, in Somaliland, but his caravan was massacred. Three years later he tried again, this time from the East Coast opposite Zanzibar. With Speke for his companion he reached Lake Tanganyika. On the return journey, at Kazeh, near Tabora, Speke left Burton and, travelling northwards, first saw the waters of the Victoria Nyanza on the 30th July, 1858. His claim that this lake gave rise to the Nile was disputed, and Speke organised another expedition which left Zanzibar in October, 1860. This expedition, led by Speke and Grant, followed the former route to Kazeh and passed round the western side of the Lake. Speke reached the capital of Mtesa, King of Uganda, on the 19th February, 1862. On the 21st January, 1863, Speke reached the Nile and discovered its outlet from the Lake at the Ripon Falls. Later in the same year, Samuel Baker discovered the Albert Nyanza and the mystery of the origin of the Nile was solved.

Certain geographical questions still, however, awaited settlement and twelve more years elapsed before further information became available. Henry M. Stanley placed a boat on the Victoria Nyanza and circumnavigated the Lake in 1875. He was greatly impressed with the possibilities offered by Uganda as a field for missionary enterprise. His appeals for support reached England at a time when a keen interest was being taken in African work, particularly in connection with the slave trade, and they met with a ready response. The first English mission was sent to Uganda in 1876. Shortly afterwards there arrived two Catholic missionaries belonging to the Order of the White Fathers of Algeria. Mohammedan proselytism was already in progress. The field was set for a series of religious quarrels which dominated the political situation in Uganda for fifteen years.

It was the birth of European interest in Uganda that led to the further exploration of the East African hinterland now known as Kenya. Apart from journeys up the Tana Valley by Wakefield in 1865, and New in 1866, and from visits to Kilimanjaro by Von der Decken in 1863, and New in 1871, little had been added to the knowledge gained by Krapf and Rebman before 1850. In 1862, Dr. G. A. Fischer made the first attempt to discover a route to Uganda more direct than that used by Speke and Stanley. He marched to Kilimanjaro from Pangani and succeeded in crossing Masailand to Lake Naivasha, which he reached on the 11th May, 1883, but he was prevented by ill-health and the Masai from continuing his journey.

The distinction of being the first European to reach the Victoria Nyanza from the east rests with Joseph Thomson, who started from Mombasa in March, 1883, and in spite of many difficulties succeeded in reaching the Lake forty-five miles east of the Ripon Falls. Ill-health prevented him from continuing his journey to the Nile, but the practicability of the route was proved and many important additions had been made to the knowledge of East African geography. In 1888, Lake Rudolf was discovered by Count Teleki von Szek, whose expedition was the first to traverse Kikuyu country.

(3) European intervention in African affairs was stimulated by the reports regarding the slave trade made by Stanley as a result of his journey from Uganda across the Congo in 1877. The organization of the Congo Free State promoted a certain amount of trade and gave European nations an indication of the commercial value of Central Africa. In 1885, the German Kaiser granted a charter of protection to the Society of German Colonization operating on the mainland opposite Zanzibar, an area which had been assigned to the Sultan of Zanzibar by the Canning award in 1861. The amount of mainland territory over which the Sultan was recognized as having authority had never been defined. This point was referred to an international commission which included in the Sultan's dominions a strip of the coast ten sea miles in depth from the Rovuma to the Tana River and certain other areas in the north. The country behind this coast strip was divided into two spheres of influence, the German sphere being south, and the British sphere north, of a line drawn from the mouth of the Umba River past the northern slopes of Kilimanjaro to the point where the first degree of south latitude intersects the eastern shore of Victoria Nyanza. This line is practically identical with the southern boundary of Kenya to-day.

The agreement did not extend to the north of the Tana River and in 1885 Germany declared a protectorate over the independent Sultanate of Witu.

In 1887, Seyyid Barghash, the Sultan of Zanzibar, granted a concession to the British East African Association on the mainland between the Umba and Tana Rivers, and on the 3rd September, 1888, this Association was incorporated under Royal Charter as the Imperial British East Africa Company. In April, 1888, Seyyid Khalifa, who had succeeded Seyyid Barghash in March, granted a concession of the district that fronted the German sphere to the German East Africa Company.

The German claim to Witu, subsequently extended to include Lamu also, was not recognized by the Sultan who, in January, 1889, offered Sir William Mackinnon, as representative of the British East Africa Company, a lease of Lamu and the adjacent islands. An unfortunate controversy followed, the Germans making every attempt to secure a permanent footing north of the Tana River and the British Company resisting all such claims. It was not until the Anglo-German Treaty of the 1st July, 1890, had been signed that the controversy ended. By that Treaty Germany withdrew her claims to Witu and the territory north of the Tana on the understanding that England should secure for Germany the definite cession of the sphere south of the Umba River leased from the Sultan of Zanzibar, and in exchange for the retrocession of Heligoland.

The controversy over Witu was ruinous to the Imperial British East Africa Company. It diverted a disproportionate amount of the new Company's energies and resources to an unhealthy and comparatively unimportant area. Trouble did not end with the signing of the Anglo-German Treaty. A dispute between the Sultan of Witu and a German timber syndicate led to the massacre of a number of German citizens, and a naval brigade under Admiral Sir E. Fremantle was sent against Witu. The Company found itself under an obligation to maintain a strong and expensive garrison in that area and this, in view of the calls on its finances in other more important parts of its territory, it was unable to afford. In 1893, the Company announced its intention of withdrawing from Witu. The supremacy of British interests in Witu had been recognized by Germany as part of the convention by which the British Government waived all rights over Heligoland, and Witu could not be altogether abandoned. The Imperial Government therefore assumed the administration of that district and declared a protectorate over it on the 31st July, 1893.

Two other difficulties impeded the early operations of the Company. A native insurrection broke out in German East Africa immediately on the arrival of the German administration. The Germans found it necessary to blockade their coast and the British Government agreed to blockade the British Company's coast also to prevent traffic in contraband across the frontier. On the British Company, therefore, rested the stigma of preventing trade with its own territory.

The second difficulty was caused by the action of certain missionaries who permitted the mission stations to be used as asylums for runaway slaves. Feeling against slavery was strong, but it was manifestly impossible to admit the right of the missionaries to offer sanctuary to runaway slaves without affecting economic conditions on the coast and alienating the sympathy of the Arab slave owners. Agreement was reached with the Arabs and the missionaries by which the Arabs consented to grant freedom on compensation to all slaves who had already escaped and the missionaries promised that they would not in future give sanctuary to refugees. On the 1st January, 1889, a historic scene took place at Rabai, a mission station founded by Krapf, 10 miles inland from Mombasa. By the payment of £3,500 the Imperial British East Africa Company secured the liberation of 1,442 slaves.

The early activities of the Imperial British East Africa Company were mainly concentrated on the Coast. The districts intervening between the Coast and the Victoria Nyanza, though known to have great potential resources, were regarded as practically valueless under existing economic conditions. It was realized that the exceptional conditions of natural fertility, climate, and general accessibility would respond to the application of European capital and enterprise but, apart from the Coast, the area next in importance appeared to be Uganda, and the Company was unwilling to extend its operations so far afield until it had consolidated its work on the littoral. International complications forced the Company's hand and it became necessary for the Company to take part in the administration of Uganda before it was fully equipped to do so.

In 1889, the Company despatched a considerable caravan under F. J. Jackson to explore the interior, establish and mark out stations, and make treaties with the various tribes. Jackson founded a Company's station at Machakos, proceeded by way of Kikuyu, Naivasha and Sotik, and reached Mumias on the 7th November, 1889. While there he was begged by Mwanga, King of Uganda, to enter Uganda and assist him to regain his throne. A commerce monopoly was offered to the Company. As he was under instructions to avoid Uganda, which was known to be in a state of revolution, Jackson felt unable to accept the offer, and went north to examine the country towards Lake Rudolf. On his return to Mumias on the 4th March, 1890, he heard that Dr. Karl Peters, in charge of a German expedition, had passed through on his way to Uganda a month previously.

In October, 1888, it had become known that Lieutenant Wissmann and Dr. Peters had been appointed leaders of an expedition which was to proceed up the Tana River with the ostensible object of relieving Emin Pasha, the Governor of the Equatorial Province of the Sudan, who, after the fall of Khartoum, had been cut off from all communications for four years. News of the relief by Stanley of Emin Pasha reached Europe in January, 1889. In the following month Peters left Berlin. His passage through German East Africa was forbidden by the German Government and a British Naval Squadron endeavoured to prevent his landing on the coast of the British sphere. Peters succeeded in avoiding the blockade, landed near Lamu, organized his caravan at Witu, then in German occupation, and started up the Tana Valley towards the end of July. A representative of the British Company, J. R. W. Pigott, had explored the valley of the Tana early in 1889 and had entered into treaties with the natives. Peters destroyed these treaties wherever he could find them. He destroyed the Company's stations and pulled down its flag. As he passed he annexed the country in the name of Germany. He had several encounters with the Kikuyu and with the Masai in Laikipia and on entering Uganda he negotiated a treaty with Mwanga. He then returned to the coast, passing down the western side of Victoria Nyanza, only to find that his labours had been in vain. The Anglo-German Treaty of the 1st July, 1890, had assigned Uganda to the British sphere of influence.

Jackson entered Mengo, the capital of Uganda, on the 14th April, 1890. He signed a treaty with Mwanga under which Uganda was included in British territory. He then returned to the Coast leaving his companion, Ernest Gedge, as the Company's representative in Uganda.

Meanwhile Captain F. D. Lugard had joined the Company's staff and had founded a chain of posts connecting Mombasa with Machakos. In 1890, he founded a station on the borders of Kikuyu country at Dagoretti. He was then ordered to Uganda and, by forced marches, succeeded in reaching Mengo on the 18th December, 1890. During the ensuing year he was straining every nerve to reconcile opposing political factions in Uganda. By the end of 1891 the British position in that kingdom seemed at last to be secure. Then came the news that the Imperial British East Africa Company was finding the cost of administering Uganda excessive and had determined to evacuate the country. This order was cancelled in January, 1892, on a private guarantee being given by Sir William Mackinnon to subscribe funds to pay for a year's administration of Uganda. Representations were made to the British Government that they should help the Company. This the Government felt unable to do, but a Government mission under Sir Gerald Portal was eventually sent to report on Uganda and on the advisability of establishing a British Protectorate over it. Instructions were also given for a preliminary survey to be made of a railway from the Coast to Uganda.

Uganda proper was informally placed under the control of the Foreign Office on the 1st April, 1893. The formal proclamation of a protectorate was issued on the 19th June, 1894.

Meanwhile, negotiations had been proceeding between the British Government and the Imperial British East Africa Company for the transfer of the Company's responsibilities in East Africa to the Imperial Government. The Company's withdrawal from Witu in 1893 has already been mentioned. On the 1st July, 1895, a British Protectorate was declared over the Company's territory between the Coast and Naivasha, the territory west of Naivasha having been included in the Uganda Protectorate. The Company received £200,000 for the surrender. The boundaries of the East Africa Protectorate were defined by proclamation on the 31st August, 1896.

The last days of the Company's administration witnessed a rebellion among the Mazrui section of the Coast Arabs, which implicated the inhabitants of most of the Coast towns from Vanga to Kipini.

In February, 1895, a dispute arose as to the succession to the post of Liwali of Takaungu. The rightful heir according to Mohammedan law was Mbaruk, the son of the late Liwali's elder brother. On being passed over in favour of his cousin, who had stronger British inclinations, Mbaruk withdrew to Gonjoro and threatened rebellion. A Naval brigade was despatched against him and the Mazrui, all sections of whom had now combined, were defeated. Mbaruk fled to Gazi and established a forest stronghold at Mwele. Mwele was taken, but the Mazrui then maintained a guerilla warfare with considerable success. Isolated posts and caravans were harassed and the rebel successes encouraged the revolt to spread. Before the end of 1895 practically the whole of the British East African coast lands were in rebellion. Mombasa was never in danger but Malindi was looted. It was not until April, 1896, that the Mazrui leaders, after a series of defeats in small engagements, abandoned the struggle, fled across the border and surrendered to the Governor of German East Africa.

(4) Under Article I of the Brussels Act of 1890 the Signatory Powers included among the means for counteracting the slave trade the construction of railways. The construction of the Uganda Railway developed out of this suggestion. Its early construction was prompted by the desire to obtain a cheap and rapid means of communication to Uganda. A preliminary survey had been made in 1892–3. The first rails were laid in 1895, and by the end of 1901 there was a weekly train service between Mombasa and the Lake. The metre gauge was chosen owing to the facilities so afforded for procuring rolling-stock from India in emergencies. Indian labour was used owing to the scarcity of African labour along the route taken by the railway. The headquarters of the railway were transferred from Mombasa to Nairobi in 1899, and the line to Nairobi was opened in August of that year. The s.s. *Winifred* was launched on the Victoria Nyanza on the 12th December, 1902. The cost of the line up to the end of September, 1903, amounted to £5,317,000.

In 1897, an expedition was organized to explore the country between Abyssinia and Fashoda. The caravan assembled at Eldama Ravine in September and was to be escorted by three companies of Sudanese troops, remnants of Emin Pasha's force, who had seen much recent active service in Uganda. Two days out from Ravine they deserted in a body, passed through Nandi, looting the Government station, and were joined by the rulers of Uganda and Unyoro. The mutiny was quelled in the middle of 1899, but not without the loss of valuable British lives.

Early reports gave the following impression of what was then the East Africa Protectorate. The Protectorate was divided into four Provinces, Jubaland, Tanaland, Seyyidieh, and Ukamba. Its western boundary was the foot of the Kikuyu Escarpment ; Jubaland was inhabited by turbulent Somalis ; Tanaland, with large potential resources, suffered from lack of population. The fertile coast lands of Seyyidieh were falling off in production. Arab influence was on the wane and the prosperity of this area was being gravely affected by the abolition of the slave trade. Ukamba was administered from Machakos and Kitui, but little was known of the Kikuyu.

Little economic importance was attached to the country between the coast and Uganda. Until the Uganda Railway was built, one of the principal functions of the Administration was to act as forwarding agents for Uganda. There were no towns up-country apart from Machakos—where the establishment of an administrative post led to the settlement of a number of Indian traders—until Nairobi was founded as a railway changing centre in 1898. In three years the population of Nairobi had grown to 8,000.

Mission stations were to be found in all the Provinces. Slavery did not exist outside the Sultan's dominions, where the law still recognised the institution of domestic slavery.

Two important steps in the development of the East Africa Protectorate were taken early in the present century. The western boundaries of the Protectorate were altered in April, 1902, so as to include the Eastern Province of Uganda, stretching as far as the Victoria Nyanza, and including the Mau Escarpment, and the Nandi, Lumbwa and Kavirondo country. In the same year laws were passed defining conditions under which land could be alienated to colonists. By April, 1903, there were nearly 100 Europeans settled in or near Nairobi.

During 1903 numerous applications were received for land in the Rift Valley. The grazing grounds on both sides of the Uganda Railway in the Rift Valley near Naivasha were at that time used by the Masai pastoralists. Agreement was reached with the Masai in 1904 that they should be placed in two reserves, one in Laikipia, some 60 miles north of the railway, and the other to the south of Nairobi, towards German East Africa. Nine years later, under a subsequent treaty, the Masai moved from Laikipia to an extended southern reserve flanking the German border.

On the 1st April, 1905, the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief was appointed under an Order in Council, dated the 9th November, 1906, and an Order in Council, dated the 22nd October, 1906, constituted Executive and Legislative Councils. All Foreign Consular Jurisdiction was transferred to the British Court during the year 1908.

During the years preceding the war the economic importance of the Protectorate steadily developed. The European population of the Colony was 5,438 in 1914 and the Indian population 14,131. The value of the export trade had risen from £124,727 in 1902–03 to £443,624 in 1913–14, new industries having sprung up in the form of coffee, fibre, and wool, and a considerable advance having been made in the exports of grain and hides. The Government revenue had grown from £95,284 in 1902–03 to £1,123,798 in 1913–14 and the Government expenditure from £311,469 to £1,115,899. Grants-in-aid from the Imperial Exchequer, which had been necessary in the early days of the administration, were discontinued in 1913.

On the outbreak of war a prompt response was made to the call for volunteers. Defence forces were formed at Mombasa, Nairobi, and Kisumu and three volunteer units were formed, the East African Mounted Rifles, the East African Regiment, and the East African Transport Corps. These measures served to ward off attacks from German East Africa until an Expeditionary Force arrived from India. The southern border was frequently violated by the enemy during 1914 but no permanent damage was done. A period of comparative inactivity followed. In September, 1915, a mass meeting was held in Nairobi at which a resolution was passed placing at the Governor's disposal the entire resources of the country. This was followed by the formation of a War Council and the compulsory registration of all European personnel. In December, 1915, an Ordinance was passed providing for compulsory military and other service. This Ordinance was applied in March, 1917, each case being considered by the War Council and District Committees. Of the 3,145 adult male Europeans in the Protectorate on the outbreak of war, 1,987 served in a military capacity during the war.

The number of African troops was also largely increased. Before the war, one battalion only of the 3rd King's African Rifles had been recruited in the Protectorate. During the war, the 3rd and 4th King's African Rifles raised three battalions each, while the 5th and 7th King's African Rifles raised part of one battalion. The total number of East Africa Protectorate natives serving in these regiments finally amounted to 8,486. In addition, 1,157 Africans were recruited for the Arab Rifles, the Police Battalion, and Police Service Battalion.

A remarkable response was made by the African community in providing men for non-combatant service such as the Carrier Corps, Maxim Gun Porters, and Stretcher Bearers. More than 200,000 enlistments for these purposes are recorded.

During the course of the war, in order to facilitate military operations, a railway line was constructed from Voi to Taveta near the boundary of German East Africa. Thence the line was linked on to the German railway near Moshi.

Although in the early days of the British administration it was found necessary to undertake punitive expeditions against refractory tribes, the history of Kenya has, apart from the war in German East Africa, been comparatively peaceful. Small expeditions were despatched against the Nandi in 1900, 1903, and 1905–06, owing to the depredations of the tribe along the railway line. The Ogaden Somalis were punished in 1901 for the assassination of the Sub-Commissioner, Mr. Jenner, in November, 1900. A patrol was despatched into Sotik in 1906 and a force visited Marakwet in 1911. Patrols visited Northern Jubaland in 1912 and 1914. Disturbances broke out among the Giriama tribe towards the end of 1914, which necessitated a punitive expedition. There were two campaigns in Turkana in 1915 and 1917, and the murder of Mr. Elliott at Serenli by the Aulihan Somalis led to punitive measures in Jubaland in 1916 and 1917.

Unofficial members first sat on the Legislative Council in 1907. Such members were nominated by the Governor until 1919 when the principle of elective representation of Europeans was recognized. The first elections were held in February, 1920. In 1923 the principle of elective representation was extended on a basis of communal franchise to the Indian and Arab Communities. Unofficial members first sat on Executive Council in 1920.

By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognised as a Colony. This Order in Council came into operation on the 23rd July, 1920. The Sultan's mainland dominions are now styled the Protectorate of Kenya, whilst the remaining territory is known as the Colony of Kenya. On the 29th June, 1925, in pursuance of a treaty between the United Kingdom and Italy, signed at London on the 15th July, 1924, the Province of Jubaland was ceded to Italy. By the Kenya Colony and Protectorate (Boundaries) Order in Council, 1926, an area on the west of Lake Rudolf and north of the River Turkwel, stretching from Mount Elgon to Mount Zulia on the boundary of the Anglo-Egyptian Sudan, which had formerly formed part of the Uganda Protectorate, was included in Kenya.

The Uganda Railway, which had been operated from the date of its construction as a State Railway under the Government of the East Africa Protectorate, was constituted in April, 1921, as a separate financial entity under the control of a Central Railway Council. In February, 1926, under the provisions of the Kenya and Uganda (Transport) Order in Council, 1925, the Office of High Commissioner for Transport was established. The High Commissioner is the Officer Administering the Government of Kenya. He has control of the transport services owned, controlled, or managed by the Governments of Kenya or Uganda, including railways, ports, wharves, and steamships. The Administration is now known as the Kenya and Uganda Railways and Harbours Services. An Inter-Colonial Railway Advisory Council and a Harbour Advisory Board have been constituted.

LANGUAGES.

The principal African language in use in Kenya is Swahili, a language evolved from Arab contact with Bantu tribes, which has become a medium of conversation with and between Africans of different tribes not only in Kenya but over a wide area in East and

Central Africa. There are numerous native languages of local importance. Among these are :—

Hamitic Languages—Somali, Galla, and Boran.

Lowland Bantu Languages—Nyika (including Giriama), Rabai, Ribe, Jibana, Chonyi, Kauma, Kambe, Digo, Durama, and Pokomo.

Highland Bantu Languages—Kamba, Kikuyu, Embu, Chuku, and Meru.

Lakeland Bantu Languages—Bantu Kavirondo and Kisii.

Nilotic Languages—Masai, Samburu, Turkana, and Nilotic Kavirondo.

Nilotic-Hamitic Languages—Nandi, Lumbwa, Kamasia, Elgeyo, Suk, Elgonyi, and Marakwet.

CURRENCY.

The currency originally consisted of the Indian rupee as the standard coin, with smaller local coins and notes of higher denominations, all expressed in terms of the rupee ; the British sovereign was also legal tender at Rs. 15. The exchange value of the rupee, after being maintained for many years by the Government of India at 1*s*. 4*d*., began to rise in 1917, and early in 1920 reached 2*s*. 9*d*. It was then decided to fix the rate in the East Africa Protectorate, the Uganda Protectorate, and the Tanganyika Territory at 2*s*. sterling to the rupee, and to issue a new currency in local rupee coin and notes, but subsequently it was decided that the new coinage should be expressed in terms of florins, instead of rupees, the 50 cent piece being alternatively termed a shilling. Some rupee notes were introduced but no rupee coins. Later the shilling was made the standard coin instead of the florin, and arrangements were made to withdraw the Indian rupee, which was demonetized from July, 1921, from circulation. The nickel-bronze coins (1, 5 and 10 cents of a rupee) have been withdrawn from circulation, and new copper-bronze coins (cents of a shilling) have been introduced.

The old Local Board of Currency Commissioners has been abolished and the currency of the Colony and Protectorate is now in the hands of the East Africa Currency Board in London, represented locally by the Treasurer.

WEIGHTS AND MEASURES.

The weights and measures in use in the Colony are the same as those used in Great Britain.

I. GENERAL.

His Royal Highness the Prince of Wales visited the Colony during the latter part of the year, being accompanied during the early stages of his route by His Royal Highness the Duke of Gloucester. Their Royal Highnesses arrived at Mombasa in the S.S. *Malda* on the 28th September and after two days at the Coast left by train for Nairobi, reaching the capital on the 1st October.

A representative East African Agricultural Show had been arranged for the first week in October and a Race Meeting was also held in Nairobi. Both meetings were attended by Their Royal Highnesses, who took an active part in the latter and rode in several races.

All members of the Local Native Councils, together with a number of other prominent persons in native society, numbering 1,400 persons in all, were the guests of Government in Nairobi, for four days during this period. A camp was specially constructed for their accommodation, and at the canteens all kinds of food commonly consumed by the native tribes were supplied. His Royal Highness the Prince of Wales met these guests on two occasions. A combined military and civil parade was held at Government House on the 2nd October, when the Prince of Wales presented to each of the leading chiefs a hunting knife and belt. On the following day, he paid an informal visit to the camp, where he spent an hour and a-half walking up and down the lines and speaking with individuals of every group, sometimes, to their great delight, in Swahili. To each Local Native Council he presented a framed portrait of himself. Reports from all districts confirm the deep impression made on the minds of those Africans who were present by the personal interest and regard for them manifested by His Royal Highness. The Prince's visit to their camp, the interest that he showed by questioning them as to details of their tribal dress and customs, and his evident concern for their welfare, deeply affected them. His Royal Highness's departure from the camp was the occasion of a memorable demonstration of spontaneous enthusiasm.

The Duke of Gloucester left Kenya on a hunting expedition to the south at the end of the first week in October. The Prince of Wales spent some days at Elementeita on his way to Uganda and on his return to Kenya at the end of the month he stayed at Kitale, Eldoret, and Nakuru before returning to Nairobi. His Royal Highness subsequently visited Nanyuki. He attended the Armistice Day Celebration in Nairobi on the 11th November and he left for Tanganyika shortly afterwards.

The Commission under the chairmanship of the Right Hon. Sir Edward Hilton Young, G.B.E., D.S.O., D.S.C., M.P., which was appointed by the Secretary of State in July, 1927, to consider certain questions relating to the closer union of the Dependencies in Eastern and Central Africa and allied subjects, arrived in Kenya from Uganda on the 27th January and spent some three weeks in the Colony before proceeding to Tanganyika.

The Governor, Lieutenant-Colonel Sir Edward Grigg, K.C.M.G., K.C.V.O., D.S.O., M.C., left the Colony on the 1st December in order to take part in advance discussions of the Report* of the Commission, which was published in England and East Africa on the 18th January, 1929. During the absence of the Governor the Government was administered by Sir Jacob Barth, Kt., C.B.E.

The Legislative Council held four sessions and sat on 33 days during the course of the year. A by-election was held in Mombasa owing to the resignation of Mr. G. G. Atkinson; Mr. J. Cumming was elected unopposed. The four Nominated Indian Unofficial Members, who had been appointed in July, 1927, to the places left vacant at the General Election in January, 1927, held their seats until their appointments terminated on the 31st January, 1928. An election to fill these seats was held on the 3rd March, 1928, but no candidates were nominated and one Indian Elected Member only sat in the Council during the remainder of the year.

The Railway and the Colony suffered great loss by the death, which took place in Nairobi on the 19th August, of Sir Christian Felling, Kt., C.M.G., General Manager of the Kenya and Uganda Railways and Harbours. Sir Christian Felling came to Kenya from South Africa at the end of 1922. He took charge of what was then called the Uganda Railway at a time when the financial prospects of the country and the Railway were at a very low ebb. "In five years he transformed the whole working of the Railway and he transfigured its finance. No man understood better that the prosperity of the Railway was due in the first place to the vigorous expansion and steadily increasing production of both the territories which the Railway served. But in new countries like this, railway development and general development are very closely allied. The steady policy of new construction which Sir Christian Felling pursued and which, without his foresight, without his gift of management, without his powers of persuasion, it would have been difficult to pursue—that policy was responsible itself in no small part for the increase of production on which the Railway throve."†

Important progress was made during the year in the development of local government following the recommendations made by the Local Government Commission which sat under the chairmanship of Mr. Justice Feetham in 1926 and presented its Report in February, 1927.

All urban areas, with the exception of Nairobi, have hitherto been administered as townships direct by the Government, the District Officer being assisted in some townships by an advisory committee of residents. Nairobi was declared a municipality in 1919 but did not assume responsibility for its own roads and drains till 1923.

---

* Cmd. 3234.

† Extract from the Governor's speech to the Legislative Council on the 20th August, 1928.

A local government inspectorate and a special branch of the Central Government to deal with local government matters, with the assistance of Standing Committees, were formed during the year, the Office of Commissioner for Local Government being combined with that of Commissioner of Lands and Settlement.

Legislation was drafted with a view to putting into effect the recommendations of the Local Government Commission, and a Round Table Conference of representatives of the European and Indian communities was convened for the purpose of discussing the various proposals contained in the Bill dealing with Municipalities before that Bill should be considered in detail by the Legislative Council. The Conference accepted the proposed extension of the Nairobi Municipality so as to include the suburban areas, and achieved substantial agreement in respect of the constitution of the Nairobi Municipal Council and the proposed Mombasa Municipal Board. The suggestions made by this Conference were accepted by the Government and the Local Government (Municipalities) Bill and other measures affecting local government were passed in the Legislative Council at a session held in Mombasa in August, 1928.

The Indian Associations, however, subsequently repudiated the agreements entered into by their representatives, and when nominations of Indian members to the Nairobi Municipal Council and the Mombasa Municipal Board were invited later in the year the Indian community declined to take part in municipal affairs pending the issue of the Report of the Hilton Young Commission.

The legislation introduced in August for local government purposes included the Local Government (Municipalities) Ordinance, which considerably amplified the machinery for municipal administration previously contained in the Municipal Corporations Ordinance of 1922, and which provided for the constitution of the Nairobi Municipal Council, for the establishment of a municipality in Mombasa, gave power to the Governor to establish other municipalities, and set up a central organisation for dealing with local government matters; a general Rating Law applicable to all urban areas; and a District Councils Ordinance dealing with the constitution, powers and functions of District Councils.

The establishment of District Councils in rural areas had been recommended by the Local Government Commission in order that these Councils should assume, at the outset, the functions of district road authorities, and with a view to their subsequently acting as local public health authorities and hospital authorities, and also in order that they should be the recognised bodies which the Government should consult when it wished local advice on any question.

The District Councils Ordinance incorporates a rating system and forms a complete code for rural authorities. All these Ordinances were assented to by the Governor on the 8th October, 1928. The

Municipalities Ordinance was applied to Nairobi on the 31st October, 1928, and the Municipality of Mombasa was established on the 27th November, 1928.

Aviation attracted increasing attention. Several journeys between Kenya and Europe were undertaken by air ; a further meeting took place in Nairobi between a flight of the Royal Air Force and one of the South African Air Force ; the Nairobi Aerodrome was seldom without two or three privately-owned machines, which made flights in the neighbourhood and from point to point in Kenya, Uganda, and Northern Tanganyika. The year's progress was marred by a fatal accident which occurred near Nairobi in March, when Mrs. Carbery, who had but recently achieved the pioneer flight from Mombasa to Nairobi, crashed during a practice flight.

After protracted negotiations at Addis Ababa with the object of securing compensation for the numerous raids carried out upon Kenya territory from Abyssinian territory since 1915, the Abyssinian Government agreed to pay a sum of £21,000, about £15,000 of which had been paid by the end of the year.

The year was a satisfactory one financially, the Colonial surplus increasing from £693,260 at the end of 1927 to £879,307 at the end of 1928. The total Funded Public Debt of the Colony on the 31st December, 1928, was £13,500,000, represented by two loans of £5,000,000 each (1921 and 1927) and one of £3,500,000 (1928).

The final section of the main railway line extension to Uganda was opened for traffic in January, 1928. Construction was begun on branch lines from Gilgil to Thomson's Falls and from Kisumu to Yala and was continued on the line from Tororo to Soroti, the section as far as Mbale being opened for traffic before the end of the year.

No census of the non-native population was taken during 1928. No census has yet been taken of the African population. A fairly accurate count is made annually for taxation purposes, but the number of children can only be estimated roughly and the return of African population is, therefore, a rough estimate only.

The following figures show the 1921 and 1926 census returns for non-natives and the estimates of the native population at the end of 1921 and 1928 :—

	1921 *Census.*	1926 *Census.*	*Increase per cent.*
Europeans	9,651	12,529	30
Asiatics (excluding Arabs)	25,880	30,583	18
Arabs	10,102	10,557	4½
	Estimate, 1921	*Estimate*, 1928	*Increase per cent.*
Africans	2,348,788	2,838,022	26*
Total	2,394,421	2,891,691	26*

---

* The African population showed a decrease in 1925 owing to the cession of Jubaland to Italy. In calculating the percentage of increase, the estimated African population of Jubaland at the end of 1921 (97,728) has been deducted from the 1921 estimate.

MEASURES FOR THE IMPROVEMENT OF NATIVE CONDITIONS DURING 1928.

Politically the year was uneventful, but rapid progress is being made in the development of local institutions and in the assumption of local responsibility. In particular, the activities of the Local Native Councils have been conspicuous, and their enthusiasm for the improvement of social and economic conditions has been reflected in the sums of money voted in their annual estimates for education, communications, and the extension of medical facilities.

For the agricultural tribes as for the stock-owning peoples the year was not without its difficulties. The rains were capricious and deficient in amount. In most of Nyanza they were satisfactory and good crops resulted. In Kikuyu and the Coast they were a partial failure. In Kerio and the Northern Frontier Province the drought was very serious. Towards the end of the year parts of the Colony, particularly Ukamba, suffered from the depredations of locusts. An increasing amount of land is yearly put under cultivation, but owing to unsatisfactory seasons the results have not been proportionate to the efforts expended. Overstocking remains a problem for which no solution has yet been found.

A development which caused great satisfaction to a great part of the native population was the progressive demarcation of the Native Reserves as gazetted in October, 1926. The visible demarcation appears to have restored confidence in Government's bona fides and to have been accepted as a guarantee that Government intends to preserve to the native communities the land which has been set aside for them. Satisfied on this point, the tribes, particularly the Kikuyu, are now turning their earnest attention to the rights of individuals to holdings within the Reserves.

A particularly noteworthy feature in the evolution of native life is the rapid substitution of wheeled transport for human porterage and of vehicular for pedestrian travel. The extension of the Colony's road system and the improvement of the road surfaces have resulted in the appearance in large numbers of the motor-lorry and the motor-bus. This is a developemnt the reactions of which cannot yet be appreciated or the cumulative effect estimated.

An innovation which must have far-reaching effects is the introduction of water-boring machines, some of which were operating in Native areas during 1928. Successful bores have been sunk in the Masai Reserve, and there is reason to suppose that in the Northern Frontier Province and other arid regions large tracts of country hitherto useless may in due course become productive.

No legislation of importance affecting the native population of the Colony was enacted during 1928.

The health of the native peoples remained reasonably good throughout the year. There was no serious epidemic other than an outbreak of malaria which was particularly severe in the Kericho District. A campaign against hookworm in Digo District was triumphantly successful.

II.—FINANCE.

The following table shows the revenue and expenditure totals for the five years ended 31st December, 1928 :—

Year.	*Revenue.* £	*Expenditure.* £
1924	2,111,565	1,861,511
1925	2,430,509	2,339,996
1926	2,627,223	2,414,681
1297	2,846,110	2,515,115
1928	3,020,694	2,834,647

No special alterations were made during the year in methods of raising revenue.

STATEMENT OF LOAN POSITION OF COLONY AT 31ST DECEMBER, 1928.

(*a*) *Public Debt.*

The Colony's Funded Public Debt on the 31st of December, 1927, amounted to £10,000,000, represented by the Loan of £5,000,000 raised in 1921 under Ordinance No. 39 of 1921 and the Loan of £5,000,000 raised in 1927 under Ordinance No. 22 of 1927.

Ordinance No. 22 of 1927 provided for the issue of stock sufficient to produce a net sum of £8,353,611 after defraying the costs of issue, and the loan raised in 1927 was a first portion of the issue under this Ordinance. The second instalment, of £3,500,000, was raised in 1928.

The total Funded Public Debt of the Colony on the 31st of December, 1928, was therefore £13,500,000, represented by two loans of £5,000,000 each (1921 and 1927) and one of £3,500,000 (1928).

The 1921 Loan, known as the " Kenya Government 6 per cent. Inscribed Stock, 1946–56 " was floated in London in November, 1921, at £95 per cent. The currency of the Loan is 35 years, but the Kenya Government has the option of redemption at par at any time after the 14th of November, 1946, on giving six calendar months' notice. This Loan was fully expended at the end of 1926.

The 1927 Loan, known as the " Kenya Government 5 per cent. Inscribed Stock, 1948–58 " was floated in London in November, 1927, at £99 10*s*. per cent. The currency of the Loan is 30 years, but the Kenya Government has the option of redemption at par at any time after the 15th of January, 1948, on giving six calendar months' notice. This Loan was raised for the purpose of redeeming the Imperial Government (free of interest for 5 years from 1924) Loan of £3,500,000, and for further railway and port development. Of this loan, £4,973,139 3s. 67c. had been spent at the end of the year.

The 1928 Loan, known as the "Kenya Government 4½ per cent. Inscribed Stock, 1950," was floated in London in May, 1928, at £95 per cent. The currency of the Loan is 22 years and it is repayable at par on the 1st of May, 1950. It was raised for further railway and harbour and colonial development, and at the close of the year £3,192,794 9s. 14c. had been spent.

(b) *Sinking Funds.*

In the case of the 1921, 1927, and 1928 Loans the legislation provides that Sinking Fund contributions shall commence after the expiration of three years from the date of the first issue of the stock, and it is stated in the prospectus that the annual contribution will be not less than one pound per cent.

Contributions to the Sinking Fund established in connection with the 1921 Loan are at present at the rate of Sh.26/- per cent. per annum.

STATEMENT OF ASSETS AND LIABILITIES OF THE COLONY AND PROTECTORATE OF KENYA ON 31ST DECEMBER, 1928.

Liabilities.	£	Sh.	cts.	*Assets.*	£	Sh.	cts.

III.—PRODUCTION.

AGRICULTURE.

The rainfall during the year 1928 was generally under average, and as a consequence crops suffered in some districts. The yield of coffee was much reduced. The estimate of yield for the season was 7,800 tons at the end of December, as compared with an actual production of 12,300 tons in the preceding year. Except in the Nyanza Province, where yields were high, the maize crop was below average, and in parts of the Nakuru District it largely failed on account of drought. The wheat crop also suffered in like manner, and in the higher districts which enjoyed a sufficient rainfall the yield was greatly reduced by "rust." In several districts a number of farmers suffered some loss in the destruction of maize and wheat crops by locusts. From the same cause some damage, though not extensive, was caused to native food crops.

Owing to shortage of rain generally, a smaller surplus of crops was available for sale from the Native Reserves, and in some areas a shortage of food existed. Grazing in the pastoral areas was poor and resulted in low condition of stock generally and a reduced output of produce and animals fit for market.

Notwithstanding the adverse seasons, development on the whole continues at a satisfactory rate. There has been a general awakening to the importance of maintaining soil fertility. Progress in the development of "mixed farming" is slow. In so far as "mixed farming" implies growing a wider range of crops, it is now being realized that a rotation is very necessary for several reasons, but the farmer who is struggling to become established is not disposed in the earlier stages to grow crops the produce of which is not marketable at a profit, however valuable these crops may be as "restorers" and "improvers" of soil fertility.

Again, in so far as "mixed farming" means the inclusion of stock in the operations, the impediments are the incidence of disease in the most highly productive areas, and the low productive capacity of the cattle, whether for beef or milk production. To feed crops and artificial foods profitably presupposes a supply of good dairy cows which will respond to such a system of management. Unfortunately, the local supply of such cows is at present so small that the system cannot be applied extensively within a short time.

Mechanical cultivation has been encouraged by the rebate given by Government to users of kerosene for agricultural purposes. The great advantages derived from this efficient and expeditious form of performing agricultural operations is unfortunately to some extent discounted by its present comparatively high cost. In the light of experience, there is a tendency more fully to combine the use of tractors and draught-oxen in the major farming operations. This combination is likely to prove not only efficient but the most economical.

During the year, arrangements were made for the organisation of an East African Meteorological Service under the direction of the Statistician to the Governors' Conference.

A system of forecasting crops was introduced during the year, and reports were published in respect of the months September to December. Monthly estimates of their crops were submitted by 178 crop correspondents and the Agricultural Department was thus enabled to inaugurate successfully this valuable service.

Exports.

The total value of agricultural exports, the produce of Kenya, in 1928 was £2,747,233, an increase of £15,439 as compared with the previous year.

The tonnage was 104,519 tons in 1928, against 139,412 tons in 1927. This decrease is mainly due to the reduction in the quantity of maize shipped during the year.

Given even normal seasons and no serious fall in market prices the quantities and values of agricultural exports should again show a substantial increase.

The statistical information given in succeeding sub-sections of this section of the report relates, except where otherwise stated, to agricultural development by Europeans.

Acreage and Occupation.

The total area allotted for occupation by Europeans is approximately 6,720,646 acres, and in addition an area of about 894,720 acres is still available for alienation. Of the area allotted, 4,996,406 acres are under occupation, showing the satisfactory increase of 258,486 acres over the previous year. The number of European occupiers totals 1,971, a net increase of 70 over the previous year, but it is calculated that changes of occupiers took place in 78 holdings, making the number of new occupiers 148.

The number of Europeans employed on agricultural holdings inclusive of the 1,971 occupiers is returned at 2,807, an increase of 185 as compared with the previous year.

The total area under cultivation is 592,741 acres, giving an average of 301 acres per occupier, as compared with 269 and 256 acres for the years 1927 and 1926 respectively.

Including land used for stock-farming, it is estimated that the area beneficially occupied is on the average 1,266 acres, which shows the extensive character of farming operations in this Colony. In addition, mention should be made of the considerable area of farms used by " native squatters."

In the returns furnished it was shown that on European holdings they had 47,111 acres under cultivation, and 878,502 acres were used for the maintenance of their stock.

Main Crops.

On 31st July, 1928, the total area under crops was 525,421 acres, and the total area under cultivation was 592,741 acres. For comparative purposes figures for the previous year are given, together with the percentages of increase and decrease, in the appended table :—

Crop.	1928.	1927.	*Increase, per cent.*	*Decrease, per cent.*
Maize	215,960	192,592	12.13	—
Wheat	88,429	65,036	35.96	—
Barley	5,933	4,093	44.95	—
Coffee	84,073	74,662	12.60	—
Sisal	91,909	71,213	29.06	—
Tea	4,809	3,156	52.37	—
Coconuts...	7,994	8,113	—	1.46
Sugar-cane	9,408	6,811	38.12	—
Miscellaneous	24,384	17,194	41.81	—
Total acreage of crops grown... ...	532,899	442,770	20.33	—
Less catch crops	7,478	4,735	57.93	—
Net area under crops	525,421	438,035	19.94	—

Maize.—The figures quoted above show an increase of 23,368 acres in the total area of 215,960 acres planted as at 31st July, 1928. The average yield over the Colony was 6.15 bags per acre, showing a reduction due to unfavourable weather conditions.

The following table shows the acreages and yields of maize in past years :—

Year.	*Acreage harvested.* Acres.	*Actual Production.* Bags.	*Bags per acre.*
1923–1924	108,556	833,640	7.68
1924–1925	129,647	893,108	6.89
1925–1926	155,751	826,614	5.95
1926–1927	177,987	1,314,643	7.39
1927–1928	177,009	1,088,706	6.15

Exports of maize (including native-grown maize) for the season (August-July) fell from 1,100,708 bags in 1926–27 to 805,801 bags in 1927–28.

Crop estimates for the 1928 planted crop show a production of about 1,100,000 bags, of which it was estimated that 800,000 bags would normally be available for export. Good crops from this planting were raised in most areas excepting parts of the Nakuru District but, as maize is the main crop grown over an extensive area in that district, the shortfall in total output is very considerable, and the effect was to reduce considerably the average yield for the Colony.

Another representative and successful Maize Conference was held in August, and some of its deliberations took place in joint session with the Wheat Conference.

Wheat.—The area planted as at 31st July, 1928, was 82,429 acres, an increase of 23,393 acres over the previous year.

The acreage harvested in each year and the production during the past five years are as follows :—

Year.	*Acreage harvested.* Acres.	*Actual production.* Bags.
1923–1924	19,599	55,920
1924–1925	23,996	61,067
1925–1926	30,627	80,069
1926–1927	46,601	120,569
1927–1928	75,102	173,958

The satisfactory prices which ruled during the previous years for wheat, the improvement and increased capacity of grain mills, the security against "rust" at the lower altitudes which has been afforded by the variety "Kenya Governor" evolved by the Agricultural Department, and the increase in cultivation of farms at elevations of 8,000 to 9,000 feet, together stimulated a great increase in production. The industry has now reached the stage when sufficient wheat is produced to meet the requirements in flour of this Colony and adjacent territories. But that position is not yet completely secure.

Unfortunately, " Black Stem Rust " (*P. Graminis*) for the first time seriously affected the yield of the 1928 crop in the variety " Equator," the standard crop of the higher altitudes, where it has hitherto been supposed that this form of " rust " was not a menace.

While average yields on good land in the best districts reach 30 bushels or more per acre, the average for the Colony remains phenomenally low, at about 8 bushels per acre. That is to be accounted for by sowings made on the poorer soils, drought in some areas, heavy losses due to " rust," and destruction by birds.

At the Wheat Conference already mentioned, it was agreed that a system of compulsory official grading should be instituted for " export " wheat. Rules and standard grades were promulgated under the Agricultural Produce Export Ordinance. Towards the end of the year, 136,640 cwt. of wheat, valued at £76,196, were exported, chiefly to India and South African markets. In addition 17,717 cwt. of flour, valued at £17,349, were exported, chiefly to Tanganyika and Uganda. It can be said with confidence that wheats of good milling quality can be grown for export to oversea markets.

Through the enterprise of the Kenya Farmers' Association, a large addition has been made to the storage capacity for wheat to be stocked at their Mill. Thus a difficulty experienced in storing wheat on farms where inadequate facilities exist has been removed to a large extent.

Wheat-milling statistics were called for in connection with the Agricultural Census, and for the period covering 1st December, 1927, to 31st November, 1928, the main features of the returns are as follows :—

There were eight wheat-mills operating during the year. The eight mills are capable of milling a total of 40.5 bags (200 lb.) of wheat hourly. 89,633 bags wheat were milled during the year, producing 24,012 bags (200 lb.) fine flour and 41,934 bags (200 lb.) atta flour.

The wastage in milling (pollards, brans, etc.) was 23,687 bags of 200 lb., or 26.4 per cent. of the total quantity milled.

Barley.—There was an increase in area from 4,093 acres in 1927 to 5,933 in 1928, and indications point to a considerable extension of this crop. Unfortunately, in areas known at present to be suitable for the crop, the grain becomes discoloured on the ear before harvesting, due probably to mist and dew. That in itself may reduce the quality from " malting " to " feeding " value. Growers are realising the care which has to be exercised in the growing of a " malting " sample, but even at export values for feeding purposes the crop may be more profitable than wheat in districts where " rust " depreciates the wheat yield.

Good varieties of malting barley have been introduced from time to time, both by the Agricultural Department and individual growers, and there is therefore available in the Colony suitable seed for extending the cultivation of this crop.

Coffee.—Labour difficulties in 1925 and 1926 arrested progress in the planting of new areas, but conditions in this respect have greatly improved and in 1928 the highest annual increase yet recorded was planted. The area under coffee increased by 9,511 acres, bringing the total area under this valuable crop to 84,073 acres. The season was not favourable to the production of a heavy crop and as compared with the previous year exports increased by 1,820 cwt. only. In value the coffee exported decreased from £1,140,549 in 1927 to £1,119,894 in 1928.

The total quantity of coffee produced in the last Agricultural Census year was 246,292 cwt., but the unfavourable weather conditions during 1928 are calculated to reduce considerably the yield of the 1928–29 crop, probably by about 50,000 cwt. The importance of this industry to the Colony is reflected in the number of coffee-growers and the proportion which the value of coffee exported bears to other crop exports.

The number of coffee-growers has increased during the year from 749 to 829, representing 42 per cent. of all the European occupiers of land, and coffee exports represented 49.8 per cent. of the Colony's total agricultural exports.

Market prices of coffee have remained high for a number of years and Kenya Coffee is not only maintaining but enhancing its reputation on the world's markets. The average value of coffee exported during the year was declared through Customs to be Shs. 109/92 per cwt.

The dreaded pest of coffee-growing countries—the Coffee Bean Borer (*Stephanodores*)—was identified for the first time on a number of plantations. As the result of preliminary inspection work, it was decided to conduct an extensive campaign calculated to arrest its spread, if not to eradicate it, early in 1929, and preparations were accordingly made.

Tea.—The area under tea as at 31st July was 4,809 acres, an increase of 1,655 acres over the previous year.

In the year under review the first export consignment of "factory-prepared" tea—86 cwt., valued at £678— was shipped. There is much promise that the industry will succeed in the Kericho and Limoru Districts, where considerable expenditure is being incurred upon planting and the erection of factories.

Sisal.—As in the case of wheat and coffee, there was a remarkable increase in the area under sisal—the greatest annual increase so far recorded. That increase was 20,696 acres, bringing the total planted as at 31st July, 1928, to 91,909 acres, of which 48,621 acres were over 3 years old and therefore ready for cutting.

Exports of fibre increased from 305,985 cwt. in 1927 to 330,315 cwt. and, with prices remaining practically constant, the value of this export increased from £468,974 in 1927 to £495,959 in 1928.

From returns furnished, the estimated production for the census year ending 31st July, 1929, is 365,000 cwt., as compared with an actual production for the previous similar period of 290,190 cwt.

Much skill and attention are given to the organisation of this industry and the marketing of the product, not only by the companies owning sisal estates but by its representative organization, the "Sisal Growers' Association," and success has been achieved particularly in reducing costs of production. Engineers and others are directing attention to the design and manufacture of approved decorticating plant. If the experiment proves successful, and at present it so promises, methods of sisal production will be greatly changed not only in this Colony but elsewhere.

Sugar-Cane.—The greatest increase hitherto recorded in the planting of cane occurred in 1928. There is now a total of 9,403 acres on European holdings and 5,693 acres on farms occupied by Indians, making a total of 15,096 acres.

The output of crystallized and raw sugar fell from 179,748 cwt. in the season 1926–1927 to 128,944 cwt. in 1927–1928, and exports, chiefly to Tanganyika, dropped from 25,329 cwt., valued at £37,052, in 1927 to 11,941 cwt., valued at £19,258, in 1928. That decrease is to be accounted for by the effect which the drought had on the supply of cane, also to the reduction in sucrose content of the cane from the same cause.

Over a period of some years the progress of this industry has been slower than anticipated, but the industry is one which involves the expenditure of a large amount of capital. With the establishment of two new sugar mills, one near Nairobi and the other at the Coast, not far distant from Mombasa, and the development now taking place in the planting of cane, it is expected that these efforts in Kenya, coupled with the output of the mill in Uganda, will shortly supply fully the demand in the Eastern African territories.

The increasing consumption of the native population, due largely to their increased purchasing power, is noteworthy, and it is felt that with a substantial reduction in the price of sugar this market could be considerably increased. On that, rather than on an export market, reliance should be placed by the industry during the initial years of its development.

Coconuts.—Non-European interests in the cultivation of coconuts appears to be confined to individual needs for local consumption, and European enterprise has not increased the "plantation" areas substantially during recent years; indeed there has been a slight decrease in the area so occupied, namely, from 8,113 acres in 1927 to 7,994 acres in 1928. Some copra is used locally for soap making. The export of copra nearly doubled in 1928, as compared with the previous year, the relative figures being 26,995 cwt., valued at £28,955, and 14,725 cwt., valued at £14,070. That increase is due to palms planted in previous years having now reached the productive stage.

Essential Oils.—For some years past, private enterprise, centered at Njoro, has experimented, chiefly with a variety of geranium, in the production of essential oils; 473 acres have now been planted, distillation has been carried out on a productive basis, and the oil is sold to a British firm.

Wattle.—The area under wattle (*Acacia decurrens*) has increased from 8,830 acres in 1925 to 9,922 acres in 1928, but during that period a considerable area was "barked" and cut down. There are 6,319 acres under the age of 6 years. The export of wattle bark has more than doubled during the last year, the figures being 44,082 cwt., valued at £17,338, in 1927 and 101,619 cwt., valued at £59,112, in 1928. The export of tannin extract remained practically constant; for 1928 it was 20,284 cwt., valued at £22,478.

The increase in export from this industry is due chiefly to the bark now supplied from the Kikuyu Native Reserve. The natives were encouraged to plant wattle trees chiefly for fuel and shelter, and the opportunity later arose for the bark therefrom to be marketed.

Miscellaneous Crops.—Little interest is now taken in flax, the area having dropped to 284 acres. Only stability in the flax market, and some assurance that profitable prices could be secured, would persuade farmers to renew the cultivation of this crop. Castor, of which 965 acres were under cultivation in 1925, is disappearing, the area in 1928 being returned at 92 acres only. Some interest is being taken in tobacco, of which 187 acres were reported as having been planted as at the 31st July 1928.

The area under oats has increased from 1,105 acres in 1925 to 2,572 acres in 1928. Only in a few districts has it been found so far that this crop "heads" properly for the production of grain.

Fodder crops, chiefly maize and oats, represented an area of 1,601 acres.

Live-Stock Industry.

The following table shows the numbers of live-stock owned by Europeans during the last five years:—

	1924.	1925.	1926.	1927.	1928.
Cattle—Total	211,381	216,589	213,423	215,650	216,961
(*a*) Breeding stock ...	110,855	110,547	105,556	107,434	110,796
(*b*) Oxen...	100,526	106,042	107,867	108,213	106,165
Horses	1,642	1,846	1,844	2,137	2,172
Mules	985	922	780	719	709
Donkeys	1,213	1,336	931	1,046	1,238
Sheep (wool bearing) ...	133,916	140,725	162,848	172,299	176,261
Sheep (native)	32,132	38,071	43,057	32,972	20,608
Goats	4,618	5,372	4,454	3,697	3,211
Pigs:—					
(*a*) Breeding Sows ...	2,384	2,040	1,714	2,896	3,455
(*b*) All others	8,284	6,524	7,411	10,061	14,697
Poultry	38,910	31,150	35,728	43,988	38,845

These returns indicate that the serious drop in the number of breeding cattle, as revealed in the 1926 Census, has been arrested, and there is evidence of slight progress in cattle-breeding. The decrease in the number of oxen is accounted for through their displacement by mechanical power.

This Colony participated in the helpful scheme of the Empire Marketing Board, and shared equally with that Board the cost of shipping freight on pure-bred stock imported from Great Britain. Great benefits should accrue to the live-stock industry through the opportunity thus afforded for improvement by the use of pedigree sires. Under regulations approved by the Kenya Government and the Empire Marketing Board, applications were granted in respect of 69 bulls, 16 cows and heifers, 32 pigs, and 22 sheep. Only a limited number of these animals arrived in this Colony before the end of the year.

Notwithstanding the financial assistance so rendered, experience of importers show that the total cost of the animals remains relatively high. As far as practicable the initial outlay has been reduced by amending the regulation whereby one year's insurance is acceptable instead of two, as originally laid down.

The cattle industry is not making the progress expected of it, and the results are disappointing having regard to the efforts of breeders coupled with the protection from losses due to diseases afforded through the Veterinary Service maintained by the Government. Considerable attention has been given, with the assistance of the Stockbreeders' Consulting Committee and a Select Committee of Legislative Council, to the drafting of legislation dealing with cattle cleansing (dipping) and the fencing of farm holdings. Both of these measures, when enacted, are calculated to advance the industry; indeed they may be regarded as prime factors, essential to progress. The success which they achieve will largely depend upon the resources made by owners of stock and occupiers of land to the provisions embodied in these Bills. Compulsory dipping should, in the course of time, greatly prevent the spread of tick-borne diseases and reduce the losses suffered, while the systematic fencing of holdings, including not only boundary fences but internal fencing creating sub-divisions of the farm, should enable farms to be cleared and maintained free of tick life, and in addition opportunities will be afforded for better management and greater use of the pastures.

A steady improvement is being made in the grading-up of sheep for the production of wool, chiefly through merinos, and the wool produced sells at satisfactory prices, due largely to the favourable conditions which exist for the production of wool, fine in type, and giving a " good yield," because of its freedom from grease and dirt.

Marked progress has been made in the pig industry. A large increase is shown in the case both of breeding sows and other pigs. A corresponding increase is shown in the production of bacon and hams.

Animal Products.

The following is a comparative table of the animal products sold by Europeans during the last five years :—

Year.		*Milk (Whole).*	*Cream.*	*Butter.*	*Cheese.*	*Ghee.*	*Bacon and Hams.*	*Wool.*
		Gals.	Gals.	Lb.	Lb.	Lb.	Lb.	Lb.
1927–28	...	421,779	75,764	324,593	130,538	78,528	519,463	420,575
1926–27	...	617,747	92,640	216,863	148,305	124,057	No return.	632,088
1925–26	...	395,031	72,693	291,894	144,070	115,815	430,119	670,752
1924–25	...	571,692	85,557	303,085	92,994	108,153	364,552	461,586
1923–24	...	372,103	107,669	252,990	93,248	112,815	—	427,266

The fluctuations in the proportions of the different kind of dairy products sold as milk-manufactured products are to be noted. The reduction in the supply of whole milk is probably due to unfavourable grazing conditions on account of drought.

Taking the ratio of

2.25 gallons milk to 1 lb. butter
1.1 ,, ,, 1 lb. cheese
2.6 ,, ,, 1 lb. ghee
3.2 lb. butter to 1 gallon cream,

it is calculated that the primary product—milk—has decreased from 2,257,974 gallons in 1926–27 to 2,068,843 gallons in 1927–28, a reduction of 189,131 gallons or 8.3 per cent.

Native Agriculture.

The Department of Agriculture maintains two schools of instruction in order that trained Native Instructors may be available for its own demonstration work as well as for Local Native Council efforts and for Mission schools at which gardening is taught.

The Department maintains demonstration plots throughout the Reserves.

Issues of seeds and plants are being made in much larger quantities from the two schools, and poultry issues are increasing.

Seed is purchased by the Agricultural Department for issue in districts where it is desired to improve seed stocks and to demonstrate the value of mass issues of good seed. Local Native Councils are now more largely interested in good seed issue, and relatively large sums are voted each year by these Councils for the purchase of seed for their particular district. In Central Kavirondo, Local Native Councils are providing money for instructors. Native people are also purchasing numbers of Rhode Island Red cockerels. There is a growing demand for this breed of bird, a breed whose introduction it is believed everywhere has been uniformly successful. A number of pure-bred Persian rams and ewes were imported and are to be used in breeding and flock improvement. A large number of demonstrations on the shade-drying of hides have been given.

Cultivation has taken place on a much larger scale than heretofore. It is estimated that in South Nyeri and Fort Hall the increase in cultivation in one year is perhaps 40 per cent. Aeroplanes have proved of great value in revealing the extension of cultivation in a country which is so broken into ridges that it may not be properly overlooked from high points. Efforts are being made to introduce a greater variety of crops into Reserves.

Native people are taking much more readily to ploughing. In Central Kavirondo, where ploughing competitions have been one of the features of the Native Shows, there is a steady demand for ploughs. In Fort Hall the Local Native Council is doing excellent work in introducing these implements. One very promising plantation industry, of especial value to the Kikuyu, who are short of fuel supplies, is the culture of the black wattle, chiefly in small patches and as windbreaks. Export of dry bark and the supply of green bark to the extract factory has already commenced. The great difficulty regarding plantation industries is the necessity of getting the crop planted in advance of the provision of the factory for its treatment. Large areas near the forest around Mount Kenya are suitable for wattle and other plantation crops, but at present there is no certainty that factories will be provided when required.

The returns of exports leaving Mombasa calculated as being of native origin do not show great expansion over the past three years, but, in common with the rest of the Colony, native areas, as a whole, have not enjoyed good seasons. Furthermore, there is evidence that many native products are not so largely exported but to an increasing extent are consumed within the territories. Kavirondo maize, formerly exported in large quantities, is now being ground into flour at Kisumu. Simsim is not all being exported as such, but crushing is taking place more extensively within the Colony. Railway works in Kikuyu and Nyanza Provinces and the provision of many new bridges and better roads are all having or will have their influence.

Native Agricultural Exports.

The estimated values of agricultural exports of native origin for the last five years are shown hereunder :—

	1924.	1925.	1926.	1927.	1928.
	£	£	£	£	£
Animals	20,000	16,000	11,000	12,000	11,000
Copra and Coconuts ...	35,000	28.000	20,600	12,000	23,000
Cotton	11,860	41,000	32.750	15,000	24,000
Groundnuts	26,000	19.000	31,000	22,500	19,659
Maize	130,000	100,000	70,000	75.000	50,000
Millets	300	865	2.750	3.350	423
Pulse	15,000	16,000	20,400	19.900	13,000
Simsim	84,000	65,000	76.500	67.350	27,353
Hides	121,000	210,000	140,000	160,000	200,000
Skins	30,000	50,000	51,000	56,000	100,000
Oils-Simsim	2,200	3,000	5,500	3,550	5,000
Potatoes	4,000	4,000	7,250	7,500	7,000
Miscellaneous	1,000	1,000	2,000	2,600	2,000
Totals	480,360	564,865	470,750	497,780	482,437

This statement does not, however, give any indication as to the total agricultural output from native areas. The native maize crop comes in, in part, during the time when there is a large demand for maize meal in Kenya and Uganda, so that by far the greater part of the total crop is consumed locally. The estimated export figures of native maize, therefore, are not comparable with the total sales. This is also true of simsim, groundnuts, and copra. An increasing local use is being made of these commodities.

Crops.—Maize is perhaps now the staple crop produced, although large quantities of matama are grown. The area of the Colony in which matama may be grown successfully is far greater than that in which maize may be grown, and especially as the rainy seasons are so short matama is more likely to give a good yield.

Cotton.—The culture of this crop is not increasing greatly. It is undoubtedly the best revenue crop natives can grow in the locations bordering on Uganda, although they are more inclined to simsim, which does not return more than half the money per acre. Efforts have been continued with some success to increase the acreage planted in Kavirondo and to improve cultural methods.

On the Coast also, at Malindi and Mambrui, production does not greatly increase, although acre returns of over 1,000 lb. of seed cotton have been realised. The crop in 1928 was better handled and an increase in production is looked for. The standard of planting and cultivation has improved.

Simsim.—Good prices have ruled for simsim, and natives are maintaining if not increasing the area planted to this crop. It has been introduced into the drier country of the Kikuyu Reserve near the Tana River.

Groundnuts.—Increased issues of seed of this crop have been made. It is particularly favoured in South Kavirondo.

Wheat.—The cultivation of this crop is extending. It is regarded as a new food crop and no doubt will take its place in native agricultural practice.

Beans.—Of all crops grown by natives, the bean crop is the most mixed. As it is used as a food crop and a renovating crop, the native is not much interested in the uniformity and yield of the crop. Beans are purchased in some quantity for local feeding and a little for export.

Native Agricultural Shows.—A show was held at Maseno, in Central Kavirondo, on 30th October.

A number of natives from every Province attended the Agricultural Society's Show held in Nairobi, at which a special Native Produce Section was organised.

Pests.—The main pest in the Reserves this year has been the locust, both in the flying and in the hopper stage. Fortunately, the hopper stage was confined mainly to pastoral areas and therefore the amount of crop destruction directly due to hoppers was not great. Flying locusts in 1928 did not do much damage to native crops. The main damage was done after the close of the year, when crops were ripening, but fortunately the extent of the damage done is relatively not great. The work that natives have done to combat this pest is noteworthy.

The stalk borer, so successfully combated in the Nakuru District by the European farmer, is responsible for loss, particularly on the Coast. Native cultural methods and the fact that cultivation is scattered in patches all over a Reserve do not permit of the degree of control which can be exercised when the cultivation is in large blocks easily overlooked.

FORESTRY.

For the first time for several years the quantity of timber sold showed a decline. Unsatisfactory rains affected local agricultural and trade conditions and reacted on the sales of timber. Reduction in the demand for timber had actually started in the latter part of 1927, but output was not then reduced. At the beginning of 1928, therefore, the mills had large quantities of timber in stock and this factor tended to accentuate the decline as reflected in the figures of timber sales for 1928.

Timber sales decreased from 1,566,400 cu. ft. in 1927 to 1,288,853 cu. ft. in 1928.

Firewood sales decreased from 8,108,890 cu. ft. in 1927 to 7,042,513 cu. ft. in 1928. Nevertheless, this latter figure is more than double that sold in the year 1925.

The Kenya and Uganda Railways and Harbours used 5,581,258 cu. ft. of fuel from Forest Reserves out of a total of 12,125,000 cu. ft. used by them during the year.

There were 651,711 poles and bamboos sold, compared with 699,157 in the previous year.

Mangrove bark found a good market and 1,155 tons were exported, as compared with 51 tons in 1927.

Two new Forest Stations, at Mount Elgon and Kisii, were opened during the year, many new nurseries and new plantation centres were started, surveys were begun in forests not hitherto brought under departmental control, and initial steps were taken in regard to the preparation of working plans.

One new Forest Reserve, the Nyeri Station Forest, a small forest of approximately 1,158 acres, was proclaimed during the year. The total area of Forest Reserves is approximately 2,550,000 acres.

There were 22 independent saw-milling firms working in the Forest Reserves, with 35 saw-mills, not counting the mills in Nairobi. There were also about ten small saw-mills working in private forests. Towards the end of the year, two saw-milling firms closed down and several other saw-mills were only working at half capacity.

The year was one of the worst planting seasons ever experienced. East of the Rift Valley the long rains were poor and gave a maximum planting season of about three weeks ; in some districts no planting whatever could be done. The short rains in November were, however, more favourable. West of the Rift Valley the rainfall was fair, but rain came at abnormal times. In all districts, as a result of two successive dry years, subsoil moisture was seriously reduced and established plantations began to show signs of damage.

There were 3,666 acres planted, as compared with 3,253 acres in 1927 and 3,047 acres in 1926. The rate of planting, therefore, is increasing steadily. The Department as now organised could plant up to 5,000 acres in a year of good rains.

The species planted during the year included 714 acres of pencil cedar, 120 acres of other indigenous timbers, 1,084 acres of exotic woods, mainly cypress, eucalyptus and blackwood, and 1,748 acres of fuel plantations. The 1918 acres of timber plantations made during the year should at maturity produce not less than seven times the total quantity of timber cut during the year. Fuel plantations are sufficient, also, to produce the same quantity as was cut during the year.

The number of trees raised in Forest Department Nurseries was increased from 5,500,000 to 7,100,000, and of these 643,600 were sold, an increase of 95,000 over the previous year.

There is a rapid and continuous rise in the sales of young trees, which indicates a growing interest in tree-planting on farms and other holdings. A nursery was re-established in the Coast area at Mazeras with a view to the experimental raising of a variety of species of economic and ornamental value suited to Coast conditions.

The seed sold during the year amounted to 1,411 lb.

There were 39,551 cubic feet of cedar, valued at £14,764, and 42,725 cubic feet of other timber, valued at £12,957, exported during the year. Most of the "other timber" was exported to Tanganyika. In addition to the above figures, 33,491 cubic feet of timber were exported to Uganda.

Imports of timber amounted to 190,631 cubic feet, valued at £42,318, of which 48,443 cubic feet, valued at £14,384, were imported on Government account; 22 per cent. of the quantity imported was teak and 58 per cent. Baltic timber.

The interest taken in Kenya cedar for pencil manufacture is growing. The export of 39,551 cubic feet of cedar during 1928 compares with one of 13,548 cubic feet in the previous year, and the outlook for this trade appears to be bright provided adequate steps are taken to ensure careful selection, accurate sawing, and thorough seasoning. A process has been developed in England for rapid treatment of the slats which appears to be successful in seasoning and at the same time slightly softening the wood. The process promises to be of great assistance to the trade. There are considerable quantities of pencil cedar in the Colony. Existing saw-mills with cedar concessions can supply any immediate demands, and it is hoped that in the near future further areas will be ready for exploitation.

In view of the extent of the Colony's timber resources, the quantity of timber imported is still high. The main reason for continued import is probably distrust of the condition of the local timber as regards seasoning. Much progress has been made in regard to seasoning at saw-mills, and drying kilns have been established by the Railway and the Public Works Department. The climate of the Colony, with its large variation in temperature and atmospheric humidity, is a particularly difficult one for timber. There are indications that kiln-drying will give completely satisfactory results in regard to the seasoning of local timber for cabinet or joinery work.

It was hoped that the kilns of the Public Works Department would be able to season joinery timbers for the use of private firms, but Government demands have hitherto absorbed the whole output. Steps are being taken to increase the capacity of the kilns.

Work was undertaken by the Department in the Machakos, Meru, Elgeyo, South Kavirondo, and Kisii Native Reserves. In Machakos District organised afforestation continued to make successful progress. There were 302 acres planted by the Department, and numerous small plantations are being set up throughout the Reserve by the Local Native Council, who have employed a European forester.

In South Kavirondo and Kisii an afforestation scheme was started during the year on the lines which have proved successful in Machakos. Little progress was made, however, as the natives were reluctant to set aside the necessary area for plantations. The district contains a vast area of practically treeless country supporting a large population, but only one small area was made available for afforestation, and that a not very suitable one.

A good deal of planting has been done in other Native Reserves. In Kikuyu, small black-wattle plantations are numerous. In the more accessible areas this increase has been encouraged by the trade in wattle bark which has recently received a considerable stimulus owing to high prices. Local Native Councils in North and Central Kavirondo Reserves take an active interest in forest development.

FISHERIES.

It is known that a great variety of fish is prevalent in the sea waters on the coast of Kenya. Some species are caught in large numbers by the primitive methods at present in vogue. A preliminary survey of the sea fisheries of the Colony was made in 1928. The objects were to examine potential trawlable areas with a view to establishing an industry on a commercial basis commensurate with the resources; to enquire into the present methods employed in fishing and to frame suggestions for improvements along the lines of modern research; and to examine the methods of curing, etc., with a view to advancing suggestions for modernising these processes. By the courtesy of the Government of the Union of South Africa, this survey was undertaken by Dr. von Bonde, Government Marine Biologist and Director of the Fisheries and Marine Biological Survey, Union of South Africa. Dr. von Bonde's report indicates that the marine resources of Kenya are undoubtedly immense and valuable. He considers that the present methods of fishing should be revolutionised and developed along modern lines; that, concurrently with this, the methods of fish preservation should also be developed; that a scientific investigation should be conducted by a fully-equipped trawler into the potential trawling areas; that sanitary regulations should be enforced in the various fish markets so as to ensure the clean handling of fish for food purposes; that the potentialities of line-fishing in the deeper waters, up to the 100-fathom line, should be investigated with a view to exploitation; and that for the present the number of fish-traps be limited and no further additions to the present permitted.

At present, about 40,000 lb. of fish, valued at £3,900, are caught. There are 212 boats, 442 canoes, 175 fish-traps, and 1,755 persons employed in fishing.

A very considerable fishing industry is also carried on along the shores of Lake Victoria both by Africans and Indians, and in several of the lake shore locations the natives depend very largely on fish for their food owing to the uncertainty of the rains.

The methods employed by the natives are vary varied and include drag-nets, weirs, traps, harpoons, long lines, and to a very small extent fishing rods.

Most of the fish caught by the natives is not eaten fresh but dried, and large quantities are carried up by those dwelling on the lake shore to markets in the hinterland and exchanged there for grain.

More modern methods of fishing by means of imported nets are employed by Indians at various fishing stations in the Kavirondo Gulf.

There are three Indian fishing villages in the Gulf, at Some, Asembo, and Nanga. The last is only 3 miles south of Kisumu and is the only one near enough to supply fish for the Nairobi market.

All persons fishing for sale or barter are required to register yearly. The fee is Sh. 300/- per annum for persons other than natives of Africa.

As it was feared that the fishing industry was declining it was decided to bring in an expert to make a survey of the Lake, and in September, 1927, Mr. Michael Graham of the Ministry of Agriculture and Fisheries arrived and investigated the problem, assisted by Captain R. E. Dent, of the Game Department, and Mr. E. B. Worthington. Mr. Graham's report was submitted in March, 1928, and contained recommendations in regard to the formation of a local fishery authority, the licensing of fishermen, the collection of statistics, the prohibition of nets of a mesh below a certain size, and the control of methods of fishing.

MINING.

There were 55 prospecting licences issued and 70 claims registered. At the close of the year, 2 leases, 401 claims, and 3 sole exploration licences were held : of the claims, 341 were in respect of gold.

Small quantities of gold were won from various claims in the Lolgorrien District and at Suna in the Kisii District, and 814 oz. of gold were exported, valued at £2,903.

The Coastal Mining and Exploration Company have carried out extensive prospecting operations in the Coastal belt.

A gypsum deposit was discovered near Simba. Tests of samples have given good results.

Good quality mica was discovered in the West Suk District. Several claims were pegged and are being developed. Promising reports have been received from the London market.

Considerable development work has been carried out by the Kenya Marble Quarry Company, holding a concession of 80 acres south-west of Kajiado ; 2,500 tons of limestone were quarried, of which 2,425 tons were used for lime and 75 tons for marble.

IV.—TRADE AND ECONOMICS.

GENERAL.

Kenya and Uganda being one administrative unit for the purposes of Customs, complete freedom of trade between the territories exists. For this reason and on account of the very intimate trade relations of the two countries, a detailed examination of the external trade of Kenya alone is a matter of considerable difficulty, particularly in view of the fact that virtually the whole of the imports and exports of both Dependencies pass through Mombasa, the principal port in Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £879,623 was transported through Kenya and shipped at Mombasa during the year, goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1928 being valued at £899,593.

The combined value of trade imports and total exports of Kenya and Uganda during the year amounted to £17,512,448, as compared with £14,804,327 in the preceding year, the total volume of trade of all classes, including importations on Government account, transit and transhipment traffic being valued at £19,550,383, as against £16,334,190 in 1927.

Clearances for home consumption amounted in value to £8,696,061, an increase of £998,881, or 13 per cent., over 1927. Exports of the domestic produce of the territories were valued at £6,661,673, as compared with £5,397,216 in the previous year; of this total, goods to the value of £3,266,403 originated in Kenya, the domestic exports of Uganda, calculated in terms of f.o.b. value at the port of final shipment, being valued at £3,395,270.

So far as the export trade in Kenya produce is concerned, an increase of £179,487 over the value of domestic exports in 1927 is recorded, but adverse climatic conditions have eliminated from the external trade figures a proper reflection of the rapid developments which are indicated in the latest Agricultural Census as taking place in the Colony. The value of maize exported during the year shows a decrease of nearly £200,000, figures in regard to sisal and coffee remaining virtually stationary, whilst an increase of £75,000 in the value of wheat exports is shown, shipments of carbonate of soda increasing in value by £140,000. A welcome expansion in the volume of trade with neighbouring territories both in domestic produce and in imported goods has to be recorded.

The depredations of locusts and the shortage of rainfall in 1928 will in all probability result in a contraction of exports of Kenya produce during the early part of 1929, but the balance should be redressed in later months if climatic conditions in 1929 are favourable.

Despite relatively unfavourable local markets, trading operations throughout the year were unusually stable, the ill-effects of over-trading, which in the past have too frequently been an unwelcome feature of trade in Eastern Africa, being markedly less evident during the period under review. At the close of the year, stocks were normal and the general trading situation, particularly in regard to native requirements, was sound. A tendency towards a less indiscriminate grant of credit facilities and a greater fluidity in the local markets consequent upon the extension of the unrestricted trading area to Tanganyika Territory were among the important contributory factors to this improved state of affairs.

The Customs Management and Tariff Laws of the territories remained unaltered during the year. Net collections of Customs revenue amounted to £1,345,170, as compared with £1,176,093 in 1927. Of this former amount, £913,336 accrued to Kenya and £431,834 to Uganda.

IMPORTS.

Of the total value of trade imports, the British Empire supplied 62.12 per cent. (Great Britain 34.59 per cent. and British possessions 27.53 per cent.), as compared with 63.91 per cent. in 1927 (Great Britain 38.34 per cent. and British possessions 25.57 per cent.).

Trade in goods originating in the United States of America and Japan continues to reflect the stimulus given by the inauguration of direct steamship services between those countries and Mombasa.

The following is a summary of the main items from the principal sources of supply, values in respect of the year 1927 being given in brackets :—

Great Britain.—Cotton textiles, £334,743 (£333,503) ; machinery, £265,333 (£223,999) ; cigarettes, £125,097 (£100,372) ; motor vehicles and bicycles, £101,154 (£128,806) ; galvanised iron sheets, £100,655 (£119,073) ; cement, £96,561 (£79,440) ; whisky, £82,173 (£71,942) ; wearing apparel £67,114 (£62,121) ; tyres and tubes, £47,276 (£53,767) ; tubes, pipes, and their fittings, £44,314 (£42,224) ; and implements and tools, £28,173 (£29,384).

India.—Jute bags and sacks, £254,502 (£159,541) ; cotton textiles, £165,567 (£130,282) ; rice, £96,956 (£78,458) ; wheat meal and flour, £57,158 (£58,196) ; tea, £54,656 (£49,910) ; and spices, £15,713 (£11,727).

Canada.—Motor vehicles, £172,777 (£119,887) ; and machinery, £14,157 (£14,113).

Union of South Africa.—Coal, £92,560 (£72,744).

United States of America.—Motor vehicles and bicycles, £311,714 (£275,178) ; cotton textiles, £93,634 (£76,741) ; petrol, £82,434 (£53,928) ; tyres and tubes, £62,106 (£46,130) ; kerosene, £59,863 (£38,295) ; lubricating oil, £53,953 (£57,400) ; and machinery, £52,900 (£37,597).

Holland.—Cotton textiles, £322,680 (£241,875) ; and tobacco manufactured, £76,308 (£72,602).

Japan.—Cotton textiles, £275,079 (£245,803); and wearing apparel, £48,440 (£30,189).

Germany.—Cotton textiles, £30,591 (£26,675); agricultural and horticultural tools, £30,289 (£120); machinery, £21,902 (£24,733); aluminium hollow-ware, £20,983 (£11,552); and shovels, spades, etc., £18,478 (£28,693).

Persia.—Fuel oil, £123,233 (£69,510); petrol, £52,917 (£51,073); and kerosene, £36,298 (£47,837).

Dutch East Indies.—Petrol, £103,809 (£100,053); kerosene, £51,160 (£50,745); and fuel oil, £37,695 (£36,145).

Cotton Piece Goods.—The value of trade imports of cotton piece goods of all descriptions amounted to £1,315,505, the total amount of duty collected thereon being £254,400, or 19 per cent. of total net duty collections. Transfers to Uganda were valued at £654,683. Imports during the year show a considerable expansion under all classes, but the progressive decrease in the relative importance of grey sheetings continues and is an indication of the widespread changes which are taking place in the requirements of the native population. The average landed value per yard of imported cotton textiles was 6*d*., as compared with 6.2*d*. in 1927, cotton blankets decreasing in value from 1*s*. 11.25*d*. each in 1927 to 1*s*. 8.8*d*. in 1928.

Great Britain maintains its hold as the chief source of supply of the better qualities of cotton textiles; Holland provides the bulk of imported cotton blankets, whilst unbleached cotton piece goods are supplied principally by Japan and the United States of America.

Vehicles.—1,616 motor-cars, 1,334 motor-lorries, and 388 motor-tractors, valued at £554,005, were imported during 1928, as against 1,585 motor-cars, 665 lorries, and 617 tractors, of a value of £531,665, imported during 1927. The main sources of supply were the United States of America and Canada, the value of motor vehicles originating in Great Britain being £50,025, or less than 10 per cent. of the total.

Importations of motor-cycles decreased from 446 (valued at £19,429) in 1927 to 302 (of a value of £12,675) in the year under review. A very large share of the motor-cycle trade remains in the hands of British manufacturers.

The number of pedal-bicycles imported increased from 4,852 (valued at £33,865) to 6,152 (valued at £39,015), more than 6,000 of this total originating in Great Britain. Fluctuations of this trade follow very closely the relative prosperity of the native population, particularly of Uganda; in consequence it is reasonable to expect that a very considerable expansion in the importations of pedal-bicycles will follow the harvesting of the satisfactory 1928–29 cotton crop.

RE-EXPORTS, TRANSIT, AND TRANSHIPMENT.

Kenya is very favourably situated geographically as an entrepôt centre, and the increased facilities now provided at the Port of Mombasa, coupled with the removal of restrictions in regard to trans-frontier traffic, have had the effect of stimulating this traffic. The following figures indicate the progress which has been made as compared with 1927 :—

	1927.	*1928.*
	£	£
Re-exports	1,555,502	2,102,998
Transit	143,538	143,551
Transhipment ...	200,723	241,846

EXPORTS.

General.—The domestic exports of Kenya and Uganda are largely agricultural, the principal exceptions being carbonate of soda, produced at Lake Magadi in Kenya, and tin-ore, originating in Uganda. As previously stated, the value of the domestic produce of Kenya and Uganda exported in 1928 amounted to £6,661,673, the increase of £1,264,457 over 1927 being very largely due to increased shipments of cotton and cotton-seed from Uganda.

A high proportion of exports are shipped to Empire markets, 74.27 per cent. being sent to Empire destinations in 1928, as compared with 70.6 per cent. in 1927. The following is a summary of the principal commodities exported to the most important markets, relative figures in regard to 1927 being given in brackets :—

Great Britain.—Coffee, £1,023,445 (£1,115,482) ; cotton, £887,186 (£448,769) ; cotton-seed, £317,817 (£163,149) ; hides and skins, £219,654 (£142,554) ; sisal fibre and tow, £178,294 (£192,438) ; maize, £113,339 (£262,277) ; wool, £103,040 (£63,980) ; rubber, £54,387 (£80,560) ; and metalliferous ores, non-ferrous, £50,698 (£12,672).

India.—Cotton, £1,364,509 (£848,749) ; wheat, £23,685 (nil) ; carbonate of soda, £27,100 (£21,275) ; hides and skins, £9,468 (£20,885) ; and barks and extracts for tanning, £2,794 (£203).

Tanganyika Territory.—Sugar, £23,137 (£48,614) ; maize meal and flour, £18,122 (£33,289) ; wheat meal and flour, £15,642 (£5,788) ; timber, £10,590 (£8,068) ; and copra, £5,204 (£747).

Union of South Africa.—Wheat, £42,670 (£130) ; coffee, £41,292 (£54,470) ; and sisal fibre and tow, £9,410 (£4,855).

Japan.—Carbonate of soda, £243,575 (£215,972) ; cotton, £231,684 (£380,058) ; and cotton-seed, £5,292 (£4,865).

Belgium.—Sisal fibre and tow, £178,279 (£173,449) ; hides and skins, £142,384 (£60,759) ; maize, £45,935 (£80,123) ; and barks and extracts for tanning, £4,890 (nil).

France.—Hides and skins, £69,187 (£21,965); coffee, £61,437 (£21,884); maize, £27,864 (£24,344); and copra, £9,927 (£11,219).

United States of America.—Sisal fibre and tow, £94,674 (£25,469); hides and skins, £35,882 (£39,897); carbonate of soda, £26,974 (nil); and timber, £6,933 (£459).

Italian East Africa, including Eritrea.—Maize, £60,695 (£47,439); coffee, £39,117 (£28,077); and sesame seed, £14,057 (£13,469).

Italy.—Hides and skins, £71,456 (£14,192); groundnuts, £13,482 (£182); copra, £7,087 (£170); and sisal fibre and tow, £5,873 (£3,664).

Germany.—Maize, £25,904 (£68,852); hides and skins, £24,002 (£18,739); barks and extracts for tanning, £17,153 (£13,705); sisal fibre and tow, £14,053 (£34,706); and timber, £4,506 (£1,397).

Cotton.—The value of raw cotton exported increased from £1,692,568 in 1927 to £2,486,038 in the year under review, these figures representing 527,481 and 556,471 centals respectively, the average declared value per cental being £3 4s. 2d. in 1927 and £4 9s. 4d. in 1928. Cotton-seed exported was valued at £323,109 (45,507 tons), as compared with £170,303 (29,502 tons) in 1927.

Coffee.—Exports of coffee during 1928 varied little either in quantity or value from the 1927 figures, the quantity exported in 1928 being 251,956 cwt., as compared with 253,319 cwt. in 1927, the relative values being £1,283,636 and £1,310,701 respectively. Of the total quantity shipped, 40,348 cwt. originated in Uganda. Direct shipments of coffee are now being made to some 30 countries, Great Britain being by far the largest market, receiving in 1928 from Kenya and Uganda coffee to the value of £1,022,445.

Maize.—Unfavourable climatic conditions adversely affected shipments of maize during 1928, the quantity exported being 892,660 cwt., or roughly half the quantity of 1,787,665 cwt. shipped in the previous year. Exportations of maize meal increased from 91,420 cwt. in 1927 to 113,308 cwt. in 1928. Great Britain, Italian East Africa (including Eritrea), Belgium, France, and Germany, in the order named, were the most important markets for maize, Great Britain and Tanganyika Territory absorbing virtually all maize meal exported.

Hides and Skins.—Exports of hides and skins continue to show a satisfactory increase, the value of shipments amounting to £592,266, as compared with £328,351 in 1927. Great Britain, Belgium, and Italy provided the principal markets for hides, Great Britain, the United States of America, and France being the chief markets for skins.

Sisal, including Sisal Tow.—The quantity of sisal and sisal tow exported during the year amounted to 16,516 tons, valued at £495,959, as against 15,839 tons (£468,974) shipped in 1927.

Carbonate of Soda.—Exports of this product, which occurs as a natural deposit at Lake Magadi, amounted to 78,255 tons, of a value of £403,131, as compared with 56,675 tons, valued at £263,129, exported during the previous year. The principal markets were Japan and Australia.

Wheat.—The increase in the export of wheat from 278 cwt. in 1927 to 136,640 cwt. in 1928 is particularly noteworthy, but it is somewhat disappointing to find that this comparatively large exportable surplus has had no apparent effect on the imports of wheat flour, of which 64,742 cwt. were imported in 1928, as compared with 63,843 cwt. in 1927.

Inter-Territorial Trade.—In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable and growing trans-frontier trade in domestic products exists. During 1928 the value of local produce sent from Kenya to Uganda amounted to £236,255, as compared with £130,118 in 1927, the principal commodities being wheat flour (£22,000), maize meal (£81,583), pulse (£28,194), soap (£34,739), and sugar (£15,350).

The value of Kenya produce exported to Tanganyika Territory amounted to £123,270, the principal articles involved being sugar (£19,169), maize meal (£17,942), wheat flour (£15,630), and wood and timber (£10,019).

Owing to the fact that Tanganyika Territory produce is allowed free admission on entry into Kenya or Uganda, a strict differentiation between articles imported for subsequent re-export and articles imported for consumption in the territories is impracticable. The total value of Tanganyika Territory produce introduced into Kenya and Uganda during 1928 was £1,120,419, re-exports being valued at £879,623. A large proportion of the balance, amounting to £240,796, was retained for local consumption, the principal articles involved being rice (£85,140) and ghee (£31,359).

V.—COMMUNICATIONS.

HARBOURS.

The control of all ports and harbours of Kenya was in 1927 vested in the High Commissioner for Transport and placed under the management of the General Manager of the Railways and Harbours. The year 1927 was also the first complete year during which the first two berths of the deep-water quays at Kilindini were available for full use.

During the year 1928 the quantity of cargo imported, shipped, and transhipped through the Port increased by approximately twenty per cent. Many of the initial difficulties experienced on the introduction of revised working arrangements under the cargo-handling and lighterage contract entered into in 1927 have disappeared as a result of close co-operation between contractors' staff and the staff of the Administration.

A revised Harbour Tariff was introduced on the 1st April, 1928, based on the recommendations of the Port Commission of 1925. The effect has been to reduce the financial loss previously sustained in working the Port without unduly increasing the charges borne by any section of the trading community.

The Harbour Advisory Board held fourteen meetings during the year and dealt with a large number of important subjects, including the Revised Harbour Tariff and the Harbours Ordinance, which was introduced on the 11th February, 1929.

The third of the new deep-water berths was handed over by the contractors on the 1st January, 1929, and it is expected that No. 4 Berth will be completed and available for shipping by September, 1929.

In August, 1928, authority was received from the Secretary of State for the construction of an additional deep-water berth (No. 5), with a double-storeyed shed as well as a bulk oil jetty.

The work of lighting the harbour was taken in hand during the year. Modern acetylene-gas buoys, beacons, and leading marks have been installed and the harbour is now stated to be one of the best lit on the African coast.

A small marine slipway for dealing with the harbour small craft was constructed at Mbaraki Creek.

A new twin-screw tug, the *Marie Felling*, was ordered during the year and underwent her trials satisfactorily.

During 1928 the earnings of the Port amounted to £196,797, as compared with £131,360 in 1927 ; and the ordinary working expenditure amounted to £83,946 in 1928 as against £68,687 in 1927. Interest and redemption charges total £129,588 and depreciation is assessed at £12,623. The loss on Port working, after taking all these charges into account, was £29,360 in 1928, as compared with £73,515 in 1927.

SHIPPING.

During 1928 the Port of Mombasa was served by seven regular lines of steamers from Europe, i.e., the Union-Castle Mail Steamship Co., Ltd., the British India Steam Navigation Co., Ltd., the Messageries Maritimes, the Compagnia Italiana Transatlantica, the Clan Ellerman and Harrison Line, the Holland-Africa Line, and the Deutsche Ost-Afrika Line. The Osaka Shosen Kaisha Line maintained a service with Japan, the Ellerman and Bucknall Line maintained a service with America, and calls were made by Nippon Yusen Kaisha and by Belgian, Danish, and Norwegian Lines. Several miscellaneous oil and coal steamers discharged full cargoes at the Port.

A fortnightly service between Bombay and Durban, calling both ways at Mombasa, has been maintained by the British India Steam Navigation Co., Ltd., and coasting services by this Line, by the African Wharfage Co., the Shell Company, and Messrs. Cowasjee Dinshaw & Bros. steamers, have been fairly regular.

The total tonnages (import and export) handled at Kilindini Harbour and Mombasa Old Port during the year are as follows. These figures do not include oil imports discharged through the Magadi Company's pipe-lines and soda exported from the Magadi Company's pier :—

	Imports. B/L Tons.	*Exports.* B/L Tons.	*Total.* B/L Tons.
1927 ...	269,257	260,674	529,931
1928 ...	322,881	262,336	585,217

The total trade of the Port of Mombasa (including Kilindini Harbour and the Old Port) for the year 1928 as compared with 1927 is summarised in the following statement :—

	1928.	*1927.*
No. of steamships... ...	637	593
Net tonnage of steamers...	1,814,731	1,703,896
Imports B/L Tons ...	447,301	369,765
Exports B/L Tons ...	344,870	323,036
Passengers landed :—		
European	7,864	7,158
Non-European	15,678	17,155
Passengers embarked :—		
European	5,951	5,947
Non-European	11,793	12,356

The registered tonnage (inwards and outwards) at all Kenya seaports during the year, as compared with 1927, was as follows :—

	1927. *Registered Tonnage.*	*1928.* *Registered Tonnage.*
Vanga...	12,611	15,450
Gazi	19,523	6,228
Mombasa	3,464,177	3,680,418
Kilifi	9,583	14,350
Malindi	7,217	16,154
Lamu	102,824	87,802

RAILWAYS.

The Inter-Colonial Advisory Council held five meetings during 1928 : three in Kenya and two in Uganda.

Earnings for the year in respect of Railway Services (as apart from Harbour Services) amounted to £2,314,430 and the railway working expenditure to £1,192,739, the surplus receipts over working expenditure being £1,021,691. After allowing for contributions to renewal funds, interest charges, etc., the net surplus of this excess transferred to betterment funds, etc., amounted to £284,998. Comparison with the figures for the previous years shows that the railway earnings for 1928 are £188,387, or 8.86 per cent., in excess of the earnings for 1927, and £255,720, or 12.42 per cent., in excess of those for 1926. As against these increases of earnings the ordinary working expenditure for the year 1928 exceeded the ordinary working expenditure for 1927 by £141,953, or 12.34 per cent., and that for 1926 by £75,966, or 6.24 per cent. The percentage ratio of ordinary working expenditure to earnings was 55.86 per cent. in 1928, as against 54.13 per cent. in 1927 and 87.21 per cent. in 1922.

The carriage of public goods provided a revenue of £1,895,755 and the tonnage of this traffic amounted to 984,351 tons, as compared with £1,737,852 and 887,076 tons during the previous year. The revenue derived from passenger traffic also showed an increase over that for 1927, viz., in 1928 1,102,110 passengers contributed a revenue of £284,750 as against 1,065,225 passengers and £266,326 in 1927.

Africans continued to use the railway in increasing numbers. The number of third-class passengers carried in 1928 exceeded one million. Greater use is being made of seasonal excursion tickets, which are steadily finding favour with the public. There were 99 "Steamer Call" excursion tickets from the coast to Nairobi and the Highlands issued during the year.

The tonnage carried by lake steamer services on Lakes Victoria, Kioga, and Albert showed a decrease from 168,094 tons in 1927 to 152,002 tons in 1928. This shrinkage was an expected result of the opening of the through rail connection with Uganda.

The total tonnage carried by the Masindi Port-Butiaba motor-service was 9,754 tons in 1928, as compared with 7,469 tons in 1927.

The following figures show the consumption of coal, wood, and oil during 1928 and 1927:—

	1928. Tons.	*1927.* Tons.
Coal	42,035	35,507
Wood	125,595	110,696
Oil	12,965	7,874

Recent tests confirm that wood fuel is still considerably the cheapest to use.

Expenditure on Capital Account (Railways and Harbours) to the end of 1928 amounted to £18,902,385. Of this sum, £11,541,869 was derived from interest-bearing capital, the balance being provided from:—

	£
Parliamentary Grants, 1896 and 1902	5,676,865
Contributions from Revenue—	
Direct	613,428
Through Betterment Funds	1,079,223

Over £12,500,000 has been spent in improving and extending harbour and railway facilities during the past six years.

The work of relaying the main line between the coast and Nairobi with 80 lb. material was continued throughout the year, and 107 miles of 80 lb. track were laid, 46 miles departmentally and 61 miles by contract. Material for a further 20 miles was received and distributed by the end of the year.

Considerable progress was made with ballasting the main line, over 6,000,000 cubic feet, representing 120 miles of line, being run out and placed in the track between the coast and Nairobi. The permanent way has been maintained in good condition throughout the system.

All bridges and culverts were maintained in good repair and a heavy programme was undertaken in the Nairobi Engineering District in connection with the strengthening of bridges.

Work on the new headquarter offices at Nairobi was begun early in 1927. By the end of 1928 the offices had reached the full height of three storeys, but completion of the roof was delayed by the non-arrival of the roof trusses from England.

The work of building a new combined railway and road causeway and bridge between Mombasa Island and the mainland was begun in June, 1927. The estimated cost of the causeway is £77,000. With the exception of a small contract for the supply of coral, the whole of the work is being carried out departmentally. The design provides for an earth causeway, protected by coral pitching, for a 25-ft. road and a 14-ft. railway with a bridge of five spans of 54 ft. each. The bridge is being founded on 12-ft. diameter concrete cylinders, sunk to a solid foundation. By the end of 1928 the earthworks were well advanced and the piers had been completed. Two of the bridge spans were launched.

The total route mileage of open lines on the 31st December, 1928, was as follows :—

	Miles.
Main Line (Mombasa to Mbulamuti, via Nakuru Junction).	782
Kahe Branch	92
Magadi Branch (Konza to Magadi)	91
Nyeri Branch (Nairobi to Naro Moru)	127
Kisumu Branch (Nakuru Junction to Kisumu) ...	131
Solai Branch (Rongai to Lake Solai)	27
Kitale Branch (Leseru to Kitale)	41
Soroti Branch (Tororo to Mbale)	35
Busoga Branch (Jinja to Namasagali)	61
Port Bell-Kampala Line	6
Total open mileage	1,393

The total track mileage, including loops and industrial sidings, amounted to 1,550.5. The route mileage covered by Lake Services is 3,245.

The final section of the Uganda Extension from Broderick Falls to Mbulamuti, a distance of 154.5 miles, was opened for traffic on the 15th January, 1928, the opening ceremony being performed on the 9th January. The total length of the Uganda Extension from Turbo to Mbulamuti is 184.5 miles. Construction started from the Kenya side in April, 1925, and from the Uganda side in January, 1925. The first section from Turbo to Broderick Falls, a distance of 30 miles, was opened on the 1st July, 1927. The expenditure to the 31st December, 1928, was £1,274,184, or approximately £6,906 per mile.

Good progress was made during 1928 with the construction of the Tororo-Soroti Branch, the total length of which will be 101½ miles. By the end of the year, more than 90 miles of earthwork had been completed and 89 miles of rails had been laid. The section from Tororo to Mbale (35 miles) was opened under construction line rates and conditions in May, 1928, and under open line conditions on the 17th December, 1928. The section Mbale-Egweri, 59 miles, was opened as a temporary measure for the acceptance of pressed cotton for export in full truck loads on the 16th January, 1929.

The construction of the branch line from Gilgil to Thomson's Falls was begun in January, 1928, and at the end of the year 42.20 miles of earthworks had been completed and 30.75 miles of track laid. The length of the line will be 48 miles in all. The section from Gilgil to Oleolondo was opened under construction line rates and conditions on the 10th October, 1928.

A survey of the Kisumu-Yala branch line was begun in January, 1928, and by the end of June this line had been completely surveyed and staked out. Construction was put in hand on the 12th October, and by the end of the year 7½ miles of formation had been finished. The branch will be approximately 32½ miles in length and it is anticipated that the line will be completed by March, 1930.

The survey of the Jinja-Kampala line was commenced in May, and by the end of the year preparations had been made to start construction. The line will be 58 miles in length and entails the bridging of the Nile below the Ripon Falls.

ROADS.

The public road system of the Colony and Protectorate now comprises 2,578 miles of main road and 6,247 miles of roads of less importance, most of which are mere tracks but quite passable for wheeled traffic except during heavy rain periods.

The total capital expenditure on the road system during the year was £66,752. In addition, the sum of £88,282 was expended on the maintenance and improvement of the road system. Improvements were carried out, both in respect of alignment and construction, on some of the main traffic-carrying roads of the Colony, and many bridges were reconstructed on permanent lines. The main township streets, especially in Mombasa, Nakuru, Kisumu, and Eldoret, also received attention and substantial improvements were put into effect.

The progress which had been maintained in the development of certain municipal and rural areas during recent years was deemed to justify a measure of devolution of the responsibilities of Government for certain public services in those areas to local bodies. Towards the close of the year, the Local Government (Municipalities) Ordinance and the Local Government (District Councils) Ordinance were enacted and rendered possible the early assumption of control by local elected bodies of the administration of roads and other services in those European areas. As far as the roads were concerned, these enactments constituted the next step in local government to which the establishment of District Road Boards under the Public Travel and Access Roads Ordinance of 1921 naturally led.

Hard surfacing on marshy sections has been carried out wherever possible, but a very large percentage of the wearing surface is still the natural earth of the locality. A vigorous programme of widening, culverting, and draining was executed on the more important earth-roads, with the result that they are now more capable of withstanding heavy rains, and most of them are passable throughout the year, except on rare occasions during exceptional rain.

The road-making and transport plant of the Department was kept working at high pressure until late in the year, when shortage of funds curtailed operations. A further reduction in native labour was made throughout the year.

Survey work was pushed ahead during the year out of the sum of £25,000 provided from loan for that purpose. In all, 412 miles of road were surveyed on their final alignment.

POSTS AND TELEGRAPHS.

Notwithstanding the unfavourable conditions affecting production, the results of the year's working show a substantial expansion of the Department's activities, and may be regarded as an indication of general financial and industrial stability. The cash revenue for the combined Kenya and Uganda service amounted to £219,481 and the recurrent expenditure to £158,865, representing increases of 4.8 per cent. and 3 per cent., respectively, over the previous year. The total capital expenditure was £24,105. The figures for Kenya separately are: cash revenue, £171,646: recurrent expenditure, £116,037—increases of 4 per cent. and 3 per cent, respectively, over 1927. Capital expenditure in Kenya amounted to £19,671. As the value of free services rendered by and to the Post Office very nearly balance, the Kenya figures show that the Department contributed a net sum of approximately £55,600 to the general revenue of the Colony. It must not be overlooked, however, that capital expenditure is not included in this figure nor is any account taken of interest and depreciation on capital sunk in telegraph and telephone lines and plant or pension commitments.

The value of money-orders issued in Kenya for payment abroad rose from £202,093 to £219,278, an increase of 8 per cent. Remittances to India accounted for £191,122, or 87 per cent. of the above total.

The total number of items of mail matter dealt with rose in Kenya from 10,890,700 to 12,320,600, an increase of 13 per cent. Parcels from abroad rose from 91,167 to 92,032, the value of the goods so imported being approximately £323,000, of which £251,800 was from Great Britain. The cash-on-delivery service, which is limited to a service with great Britain, is rapidly growing in popularity. The parcel post continues to be the main channel for the importation by traders of high-value light goods.

Although the East Coast has not the advantage in regard to regularity which a subsidised shipping service would afford, the Colony has on the whole been well served so far as oversea mails are concerned. English mail arrivals averaged 1.13 per week and departures 1.61, the average time taken in transit each way being approximately 20 days. The Indian and South African services were also of a satisfactory character. As there were no air services affecting East Africa in operation during the year, there were no exchanges of air mails.

The oversea telegraph services were satisfactorily maintained. Although the opening of the commercial short-wave wireless service—known as Kenya-radio—with Great Britain in June provided an alternative route in or out of the country, the great bulk of the Colony's telegraphic correspondence is still carried over the Eastern Telegraph Company's cable system. The length of cable which connects Mombasa with the Company's main system at Zanzibar was interrupted from the 14th April to the 5th May, but no public inconvenience was caused thereby as local alternative routes were available.

The Kenya-radio service above referred to is at present restricted to deferred traffic. The service is still in the experimental stage, but, even with its present limitations, it has more than justified its establishment and is affording a valuable cheap alternative to the cable route for the less urgent classes of telegrams. From the date the service was opened, viz., 15th June, to the end of the year, it dealt with over 22,000 messages totalling over 500,000 words, and by the end of the year it had succeeded in attracting no less than 82 per cent. of all classes of deferred traffic between Kenya and Uganda and Great Britain. Notwithstanding this, the total oversea traffic for all places handled by the Cable Company showed a reduction of only 2.8 per cent. as compared with the previous year.

The Government wireless station at Mombasa was efficiently maintained during the year and the volume of traffic handled by it showed a substantial increase. The station is primarily a ships' coast station, but it also maintains a service with Italian Somaliland through the Colony's former station at Chisimaio. The station was also used for receiving and distributing the wireless British official news bulletins until that service was taken over under licence by the Broadcasting Company in November.

A broadcast service was inaugurated by the British East African Broadcasting Company from a broadcasting station at Nairobi, under a licence from the Kenya Government, on the 15th July. Transmission was at first on a wave-length of 90 metres, but as transmission on this wave-length was not capable of giving efficient reception over all parts of the Colony, as provided for in the licence, simultaneous transmission on two wave-lengths of 400 and 33.5 metres was subsequently introduced with better results.

The support accorded by the public to the service has been disappointing. The number of listeners' licences of all kinds in force at the end of the year only amounted to 165. The fee for a listener's licence is Shs. 50/- per annum, of which Shs. 5/- is retained by the Post Office as public revenue, the balance being handed over to the Company.

Programmes consist mainly of items of local news, the British official news bulletins, local agricultural and weather reports, reproductions of gramophone records, and occasional relays of distant stations.

Public telephone exchanges are established at Nairobi, Mombasa, Nakuru, Eldoret, Kisumu and Ruiru, and development at these centres proceeded normally during the year. A start was made on the reconstruction of the Nairobi exchange on the underground system, but progress was somewhat retarded owing to certain material having arrived damaged and in some degree also owing to shortage of staff. Nevertheless, a considerable number of subscribers were transferred to the new system, particularly in the commercial area. A start was also made on the Kenya section of a telephone trunk-line from Mombasa to Tanga. This line will also give trunk communication between Mombasa and Dar-es-Salaam by means of an existing line between Tanga and Dar-es-Salaam. The work was nearing completion at the close of the year and the service has since been opened. This trunk-line should prove of very great value to shipping and commercial interests generally along the coast.

Although a fairly extensive district scheme was in hand during the year and other schemes are under consideration, it cannot be said that rural telephone development is proceeding as rapidly as might be expected. Conditions in the agricultural industry during the past few years have, however, been rather against farmers undertaking any fresh liabilities. There is, moreover, the permanent factor that it is only in a very limited number of areas that settlement is sufficiently close to enable a rural telephone system to be established at low rates. Very great importance is attached to the development of rural systems on lines which will not throw any direct burden on the State, and in December a committee was appointed to consider present rates and conditions relating to such lines with the object of further encouraging development.

All the principal business and administrative centres of the Colony are linked by telegraph, but the rapid increase of telegraphic traffic during the past few years, without any increase in line facilities, gives rise on occasions to congestion on many of the main routes. Provision has, however, now been made for telephone trunk-lines between Mombasa, Nairobi and Nakuru. Work on these will shortly be commenced and, when completed, the additional facilities provided will be adequate to meet requirements for some years.

The total telegraph and telephone pole mileage of the Colony is 2,149 and the wire mileage 8,655.

POST OFFICE SAVINGS BANK.

The figures for the year show that the Savings Bank continues to grow in popularity. The amount standing to the credit of depositors at the end of the year amounted to £100,403, as compared with £78,007 at the end of 1927—an increase of £22,396, or 28.71 per cent. Deposits exceeded withdrawals by £20,426, as compared with £13,286 during 1927. The interest credited to depositors amounted to £1,971, an increase of £597 on the amount credited during the previous year.

The number of European, Asiatic, and African depositors in the Savings Bank at the end of the year was 1,676, 3,156, and 878, respectively, as compared with 1,523, 2,716, and 779 at the close of the previous year. The average amount standing to the credit of each account in the three classes was £16 15s. 0d., £19 18s. 0d., and £10 3s. 0d., respectively.

The figure relating to the number of African depositors shows that the African population, as a whole, is practically untouched. Those who are depositors are mainly clerks and artisans and servants in European houses. Notwithstanding any efforts that may be made, it is feared that it will be a long time before the advantages of the Savings Bank and the facilities afforded by it make any real appeal to the general run of Africans.

VI.—JUSTICE, POLICE, AND PRISONS.

JUSTICE.

The total number of civil cases filed in the Supreme Court during 1928 was 810, an increase of 165 over the figure for 1927. 515 of these cases were filed in Nairobi, 135 in Mombasa, 76 in Nakuru, and 72 in Eldoret.

The number of Probate and Administration cases filed in 1928 was 213, as compared with 175 in 1927; of Insolvency Causes 110, as compared with 41 in 1927; of Trust Causes 4, as compared with 5 in 1927. There were 44 civil appeals from Subordinate Courts, 162 original criminal cases committed for trial to the Supreme Court, 28 criminal appeals from Subordinate Courts, 824 confirmation cases, and 168 criminal revision cases, giving a total of 2,363 cases filed in the Supreme Court in 1928, as compared with 2,144 in 1927.

The apparently large increase in the number of Insolvency Causes is represented for the most part by a number of petty debtors who, on being arrested in execution of decrees in Magistrates' Courts, elected to file Bankruptcy Petitions. Many of these bankrupts commence business with little or no capital and some in a state of indebtedness.

The Resident Magistrates' Courts at Nairobi and Mombasa dealt with 14,175 cases, as compared with 13,330 in 1927. Of these, 6,284 were civil cases and 7,891 criminal cases.

The total number of civil cases tried in all Courts in Kenya was 12,243, an increase of 1,345 over the figure for 1927.

A total of 29,193 persons were brought before the criminal courts during 1928. Of these, 1,714 were Europeans, 2,489 Asiatics, and 24,990 Africans: 24,695 persons were convicted, including 1,376 Europeans, 1,939 Asiatics, and 21,380 Africans. The number of convictions is 847 fewer than the corresponding figure for 1927. Convictions for petty offences under revenue, municipal, road, and other laws relating to the social economy of the territory account for a decrease of 62 as compared with the figures for such offences in 1927, and convictions under laws relating to the employment of natives (i.e., the Employment of Natives and the Resident Native Labourers Ordinances) account for a decrease of 514 as compared with the corresponding figure for 1927. There is a decrease of 236 convictions for offences against property other than malicious injury to property and theft of stock and produce. There was a decrease of 12 in the number of convictions for malicious injury to property, an increase of 44 in the number of convictions for theft of stock and produce, and the number of persons convicted of offences against the person rose from 938 in 1927 to 1,037 in 1928.

Resident Magistrates were posted at Nairobi and Mombasa throughout the year, and in the latter part of the year Resident Magistrates were also posted at Nakuru, Eldoret, and Kisumu.

POLICE.

The police force is comprised of Africans under European officers and non-commissioned officers, with a small proportion of Asiatic subordinate officers.

It is responsible for policing the settled and urban areas of the Colony, and also provides police for special duty in the Northern Frontier Province and Turkana. African police are also supplied to Native Reserves, where they operate under the direction of officers of the Administration. The administration of justice in Native Reserves is largely assisted by the Native Authorities.

Crime in Kenya in comparison with the criminal statistics of countries further East is neither prevalent nor generally serious.

Despite the steady expansion of settlement and population both in farming districts and in towns which has been in process during the past few years, cognisable crime under the Indian Penal Code, so far as the settled and urban areas are concerned, has shown an appreciable decrease since 1926. The total number of such cases reported in 1928 was 3,231, or 18 per cent. less than the total of 3,942 cases in 1926.

Offences against property constitute the bulk of the Colony's crime. Housebreaking, a class of offence which had formerly been proportionately heavy throughout the Colony, has decreased from 580 cases in 1925 to 334 in 1928. At the same time, investigation has shown increased success.

Intensive systems of night patrolling, surveillance of re-convicted criminals, and the proper development of the Criminal Investigation Department have enabled the police to deal successfully with the habitual criminal and not only to control but to reduce crime.

The application of the Weights and Measures Ordinance, which had been in abeyance in the Colony since 1923, was put into effect from the beginning of the year in Nairobi and later was applied to other areas of the Colony.

A central registry of firearms, to record and tabulate all licences and permits issued in the Colony under the Arms Ordinance, was started during 1928 as a special branch of the Criminal Investigation Department.

PRISONS.

The total number of persons committed to serve sentences of imprisonment or in detention camps during the year 1928 was practically identical with the total of the preceding year, and was at the rate of 1 in every 280 of the total population of the Colony. The number of Europeans committed is on the increase.

There was a reduction of over 26 per cent. in the number of persons committed to serve sentences of imprisonment. A considerable increase took place in the number of committals to detention. The daily average number in prison in 1928 declined by 6 per cent.

The general health of prisoners was less satisfactory than in the previous year.

Considerable progress has been made in the training of long-term African convicts in carpentry, masonry, and building, under European technical instructors, and much useful work was done by African convict artisans on new buildings at various centres.

VII.—PUBLIC WORKS.

The progress of the Colony during the last few years has enabled gradually increasing sums to be provided annually for public works, especially for public buildings, roads, and town water-supplies.

During the year 1928 the expenditure on public works services controlled by the Public Works Department amounted to £811,230, of which the sum of £356,104 was expended on works under construction out of loan funds.

The urgent need for the provision of Government schools has been recognised for many years, and good progress was made during 1928 with the programme which included the erection of substantial school buildings at Nairobi, Nakuru, Eldoret, and Kitale.

Medical work amongst natives in Reserves and townships has in the past been handicapped by the absence of suitable hospitals and accommodation for the hospital staff. Progress was made in overcoming this deficiency, and hospitals at Kakamega, Kitui, and Eldoret were finished during the year.

The building programme also included the construction of a number of houses, to be built on modern lines, to reduce the rough and insanitary structures in out-stations and to do away with the expense of renting houses in towns. During the year, steady progress was maintained in providing suitable accommodation for the European, Asiatic, and native staff of Government. Much of the work was carried out by native apprentices, the opportunity having been taken of making use of the building programme for training natives in skilled trades.

Progress was maintained in the provision of water supplies for those towns which had reached such a stage in their development as to justify piped supplies being laid on or an improvement of an existing supply. The new waterworks for Eldoret, which had been commenced late in 1927, were approaching completion at the end of the year, and additions and improvements were put into operation in connection with the Nakuru and Kisumu supplies. The replacement of the existing gravitation main for the waterworks of Mombasa capable of conveying 600,000 gallons per day, by a cement-lined steel pipe capable of carrying 2,000,000 gallons per day was put in hand towards the end of the year.

An interesting feature of Public Works services was the success attained in boring for water in various parts of the Colony. Most of the drilling was carried out for farmers in European areas and for Local Native Councils in Native Reserves. At the beginning of the year, 4 drills were at work, and 6 were in commission by the end of the year.

During the year, much information was acquired regarding the best methods of kiln-drying certain species of local timber for joinery. The behaviour of the manufactured work during wet and dry seasons indicated that some of the timbers of Kenya, after seasoning, compare favourably with imported kinds.

The demand for authority to divert water from public streams for farming purposes and other uses showed a considerable increase in conformity with the increase in farming activity. The number of water permits issued during the year was 71 per cent. in excess of the number issued during the year 1927.

Little progress was made in the development of the water-power resources of the Colony during the year, construction being confined to a number of small projects in connection with farming operations. There were 57 permits issued during the year for the development in the aggregate of 1,115 horse-power and the utilization therefor of 307 cubic feet of water per second.

VIII.—PUBLIC HEALTH.

In 1928, as previously in 1926, the most outstanding feature of the year with regard to the incidence of communicable disease was the occurrence of a number of severe outbreaks of malaria in certain parts of the highlands of the Colony. In all, six districts were affected, four being Native Reserves and two being European farming areas or "settled districts." Of these areas, the two settled districts had been affected to some extent by the epidemic of 1926, while the four Native Reserves, so far as is known, had not previously suffered from malaria in epidemic form. The distribution of epidemic malaria in 1928 was therefore somewhat different from that which pertained in 1926. In 1926 the most serious incidence occurred in the central highlands. In 1928 the central highlands were not seriously affected and the incidence of epidemic malaria was confined to the north-western highlands; that is, to the more or less continuous stretch of high land which lies to the north-west of the Great Rift Valley and between the Valley and the basin of the Victoria Nyanza. The position for a time was undoubtedly serious. It is a matter for some satisfaction, however, that following on the recurrence of epidemic malaria in 1928 there has been an increased appreciation of the facts that under present conditions malaria, even in non-endemic areas, may from time to time become of serious importance; that in order to combat malaria general as well as particular measures must be adopted; and that time, energy, and funds must be devoted to the task of securing, by means of education and development, as widespread an amelioration of sanitary conditions throughout the Colony as may be possible.

Apart from the outbreaks of malaria referred to above, no unusual incidence of communicable disease occurred during 1928, and as the outbreaks in question, though serious, were limited to a comparatively small area of the Colony it cannot therefore be said that the general health of the population of the Colony as a whole was less satisfactory in 1928 than in previous years, since, in the absence of accurate vital statistics, it is impossible to measure any small variations in the general standard of health which may be occurring. An important piece of work was, however, carried out during the year, which at a later date will allow of more accurate estimates being made of the results of the medical, sanitary, agricultural, and social developments which are now taking place in the Native Reserves. This work was undertaken more particularly in connection with the ankylostomiasis campaign which was carried out in the Digo Reserve on the coast, where large numbers of the natives who presented themselves for treatment were submitted to a full and careful physical examination and the results recorded. The findings confirm the opinion which has been expressed in many previous reports to the effect that the standard of health which prevails among African natives is generally at a low level and that with few exceptions the physique and capacity of the population are affected as the result of infection with those endemic preventable diseases which generally prevail where the standard of culture of the people and the cultivation of the land is still primitive.

In the Reserves other than Digo the collection of information regarding the physical and pathological condition of the inhabitants has also been pursued and, though the amassing of information from which statistical findings can be deduced must be a long process, the results to date indicate that in these Reserves also the general health is far from satisfactory. The diseases which predominate vary in different localities, but the general picture is that of a population whose efficiency is impaired.

Of the general observations which have been made, perhaps the most outstanding have reference to the incidence of infection with intestinal worms and the effect of such infections on the population. Hitherto, among the diseases resulting from infection with intestinal worms, hookworm disease alone has received much attention, but during the past year evidence has been accumulating which indicates that the disability which results from infection with tapeworms and roundworms is by no means negligible, and that in countries such as Kenya, where these infections are common, the diseases which result play a much larger part in lowering the standard of the public health than has hitherto been realised.

In the Digo Reserve on the coast, where a treatment campaign was carried out throughout the year against hookworm, the whole population, numbering over 52,000 persons, was treated as circumstances required, and by the end of the year each house had been voluntarily provided by its owner with a properly-constructed pit-latrine. In the Teita Reserve in the Ukamba Province a sanitation campaign was also carried out, though in this case the infection with which it was hoped so to deal was roundworm or ascaris. In other Reserves anti-helminthic work was chiefly limited to preliminary propaganda and treatment, but it is not improbable that within a few years the custom of using latrines will have become widely spread throughout at least the more developed native districts.

During the year, the incidence of plague was not notable and was chiefly limited to a small outbreak in Nairobi and sporadic outbreaks in the endemic areas of the Nyanza Province. In the settled areas the incidence was very low. Four sporadic cases occurred in Mombasa. Throughout the year, five cases of smallpox occurred but in no case could the source of infection be traced.

Of the acute fevers, pneumonia as usual caused much sickness, and in the towns especially and among the poorer section of the urban native population this disease was responsible for a high mortality.

In the Native Reserves, yaws, in spite of the large number of cases which have been treated during recent years, continues to cause much disability, and it is only in the Kikuyu District of Fort Hall that there would yet appear to have been a large reduction in the incidence. The total number of cases treated during the year was 85,617.

In certain parts of the Nyanza Province the incidence of syphilis presents a problem of some magnitude, and during the year increased efforts have been made in these areas to induce patients to attend regularly for treatment. These efforts have met with some degree of success, but the number of patients so attending is still small in proportion to the numbers who do not return after they have been relieved of their more distressing symptoms, and much further propaganda and more widespread facilities for treatment will be required before the position becomes reasonably satisfactory.

The work of the Medical Department during the year was carried out on normal lines except that in certain Native Reserves particular attention was devoted to helminthic diseases and the treatment of syphilis, while in the towns particular attention was given to the control of malaria. The investigation of mosquito conditions received special attention from the Entomologist throughout the year.

IX.—EDUCATION.

Government schools have been established for the provision of education to European, Indian, Arab, and African children. State institutions are supplemented by private and missionary enterprise; the latter is largely subsidized from Government funds. There are four Central Advisory Committees which deal with the education of each race, and there are four School Area Committees in connection with European education, four for Indian education, and twelve for African education. All these committees did valuable work during the year.

The Administration was strengthened during the year by the appointment of an additional Inspector of Schools, chiefly, though not exclusively, concerned with Indian education.

European Education.—There are Government schools at Mombasa, Nairobi, Nakuru, Thika, Nanyuki, Eldoret, Kitale, and in other parts of the Colony. The number of Government European schools increased from twelve to fifteen. The number of pupils in attendance at these schools increased from 683 to 740. In addition, there are thirteen aided and private schools accommodating more than 300 children.

At Nairobi the numbers in the Government school are rapidly approaching 400. The Government schools at Eldoret and Nakuru, as well as the aided Loreto Convent School, have about 100 children each. Many of the rural schools, however, are very small, some having as few as from 8 to 14 children.

All schools, with one exception, were visited by departmental officers during the course of the year. The general standard of work shows a marked improvement.

Domestic science, the teaching of which was formerly confined to the European school at Eldoret, was commenced at the Nairobi school, where a block was equipped and a specialist teacher engaged. Commercial training was also introduced during the year. Oversea examining bodies are generously co-operating in the development of departmental tests in these subjects, so that certain parts of the tests receive the benefit of their standardization and reputation. When the Senior Secondary Boys' School at Kabete, detailed plans for which are now ready, is completed, it will be possible to extend the local character of education in agriculture and manual work.

Financial provision has been made for starting continuation evening classes for boys and girls who have left school and who desire to proceed further with their studies.

Indian Education.—There are 44 schools of varying sizes devoted to the education of Indian children. Of these, eight are Government schools and sixteen are subsidized by the Government.

A survey has been made of Indian schools in relation to the population. The result shows that, apart from Nairobi and Mombasa, where it is difficult to arrive at a trustworthy estimate, the large majority of Indian boys and of girls up to twelve years of age are in school. This is noteworthy in that the Indian population outside the large towns is widely scattered throughout the country.

No Government school has fewer than 32 children on the roll. In the 16 aided schools the numbers vary from 155 to 12, five having a roll of less than 25.

The interest of the Indian community in female education is increasing, but public opinion as yet compels few parents to keep their girls at school after the age of twelve years.

The need for boarding accommodation is being met in part by the construction of a hostel for 40 boys which is to be built in connection with the Government Senior Secondary School at Nairobi, and space is being arranged for additional hostels if this experiment justifies it.

Almost all the Indian schools in the Colony were inspected during the year. A slow but general improvement is apparent in the standard of work. Examination results are satisfactory and show an improvement over those of 1927.

Arab and African Education.—There were steady developments in Arab and African education during the year. The number of Government African schools increased from 27 to 28 and the number of pupils in those schools from 1,776 to 2,007.

Substantial increases are also recorded in the case of private and aided schools. The number of Central Schools, that is, schools with a European in charge, increased from 67 to 77. The number of village schools rose from 1,567 to 2,459, the number of pupils in attendance rising from 71,897 in 1927 to 83,549 in 1928.

The outstanding feature in connection with technical education was the development of the "gang" system at the Native Industrial Training Depot at Kabete. At the end of the year there were 505 apprentices on the roll of the school working at various trades. Of this number, 145 were working in gangs on public works, 70 on departmental buildings in various parts of the country, and 290 were undergoing training at the Depot.

Steady development took place at the other Government technical schools situated at Machakos, Waa, Kericho, Kapsabet, Narok, and Kajiado, though the drought had a depressing effect on the ghee industry carried on at the Masai schools. Considerable financial support was received for many schools from Local Native Council Funds.

Some of the mission technical schools suffered through shortage of technical staff, but on the whole progress was apparent.

The Jeanes School seems to be growing in popularity and a better class of teacher came forward for training in this valuable work. Neighbouring territories seem to be interested in its activities, and enquiries were made during the year with a view to the admission of pupils. It is expected that some reservation of accommodation will be made for Tanganyika and Uganda during 1929.

The demand for education among the police units throughout the country grew steadily and, as far as funds permitted, extra teachers were supplied. Reports from these schools indicate that increasing numbers are qualifying for the extra allowances which are given to those who attain a certain educational proficiency.

School Buildings.—Building operations have been proceeding throughout the year in various centres to cope with the ever-increasing demand for accommodation by all races. In Nairobi progress was made with the elementary European school at Parklands and the fine Indian secondary school was almost complete by the end of the year. New buildings for European children were started at Eldoret and Kitale and a handsome boarding and classroom block added to the European school at Nakuru. In African education, additions were made to school buildings at the Native Industrial Training Depot, Jeanes School, Machakos, Narok, Kajiado, Waa, Kapsabet, and Kericho. Many of these extensions were carried out by "gangs" from the Native Industrial Training Depot in charge of European artizans, and in this way building costs were reduced very considerably.

X.—LANDS AND SURVEY.

The increase in closer subdivision of farms and the improvement in both road and railway communications produced a new phase in land settlement. The questions of communications and land settlement form an important part of the general administration of the settled areas of the Colony and are closely related to the need for increased medical and educational facilities. Steps were therefore taken to co-ordinate these allied factors at the headquarters of Government and to establish a greater measure of direct local control.

The local administration became more intimately associated with land administration by the transfer to each district of local land records and registers and by the appointment of each administrative officer as an Assistant Land Officer. Land Assistants were stationed at convenient centres to advise the District Officers on matters of detail. At headquarters the unification was attained by combining the offices of the Commissioner for Local Government and the Commissioner of Lands and by entrusting to that Office the central administration of land matters. The Survey and Registration Department became a separate Government Department under the Surveyor-General.

The Kenya Advisory Committee, which had been appointed to advise on closer settlement and cognate matters, produced a closer Settlement Scheme, to which reference is made below. In October, the Committee, which had come to be consulted with increasing frequency on matters affecting the general alienation of land, recommended that a small Advisory Land Board be appointed to advise the Governor on the following matters :—

(*a*) Proposals for the alienation of land under ordinary conditions ;

(*b*) Schemes for the development of unopened areas, e.g., water-boring schemes, proposals for offering land for tender, etc. ;

(*c*) Closer settlement proposals and all matters in connection therewith ;

(*d*) Applications for direct grants of land, and for adjustment of farm boundaries ;

(*e*) Alleviation of development or other conditions in leases of farms.

This recommendation was approved by Government and a Board was appointed in November consisting of the Commissioner for Local Government, Lands and Settlement (Chairman), the Director of Agriculture, and two unofficial members.

Government policy of promoting settlement in those parts of the Colony which are open for development by non-native races has been pursued during the year. The Closer Settlement Scheme proposed by the Kenya Advisory Committee is intended to apply to both local and oversea applicants and in its initial stages comprises some 72,000 acres of land. In broad outline the Scheme provides for :—

(*a*) Small holdings of 200–250 acres for local and oversea applicants of small means. These are sited principally near Kitale in the Trans-Nzoia district where 28,000 acres are earmarked.

(*b*) Mixed farms of 750 to 1,500 acres for local applicants with some means. The lands at present earmarked for these farms are in the Thomson's Falls, Ol Bolossat and Ndaragua area on the slopes of the Aberdare Range.

(*c*) Land grants to retiring Civil Servants.

The third section of the scheme is intended to apply to officers nearing retirement from the service of any of the East African group of Dependencies, and of the Kenya and Uganda Railways and Harbours Administration.

The Scheme was approved by the Legislative Council on 20th June, 1928. As the first portion of the scheme is dependent on the establishment of a Land Bank, the introduction of this portion awaits the enactment of the Land Bank Bill and the final approval of the Secretary of State to the complete proposals.

During the months of June and July applications were publicly invited for direct grants of areas of Crown land for the cultivation of sisal. Twenty-five applications were received in respect of land situated near Voi, in the Fort Hall District, on the Yatta Plateau, and the Athi Plains. Direct grants were approved to six separate groups of applicants on titles restricted to the cultivation of fibre-producing plants, in respect of an area of about 56,000 acres in the aggregate, subject to the payment of a stand premium at rates ranging from Shs. 5/- to Shs. 30/- per acre. By the end of the year two only of the applicants had accepted the terms offered, viz., The B.E.A. Corporation, 5,000 acres at Voi at Shs. 5/- per acre ; and Messrs. Langenberg & Schwentafsky, 5,000 acres at Voi at Shs. 5/- per acre.

Apart from the sisal grants noted above, only four grants of agricultural land were made in 1928, two at the Coast of 5,000 acres each and two in connection with the Laikipia Land Extension Scheme, comprising 6,000 acres. Two exchanges of land were also approved by which 422 acres additional were alienated.

Auction sales of township plots were advertised to take place in Nairobi, Mombasa, Elburgon, and Njoro.

High prices were realised for Nairobi and Mombasa business plots.

The Elburgon sale was abortive on account of local objections to the advertised conditions. The sale of Mombasa residential plots, advertised for European purchase and occupation only, was postponed by order of the Supreme Court, pending further legal action on the application of an Indian.

Several direct grants, on payment of purchase price, and exchanges of small areas in the townships of Mombasa, Nairobi, and Eldoret were approved, on the recommendation of the Mombasa and Nairobi Town Planning Authorities and the Eldoret Township Committee, with a view to facilitating the completion of the town planning schemes in the respective townships.

Concessions for a term of three years were granted, as a result of public invitation to tender, giving the right, subject to the payment of royalty, to collect bêche-de-mer in three areas embracing the whole of the coast-line.

Tenders by way of royalty were invited for the collection of wild fibre (*Sansiviera*) growing on Crown land. Four tenders were accepted covering some 48,000 acres of land chiefly in the Voi District.

Coast Land Registration.—The recorder of titles during 1928 dealt with about 100 cases in his Court, and 131 Certificates were taken up by plot holders. There are still some 2,400 completed titles awaiting delivery against payment of the charges due.

There are 4,242 claims pending in respect of land in Lamu, Malindi, Kilifi, Takaungu, and Vanga, survey and adjudication. The present demand for titles hardly warrants the cost of survey.

The total revenue for fees in connection with Coast Titles was £1,284.

Registration and Stamping of Documents.—No change has been made during the year in the incidence of Registration Fees and Stamp Duties. The over-embossing system for the cancellation of stamps introduced in July, 1927, has worked admirably during the year and has undoubtedly prevented a great deal of leakage of revenue due to fraud.

Statistics of Areas.—The following analysis of various areas in the Colony and Protectorate reflects the position as at the 31st December, 1928 :—

	Sq. Miles.	Sq. Miles.	Sq. Miles.
Total area of Colony and Protectorate			224,960
1. Native Reserves		48,297	
2. Forest Reserves		3,909	
(In addition there are 105 sq. miles of Forest Reserve within the boundaries of Native Reserves, and also large forest areas not yet defined.)			
3. Surveyed into farms		12,505	
Alienated	10,472		
(In addition there are included in Native Reserves 73 sq. miles of alienated land and 8 sq. miles of land surveyed for alienation.)			
Township Reserves	284		
Government Reserves... ...	261		
Available for alienation ...	1,488		
	12,505		
4. Northern Frontier Province		95,480	
5. Turkana		8,867	
6. Extension from Uganda (Northern Turkana).		15,859	
7. Unclassified Areas (including 1,834 sq. miles of water).		40,043	
		224,960	224,960

Certain discrepancies which are not due to actual changes during the year occur between these figures and those prepared in 1927. These are accounted for by the discovery of minor errors in the classification of various pieces of land.

In particular, the final figure for alienated land is less than that given in the 1927 report by 29 square miles. This is due chiefly to the surrender of a Fibre Concession at Masongoleni in respect of 200 square miles in exchange for a new grant under ordinary conditions of a much smaller area comprising a portion of the same land together with other land. This exchange was sanctioned in 1919 but did not take documentary form until 1928.

Apart from township plots, the land actually granted during the year 1928 amounts to 26,728 acres or 41.76 square miles.

The revenue derived from sales and rents of land totalled £109,367 in 1928, as compared with £95,423 in the previous year.

The Railway Administration collected during 1928 a sum of £10,952 on account of land sales and £8,681 on account of rents. These amounts are not included in the foregoing figures.

Survey.—The Survey section of the Land Department was re-organised in January, 1928, as a separate department under the style of the Survey and Registration Department, and the designation of the officer in charge was changed from that of Director of Land Surveys to that of Surveyor-General.

The functions of the new Department remained as before and included in 1928 the control of all surveys affecting title to land, the production and maintenance of maps showing landed properties, and the registration of land titles. No topographical or geological survey section was maintained during the year.

Six firms of surveyors licensed under the Land Surveyors Ordinance were in practice during 1928.

XI.—LABOUR.

The supply of native labour throughout the year was generally equal to the demand. Reports, however, indicate that in the Trans Nzoia, where crops were particularly good, there was a certain shortage. In other districts crops were partially ruined by drought and locusts, and labour requirements for harvest were correspondingly below the normal. Had this not been the case it is possible that the supp'y would not have been in all cases adequate. Tea and coffee estates demand a large number of labourers to every hundred acres and though this number steadily decreases with the increasing use of machinery and the adoption of improved methods of farm management the total number of natives employed by tea and coffee planters increases as additional areas are brought under cultivation. This is equally true of those employed on sisal estates.

The average number of native labourers in employment at any one time of the year was 151,720. Of these, approximately 114,000 are employed in agriculture, 14,000 are employed on railway maintenance and construction, 7,500 on public works, 6,600 are engaged as domestic servants, while the balance are included under miscellaneous. Numbers of women and children find employment regularly in harvesting maize and coffee. There are also 33,000 registered resident native labourers on farms, who with their families number 111,000 persons.

The average rate of wages for unskilled labour, including the value of food supplied, is Shs. 21/- per month.

Opportunities for natives to learn trades are gradually increasing and improving, not only at Government institutions such as the Railway Workshops, the Industrial Training Centre, Kabete, the Waa School, the Machakos Industrial School, and the Departments of Public Works and Agriculture, but also at certain mission stations, where industrial training is given for the pupils as part of the regular curriculum.

The general health of native labourers may be confidently said to be steadily improving. This improvement is due in part to the progressive realisation by employers of the importance of an adequate and varied diet and of sanitary surroundings, and partly to the regular system of Government inspection and exhortation which is maintained by the Principal Labour Inspector and his officers. A considerable amount of literature dealing with the care of natives was distributed to employers during the year, including the following pamphlets :—

(1) *Straight Talks on Labour* (Dr. Fisher).

(2) *Simple Remedies for Sick Natives* (Dr. Fisher).

(3) *The Prevention of Ulcers among Labourers on Estates* (Dr. Fisher).

(4) *The Housing of African Natives on Farms and Estates* (Health Pamphlet No. 3, Medical Dept.).

(5) *The Prevention of Mosquitoes-Malaria* (Health Pamphlet No. 4, Medical Dept.).

(6) *Malaria and Development* (Health Pamphlet No. 5, Medical Dept.).

(7) *Bora Afia* (Dr. Gilks). A simple health pamphlet in Swahili.

Government Rest Camps (permanent buildings) are maintained for natives proceeding to and from employment at Nairobi, Kisumu, Yala, Kendu Bay, and Sagana. Each camp is in charge of a native caretaker under the supervision of the District Officer. Lodging, cooking utensils, and water are provided at these camps free of charge. At Nairobi and Kisumu food and fuel are sold at cost price ; some 25,000 natives used these camps during the year.

No legislation affecting the employment of natives was enacted during the year.

Relations between employers and employed continued to be generally excellent.

XII.—LEGISLATION.

Thirty-four Ordinances were passed during the year 1928, of which the following are the more important :—

Kerosene Oil (*Repayment of Duty*).—Ordinance No. 1 provides for the repayment to persons using imported kerosene oil to supply power for farm tractors employed in agriculture of an amount equivalent to the Customs duty paid upon such oil. The Ordinance goes on to provide the procedure under which claims for repayment may be made and the method by which such claims are to be checked.

Births and Deaths Registration.—Ordinance No. 2 repeals and re-enacts the law in regard to the notification and registration of births and deaths and other matters incidental thereto. Registration of the births of Europeans, Americans or Asiatics is made compulsory and power is taken to declare the registration of births of all persons in the Colony of any particular race, class, or group, or of all or some of the inhabitants of any area, to be compulsory. The registration of the deaths of all persons dying within a township and also the registration of the deaths of all Europeans, Americans, and Asiatics dying elsewhere within the Colony is made compulsory.

Extradition.—Ordinance No. 9 provides that a Magistrate of the first class may exercise the powers under the Extradition Acts of 1870-1873, which are exercised in England by Police Magistrates and Justices of the Peace.

Alteration of Time.—Ordinance No. 11 declares time for the Colony and Protectorate to be three hours fast on Greenwich mean time.

Criminal Law.—Ordinance No. 15 makes it an offence punishable with fourteen years' imprisonment and a fine to use force of an indecent nature to a woman under sixteen years of age notwithstanding that such woman consents to such force.

Local Government (*Municipalities*).—Ordinance No. 19 replaces the law relating to municipal government and provides for matters incidental thereto.

Local Government (*Rating*).—Ordinance No. 20 enables local authorities to prepare a valuation roll and to impose and collect rates.

Local Government (*District Councils*).—Ordinance No. 21 provides for local government in rural areas and for the establishment of District Councils and other matters incidental thereto.

Trout Protection.—Ordinance No. 24 provides for the protection of trout and the regulation of trout-fishing in the Colony.

Traffic.—Ordinance No. 26. provides for the control of traffic on roads and for the licensing and taxation of vehicles used thereon.

Public Health (Division of Lands).—Ordinance No. 32 repeals and re-enacts the law relating to the regulation and control of divisions of land and rectifies some difficulties which had been experienced. The provisions of the Ordinance are made applicable to the whole Colony outside municipalities or townships instead of being limited to land within certain distances of towns and railway stations.

Harbours Regulation.—Ordinance No. 33 provides for the regulation, control and management of the harbours in the Colony and for matters incidental thereto. By the Kenya and Uganda (Transport) Order in Council, 1925, the harbours of the Colony were placed under the control of the High Commissioner for Transport. It was therefore considered desirable to define the responsibilities and powers of the High Commissioner. The Ordinance, which is modelled on the lines of the Kenya and Uganda Railway Ordinance, 1927, replaces the old law relating to the administration and management of ports in the Colony.

Subordinate Courts (Separation and Maintenance).—Ordinance No. 34 confers jurisdiction on certain Magistrates in reference to married women. It enables maintenance orders to be made and enforced in the Colony.

Departmental Offences.—Ordinance No. 35 provides for the punishment of departmental offences. The Ordinance is designed to promote the efficiency of the public service by enabling disciplinary fines of limited amounts to be imposed upon subordinate officers of Government by such Heads of Departments and other officers as the Governor may from time to time determine.

Ordinances Nos. 19, 20, 21, *and* 32 give effect to certain recommendations of the Local Government Commission Report, 1927.

The Defence Force Ordinance, which was passed in the Legislative Council on the 14th May, 1927, became law on the 2nd July, 1928, as Ordinance No. 12 of 1928. By the end of the year, nearly 5,000 persons had voluntarily enrolled themselves, the number of enrolments being estimated at about 90 per cent. of the total number of persons liable to be enrolled as calculated from census returns.

PREFATORY NOTE.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian Line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East Longitude to 41° East. The land area is 219,731 square miles and the water area 5,229 square miles, making a total area of 224,960 square miles. The water area includes the larger portion of Lake Rudolf and the eastern waters of the Victoria Nyanza, including the Kavirondo Gulf.

The official time used is the zone time two-and-a-half hours fast on Greenwich.

The physiography of Kenya may be broadly conceived as consisting of :—

(1) A low-lying region, less than 3,000 feet in height and comprising about three-fifths of the total area of the Colony. This region extends from the sea to approximately the 38th degree of East Longitude. Apart from the Coast strip, which is essentially tropical, it is poorly watered and mostly covered with thorn scrub.

(2) A plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet and extending in a westerly direction for about 200 miles to the 35th degree of East Longitude. It continues in the south across the boundary of Tanganyika Territory and in the north to about the 2nd degree of North Latitude. This plateau is characterised by extensive open plains such as those of the Athi River and the Uasin Gishu Plateau.

(3) The great Rift Valley formed by the subsidence of a portion of the elevated plateau and containing Lake Rudolf and numerous smaller lakes, some of fresh water and others impregnated with soda, and many extinct volcanoes. It extends in a direction generally north and south, the eastern wall formed by the Laikipia Escarpment, Aberdare Range, and Kikuyu Escarpment and the western wall by the Mau Escarpment which is known as the Elgeyo Escarpment in the north.

(4) The district near the Victoria Nyanza, the high plateau making a somewhat rapid descent to the shores of the lake where, at an altitude of 3,726 feet above sea-level, a tropical climate is again found. The floor of the Nyanza basin is normally fairly level, but it is intersected by numerous broad and shallow valleys.

From the Mau Escarpment northwards the Nzoia, Yala, Kuja, and Amala Rivers flow into the Victoria Nyanza. Northwards the River Turkwel from Mount Elgon and the Kerio from the Elgeyo Escarpment flow into or towards Lake Rudolf. The southern and eastern slopes of Mount Kenya and the eastern side of the Aberdare Range give rise to the Tana River, which enters the Indian Ocean near Lamu. From the Aberdares also flows the Athi River which, with its principal tributary, the Tsavo, from Kilimanjaro, enters the Ocean as the Sabaki River near Malindi. The Northern Uaso Nyiro traverses Laikipia and flows in an easterly direction north of Mount Kenya to the Lorian Swamp. The Southern Uaso Nyiro from the Mau Escarpment passes southward along the bed of the Rift Valley into Lake Natron in Tanganyika Territory.

Mount Kenya, after which the Colony is named, is 17,040 feet in height and is capped by perpetual snow and ice. Mount Elgon, also an extinct volcano, is 14,140 feet in height and is slightly below the level of perpetual snow. The Aberdare Range contains Settima (13,000 feet) and Mount Kinangop (12,816 feet). The Mau Escarpment attains a height of over 10,000 feet.

The slopes of Kenya and Elgon and of the mountain ranges on either side of the Rift Valley are clothed in forests. The less settled areas of the Colony abound in game and many of the upper waters of mountain streams have been stocked with trout.

There are no marked seasonal changes such as winter and summer. At high altitudes the diurnal variation of temperature is high, being as much as 30° F. in some localities, but the mean temperature varies little from month to month.

The range of temperature between different parts of Kenya is very wide. At Lamu on the coast the mean shade temperature is 80° F. At Mombasa it is 77° F. In Kisumu, on the Victoria Nyanza, it is 72.5° F. In the Rift Valley and highland areas the mean temperature is normally between 58° F. and 65° F.

The rainfall is generally well distributed. Precipitation varies considerably with the physical configuration of the Colony. The average known annual rainfall, taken over a number of years, ranges from 19 inches at Athi River, on the plains some 20 miles south-east of Nairobi, to 86 inches at Songhor in the Nandi Hills east of the Victoria Nyanza. The low-lying districts on the Northern Frontier are dry. The average rainfall occurring in the principal agricultural and pastoral districts is given as approximately 35 to 40 inches, but it is higher west of the Mau Escarpment. The heaviest rainfall is normally experienced from March to June and October to December. Hail is of comparatively rare occurrence and is confined to restricted belts. Frost does not occur below 8,000 feet except in some damp hollows.

HISTORY.

The history of the territory now known as Kenya may be divided into four sections. The first deals exclusively with the Coast; the second with the exploration of the hinterland; the third with the partition of Africa among European Powers and the administration of the Imperial British East Africa Company; and the fourth with the administration of the country under the Imperial Government.

(1) It seems probable that Arabs and Persians traded with the East African Coast from the remotest antiquity. The "Periplus of the Erithrean Sea," compiled towards the end of the first century, A.D., gives the first account of Zanzibar and the coast of "Azania." In 1331, Ibn Batuta, the Arab explorer, visited Mombasa and found Arabs in undisputed possession of the coast lands. In 1498, Vasco de Gama, with the first Portuguese expedition to round the Cape of Good Hope, sailed along the East African Coast. The Coast towns were all under Arab rule and are described as prosperous trading cities. Mombasa, reached on the 7th April, 1498, is referred to as a "great city of trade, with many ships." Vasco de Gama's stay in Mombasa was cut short by an incident which led him, probably without cause, to suspect treachery and he sailed north to Malindi.

Of Malindi he writes: "The city was a great one, of noble buildings, and surrounded by walls, and, placed immediately on the shore, it made an imposing appearance." Cordial relations were established and maintained between the inhabitants of Malindi and the Portuguese, who were able to refit their ships for the voyage to India.

On Vasco da Gama's return to Portugal, a fleet under Cabral was sent to annex India. Cabral looted Mombasa in 1500. In 1505, Francisco Almeyda attacked and destroyed the town and in 1508 Mombasa was formally annexed to Portugal. Twenty years later, as a result of trouble with the inhabitants, the Portuguese under Don Zuna da Cunha captured the city after a siege of four months. In 1586, the city having been rebuilt, a Turkish fleet under Ali Bey visited Mombasa, which placed itself under his protection. The Portuguese retaliated by again burning the town. It was rebuilt only to be burned again by an African tribe known as the Zimba. The Zimba were expelled by the Portuguese, who then, in 1594, built Fort Jesus.

In 1630, the inhabitants of Mombasa attacked the fort. The Portuguese capitulated and were murdered. An expedition from India landed and recaptured the fort after a siege of three months. The fort was rebuilt by Xerxas de Cabreira in 1635.

About 1660 the Mazrui, who were the leading Arab clan on the East Coast, entered into an alliance with the Imam of Oman on the Persian Gulf. After a long struggle the Arabs expelled the Portuguese from Mombasa in 1698. Expeditions organised from Lisbon to recapture Mombasa during the following decade were unavailing. In 1728, the Portuguese were again in temporary possession, but in November, 1729, they were finally driven from Mombasa, which came once more under the suzerainty of the Imam of Oman. A Portuguese force sent from India to recapture the town was lost at sea.

Fifteen years later, Mombasa, under a Mazrui named Ali bin Osman, declared itself independent of Muscat. In 1753, the Mombasa Arabs attempted to capture Zanzibar. The attempt failed, but Pemba remained under the influence of Mombasa until 1822, when the Mazrui were completely defeated by the Oman Governor of Zanzibar. In the same year, Seyyid Said, who had been declared Imam in 1806, seized Pate and Pemba and threatened Mombasa.

British intervention on the East Coast started in December, 1823, when H.M.S. *Barracouta*, commanded by Captain Vidal, arrived in Mombasa during the course of a survey expedition to the East African coast. The inhabitants "begged Captain Vidal to authorize them to hoist the English flag and to place the town and territory in the hands of His Britannic Majesty." This request was referred to Captain Owen of H.M.S. *Leven*, who informed them "that provided they would assent to the abolition of the slave trade he would transmit their proposal to his Government for their decision, and that he should have no objection to hold the place in the meantime.''

Lieutenant Reitz, third Lieutenant of the *Leven*, was appointed Commandant and left in charge of the new Protectorate on the 8th February, 1824. He died of fever after a visit to the Pangani River on the 29th May, 1824, in his twenty-second year. The Protectorate over Mombasa was not confirmed by the British Government. It appears to have lasted about two years, but there is no record of any formal termination.

In 1829, Seyyid Said attacked Mombasa with the consent of the Indian Government. He placed a garrison of 300 Baluchis in the fort but, on his departure to quell a rebellion in Muscat, these were starved into submission by the Mazrui. In 1832, Seyyid Said transferred his Court from Oman to Zanzibar and, with the subjugation of the Mazrui in 1837 and of the Islands of Siu and Patta in 1843, a period of great prosperity ensued along the East African Coast.

Seyyid Said died in 1856. By his will he left the lordship of Oman to his eldest surviving son, Seyyid Thwaini. Zanzibar he left to his next son, Seyyid Majid. A dispute arose and the rivals agreed to submit the question of succession to the arbitration of Lord Canning, then Governor-General of India. Lord Canning awarded Oman to Seyyid Thwaini and Zanzibar and the mainland dominions to Seyyid Majid. Seyyid Majid died in 1870. He was succeeded by his brother Seyyid Barghash, whose reign is memorable as witnessing the steady growth of British influence under the care of Sir John Kirk, and the partition of Africa between European Powers.

(2) The history of European endeavour in the hinterland of East Africa centres round the sources of the Nile. Arab explorers had traversed Eastern Africa for many centuries before any information was forthcoming which was accepted as reliable. Their accounts were co-ordinated by early geographers, notably Ptolemy in A.D. 150 and Sanson d'Abbeville in 1635, but it was not until the 19th century that more accurate knowledge was obtained. The Portuguese, during their occupation of the Coast strip, made little effort to explore the hinterland. It was not, indeed, until 1848 that Kilimanjaro was seen by Rebmann. Krapf first saw the snows of Mount Kenya in 1849. The work of these two dauntless missionaries opens the chapter of discovery inland from the East Coast of Africa. It was not until after the discovery of the sources of the Nile that any further progress was made from the East.

The fact that the Nile rises in flood at the driest season of the year presented a problem which had aroused the interest of geographers in all ages. Attempts to solve this problem by a journey up the Nile Valley had failed. The 19th century witnessed determined attempts to reach the head-waters of the Nile from other directions. Sir Richard Burton, in 1854, endeavoured to reach the interior from Berbera, in Somaliland, but his caravan was massacred. Three years later he tried again, this time from the East Coast opposite Zanzibar. With Speke for his companion he reached Lake Tanganyika. On the return journey, at Kazeh, near Tabora, Speke left Burton and, travelling northwards, first saw the waters of the Victoria Nyanza on the 30th July, 1858. His claim that this lake gave rise to the Nile was disputed, and Speke organised another expedition which left Zanzibar in October, 1860. This expedition, led by Speke and Grant, followed the former route to Kazeh and passed round the western side of the Lake. Speke reached the capital of Mtesa, King of Uganda, on the 19th February, 1862. On the 21st January, 1863, Speke reached the Nile and discovered its outlet from the Lake at the Ripon Falls. Later in the same year, Samuel Baker discovered the Albert Nyanza and the mystery of the origin of the Nile was solved.

Certain geographical questions still, however, awaited settlement and twelve more years elapsed before further information became available. Henry M. Stanley placed a boat on the Victoria Nyanza and circumnavigated the Lake in 1875. He was greatly impressed with the possibilities offered by Uganda as a field for missionary enterprise. His appeals for support reached England at a time when a keen interest was being taken in African work, particularly in connection with the slave trade, and they met with a ready response. The first English mission was sent to Uganda in 1876. Shortly afterwards there arrived two Catholic missionaries belonging to the Order of the White Fathers of Algeria. Mohammedan proselytism was already in progress. The field was set for a series of religious quarrels which dominated the political situation in Uganda for fifteen years.

It was the birth of European interest in Uganda that led to the further exploration of the East African hinterland now known as Kenya. Apart from journeys up the Tana Valley by Wakefield in 1865, and New in 1866, and from visits to Kilimanjaro by Von der Decken in 1863, and New in 1871, little had been added to the knowledge gained by Krapf and Rebmann before 1850. In 1862, Dr. G. A. Fischer made the first attempt to discover a route to Uganda more direct than that used by Speke and Stanley. He marched to Kilimanjaro from Pangani and succeeded in crossing Masailand to Lake Naivasha, which he reached on the 11th May, 1883, but he was prevented by ill-health and the Masai from continuing his journey.

The distinction of being the first European to reach the Victoria Nyanza from the east rests with Joseph Thomson, who started from Mombasa in March, 1883, and in spite of many difficulties succeeded in reaching the Lake forty-five miles east of the Ripon Falls. Ill-health prevented him from continuing his journey to the Nile, but the practicability of the route was proved and many important additions had been made to the knowledge of East African geography. In 1888, Lake Rudolf was discovered by Count Teleki von Szek, whose expedition was the first to traverse Kikuyu country.

(3) European intervention in African affairs was stimulated by the reports regarding the slave trade made by Stanley as a result of his journey from Uganda across the Congo in 1877. The organization of the Congo Free State promoted a certain amount of trade and gave European nations an indication of the commercial value of Central Africa. In 1885, the German Kaiser granted a charter of protection to the Society of German Colonization operating on the mainland opposite Zanzibar, an area which had been assigned to the Sultan of Zanzibar by the Canning award in 1861. The amount of mainland territory over which the Sultan was recognized as having authority had never been defined. This point was referred to an international commission which included in the Sultan's dominions a strip of the coast ten sea miles in depth from the Rovuma to the Tana River and certain other areas in the north. The country behind this coast strip was divided into two spheres of influence, the German sphere being south, and the British sphere north of a line drawn from the mouth of the Umba River past the northern slopes of Kilimanjaro to the point where the first degree of south latitude intersects the eastern shore of Victoria Nyanza. This line is practically identical with the southern boundary of Kenya to-day.

The agreement did not extend to the north of the Tana River and in 1885 Germany declared a protectorate over the independent Sultanate of Witu.

In 1887, Seyyid Barghash, the Sultan of Zanzibar, granted a concession to the British East African Association on the mainland between the Umba and Tana Rivers, and on the 3rd September, 1888, this Association was incorporated under Royal Charter as the Imperial British East Africa Company. In April, 1888, Seyyid Khalifa, who had succeeded Seyyid Barghash in March, granted a concession of the district that fronted the German sphere to the German East Africa Company.

The German claim to Witu, subsequently extended to include Lamu also, was not recognized by the Sultan who, in January, 1889, offered Sir William Mackinnon, as representative of the British East Africa Company, a lease of Lamu and the adjacent islands. An unfortunate controversy followed, the Germans making every attempt to secure a permanent footing north of the Tana River and the British Company resisting all such claims. It was not until the Anglo-German Treaty of the 1st July, 1890, had been signed that the controversy ended. By that Treaty Germany withdrew her claims to Witu and the territory north of the Tana on the understanding that England should secure for Germany the definite cession of the sphere south of the Umba River leased from the Sultan of Zanzibar, and in exchange for the retrocession of Heligoland.

The controversy over Witu was ruinous to the Imperial British East Africa Company. It diverted a disproportionate amount of the new Company's energies and resources to an unhealthy and comparatively unimportant area. Trouble did not end with the signing of the Anglo-German Treaty. A dispute between the Sultan of Witu and a German timber syndicate led to the massacre of a number of German citizens, and a naval brigade under Admiral Sir E. Fremantle was sent against Witu. The Company found itself under an obligation to maintain a strong and expensive garrison in that area and this, in view of the calls on its finances in other more important parts of its territory, it was unable to afford. In 1893, the Company announced its intention of withdrawing from Witu. The supremacy of British interests in Witu had been recognized by Germany as part of the convention by which the British Government waived all rights over Heligoland, and Witu could not be altogether abandoned. The Imperial Government therefore assumed the administration of that district and declared a protectorate over it on the 31st July, 1893.

Two other difficulties impeded the early operations of the Company. A native insurrection broke out in German East Africa immediately on the arrival of the German administration. The Germans found it necessary to blockade their coast and the British Government agreed to blockade the British Company's coast also to prevent traffic in contraband across the frontier. On the British Company, therefore, rested the stigma of preventing trade with its own territory.

The second difficulty was caused by the action of certain missionaries who permitted the mission stations to be used as asylums for runaway slaves. Feeling against slavery was strong, but it was manifestly impossible to admit the right of the missionaries to offer sanctuary to runaway slaves without affecting economic conditions on the coast and alienating the sympathy of the Arab slave owners. Agreement was reached with the Arabs and the missionaries by which the Arabs consented to grant freedom on compensation to all slaves who had already escaped and the missionaries promised that they would not in future give sanctuary to refugees. On the 1st January, 1889, a historic scene took place at Rabai, a mission station founded by Krapf, 10 miles inland from Mombasa. By the payment of £3,500 the Imperial British East Africa Company secured the liberation of 1,442 slaves.

The early activities of the Imperial British East Africa Company were mainly concentrated on the Coast. The districts intervening between the Coast and the Victoria Nyanza, though known to have great potential resources, were regarded as practically valueless under existing economic conditions. It was realized that the exceptional conditions of natural fertility, climate, and general accessibility would respond to the application of European capital and enterprise but, apart from the Coast, the area next in importance appeared to be Uganda, and the Company was unwilling to extend its operations so far afield until it had consolidated its work on the littoral. International complications forced the Company's hand and it became necessary for the Company to take part in the administration of Uganda before it was fully equipped to do so.

In 1889, the Company despatched a considerable caravan under F. J. Jackson to explore the interior, establish and mark out stations, and make treaties with the various tribes. Jackson founded a Company's station at Machakos, proceeded by way of Kikuyu, Naivasha and Sotik, and reached Mumias on the 7th November, 1889. While there he was begged by Mwanga, King of Uganda, to enter Uganda and assist him to regain his throne. A commerce monopoly was offered to the Company. As he was under instructions to avoid Uganda, which was known to be in a state of revolution, Jackson felt unable to accept the offer, and went north to examine the country towards Lake Rudolf. On his return to Mumias on the 4th March, 1890, he heard that Dr. Karl Peters, in charge of a German expedition, had passed through on his way to Uganda a month previously.

In October, 1888, it had become known that Lieutenant Wissmann and Dr. Peters had been appointed leaders of an expedition which was to proceed up the Tana River with the ostensible object of relieving Emin Pasha, the Governor of the Equatorial Province of the Sudan, who, after the fall of Khartoum, had been cut off from all communications for four years. News of the relief by Stanley of Emin Pasha reached Europe in January, 1889. In the following month Peters left Berlin. His passage through German East Africa was forbidden by the German Government and a British Naval Squadron endeavoured to prevent his landing on the coast of the British sphere. Peters succeeded in avoiding the blockade, landed near Lamu, organized his caravan at Witu, then in German occupation, and started up the Tana Valley towards the end of July. A representative of the British Company, J. R. W. Pigott, had explored the valley of the Tana early in 1889 and had entered into treaties with the natives. Peters destroyed these treaties wherever he could find them. He destroyed the Company's stations and pulled down its flag. As he passed he annexed the country in the name of Germany. He had several encounters with the Kikuyu and with the Masai in Laikipia and on entering Uganda he negotiated a treaty with Mwanga. He then returned to the coast, passing down the western side of Victoria Nyanza, only to find that his labours had been in vain. The Anglo-German Treaty of the 1st July, 1890, had assigned Uganda to the British sphere of influence.

Jackson entered Mengo, the capital of Uganda, on the 14th April, 1890. He signed a treaty with Mwanga under which Uganda was included in British territory. He then returned to the Coast leaving his companion, Ernest Gedge, as the Company's representative in Uganda.

Meanwhile Captain F. D. Lugard had joined the Company's staff and had founded a chain of posts connecting Mombasa with Machakos. In 1890, he founded a station on the borders of Kikuyu country at Dagoretti. He was then ordered to Uganda and, by forced marches, succeeded in reaching Mengo on the 18th December, 1890. During the ensuing year he was straining every nerve to reconcile opposing political factions in Uganda. By the end of 1891 the British position in that kingdom seemed at last to be secure. Then came the news that the Imperial British East Africa Company was finding the cost of administering Uganda excessive and had determined to evacuate the country. This order was cancelled in January, 1892, on a private guarantee being given by Sir William Mackinnon to subscribe funds to pay for a year's administration of Uganda. Representations were made to the British Government that they should help the Company. This the Government felt unable to do, but a Government mission under Sir Gerald Portal was eventually sent to report on Uganda and on the advisability of establishing a British Protectorate over it. Instructions were also given for a preliminary survey to be made of a railway from the Coast to Uganda.

Uganda proper was informally placed under the control of the Foreign Office on the 1st April, 1893. The formal proclamation of a protectorate was issued on the 19th June, 1894.

Meanwhile, negotiations had been proceeding between the British Government and the Imperial British East Africa Company for the transfer of the Company's responsibilities in East Africa to the Imperial Government. The Company's withdrawal from Witu in 1893 has already been mentioned. On the 1st July, 1895, a British Protectorate was declared over the Company's territory between the Coast and Naivasha, the territory west of Naivasha having been included in the Uganda Protectorate. The Company received £200,000 for the surrender. The boundaries of the East Africa Protectorate were defined by proclamation on the 31st August, 1896.

The last days of the Company's administration witnessed a rebellion among the Mazrui section of the Coast Arabs, which implicated the inhabitants of most of the Coast towns from Vanga to Kipini.

In February, 1895, a dispute arose as to the succession to the post of Liwali of Takaungu. The rightful heir according to Mohammedan law was Mbaruk, the son of the late Liwali's elder brother. On being passed over in favour of his cousin, who had stronger British inclinations, Mbaruk withdrew to Gonjoro and threatened rebellion. A Naval brigade was despatched against him and the Mazrui, all sections of whom had now combined, were defeated. Mbaruk fled to Gazi and established a forest stronghold at Mwele. Mwele was taken, but the Mazrui then maintained a guerilla warfare with considerable success. Isolated posts and caravans were harassed and the rebel successes encouraged the revolt to spread. Before the end of 1895 practically the whole of the British East African coast lands were in rebellion. Mombasa was never in danger but Malindi was looted. It was not until April, 1896, that the Mazrui leaders, after a series of defeats in small engagements, abandoned the struggle, fled across the border and surrendered to the Governor of German East Africa.

(4) Under Article I of the Brussels Act of 1890 the Signatory Powers included among the means for counteracting the slave trade the construction of railways. The construction of the Uganda Railway developed out of this suggestion. Its early construction was prompted by the desire to obtain a cheap and rapid means of communication to Uganda. A preliminary survey had been made in 1892-3. The first rails were laid in 1895, and by the end of 1901 there was a weekly train service between Mombasa and the Lake. The metre gauge was chosen owing to the facilities so afforded for procuring rolling-stock from India in emergencies. Indian labour was used owing to the scarcity of African labour along the route taken by the railway. The headquarters of the railway were transferred from Mombasa to Nairobi in 1899, and the line to Nairobi was opened in August of that year. The s.s. *Winifred* was launched on the Victoria Nyanza on the 12th December, 1902. The cost of the line up to the end of September, 1903, amounted to £5,317,000.

In 1897, an expedition was organized to explore the country between Abyssinia and Fashoda. The caravan assembled at Eldama Ravine in September and was to be escorted by three companies of Sudanese troops, remnants of Emin Pasha's force, who had seen much recent active service in Uganda. Two days out from Ravine they deserted in a body, passed through Nandi, looting the Government station, and were joined by the rulers of Uganda and Unyoro. The mutiny was quelled in the middle of 1899, but not without the loss of valuable British lives.

Early reports gave the following impression of what was then the East Africa Protectorate. The Protectorate was divided into four Provinces, Jubaland, Tanaland, Seyyidieh, and Ukamba. Its western boundary was the foot of the Kikuyu Escarpment; Jubaland was inhabited by turbulent Somalis; Tanaland, with large potential resources, suffered from lack of population. The fertile coast lands of Seyyidieh were falling off in production. Arab influence was on the wane and the prosperity of this area was being gravely affected by the abolition of the slave trade. Ukamba was administered from Machakos and Kitui, but little was known of the Kikuyu.

Little economic importance was attached to the country between the coast and Uganda. Until the Uganda Railway was built, one of the principal functions of the Administration was to act as forwarding agents for Uganda. There were no towns up-country apart from Machakos—where the establishment of an administrative post led to the settlement of a number of Indian traders—until Nairobi was founded as a railway changing centre in 1898. In three years the population of Nairobi had grown to 8,000.

Mission stations were to be found in all the Provinces. Slavery did not exist outside the Sultan's dominions, where the law still recognised the institution of domestic slavery.

Two important steps in the development of the East Africa Protectorate were taken early in the present century. The western boundaries of the Protectorate were altered in April, 1902, so as to include the Eastern Province of Uganda, stretching as far as the Victoria Nyanza, and including the Mau Escarpment, and the Nandi, Lumbwa and Kavirondo country. In the same year laws were passed defining conditions under which land could be alienated to colonists. By April, 1903, there were nearly 100 Europeans settled in or near Nairobi.

During 1903 numerous applications were received for land in the Rift Valley. The grazing grounds on both sides of the Uganda Railway in the Rift Valley near Naivasha were at that time used by the Masai pastoralists. Agreement was reached with the Masai in 1904 that they should be placed in two reserves, one in Laikipia, some 60 miles north of the railway, and the other to the south of Nairobi, towards German East Africa. Nine years later, under a subsequent treaty, the Masai moved from Laikipia to an extended southern reserve flanking the German border.

On the 1st April, 1905, the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief was appointed under an Order in Council, dated the 9th November, 1906, and an Order in Council, dated the 22nd October, 1906, constituted Executive and Legislative Councils. All Foreign Consular Jurisdiction was transferred to the British Court during the year 1908.

During the years preceding the war the economic importance of the Protectorate steadily developed. The European population of the Colony was 5,438 in 1914 and the Indian population 14,131. The value of the export trade had risen from £124,727 in 1902-03 to £443,624 in 1913-14, new industries having sprung up in the form of coffee, fibre, and wool, and a considerable advance having been made in the exports of grain and hides. The Government revenue had grown from £95,284 in 1902-03 to £1,123,798 in 1913-14 and the Government expenditure from £311,469 to £1,115,899. Grants-in-aid from the Imperial Exchequer, which had been necessary in the early days of the administration, were discontinued in 1913.

On the outbreak of war a prompt response was made to the call for volunteers. Defence forces were formed at Mombasa, Nairobi, and Kisumu and three volunteer units were formed, the East African Mounted Rifles, the East African Regiment, and the East African Transport Corps. These measures served to ward off attacks from German East Africa until an Expeditionary Force arrived from India. The southern border was frequently violated by the enemy during 1914 but no permanent damage was done. A period of comparative inactivity followed. In September, 1915, a mass meeting was held in Nairobi at which a resolution was passed placing at the Governor's disposal the entire resources of the country. This was followed by the formation of a War Council and the compulsory registration of all European personnel. In December, 1915, an Ordinance was passed providing for compulsory military and other service. This Ordinance was applied in March, 1917, each case being considered by the War Council and District Committees. Of the 3,145 adult male Europeans in the Protectorate on the outbreak of war, 1,987 served in a military capacity during the war.

The number of African troops was also largely increased. Before the war, one battalion only of the 3rd King's African Rifles had been recruited in the Protectorate. During the war, the 3rd and 4th King's African Rifles raised three battalions each, while the 5th and 7th King's African Rifles raised part of one battalion. The total number of East Africa Protectorate natives serving in these regiments finally amounted to 8,486. In addition, 1,157 Africans were recruited for the Arab Rifles, the Police Battalion, and Police Service Battalion.

A remarkable response was made by the African community in providing men for non-combatant service such as the Carrier Corps, Maxim Gun Porters, and Stretcher Bearers. More than 200,000 enlistments for these purposes are recorded.

During the course of the war, in order to facilitate military operations, a railway line was constructed from Voi to Taveta near the boundary of German East Africa. Thence the line was linked on to the German railway near Moshi.

Although in the early days of the British administration it was found necessary to undertake punitive expeditions against refractory tribes, the history of Kenya has, apart from the war in German East Africa, been comparatively peaceful. Small expeditions were despatched against the Nandi in 1900, 1903, and 1905-06, owing to the depredations of the tribe along the railway line. The Ogaden Somalis were punished in 1901 for the assassination of the Sub-Commissioner, Mr. Jenner, in November, 1900. A patrol was despatched into Sotik in 1906 and a force visited Marakwet in 1911. Patrols visited Northern Jubaland in 1912 and 1914. Disturbances broke out among the Giriama tribe towards the end of 1914, which necessitated a punitive expedition. There were two campaigns in Turkana in 1915 and 1917, and the murder of Mr. Elliott at Serenli by the Aulihan Somalis led to punitive measures in Jubaland in 1916 and 1917.

Unofficial members first sat on the Legislative Council in 1907. Such members were nominated by the Governor until 1919 when the principle of elective representation of Europeans was recognized. The first elections were held in February, 1920. In 1923 the principle of elective representation was extended on a basis of communal franchise to the Indian and Arab Communities. Unofficial members first sat on Executive Council in 1920.

By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognised as a Colony. This Order in Council came into operation on the 23rd July, 1920. The Sultan's mainland dominions are now styled the Protectorate of Kenya, whilst the remaining territory is known as the Colony of Kenya. On the 29th June, 1925, in pursuance of a treaty between the United Kingdom and Italy, signed at London on the 15th July, 1924, the Province of Jubaland was ceded to Italy. By the Kenya Colony and Protectorate (Boundaries) Order in Council, 1926, an area on the west of Lake Rudolf and north of the River Turkwel, stretching from Mount Elgon to Mount Zulia on the boundary of the Anglo-Egyptian Sudan, which had formerly formed part of the Uganda Protectorate, was included in Kenya.

The Uganda Railway, which had been operated from the date of its construction as a State Railway under the Government of the East Africa Protectorate, was constituted in April, 1921, as a separate financial entity under the control of a Central Railway Council. In February, 1926, under the provisions of the Kenya and Uganda (Transport) Order in Council, 1925, the Office of High Commissioner for Transport was established. The High Commissioner is the Officer Administering the Government of Kenya. He has control of the transport services owned, controlled, or managed by the Governments of Kenya or Uganda, including railways, ports, wharves, and steamships. The Administration is now known as the Kenya and Uganda Railways and Harbours Services. An Inter-Colonial Railway Advisory Council and a Harbour Advisory Board have been constituted.

LANGUAGES.

The principal African language in use in Kenya is Swahili, a language evolved from Arab contact with Bantu tribes, which has become a medium of conversation with and between Africans of different tribes not only in Kenya but over a wide area in East and

Central Africa. There are numerous native languages of local importance. Among these are :—

Hamitic Languages—Somali, Galla, and Boran.

Lowland Bantu Languages—Nyika (including Giriama), Rabai, Ribe, Jibana, Chonyi, Kauma, Kambe, Digo, Durama, and Pokomo.

Highland Bantu Languages—Kamba, Kikuyu, Embu, Chuku, and Meru.

Lakeland Bantu Languages—Bantu Kavirondo and Kisii.

Nilotic Languages—Masai, Samburu, Turkana, and Nilotic Kavirondo.

Nilotic-Hamitic Languages—Nandi, Lumbwa, Kamasia, Elgeyo, Suk, Elgonyi, and Marakwet.

CURRENCY.

The currency originally consisted of the Indian rupee as the standard coin, with smaller local coins and notes of higher denominations, all expressed in terms of the rupee; the British sovereign was also legal tender at Rs. 15. The exchange value of the rupee, after being maintained for many years by the Government of India at 1*s*. 4*d*. began to rise in 1917, and early in 1920 reached 2*s*. 9*d*. It was then decided to fix the rate in the East Africa Protectorate, the Uganda Protectorate, and the Tanganyika Territory at 2*s*. sterling to the rupee, and to issue a new currency in local rupee coin and notes, but subsequently it was decided that the new coinage should be expressed in terms of florins, instead of rupees, the 50 cent piece being alternatively termed a shilling. Some rupee notes were introduced but no rupee coins. Later the shilling was made the standard coin instead of the florin, and arrangements were made to withdraw the Indian rupee, which was demonetized from July, 1921, from circulation. The nickel-bronze coins (1, 5 and 10 cents of a rupee) have been withdrawn from circulation, and new copper-bronze coins (cents of a shilling) have been introduced.

The old Local Board of Currency Commissioners has been abolished and the currency of the Colony and Protectorate is now in the hands of the East Africa Currency Board in London, represented locally by the Treasurer.

WEIGHTS AND MEASURES.

The weights and measures in use in the Colony are the same as those used in Great Britain.

I.—GENERAL.

The report* of the Commission under the chairmanship of the Right Hon. Sir Edward Hilton Young, G.B.E., D.S.O., D.S.C., M.P., which was appointed by the Secretary of State in July, 1927, to consider certain questions relating to the closer union of the Dependencies in Eastern and Central Africa and allied subjects, was published in England and East Africa on the 18th January, 1929.

The Governor, Lieutenant-Colonel Sir Edward Grigg, K.C.M.G., K.C.V.O., D.S.O., M.C., who left the Colony on the 1st December, 1928, in order to take part in advance discussions of the report of the Commission, returned to the Colony on the 14th August, 1929. During his absence the Government was administered by Sir Jacob Barth, C.B.E.

In March, Sir Samuel Wilson, G.C.M.G., K.C.B., K.B.E., was asked by the Secretary of State to visit Kenya, Tanganyika, and Uganda with a view to discussing with the local Governments and the communities there the recommendations of the Hilton Young Commission. Sir Samuel Wilson reached Mombasa on the 29th April, and after spending a month travelling in the three territories returned to Nairobi on the 27th May, where, between the 1st and 5th June, he held meetings with the Acting Governor of Kenya and the Governors of Tanganyika and Uganda. Sir Samuel Wilson left Mombasa for London on the 12th June, and his report† was published in England and East Africa on the 5th October.

The Right Hon. V. S. Srinivasa Sastri, P.C., who was appointed by the Government of India to help the Indian communities in East Africa to present their views on matters arising out of the Hilton Young Commission's Report and to be at Sir Samuel Wilson's disposal if he wished to make use of him in dealing with Indian deputations, reached Kenya on the 10th May, and after spending a month in Kenya and Uganda sailed for Bombay on the 12th June. Mr. Sastri presented a report on his visit to the Government of India, which was published in March, 1930.

The Legislative Council held four sessions and sat on 26 days during the course of the year. Two by-elections were held, one in Nairobi North owing to the resignation of Captain H. F. Ward and one in Rift Valley owing to the resignation of Lord Delamere. Both by-elections were contested. Major E. S. Grogan, D.S.O., was elected for Nairobi North and Mr. E. Powys Cobb for Rift Valley. The four vacancies for Indian members of Council remained unfilled throughout the year.

The year 1929 was one of considerable agricultural hardship. During the first part of the year drought became more severe. There was a failure of crops in a wide area comprising both

---

* Cmd. 3234.

† Cmd. 3378.

European farms and Native Reserves. Measures became necessary to safeguard the food supplies and a Food Control Board was set up in March. Famine relief measures were necessary, particularly in the Kikuyu and Ukamba Provinces.

During the second part of the year rains were well distributed and good yields were obtained. Food control measures were relaxed in September. The cost of famine relief, after allowing for revenue from the sale of foodstuffs, was approximately £60,000.

Danger of famine was accentuated owing to invasions of locusts. Locusts, both in the flying and in the hopper stage, visited the Colony towards the end of 1928. In that year the hopper stage was confined mainly to pastoral areas, and the amount of crop destruction directly due to hoppers was not therefore great. Early in 1929, however, more serious damage was done to the ripening crops. Extensive measures were taken to deal with these invasions.

In January, operations were carried on in the Kerio and Ukamba Provinces and on a smaller scale in the Coast Province, the Northern Frontier, and the Masai Reserve.

The work of hopper destruction terminated at the end of January, and the flying swarms which arose from the undisturbed areas in the Northern Frontier Province and Tanaland flew south after doing considerable damage to crops in the Meru and Embu districts. These swarms eventually entered Tanganyika Territory in a series of waves early in February. Swarms which escaped destruction in Turkana and Kerio also flew south over the Plateau and Trans Nzoia.

In April, maturing swarms began to fly north, first appearing at Voi and in the Masai Reserve. Later large locust concentrations were reported in the Nandi country, at Thomson's Falls and at Ngobit. Damage was done to wheat, sisal, coconuts, and bananas. These concentrations were attacked by flame-throwing units, but it was found that the amount of destruction done was not commensurate with the expenditure entailed. The units were therefore withdrawn and the personnel formed the nucleus of a scouting organization.

Reports of laying were received from the Masai Reserve, Machakos, Voi, Gilgil, Embu, and the Kerio Province generally, and the scouting staff was augmented early in May. A locust train was also despatched for anti-hopper work on the Voi-Kahe line. By the end of May twenty-eight trucks and 48 officers were in the field. The Gilgil area of 15,000 acres infestation was under control in 14 days, and hoppers in Kitui and Machakos districts were cleared up in a short time.

At the end of May the hopper infestation in North and South Turkana, Karamoja (Uganda), Suk country and Elgeyo and Marakwet was such that further locust staff had to be enlisted.

By the 15th June there were 50 temporary locust officers operating in the Kerio Province. Hoppers were being destroyed by burning in Turkana and by spraying and bran baiting elsewhere.

The infestation in the Masai Reserve was extensive, and 14 officers were employed in the work of destruction; on 15th June an extra locust train was assembled for operations on the Magadi railway line. By the end of June the infestation was under control, and by the end of July practically all hoppers were destroyed in an area of 6,000 square miles.

Early in July fresh hatchings were reported in the Voi district and the staff had to be reinforced for working this difficult bush country from which some hoppers eventually escaped. Other hoppers reached maturity in the Uasin Gishu Masai Reserve bordering the Baringo district, whilst complete destruction could not be effected in North Baringo, Karamoja, and Turkana generally.

By the middle of July there were 100 officers in the field. Large hopper bands were reported north of Moyale in Abyssinia, but, although flying swarms were reported from various places in the Colony, there was no damage done to crops.

The middle of August saw the commencement of a reduction in staff, although it was realized that anti-hopper operations would not definitely cease especially in view of the fresh laying that had taken place in South Turkana, on both banks of the Turkwell and Kerio Rivers, and in Baringo by gravid swarms that had entered these localities from the Sudan and round the southern end of Lake Rudolf. Young hoppers appeared at the end of August and efforts were made to clear the areas rapidly. Except in Baringo, this was not entirely accomplished owing to the intensity of the infestation and local restrictions imposed on baiting and spraying. Three large swarms escaped in North and South Turkana. By 10th October, 1929, the locust field staff was reduced to a scouting nucleus of thirteen temporary officers.

At the end of October the Colony was again invaded by gravid swarms from the north and laying took place in the Northern Frontier Province, Meru, Embu, Kitui, and Voi districts. During November and December further staff had to be enrolled and a total of 27 officers were operating.

The Northern Frontier Province infestations covered an area of 900 square miles, mainly in the vicinity of Archer's Post. In spite of labour shortage successful operations were carried out with bran bait.

At the close of the year operations were also in progress in the Embu and Kitui districts. The cost of locust destruction during 1929 amounted to about £55,000. Prospects for 1930 are favourable.

The domestic exports of the Colony fell short of the 1928 figures by £520,000 and are given for 1929 as £2,745,910. The main items accounting for the shortage were a decrease in the value of coffee exports of over £400,000 and a fall of £125,000 in the value of exports of carbonate of soda. The fall in the value of coffee exported may be attributed partly to adverse climatic conditions and partly to the fact that, owing to the nature of the season, an unusually large proportion of the season's crop was not exported before the end of the calendar year.

As a direct result of drought conditions and the depredation of locusts the Colonial revenue suffered. Native hut and poll tax fell short of the estimate by £35,000 and other sources of revenue were affected. Nevertheless, actual receipts exceeded the estimated revenue and, although there was a deficit on the year's working of £171,330, this deficit was more than covered by abnormal expenditure on the locust campaign (£55,272) famine relief (£58,996) and expenditure specially voted to be met from surplus balances (£72,914). The Colony's surplus balances at the end of the year amounted to £707,976. The total Funded Public Debt of the Colony on 31st December, 1929, was £13,500,000, represented by two loans of £5,000,000 each (1921 and 1927) and one of £3,500,000 (1928). Of this funded debt approximately £9,400,000 has been devoted to railway development, £2,700,000 to port development and £1,400,000 to the service of the Colony.

In March, 1929, a representative Committee was appointed to make representations as to the policy to be followed by the Colony in the revision of the customs tariff which was being pressed for by the Governments of Tanganyika and Uganda. The Committee presented its report in May and its recommendations, which were generally adopted by the Kenya Government, were placed before a Conference of East African Governors held in Nairobi in January, 1930. A general revision of the customs tariff applicable to Kenya, Uganda, and Tanganyika has since been undertaken and passed into law.

Members of the British Association for the Advancement of Science visited the Colony in two parties in August and September, 1929. Tours were organized on their behalf to different parts of the Colony likely to be of interest to them and members of the Association gave lectures and addresses in Nairobi and elsewhere.

A Commission of Inquiry was appointed, in September, 1929, to consider and make recommendations in regard to :—

(1) The progress of the main branches of the agricultural industry (including native agriculture and stock) since 1920;

(2) Factors which tend to retard progress, if any, and the means whereby production may be increased and accelerated;

(3) The provision which should be made for augmenting departmental or other services calculated to advance the industry and the share, if any, which should be borne by organizations or undertakings representing or concerned with agricultural interests and production;

(4) The formation and function of advisory, consultative, or other bodies in connection with the agricultural industry.

The Commission sat under the chairmanship of Sir Daniel Hall, K.C.B., LL.D., F.R.S., who had visited the Colony with other members of the British Association for the Advancement of Science. It presented its report in October.

A provincial reorganization, intended to simplify the treatment of local questions affecting the interests of the settled areas and the Native Reserves, was introduced on the 1st October. During the past few years, districts in which there are no Native Reserves have been administered as separate units outside the provincial organization by Resident Commissioners under the direct supervision of the Colonial Secretary, while Native Reserves and a few districts which embraced both Native Reserves and non-native development were grouped in Provinces, under the general supervision of the Chief Native Commissioner.

With the establishment of District Councils under the Local Government (District Councils) Ordinance, 1928, in non-native areas and the development of Native Councils operating under the Native Authority (Amendment) Ordinance, 1924, it became desirable to focus at local points the interests of native and non-native development and to provide a local liaison between them. Government therefore decided to maintain, where geographically possible, separate native and non-native districts, but to form into Provinces groups of districts which have closely connected interests.

This policy is not at present universally possible and the mixed districts of Kericho, Nandi, and Machakos have not been altered for the time being, whereas the old Fort Hall and Kyambu Districts are divided into two Native Reserves and one Non-Native District within the same Province. Again, it has not been possible at present to incorporate the Districts of Naivasha and Laikipia with any Native Reserve and they thus stand alone in one Province.

The new Provinces are as follows :—

1. *Nyanza Province*, headquarters Kisumu, comprising the Districts of Central, North and South Kavirondo, Kisumu-Londiani, and Kericho.

2. *Nzoia Province*, headquarters Eldoret, comprising the Districts of Nandi, Uasin Gishu, Elgeyo, Marakwet, and Trans Nzoia.

3. *Turkana Province*, headquarters Kapenguria, comprising the Districts of North and South Turkana, and West Suk.

4. *Rift Valley Province*, headquarters Nakuru, comprising the Districts of Nakuru, Ravine, and Baringo.

5. *Naivasha Province*, headquarters Naivasha, comprising the Districts of Naivasha and Laikipia.

6. *Masai Province*, headquarters Ngong, comprising the Districts of Narok and Kajiado.

7. *Kikuyu Province*, headquarters Nyeri, comprising the Districts of Nairobi, Kyambu, Fort Hall, South Myeri, North Nyeri, Embu, and Meru.

8. *Ukamba Province*, headquarters Machakos, comprising the Districts of Machakos, Kitui, and Teita.

9. *Coast Province*, headquarters Mombasa, comprising the Districts of Digo, Mombasa, Kilifi, Tana River, and Lamu.

10. *Northern Frontier Province*, headquarters Isiolo, comprising the Districts of Isiolo, Marsabit, Moyale, Wajir, and Telemugger.

The progress made in 1928 in the development of local government was continued during the year. At the beginning of 1929 the Municipalities of Nairobi and Mombasa had been established under the Local Government (Municipalities) Ordinance, 1928. The constitution of Municipal Boards at Nakuru and Eldoret followed on the 10th January and the 30th April, 1929, respectively.

The financial relations between the Government and the Nairobi and Mombasa Municipalities were embodied in the Local Government (Municipalities) Ordinance, 1928, which did not, however, make provision for the contributions to be paid from Government funds to the smaller Municipalities of Nakuru and Eldoret. These were worked out on the basis of the cost to Government of administering local services in these towns in 1928 and were consolidated into an annual grant of £3,000 to each Municipal Board.

No rates were levied in Nakuru or Eldoret.

The creation of these four municipal authorities on a proper statutory basis has served to awaken a sense of civic responsibility, and the results so far attained have justified the inception of the policy.

In the settled areas the constitution of District Councils was provided for in the Local Government (District Councils) Ordinance, 1928. The first District Council, that of Nakuru, was formed on the 7th January, and the constitution of the four District Councils of Nyanza, Uasin Gishu, Naivasha, and Nairobi followed within the first half of the year. The Councils performed, mainly, the functions of district road authorities and have not yet exercised their powers as public health or hospital authorities. Practically the whole of their revenue was derived from Government grants, which were assessed on a liberal basis, and none of the Councils levied district rates.

Being established at an interim point in the year, many Councils were unable to complete the preliminaries of organization connected with staff and road plant in time for a full year's programme of road work to be carried out or for a fair appreciation to be gained of the promise of the local government system in the rural areas.

In 1928, participation in municipal affairs was declined by the Indian community pending the issue of the Report of the Closer Union Commission. This attitude was maintained throughout the year. The fixation of 2nd August as nomination day for the election of European members to the Nairobi Municipal Council brought matters to a head, since in the absence of Indian representation the Council to be elected would not be legally constituted. The Acting Governor summoned the Indian leaders to discuss the situation, but they were unwilling to depart from the position which they had taken up. A Bill to amend the Local Government (Municipalities) Ordinance, 1928, was passed by the Legislative Council in July to provide a way of avoiding the deadlock which would ensue under the Principal Ordinance in the case of Nairobi and Mombasa if the full complement of members was not available. At the same time the door was left open to the Indian community to return to take their proper share in the municipal administration of the towns in which they lived.

Other local government legislation is dealt with under Head XII of this Report.

The branch railway line from Gilgil to Thomson's Falls was opened in August, 1929, and earth works were almost completed on the Kisumu-Yala branch, platelaying on which had reached mile 12 by the end of the year. Work was begun on the Naro Moru-Nanyuki extension in September, 1929. The final section of the Tororo-Soroti line in Uganda was opened in October. Platelaying on the Jinja-Kampala line, with the exception of the Nile Bridge was completed in January, 1930.

Preliminary survey flights between Kisumu and Khartoum were started in February, 1927, with a view to deciding whether an air mail service was possible on that route. These preliminary flights, which were started by Captain T. A. Gladstone, were completed by Sir Alan Cobham on behalf of the North Sea Aerial and General Transport Company, Limited, in 1928, and in the same year proposals for a subsidized air mail service were considered at a conference called in Nairobi, at which the Imperial importance of linking up London with Cape Town was stressed.

During 1929 negotiations continued, and it became apparent that the situation of Kisumu at railhead on Lake Victoria offered exceptional advantages for the changing over station from sea to land machines on the route.

During the year a representative of the Air Ministry visited the Colony to advise upon the technical inspection of aircraft. The Aero Club of East Africa, with a membership of approximately 300, has done much to stimulate interest in aviation, and five aircraft, for commercial and private flying, were registered during the year. The annual combined flight of the Royal Air Force and the South African Air Force from Cairo to Cape Town and back took place in March. Commercial aviation in the Colony is at present represented by a local company, Messrs. Wilson Airways, Ltd. Progress is being made in the work of preparing aerodromes and landing grounds.

No census of the non-native population was taken during 1929. No census has yet been taken of the African population. A fairly accurate count is made annually for taxation purposes, but the number of children can only be estimated roughly and returns of the African population are, therefore, rough estimates only.

The following figures show the 1921 and 1926 census returns for non-natives and the estimates of the native population at the end of 1921, 1926, and 1929.

	1921 *Census.*	1926 *Census.*	*Increase per cent.*
Europeans	9,651	12,529	30
Asiatics (excluding Arabs)	25,880	30,583	18
Arabs	10,102	10,557	4½
	Estimate 1921.	*Estimate* 1929.	
Africans	2,348,788	2,930,604	30*
Total	2,394,421	2,984,273	30*

* The African population showed a decrease in 1925 owing to the cession of Jubaland to Italy. In calculating the percentage of increase, the estimated African population of Jubaland at the end of 1921 (97,728) has been deducted from the 1921 estimate.

Estimates of the non-native population at the end of 1929 compiled from provincial returns give the following figures :—

Europeans	16,663
Indians	35,514
Goans	3,990
Arabs	12,504
Other Races	3,883
Total non-native population	72,554
Estimated native population	2,930,604
Total estimated population at the end of 1929.	3,003,158

The percentage increase in population from 1921 to 1929 based on the above figures is—Europeans 73 per cent.; Indians 56 per cent.; Goans 65 per cent.; Arabs 24 per cent.; total non-natives 59 per cent.; total population 31 per cent.

NATIVE ADMINISTRATION, NATIVE AFFAIRS, AND NATIVE INTERESTS.

The general freedom from native troubles and disturbances that has been a feature of recent years among the more settled tribes was maintained except for two episodes which occurred among the Kikuyu and Lumbwa tribes respectively.

In the remoter areas, too, the political calm was unruffled except on the northern border of the Turkana Province where raids by the Donyiro and Merille on the Turkana caused the death of 35 men, 71 women, and 33 children. It is, however, gratifying to record that the raiders were heavily punished on two occasions in the course of their retreat by patrols of King's African Rifles.

The investigation of the customs relating to Kikuyu Land Tenure by the Committee appointed for the purpose aroused keen interest among the natives and the report submitted to Government is believed to provide the solution of many of the difficulties that have hitherto faced the Administration.

Economically speaking, the year with its visitations of drought, famine, and locusts was a distressing one in certain areas. The most affected areas were the Meru and Embu districts of the Kikuyu Province and portions of the Kitui district of the Ukamba Province which suffered acutely from famine and necessitated extensive measures of relief. The drought caused some mortality in stock among the Masai and Turkana natives and food shortages, which never reached famine proportions, were experienced elsewhere.

An encouraging feature of the year was the increased interest in the Local Native Councils displayed by members of these bodies particularly in the Kikuyu and Nyanza Provinces.

Education, and in particular the institution of Government as opposed to Mission schools, is one of the demands that is not only being voiced with increasing intensity but has evoked contributions from Native Councils up to the end of 1929 to the extent of £35,674.

In point of health the year was tolerably free from serious epidemics among the native population.

The progress previously effected among the Wadigo population on the Coast in the eradication of hookworm and the inculcation of improved methods of sanitation has been maintained.

In agriculture, the growing keenness for improved methods of cultivation is exemplified in the increased use of ploughs in the Central Kavirondo, South Lumbwa, Machakos, and Nandi Districts.

II.—FINANCE.

The following table shows revenue and expenditure totals for the five years ended 31st December, 1929.

Year.	*Revenue.*	*Expenditure.*
	£	£
1925	2,430,509	2,339,996
1926	2,627,223	2,414,681
1927	2,846,110	2,515,115
1928	3,020,694	2,834,647
1929	3,333,742	3,505,072

No special alterations were made during the year in methods of raising revenue.

STATEMENT OF LOAN POSITION OF COLONY AT 31ST DECEMBER, 1929.

(*a*) *Public Debt.*

The Colony's Funded Public Debt on the 31st of December, 1928, amounted to £13,500,000 represented by the following loans:—

£5,000,000 raised in 1921 under Ordinance No. 39 of 1921.
£5,000,000 raised in 1927 under Ordinance No. 22 of 1927.
£3,500,000 raised in 1928 under Ordinance No. 22 of 1927,

and no change has taken place during the year under review.

The 1921 loan, known as the " Kenya Government 6 per cent. Inscribed Stock, 1946-56 " was floated in London in November, 1921, at £95 per cent. The currency of the loan is 35 years, but the Kenya Government has the option of redemption at par at any time after the 14th of November, 1946, on giving six calendar months notice. This loan was fully expended at the end of 1926.

The 1927 loan, known as the " Kenya Government 5 per cent. Inscribed Stock, 1948-58 " was floated in London in November, 1927, at £99.10.0 per cent. The currency of the loan is 30 years, but the Kenya Government has the option of redemption at par at any time after the 15th of January, 1948, on giving six calendar months notice. This loan was raised for the purpose of redeeming the Imperial Government (free of interest for 5 years from 1924) loan of £3,500,000, and for further railway and port development. Of this loan £4,631,447.4.18 had been spent at the end of the year.

The 1928 loan, known as the " Kenya Government 4½ per cent. Inscribed Stock 1950 " was floated in London in May, 1928. The currency of the loan is 22 years and it is repayable at par on the 1st of May, 1950. It was raised for further railway and harbour colonial development, and at the close of the year £3.236,241.12.85 had been spent.

(*b*) *Sinking Funds.*

In the case of the 1921, 1927, and 1928 loans the legislation provides that Sinking Fund contributions shall commence after the expiration of 3 years from the date of the first issue of the stock, and it is stated in the prospectus that the annual contribution will be not less than one pound per cent.

Contributions to the Sinking Fund established in connection with the 1921 loan are at present at the rate of Shgs.26/- per cent. per annum.

III.—PRODUCTION.

AGRICULTURE.

The annual rainfall was in most districts above the average, but it was not well distributed over the whole year. Excessive rains, which occurred in some districts during December, impeded harvesting operations and extensive areas of maize and wheat remained unharvested at the end of the year. The coffee crop was not so high, but the favourable weather conditions prevailing during the year had the effect of restoring vigour to the trees, the benefits of which should be reflected in the yield of the succeeding crop provided satisfactory rains continue. Both in the "settled" areas and Native Reserves the crops of 1929 as a whole reached a record volume of production, but a heavy fall in the market prices of primary products took place and tended to diminish the benefits which would otherwise have accrued from the satisfactory crops obtained.

Failure of the "short rains" of 1928, combined with the depredations of locusts, brought about famine conditions in certain areas, notably in the Meru and Embu districts, in the early part of the year. Immediate action was taken to prohibit the export of certain native foodstuffs, save under licence, from the Kikuyu Province. After a close examination of the position and consultation with interests concerned, the Director of Agriculture was appointed Licensing Authority until the Food Control Ordinance, 1929, was enacted. Under it a representative Food Control Board was appointed.

An embargo was placed on the export from the Colony of maize, maize meal, and pulse, save under licence from the Food Control Board; available stocks of foodstuffs in the Colony were assessed, and arrangements made for their equitable distribution.

Maximum prices chargeable for maize and maize meal were declared. Export licences were issued as far as possible in order to avoid jeopardizing the future trade of the Colony, and in September the embargo was raised.

Special issues of seed were made in the affected areas and supplies of food, at a total cost of £52,900, were purchased and delivered by the Board. It became necessary to import 30,358 bags of maize from South Africa to meet the shortage which existed before supplies from the new crop became available.

The Meteorological Services previously undertaken by the Agricultural Department were handed over to the East African Meteorological Service on 1st January, 1929.

The Tenth Agricultural Census, for the year 1st August, 1928, to 31st July, 1929, was compiled and published. It shows a satisfactory advance in every branch of the industry.

The revised system of forecasting crop production and exports, inaugurated in 1928, was continued during the year with satisfactory results. The number of crop correspondents who assist in this service by submitting monthly estimates was increased to 285. Reports were published in respect of the months of January, February, July, August, September, October, November and December.

Despite the fact that adequate supplies of Kenya-grown wheat were offering in the Colony throughout the year, an increase in the quantity of wheat, flour, and meal imported, though slight, is again recorded. Of the total imported, i.e., 68,605 cwt., 10,065 cwt. were exported to Uganda and re-exports amounted to 6,977 cwt. By deducting these quantities it is seen that Kenya consumed 51,563 cwt. Railway statistics show that 33,754 cwt. were railed from the Coast to "up-line" destinations, including Uganda; it would therefore appear that of the 51,563 cwt. consumed in Kenya 27,874 cwt. were retained at the Coast and 23,689 cwt. consigned to other parts of the Colony. Translated into wheat this importation of flour, even if entirely displaced, would not provide a market for more than about 20 per cent. of the present production of wheat.

For all practical purposes Kenya is self-supporting in respect of ham and bacon, butter, and cheese. Such quantities as are imported consist chiefly of tinned goods for special needs, e.g., "safari" requirements.

Imports of sugar have varied greatly during the last few years, but it is hoped that, as the industry becomes more firmly established and the production of cane increases substantially, a large proportion of the present imports will shortly be displaced.

Exports.

The total value of agricultural exports, the produce of Kenya, in 1929 was £2,382,976, a decrease of £364,272 as compared with the previous year.

The value of coffee exported during the year decreased by £416,736. This more than accounts for the decrease in the total value of agricultural exports.

The tonnage was 90,233 tons in 1929 against 104,519 tons in 1928. This decrease is almost entirely due to the smaller quantities of maize and coffee shipped during the year. Mention has already been made of the restriction of export of maize early in the year owing to famine conditions, while in the latter months there was also a decrease in tonnage of this traffic exported owing to the lateness of the season.

The statistical information given in the succeeding sub-sections of this Report relate, except where otherwise stated, to agricultural development by Europeans.

More complete information is to be found in the Annual Agricultural Census Report for the year.

Acreage, Occupation, and Development.

The total area allotted for occupation by Europeans is approximately 6,720,080 acres, and in addition an area of about 952,320 acres is still available for alienation. Of the area allotted 5,000,648 acres are under occupation, showing an increase of 104,242 acres as compared with the preceding year. The number of European occupiers totals 2,035, a net increase of 64 over the previous year, but it is calculated that changes of occupiers took place in 79 holdings, making the number of new occupiers 143.

The number of Europeans employed on agricultural holdings, inclusive of the 2,035 occupiers, is returned at 2,882, an increase of 75 as compared with the previous year. It is recorded that 19 holdings previously occupied were vacated during the year. It is believed that the conditions of drought in certain areas have been the cause of this temporary surrender, and that they will shortly be again occupied and developed.

The total area under cultivation is 635,590 acres, giving an average of 312 acres per occupier as compared with 301 and 269 acres for the years 1928 and 1927 respectively. Including land used for stock farming it is calculated that the area beneficially occupied is, on the average, 1,309 acres per occupier, which shows the extensive character of farming operation in the Colony. In addition, considerable areas of farms are used by "native squatters" and employees.

Main Crops.

On 31st July, 1929, the total area under crops was 380,171 acres and the total area under cultivation 635,590 acres. For comparative purposes figures for the previous year are given, together with percentages of increase and decrease, in the appended table:

	1929.	1928.	*Increase per cent.*	*Decrease per cent.*
Maize	245,807	215,960	13·8	—
Wheat	66,089	88,429	—	25·3
Barley	14,543	5,933	145·1	—
Coffee	90,205	84,073	7·3	—
Sisal	109.375	91,909	18·8	—
Tea	5,593	4,809	16·3	—
Coconuts	8,568	7,994	7·3	—
Sugar Cane	11,161	9,408	18·6	—
Miscellaneous	28,543	24,384	17·1	—
Total acreage of crops grown	579,884	532,899	8·8	—
Less Catch crops	9,713	7,478	29·9	—
Net Area under Crops: ...	**570,171**	**525,421**	**8·5**	—

Maize.—The figures quoted above show an increase of 29,847 acres, or 13.8 per cent. in the total area of 245,807 acres planted as at 31st July, 1929.

The average yield over the Colony was 5.35 bags per acre, showing a reduction due to unfavourable weather conditions and in a lesser degree to damage caused by locusts.

The following table shows the acreages and yields of maize in past years :—

Year.	*Acreage Harvested.*	*Actual Production.*	*Bags per acre.*
1924–1925	129,647	893,108	6·89
1925–1926	155,751	826,614	5·95
1926–1927	177,987	1,314,643	7·39
1927–1928	177,009	1,088,706	6·15
1928–1929	204,945	1,099,317	5·36

Exports of maize (including native grown) for the season (August-July) increased from 805,081 cwt. in 1927-28 to 912,561 cwt. in 1928-29.*

Crop estimates for the 1929 planted crop forecast a record total production of two million bags, and it is estimated that about 1,250,000 bags will be available for export. Good crops from this planting were secured in almost every district, and at the end of December it was estimated that the average yield over the Colony would figure at 8.18 bags per acre.

The co-operative experiments recently started on farms have already furnished useful information on soil fertility and treatment in relation to the growing of maize and other crops.

At the Njoro plant-breeding station much valuable work on maize has been done, having a direct bearing upon the best practice to be adopted for securing high yields, the most economical manurial applications and other problems. Both at that station and at the Scott Agricultural Laboratories work is being done on maize selection and breeding for the improvement of high yielding types of " flat white " maize, and at the latter Institution a variety " Muratha " is also being fixed and improved for cultivation in native areas.

The grain conditioning and grading services continue to perform a valuable and essential service. As evidence of the extreme care exercised in the discharge of the service no complaints have been made by the trade either oversea or locally. The Grading Certificates remain unchallenged and final and they have established a high reputation.

---

* In the earlier years of maize export a fair proportion of that exported consisted of maize of " native " type. Latterly, however, native grown maize has come to be used largely for local consumption and for export to Benadir Coast ports, thus releasing a larger quantity of " flat white " for export to the European markets. Maize of this type is now being grown in Native Reserves in increasing quantities through the distribution of seed in bulk by the Department of Agriculture in some cases as a free issue, in others from funds provided by Local Native Councils.

Wheat.—The area planted as at 31st July, 1929, was 66,089 acres, a decrease of 22,340 acres as compared with the previous year. It is known, however, that considerable areas were sown, particularly in Machakos district, subsequent to the 31st July. The decrease in the wheat area is due to a change over from this crop to maize and barley, which has been in evidence during the past two years. The total acreage of these crops, however, only shows an increase of 16,117 acres over the previous year. It is believed that this small increase is due to unfavourable weather conditions which prevailed in the early part of the year.

The acreage harvested in each year and the production during the past five years are as follows :—

Year.	*Acreage Harvested.* Acres.	*Actual Production.* Bags.
1924-25	23,996	61,067
1925-26	30,627	80,069
1926-27	46,601	120,569
1927-28	75,102	173,958
1928-29	82,951	228,141

There are indications that average yields higher than those of past years will now be obtained, due to the lessened risk of rust by the introduction of rust-resistant varieties, the application of fertilizers to wheat crops, the growing of wheat on land possessing higher fertility, and a better knowledge of the culture of the crop.

During the year 69,603 cwt. wheat, valued at £38,281, were exported chiefly to Indian and South African markets. In addition 32,013 cwt. of flour, valued at £31,996, were exported mainly to Uganda and Tanganyika.

Statistics of wheat milling operations were called for in respect of the period 1st December, 1928, to 30th November, 1929. The main features of the returns are as follows :—

There were eight wheat mills operating in the Colony during the year. These mills are capable of milling a total of 56 bags (200 lb.) of wheat hourly; 124,356 bags wheat were milled during the year, and produced 33,353 bags (200 lb.) fine flour and 41,934 bags (200 lb.) Atta flour.

The wastage in milling (pollards, bran, etc.) was 30,915 bags of 200 lb., or 24.8 per cent. of the total quantity milled.

The establishment of the wheat industry in this Colony is primarily dependent upon the growing of rust-resistant varieties for the breeding and raising of which an efficient plant-breeding organization is essential. The position is an intensely complicated and difficult one. The three main species of rust, viz. : *Puccinia graminis* (Black Stem Rust), *Puccinia glumarum* (Ear or Yellow Rust) and *Puccinia triticina* (Brown or Leaf Rust) are present in different districts, in many of which two species are prevalent. In addition, two physiologic forms of *Puccinia graminis* have been determined, and the same variety may not be resistant to both. A considerable advance has been made by the breeding and multiplication of B.286 (Kenya Standard) to the stage when several thousands of acres of it are now in cultivation. This is a "fixed" variety possessing also good yielding power and high milling quality. It is resistant to both forms of *Puccinia graminis* and is therefore suited to those districts in which *Puccinia glumarum* is not prevalent. There is considerable promise that success will be achieved in the breeding of varieties which will be resistant both to *Puccinia graminis* and *Puccinia glumarum*, an achievement which will, it is believed, be without parallel elsewhere.

The wheat grading system introduced in the previous year, and based upon variety, description of grade, and weight per bushel, has worked very satisfactorily and is already accepted by the trade. Good grades both of "Equator" and "Kenya Governor" are realizing satisfactory prices as compared with standard varieties and grades on the overseas markets.

Wheat has been successfully introduced into certain Native Reserves with the main object of improving the variety and quality of the farinaceous diet of natives. In collaboration with the Medical Department tests were made on the mixing of wheat and maize meal in the proportion of about 1 to 5 respectively, with entirely beneficial results, and it is not unlikely that such a mixture will become a standard "posho" ration.

Barley.—The area under barley, as at 31st July, 1929, was 14,543 acres compared with 5,933 acres in the previous year, and indications point to still further extension of this crop. An export trade has now been established, 24,798 cwt. valued at £8,679 having been shipped to oversea markets. It has been demonstrated that "malting" barley of good quality can be grown in several districts, though as in other countries the risks of discolouration of grain due to rain and mists must remain.

Coffee.—Notwithstanding the unfavourable planting conditions which prevailed in the early months of the year, a satisfactory increase in the area planted with coffee is again recorded. The total area under coffee is returned at 90,205 acres, an increase of 6,132 acres over the previous year.

Owing to unfavourable weather conditions, the quantity of coffee produced in the last Agricultural Census year was low. It amounted to 145,880 cwt. of coffee, valued at £785,171. The December estimate of the 1929-30 crops was given at 198,173 cwt., or 61,802 cwt. in excess of its forerunner. For some years past the general condition of many coffee plantations has suffered on account of a deficiency in rainfall, although this did not actually amount to drought. The more copious and regular rains of 1929 have restored the condition of the trees, their vigour has greatly improved, and in the absence of unforeseen circumstances the 1930-31 crop should prove a record one in yield.

To some extent the lower average yields of recent years have been compensated by abnormally high prices, but it cannot be expected that such prices will be maintained, and, in fact, the value of Kenya coffee decreased towards the end of the year. This is attributable partly to the inferior quality caused by drought conditions during ripening, and partly to the large quantity of low grade coffee on the world's markets. Good quality "Kenya Coffee," however, maintained a high price throughout the year.

For the first six months of the year, an Assistant Agricultural Officer was attached to the Coffee Section to assist the Senior Coffee Officer with routine work at headquarters, and in connection with the organization of the *Stephanodores* campaign. In addition, three Temporary Inspectors and 13 Temporary Assistant Inspectors were engaged for the campaign. The means adopted to control this pest was by complete clearing up of all ripe coffee, whether on the trees or on the ground in plantations or round factories, or elsewhere, to ensure that there was a certain period when it could find no breeding place.

Opportunity was taken to make a complete survey of coffee pests and diseases throughout the Colony.

Certain points in the Rules were found in practice to be unsatisfactory, and these were cleared up in the Diseases of Plants Prevention (Coffee) (Amendment) Rules, 1929, which came into force in April. The Longicorn beetle "Sophronica" was found to be so widely distributed and to be capable of causing so much damage that it was included with *Stephanodores* in these Rules.

Further steps were taken to control the spread of the pest by enforcing the inspection of all coffee intended for seed purposes, and 4,970 lb. of such coffee were examined by members of the staff, and passed as free from diseases and pests.

The general inspection has enabled a large number of neglected or abandoned plantations to be cleared up, and the removal of these menaces, together with a noticeable improvement in cultural methods directly consequent on the inspection, should prove a great asset to the industry.

The campaign was completed, as far as field work was concerned, by the end of April, and the staff was gradually reduced until that date, when four Temporary Inspectors were retained to form a nucleus field staff for future operations. These officers were employed for the remainder of the year on general coffee inspection, although in some cases and for varying periods, their services were utilized in connection with other inspection work.

Experimental work has been continued at the Scott Agricultural Laboratories on different varieties, also in connection with pruning, seed selection, irrigation, budding and grafting, and shade, both natural and artificial.

A small Coffee Factory specially designed to deal with the experimental work in progress was erected during the year.

Research work on "Coffee Mealy Bug" has been pursued with vigour, and with the information now available in regard to control measures, planters are placed in a position to prevent large scale losses, provided that steps are taken in due time. Unfortunately, however, the cost is appreciable, and financial difficulties may hinder essential measures being carried out in advance of the onset of the pest.

Tea.—The area under tea as at 31st July was 5,593 acres as compared with 4,809 acres in the previous year.

There were 152,813 lb. of "prepared" tea produced during the year; of this quantity 7,906 lb. valued at £738, were exported. The industry is being promoted chiefly by companies possessing experience and the necessary financial backing. Plans of development are being carried out for extensions of tea gardens and factories during the next few years. Already five well equipped factories have been erected. There is promise that both in yield and quality success will be attained.

Sisal.—A large increase in the area planted with sisal is again recorded.

The total area as at 31st July is returned at 109,375 acres, an increase of 17,366 acres over the previous year. The area ready for cutting, i.e., over three years old, is given at 54,197 acres.

Exports of sisal fibre and tow increased from 290,190 cwt. in 1927-1928 to 349,174 cwt. in 1928-1929. The value of these exports amounted to £420,777 and £583,164 respectively. From returns received the estimated production for the census year, ending 31st July, 1930, is 417,340 cwt., as compared with an actual production for the previous year of 316,180 cwt.

Sugar Cane and Sugar.—A further increase of 1,753 acres is recorded in the area of sugar cane on European holdings. There is now a total of 11,161 acres on these holdings, and 8,820 acres on farms occupied by Indians, making a total of 19,981 acres as compared with 15,096 acres in the preceding year. The increase on Indian holdings amounted to 5,127 acres.

Owing to the unfavourable season the output of crystallized sugar fell from 127,034 cwt. in the year 1927-28 to 123,040 cwt. in 1928-29 and exports dropped from £38,696 to £31,165 during that period.

Importations of sugar decreased considerably during 1929, as compared with 1928, but were still greatly in excess of the three previous years.

Progress has been made by the establishment of two new mills, one at the Coast and the other in the Highlands. The industry was started some years ago, and, notwithstanding protection afforded through Customs duty, it is somewhat disappointing that a larger proportion of the imports has not been displaced.

Coconuts.—A slight increase in the area of " European-owned " coconuts occurred during the year. This area is now given at 8,568 acres as compared with 7,994 acres in 1927-28.

Increasing quantities of copra are being used locally in the manufacture of soap. This, combined with lower market prices oversea, had the effect of reducing exports very considerably.

During the period 1928-29 (August-July) only 3,270 cwt. copra were exported as compared with 27,860 cwt. in the previous year.

The yield of coconuts and copra is very low in several plantations due chiefly to unfavourable soil conditions. Non-Europeans are little interested in extending copra production on a commercial basis and appear satisfied with a sufficiency for their own needs in respect of food and drink.

Wattle.—An extension of the wattle industry is revealed in the export figures of bark and extract. A second factory for the manufacture of wattle extract is in process of erection.

Extensive areas of the Kikuyu Province, particularly in the higher altitudes of the Native Reserves, are admirably suited to wattle growing and during the last year in particular the supply of bark has come chiefly from native sources. The wattle tree (*Acacia decurrens* and *Acacia mollisima*) serves several purposes useful to natives. It provides shelter around the huts, poles for house building, and fuel; and from the sale of the bark cash is obtained. As is not unusual in the early stages of an industry, bark of low and mixed quality has been shipped bringing discredit upon the reputation of the output. Instruction has been given in regard to the care which should be exercised, and the preparation of bark for market.

Potatoes.—There has been a very considerable increase in the export trade in potatoes. There were 82,755 cwt. exported during the year, valued at £27,050. Of the 1929 exports, over 80 per cent. were shipped to Bombay, where a market for Kenya produce is becoming established, and where the value of the Kenya grading certificate is fully appreciated.

At the present time the supplies are derived mainly from native sources, but it should be profitable also to European growers, who might develop a trade for named varieties used largely for seed purposes.

Miscellaneous Crops.—A large range of crops was referred to in the census returns under the head " Miscellaneous Crops." It covers oats, wattle, buckwheat, cabbage, carrot, cassava, chillies, essential oils, ginger, groundnuts, kale, lucerne, lupin, mangel, melon, millet, onion, pumpkin, rape, rice, rye, simsim, sweet potato, teff grass, tobacco, turnips, etc., and also areas under nurseries. The area under these covers 28,543 acres as compared with 24,384 acres in the previous year.

Several of these crops are likely to be more extensively planted in the near future, particularly those which can be used for fodder purposes. Rotation and green manuring crops are also likely to be much more extensively planted.

Live Stock.

The following table shows the numbers of live stock owned by Europeans during the last five years :—

	1925.	1926.	1927.	1928.	1929.
Cattle—Total	216,589	213,423	215,650	216,961	218,390
(*a*) Breeding stock ...	110,547	105,556	107,434	110,796	115,777
(*b*) Oxen	106,042	107,867	108,213	106,165	102,613
Horses	1,846	1,844	2,137	2,172	2,288
Mules	922	780	719	709	632
Donkeys	1,336	931	1,046	1,238	1,235
Sheep (Wool-bearing) ...	140,725	162,848	172,299	176,261	210,912
Sheep (Native)	38,071	43,057	32,972	20,603	24,568
Goats	5,372	4,454	3,697	3,211	3,926
Pigs—					
(*a*) Breeding Sows ...	2,040	1,714	2,896	3,455	3,108
(*b*) All others	6,524	7,411	10,061	14,697	14,638
Poultry	31,150	35,728	43,988	38,845	35,786

These returns show a small increase in the number of breeding stock. The decrease in the number of oxen is accounted for through their displacement by mechanical power. The previous drop in breeding stock has apparently been arrested, and there is evidence that interest is again being awakened in cattle breeding and the improvement of herds.

This Colony participated in the scheme inaugurated by the Empire Marketing Board and shared equally with that Board in the cost of shipping freight on pure-bred stock imported from Great Britain. On this service the contribution from this Government amounted to £1,295 in 1929, a figure which included arrears of payment in respect of some animals imported in 1928.

Grants-in-aid were paid in respect of the importation of 17 bulls, 22 cows and heifers, 4 pigs, and 22 sheep during the year.

There has been an increase in the number of cows and heifers imported.

The best opportunity for European stockowners lies in the breeding of dairy cattle and the pursuit of a dairying industry. For natives the best market in the future, apart from the comparatively small number required to supply butchers' shops in townships, lies in supplying an increasing demand for consumption in native areas, a demand which should be encouraged in every way in order that the native diet may be improved.

The establishment of a meat factory for dealing with surplus native stock, particularly those of indifferent quality, again received attention and much information in connection with the project has been collected. In order to place the native live stock industry on an economic basis it is necessary to reduce over-stocking and to arrest the destruction which is being caused in Native Reserves mainly pastoral in character.

Reference was made in the 1928 report to the value and importance of legislation dealing with the fencing of farm holdings and cattle cleansing (dipping). The Bills dealing therewith underwent close examination by a Select Committee of Legislative Council after consultation with stockowners, and they were passed at the end of the year under review.

The Committee of Civil Research accepted the offer of the Kenya Government to place the Government Farm, Naivasha, together with a grant of £5,000 at the disposal of the Rowett Institute, Aberdeen, in order that a new series of experiments might be carried out in the application of results previously obtained to stock-farming practice. The experiments will mainly cover the addition of concentrated and mineral foods to pasture and the effect of the application of fertilizers upon the chemical and botanical composition of pastures. The farm, in so far as is possible, will be run on commercial lines, and it is hoped that it will prove, in addition, a useful demonstration of the value of sound management. The work is being done in close collaboration with the Department of Agriculture.

The set-back which was apparent in the sheep industry during 1928 has been arrested. The export of wool increased from 7,899 cwt. in 1928 to 9,136 cwt. in 1929, but as the result of a fall in market prices the export value decreased from £103,040 in 1928 to £98,871 in 1929.

The building up of a wool industry, based upon Merinos is being steadily pursued. The decreased demand and lower prices for wool have adversely affected clips, like those of Kenya, whose "marks" are not so well established and whose quality is not so high as those from countries where high quality Merinos have been bred for long periods of time.

During the year the pig industry has received considerable attention, chiefly with a view to improving the quality of bacon produced. At the end of April the first Pig Industry Conference was held, at which were discussed the cost of production, the question of supply and demand, export trade for pig products, co-operation, the improvement of pig breeding, and feeding methods. It was further decided to constitute a Pig Industry Consulting Committee to enquire into all matters relative to the industry, including the opening up of new markets to absorb surplus production, as the present pig population of the Colony is sufficient to supply more than the local market.

Animal Products.

The following is a comparative table of the animal products sold by Europeans during the last five years :—

Year.	*Milk (Whole)*	*Cream.*	*Butter.*	*Cheese.*	*Ghee.*	*Bacon and Hams.*	*Wool.*
	gals.	*gals.*	*lb.*	*lb.*	*lb.*	*lb.*	*lb.*
1928-29 ...	791,452	212,914	290,905	145,609	65,215	603,233	939,619
1927-28 ...	421,779	75,764	324,593	130,538	78,528	519,463	420,575
1926-27 ...	617,747	92,640	216,863	148,305	124,057	No return.	632,088
1925-26 ...	395,031	72,693	291,894	144,070	115,815	430,119	670,752
1924-25 ...	371,692	85,557	303,085	92,994	108,153	364,552	461,586

The fluctuations in the proportions of the different kinds of dairy products sold as milk manufactured products are to be noted.

Taking the ratio of

2.25 gallons milk to 1 lb. butter,
1.1 ,, ,, 1 lb. cheese.
2.6 ,, ,, 1 lb. ghee,

it is calculated that the primary product—milk—has increased from 2,068,843 gallons in 1927-28 to 3,904,856 gallons in 1928-29, an increase of 1,836,013 gallons, or 88.7 per cent.

The better organization of the dairy industry through the establishment of Co-operative Creameries has undoubtedly stimulated production. The increase for the year ended 31st July, 1929, is remarkable, and it is believed that it is still greater for the calendar year. The improvement in grazing due to better rainfall has greatly increased the yield of milk and a considerable surplus of butter will be available for export. Its quality has been proved to be acceptable on the European market.

Indian Agriculture.

The activities of Indian occupiers of land are confined to a few individual holdings at the Coast which do not contribute substantially to production, though a quantity of coconuts, copra, and fruit is marketed from them; a number of market gardeners engaged chiefly in supplying the Nairobi market with vegetables, and an

Indian farming community settled in the Kibos—Miwani area. Considerable development is taking place in this area, chiefly for the growing of sugar cane.

Through the Nyanza Indian Farmers' Association, information has been furnished in respect of the operations of this community. The following are comparative figures of the development in this area over the past two years :—

	1928.		*1929.*	
Total number of Occupiers ...	40		48	
Area occupied	4,217	acres	13,200	acres
Area under sugar cane	3,693	,,	8,820	,,
Area under maize	55	,,	200	,,
Area cultivated but not planted	437	,,	980	,,
Number of working oxen ...	1,234		2,015	
Number of other cattle ...	746		600	

In the last Agricultural Census year 39,900 tons of sugar cane were cut and found a market chiefly at the sugar mill in the same district, as compared with 28,800 tons in the preceding year.

There are indications that greater interest is being awakened in agricultural development in the coastal belt by non-native enterprise, and there is evidence of advancement and greater production among native tribes. Steps have been taken to give effect to the recommendation of the Agricultural Commission in connection with the appointment of an Advisory Committee on Agriculture at the Coast.

Native Agriculture.

The Department of Agriculture maintains two schools of instruction in order that trained Native Instructors may be available for its own demonstration work as well as for local Native Councils propaganda and for Mission Schools where gardening and agricultural methods are taught. At the Scott Laboratories permanent buildings were erected for housing native pupils, together with a large dining-room and kitchens.

The Department maintains demonstration plots throughout the Reserves, some of which are as large as ten acres, thus adding to the quantity of improved seed for issue.

The peripatetic ploughing school mentioned in the last report has been at work as two units, one in Embu and one in Fort Hall. It is proving of interest to native people and is of value where large seed plots are established.

There is a very great increase in the number of ploughs in Kavirondo, where ploughing instructors are active. The natives are also using their ploughs more, and turning over much land.

There are areas in the Colony in which people are still using the old primitive implements, but modern implements are gradually displacing them.

The issue of seed to native areas has been maintained and increased, particularly through votes from local Native Councils. In 1928, a total of 21,780 lb. of seed was provided by these bodies; in 1929, 126,980 lb. were so secured. In addition to these normal issues large quantities of "famine" seed were issued in Embu, Meru, and on the Coast. A total of 667,631 lb. was so issued.

In addition to paying for seed and poultry, local Native Councils are showing greater inclination to pay for instructors, particularly in Kavirondo where some eight ploughing instructors are employed.

In regard to poultry the demand for better birds is increasing rapidly. Consideration has been given to the problem of supply and it is proposed to increase facilities by which natives may secure sittings of eggs. There is a growing demand, particularly on the Coast, for pens of breeding birds.

Much attention has been given to the hides and skins trade. A Sub-Committee of the Mombasa Chamber of Commerce have given co-operation and assistance. It is considered that any hard and fast system of grading would be impracticable of administration, and other means of improving the quality of hides and skins are being diligently investigated. Veterinary and Agricultural Officers have been carrying out propaganda and demonstration work in Native Reserves and in the Nyanza Province, and a number of "bandas" for the shade drying of hides have been erected. No radical improvement, however, can be effected until a return, commensurate with the additional labour involved, is obtained. At present little differentiation in price is made between well-prepared hides and others.

The annual increase in the area under cultivation is most pleasing and the growing popularity of labour-saving appliances is noteworthy. In the Meru Reserve, iron hand implements are displacing the wooden ones formerly largely used, to some extent as a result of the growing numbers of Meru people who go out to work in settled areas.

NATIVE AGRICULTURAL EXPORTS.

The estimated values of agricultural exports of native origin for the last eight years are shown hereunder :—

	1922.	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	£	£	£	£	£	£	£	£
Animals	1,200	10,000	20,000	16,000	11,000	12,000	11,000	10,300
Copra and Coconuts ...	12,000	10,280	35,000	28,000	20,600	12,000	23,000	2,500
Cotton	—	—	11,860	41,000	32,750	15,000	24,000	24,800
Cotton Seed	—	—	—	—	—	—	—	5,400
Groundnuts	20,000	24,000	26,000	19,000	31,000	22,500	19,659	29,500
Maize	73,000	120,000	130,000	100,000	70,000	75,000	50,000	45,000
Millets	1,000	4,000	300	865	2,750	3,350	423	240
Pulse	7,000	12,000	15,000	16,000	20,400	19,300	13,000	12,500
Simsim	4,800	22,000	84,000	65,000	76,500	67,350	27,355	27,500
Hides	45,000	60,000	121,000	210,000	140,000	160,000	200,000	220,000
Skins	5,000	3,000	30,000	50,000	51,000	56,000	100,000	87,000
Oils—Simsim	—	2,400	2,200	3,000	5,500	3,550	5,000	10,000
Potatoes	5,000	3,000	4,000	4,000	7,250	7,500	7,000	24,000
Miscellaneous	1,000	1,000	1,000	1,000	2,000	2,600	2,000	2,000
Total £	176,000	271,680	480,360	564,865	470,750	497,780	482,437	500,740

This statement does not, however, give any indication as to the total agricultural output from native areas. The native maize crop comes in, in part, during the time when there is a large demand for maize meal in Kenya and Uganda, so that by far the greater part of the total crop is consumed locally. The estimated export figures of native maize, therefore, are not comparable with the total sales. This is also true of simsim, groundnuts, and copra. An increasing local use is being made of these commodities.

Despite lower average values of produce, however, the total value of exports has not only been maintained but increased. In the Native Reserves there is evidence of substantial increase in cultivation and production.

Crops.—Maize is perhaps now the staple crop produced, although large quantities of matama (sorghum) are grown. The area of the Colony in which matama may be grown successfully is far greater than that in which maize may be grown. The Agricultural Officer at the Laboratories is working on a selection of maize named " muratha " which should be of great value in the Kikuyu Reserve, and in the short season areas. Yellow maize on the Coast has done exceedingly well, and it matures much more quickly than the usual white maize. Steady advance may be recorded with the maize crop. The more general growth of wheat would help to meet the requirements of the people for a short season grain crop.

Cotton.—As to acreage planted, growth of crop, and cultivation given, 1929 has been a record year. On the Coast the large acre yields and the fixed unvarying price throughout the buying season together with much instruction have induced more interest and activity. Prices paid for the 1928 crop sold and ginned in 1929 were 17-18 cents for " A " quality and 7-9 cents for " B " quality. There were 1,784 bales produced in Kavirondo, and 200 on the Coast, a total of 1,984. The 1930 estimate is 2,500 bales in Kavirondo and 500 on the Coast. Large quantities of Kenya seed cotton are carried over the border into Uganda.

Simsim.—This crop is very popular on the Coast, but has not yet taken on elsewhere.

Groundnuts.—A considerable improvement in quality of produce is reported from South Kavirondo. Natives still beat the husks off the nuts so that a badly smashed sample mixed with some husk is marketed. Hand-shelling is quite as quick and gives a much more presentable sample.

Wheat.—The area under this crop is extending in Kikuyu, in some places displacing millets. In a few years a large acreage may be expected.

Beans.—Beans are increasing in popularity but are very mixed. An endeavour is being made to fix one type of seed in certain locations.

Potatoes of the English variety are being more extensively grown, and a large export has already developed. The cultivation of this crop is improving and in time it should form an important factor in native agriculture.

Wattle-tree planting is being developed. From August to December, 933 tons of bark were sold by natives at an average price of Shgs. 54/- per ton. Improvements in drying are urgently needed and honesty in marketing needs to be inculcated. The crop has been introduced into Meru and is being developed about Mount Kenya.

Up to the present, the chief concern of Officers of the Department has been to encourage the growing of food crops, in the belief that a bountiful supply of food is essential to the peaceful development of the people and that once this is assured, other and more valuable crops may in turn be produced in increasing quantities.

The sale of milk by natives and its separation is increasing rapidly. In the Kisii district four local Native Council dairies produced a total of 8,822 lb. ghee and 3,608 lb. butter, while the export from Asembo in Central Kavirondo has been as high as 18,000 lb. ghee in a single month.

The cultivation of root crops such as canna, cassava, and sweet potato have been encouraged as a means of combating famine conditions.

The following figures show the estimated numbers of live stock owned by natives :—

Cattle	3,280,000
Sheep	2,670,000
Goats	3,680,000
Horses	200
Mules	300
Donkeys	36,000
Camels	60,000

There is evidence to show that cattle, sheep, and goats maintain a steady, if small, annual increase, but in the circumstances it is possible only to quote approximate figures. In the interests of native tribes and in order to prevent the spread of disease from one Native Reserve to another, restrictions are imposed upon the movements of cattle beyond the boundaries of Reserves except under control.

Agricultural Shows.

An Agricultural Show was held at Nakuru during the first week in December, under the auspices of the Royal Agricultural and Horticultural Society of Kenya.

This show, both in the interest taken in it, and in the quality of the exhibits, whether for exhibition or competition, was a marked success.

This is the more noteworthy in that the agricultural conditions which obtained during the year were scarcely favourable to the holding of a show on such a large scale.

For purposes of display at an exhibition held at Dar-es-Salaam, the Department of Agriculture, with the assistance of those engaged in the several industries, organized an exhibit representative of the Colony, including also illustrations of Departmental activities.

No Native Agricultural Shows were held during the year on account of the unfavourable conditions in respect of crops prevailing in Native Reserves.

FORESTRY.

The total revenue from the forests was £40,420, being an increase of £1,565 over the figures of the previous year. The total expenditure was £37,913.

The actual quantity of timber sold was 1,223,893 cubic feet which shows some decrease compared with any of the three previous years and a decrease of 343,000 cubic feet compared with the peak year of 1927.

The quantity of wood fuel sold increases each year and reached the figure of 8,984,894 cubic feet. Of this quantity 2,079,000 cubic feet was absorbed by domestic and industrial consumption and the balance by the railway.

The total quantity of timber exported was 136,469 cubic feet. Of this quantity 19,000 cubic feet consisted of cedar pencil slats, which showed a reduction of 50 per cent. compared with the previous year. The balance went mainly to Uganda and Tanganyika in approximately equal proportions.

The pencil slat trade has not developed as had been hoped for. The main reason is the rapid improvement in recent years in the artificial treatment of cheap substitutes such as Limewood. Pencil cedar is not only rather dearer, but gives rather more trouble during manufacture. It is, however, the most suitable wood for pencils, and investigations are now proceeding in England with a view to overcoming manufacturing difficulties. When the treatment is perfected it is considered that, in view of the abundance of the timber in the Colony, there should be a bright future for the trade.

Of other timbers such as East African camphor and musharage (African Olive), there is a much larger quantity available than can be absorbed by the East African markets and if the costs of production can be reduced it should be possible to establish an export trade in the best of these timbers.

A small but useful and old established export trade consists of mangrove poles, of which 296,600 were exported during the year to Persian Gulf and Indian ports. The supplies of mangrove bark of which there has been a considerable export trade in the past, are now practically exhausted.

Another minor forest product for which there exists great possibilities is bamboo for paper pulp. First-class paper has been made of the local bamboo. The areas are large and some of them very conveniently situated for working, in the healthiest districts of the Colony.

The reafforestation work of the Forest Department steadily increases each year and more than keeps pace with the exploitation of the forests. During the year 4,003 acres of plantations were made and 1,734 acres of forest were successfully regenerated naturally. Of the area planted 1,063 acres were planted on bush or grassland and were therefore an actual addition to the Colony's forested area. The main species planted were pencil cedar, the more valuable indigenous hardwoods such as *mueri*, *moru* and *muringa*, cypress species for softwood supply and eucalypts for firewood supply near townships and in railway fuel areas.

The number of tree seedlings raised in the Department's nurseries was 11,659,000, a large increase on any previous year. A record number also, viz., 806,400, were sold for private planting.

The great majority of the Colony's forests are demarcated and permanently reserved for forestry purposes. The remaining forests which are mainly in Native Reserves e.g., Nandi, Cherangani, Masai, etc., will be surveyed and proposals made for their reservation as staff becomes available. During the year a preliminary survey of the North Kavirondo and part of the Nandi forest was completed.

A good general idea of the Colony's total forest resources has been obtained, but the detailed survey of these on which to base definite estimates and plans has only so far been completed for a few of the more accessible forests.

FISHERIES.

A great variety of fish is prevalent in the sea waters on the coast of Kenya. Some species are caught in large numbers by the primitive methods at present in vogue. A preliminary survey of the sea fisheries of the Colony was made in 1928 by Dr. von Bonde, Government Marine Biologist and Director of the Fisheries and Marine Biological Survey, Union of South Africa. His report indicates that the marine resources of Kenya are immense and valuable. Attention is being given to the most satisfactory method of giving effect to the recommendations contained in Dr. von Bonde's report. Detailed enquiries have been made into the probable cost of a further and more extensive survey of the coastal fishing grounds.

A very considerable fishing industry is also carried on along the shores of Lake Victoria both by Africans and Indians, and in several of the lake shore locations the natives depend very largely on fish for their food. The methods employed by the natives are very varied and include drag-nets, weirs, traps, harpoons, long lines, and to a very small extent fishing rods. Most of the fish caught by the natives is not eaten fresh but dried, and large quantities are carried up by those dwelling on the lake shore to markets in the hinterland and exchanged there for grain.

More modern methods of fishing by means of imported nets are employed by Indians at various fishing stations in the Kavirondo Gulf. There are three Indian fishing villages in the Gulf, at Seme, Asembo, and Nanga. The last is only three miles south of Kisumu and is the only one near enough to supply fish for the Nairobi market.

All persons fishing for sale or barter are required to register yearly. The fee is Shgs. 300/- per annum for persons other than natives of Africa.

A survey of Lake Fisheries was undertaken in 1927 and 1928 by Mr. Michael Graham assisted by Captain R. E. Dent of the Game Department, and Mr. E. B. Worthington. Rules were promulgated during 1929 to regulate and control the types of fishing net used, with the object of protecting these species of fish which are of marketable value.

MINING.

During the year under review 27 ordinary prospecting licences were issued, and although the licensees operated under their licences, discoveries were apparently not of any importance, as no claims were registered. Two sole exploration licences were issued, covering a total of 25 square miles, and reports from these areas show that indications are promising. Negotiations were in progress for five other sole exploration licences. After considerable correspondence and discussion, two applications were abandoned, while the remainder were still being considered at the end of the year.

There was a decrease in the footage of development work effected, due to the fact that work on many claims had ceased temporarily on account of lack of promise, or of the necessity to attract further capital. Several gold claims, however, were rapidly approaching the producing stage, and this should be reflected in the output of gold for 1930. The following figures show a comparison of the development work effected during the previous five years :—

	Feet.
1925	1,210
1926	2,916
1927	2,697
1928	3,132
1929	1,136

The most promising minerals are gold, mica, lime, and marble. On the claims concerned, corundum and gypsum have been bulked, but not yet exported from the claims.

The production of gold was 845 oz. valued at £3,672; of marble, 250 tons valued at £2,500; of lime, 1,650 tons valued at £1,650; and of mica, 3,753 lb. valued at £560.

A new mining law, designed to be uniform with that of Uganda and Tanganyika, was prepared and is under consideration.

Prospectors appear to be hampered largely for want of capital. Whether that capital can be attracted or not must depend upon the indications available, and the scientific development of an area. It is also realized that geological survey would assist prospectors and encourage prospecting, and discussions have taken place for the formation of a Geological Survey Department possibly in conjunction with the Uganda Government.

IV.—TRADE AND ECONOMICS.

General.

Kenya and Uganda form a single unit for purposes of Customs and there is in consequence complete freedom of trade between the territories. A detailed examination of the external trade of Kenya alone is therefore a matter of considerable difficulty, more particularly as virtually the whole of the imports and exports of both Dependencies passes through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £841,324 was transported through Kenya and shipped at Mombasa during the year, goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1929 being valued at £909,312.

The combined value of trade imports and total exports (i.e. exports of domestic produce and re-exports) of Kenya and Uganda during the year amounted to £18,062,190 as compared with £17,512,448 in 1928 and £14,804,329 in 1927, the total volume of trade of all classes, including importations on Government account, transit and transhipment traffic, being valued at £19,837,533 as against £19,550,383 in 1928.

The value of merchandise cleared for Home Consumption during the year was £8,607,910 as against £8,696,061 in 1928, a decrease of £88,151 or 1.01 per cent. Exports of the domestic produce of the territories were valued at £7,020,668 as compared with £6,661,673 in the previous year; of this total goods to the value of £2,745,910 originated in Kenya the domestic exports of Uganda, calculated in terms of the f.o.b. value at port of final shipment from the two territories being valued at £4,274,758.

So far as the export trade in Kenya produce is concerned, adverse climatic conditions and the depredations of locusts resulted in a somewhat serious contraction in the value of domestic exports as compared with totals for the previous year. Including a diminution of £125,837 in the value of carbonate of soda shipped, the total domestic exports of Kenya during 1929 show a decrease in value of £520,493 in comparison with the total domestic exports of the Colony in 1928. Conditions were such that it became necessary in March to impose restrictions on the export of maize and certain other foodstuffs, these restrictions not being entirely removed until September of the year under review. The consequent shrinkage in the volume of foodstuffs available for export resulted in decreased shipments of maize, maize meal, and wheat though exports of wheat flour, barley, and potatoes show satisfactory increases. Raw coffee, however, is the most disappointing item in the list of Kenya exports as under this heading a decrease in value is recorded of 416,688 as compared with exports in 1928.

The prospects for 1930 are favourable so far as the volume of exports are concerned, though depression in the value of primary products in the world's markets is already causing some anxiety.

Trading operations throughout the year continued to be comparatively stable despite difficulties consequent upon adverse agricultural conditions and the outbreak of plague in Uganda which had the effect of restricting purchases by the native population for some considerable time. At the close of the year bonded stocks were valued at £560,897 representing an increase of £192,083 over the value of goods remaining in bond on 31st December, 1928.

The Customs Management and Tariff Laws remained unaltered during the year. Committees were, however, appointed in Kenya and Uganda respectively to review the Common Tariff, with particular reference to protected articles, and reported to their several Governments in 1929. Discussions with a view to the introduction of a modernized and amended Tariff common to the territories of Kenya, Uganda, and Tanganyika Territory were still in progress at the end of the year.

Net collections of Customs Revenue amounted to £1,390,026 as compared with £1,345,170 in 1928. Of this former amount £949,724 accrued to Kenya and £440,302 to Uganda.

IMPORTS.

Of the total value of trade imports, the British Empire supplied 59.93 per cent. (Great Britain 36.83 per cent. and British Possessions 23.10 per cent.) as compared with 62.12 per cent. in 1928 (Great Britain 34.59 per cent. and British Possessions 27.53 per cent.). The United States of America (12.03 per cent.), Japan (5.67 per cent.), Holland (5.12 per cent.), Germany (4.62 per cent.), and Belgium (3.32 per cent.) are the principal foreign sources of supply of imported goods. The following is a summary of the main items, values in respect of the year 1928 being given in brackets :—

Great Britain and Northern Ireland.—Cotton textiles £308,066 (£334,743); machinery £272,573 (£265,333); galvanized iron sheets £123,680 (£100,655); cigarettes

lishing company inc

£121,502 (£125,097); motor vehicles and bicycles £118,278 (£101,154); cement £105,782 (£96,561); whisky £85,617 (£82,173); wearing apparel £52,620 (£67,114); tyres and tubes £51,336 (£47,276); tubes, pipes and their fittings £45,072 (£44,314); implements and tools £35,855 (£28,173); lubricating oils and greases £23,336 (£24,507).

India.—Jute bags and sacks £179,077 (£254,502); cotton textiles £142,667 (£165,567); rice £102,105 (£86,956); wheat meal and flour £58,579 (£57,158); tea £49,956 (£54,656).

Canada.—Motor vehicles and bicycles £227,711 (£172,777); tyres and tubes £25,948 (£993).

Union of South Africa.—Coal £60,761 (£92,560).

United States of America.—Motor vehicles and bicycles £258,530 (£311,714); cotton textiles £96,853 (£93,634); petrol £94,121 (£82,434); kerosene £89,648 (£59,863); tyres and tubes £71,437 (£62,106); lubricating oils and greases £71,232 (£53,953); and machinery £51,825 (£52,900).

Japan.—Cotton textiles £307,468 (£275,079); and wearing apparel £61,599 (£48,440).

Holland.—Cotton textiles £275,091 (£322,680); and tobacco manufactured £89,638 (£76,308).

Germany.—Cotton textiles £36,636 (£30,591); machinery £28,518 (£21,902); agricultural and horticultural tools £19,913 (£30,289); aluminium hollow-ware £15,966 (£20,983); and shovels, spades, etc. £13,311 (£18,478).

Dutch East Indies.—Petrol £153,300 (£103,809); kerosene £58,867 (£51,160); and fuel oil £34,308 (£37,695).

Persia.—Fuel oil £106,028 (£123,233); petrol £19,056 (£52,917); and kerosene £14,549 (£36,298).

Cotton Piece Goods.—The value of trade imports of cotton textiles of all descriptions amounted to £1,271,738 as compared with £1,315,505 in 1928, the total amount of Customs duty collected thereon being £247,954 or 17.9 per cent. of the total net duty collections. Transfers to Uganda were valued at £589,900. With the exception of unbleached and printed cottons, all classes show a decrease in value as compared with importations during the previous year. The average landed value per yard of imported cotton textiles was 5.7d. as compared with 6d. in 1928, cotton blankets decreasing in value from 1.8.8d. to 1.8.3d. Great Britain continues to supply the better qualities of cotton textiles, Holland providing the bulk of imported cotton blankets, whilst grey sheetings are supplied principally by Japan and the United States of America.

Vehicles.—1,552 motor cars, 1,486 motor lorries and 378 motor tractors valued at £553,226 were imported during the year as against 1,616 cars, 1,334 lorries and 388 tractors of a total value of £554,005 imported during 1928. The main sources of supply were the United States of America and Canada, the value of motor vehicles of these descriptions originating in Great Britain being £45,890 or 8 per cent. of the total.

Importations of motor bicycles continued to decrease, 267 valued at £10,579 being imported in 1929 as against 302 valued at £12,679 imported in 1928. Popularity of the light car for use in townships and slow development of the native markets are the principal causes of the decrease in importations. Great Britain continues to be the principal source of supply.

Following an improvement in the Uganda cotton crop, the number of pedal bicycles imported increased from 6,152 in 1928 to 10,976 in the year under review. The value of this trade, which is almost entirely with Great Britain, amounted to £61,900.

RE-EXPORT, TRANSIT AND TRANSHIPMENT.

The value of goods re-exported during 1929 amounted to £2,120,943 or 23.77 per cent. of the total value of trade imports. Transit and transhipment traffic were valued at £123,045 and £238,760 respectively as compared with £143,551 and £241,846 in 1928.

EXPORTS.

General.—The domestic exports of Kenya and Uganda are largely agricultural, the principal exceptions being carbonate of soda produced at Lake Magadi in Kenya and tin-ore originating in Uganda. As previously stated, the value of domestic produce of Kenya and Uganda exported during 1929 amounted to £7,020,668 as compared with £6,661,673 in 1928, increased shipments of cotton and cotton seed from Uganda redressing a balance which would otherwise have been unfavourable.

Empire markets continue to absorb a large proportion of exports, 72.13 per cent. of the total being despatched to destinations within the Empire. The principal foreign markets were Japan (10.64 per cent.); Belgium (6.19 per cent.); the United States of America (2.30 per cent.); Italy (1.60 per cent.); and France (1.26 per cent.).

The following is a summary of the principal commodities exported to the more important markets, relative figures in regard to 1928 being given in brackets :—

Great Britain and Northern Ireland.—Cotton £720,527 (£887,186); coffee £658,908 (£1,023,445); cotton seed £387,513 (£317,817); maize £216,814 (£113,339); hides and skins £191,297 (£219,654); sisal fibre and tow £119,184 (£178,294); wool £98,856 (£103,040); tin-ore £63,900 (£50,698).

India and Burmah.—Cotton £1,949,177 (£1,364,509); carbonate of soda £23,750 (£27,100); potatoes £14,161 (£8,159); hides and skins £13,532 (£9,468).

Tanganyika Territory.—Sugar £31,968 (£23,137); wheat meal and flour £31,784 (£15,642); maize £22,342 (£2,956); maize meal and flour £20,859 (£18,122); timber £18,943 (£10,590); oil, sesame £10,507 (£6,873).

Union of South Africa.—Coffee £57,712 (£41,292); sisal £7,991 (£9,410); carbonate of soda £5,316 (£3,016).

Japan.—Cotton £557,146 (£231,684); carbonate of soda £178,300 (£243,575); cotton seed £8,042 (£5,292).

Belgium.—Sisal £295,719 (£178,279); hides and skins £100,978 (£142,384); maize £25,503 (£45,935).

United States of America.—Sisal £95,560 (£94,674); hides and skins £48,929 (£35,882); chillies £7,455 (nil).

France.—Hides and skins £40,634 (£69,187); coffee £21,279 (£61,437); maize £11,010 (£27,864).

Italian East Africa and Colonia Erytrea.—Coffee £20,201 (£39,117); sesame seed £19,277 (£14,057); maize £16,220 (£60,695).

Italy.—Hides and and skins £55,593 (£71,456); groundnuts £19,493 (£13,482); sisal £19,041 (£5,873); cotton £6,273 (£2,004).

Germany.—Hides and skins £27,728 (£24,002); maize £10,555 (£25,904); groundnuts £6,921 (£1,750); barks and extracts for tanning £6,799 (£17,153).

Cotton.—The value of raw cotton exported increased from £2,486,038 in 1928 to £3,315,101 in the year under review, these figures representing in quantity 556,471 and 817,031 centals respectively, the average declared value per cental being £4 9s. 4d. in 1928 and £4 1s. 2d. in 1929. Cotton seed exported was valued at £424,064 (67,535 tons) as compared with £323,109 (45,507 tons) in 1928. The bulk of cotton and cotton seed originated in Uganda, railway extensions in that Protectorate accelerating considerably the expansion of the export trade in cotton seed.

Coffee.—A shortage of rainfall seriously affected shipments of coffee during 1929, the combined value of exports decreasing from £1,283,636 in 1928 to £879,895 in the year under review. The total quantity exported amounted to 174,290 cwt. as compared with 251,956 cwt. shipped during 1928, 41,199 cwt. being declared as originating in Uganda and 133,091 cwt. in Kenya. The average declared value per cwt. was 110.11.6d. as against 101.10.2d. during 1928. Great Britain continued to provide the principal market, receiving in 1929 Kenya and Uganda coffee to the value of £658,908.

Maize.—Locust infestation coupled with a shortage of rainfall in many areas necessitated the imposition of restrictions on the export of this commodity for a considerable portion of the year.

In consequence, exports during 1929 decreased by 117,966 cwt. as compared with the previous year though more favourable overseas market prices resulted in a net increase in the value of shipments of £3,694. A shortage of stocks on hand between the harvests was met by an importation on private account of 20,685 cwt. and on Kenya Government account of 36,339 cwt. Exports of maize meal show a decrease of 66,314 cwt. in quantity and £27,634 in value.

Sisal including Sisal Tow.—As compared with 1928 exports during the year decreased in quantity by 869 tons but show an increase in value of £57,613, the average declared value per ton being £35.7.7 as compared with £30.0.7 in 1928.

Hides and Skins.—Exports reflect a decrease in value of £94,221, there being a noticeable contraction in the quantity and value of hides exported from Uganda.

Carbonate of Soda.—The exports of this commodity which occurs as a natural deposit at Lake Magadi decreased by 23,118 tons in quantity and £125,837 in value as compared with the previous year.

Other Exports.—Satisfactory increases are recorded in the exports of wool, butter, potatoes, sugar, timber, sesame seed and oil, and barley.

Inter-Territorial Trade.—In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to and from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1929 the value of local produce sent from Kenya to Uganda amounted to £189,938 as compared with £236,255 in 1928 and £130,118 in 1927. The principal commodities involved being wheat and maize meal flour, sugar and soap.

The value of Kenya produce exported to Tanganyika Territory amounted to £178,346 as compared with £123,270 in 1928, Tanganyika Territory produce imported for consumption in Kenya being valued at £145,678.

The Customs Agreement of 1927 whereby the free interchange of imported goods between Kenya, Uganda, and Tanganyika Territory is allowed has stimulated this class of trade which now assumes very considerable proportions, the value of imported merchandise transferred from Kenya-Uganda to Tanganyika Territory during 1929 amounting to £909,312 (including specie valued at £232,092), and the amount of Customs duty collected by the Kenya and Uganda Customs administration and transferred to Tanganyika Territory under this Agreement reaching a total of £122,413. Traffic in imported goods in the reverse direction was valued at £295,902 (including specie valued at £230,400), the Customs duty involved being £8,402.

Tanganyika Territory produce passing through Kenya for shipment at Mombasa amounted in value to £757,724.

Air Traffic.—Under the Air Navigation Directions, 1928, aircraft are brought under strict control, certain aerodromes designated "Customs Aerodromes" being approved for use of aircraft arriving from or proceeding to places outside the territories. Considerable use of the Customs Aerodromes established at Nairobi, Kisumu, and Jinja was made by aircraft on foreign service during the year.

V.—COMMUNICATIONS.

HARBOURS.

The control of all ports and harbours of Kenya was in 1927 vested in the High Commissioner for Transport and placed under the management of the General Manager of the Railways and Harbours. The year 1927 was also the first complete year during which the first two berths of the deep-water quays at Kilindini were available for full use.

Berth No. 3 was brought into use in January, 1929, and Berth No. 4 in June, 1929.

Work on the construction of Berth No. 5, for which Messrs. Pauling & Co., are responsible, has made good progress. The bulk oil jetty and lighterage berth at Shimanzi are also in hand.

A large group of sidings was installed behind the sheds on Berths Nos. 3 and 4 during the year, and through rail connections between the harbour and Shimanzi was completed and brought into use.

An extensive scheme of electric lighting was also completed, and this scheme includes lighting the group of sidings behind berths Nos. 3 and 4 and re-wiring the whole of the lighterage quay, sheds, and stacking grounds.

The erection of electric quay cranes on berths Nos. 3 and 4, and the additional crane equipment for berths Nos. 1 and 2 was completed by the end of October, 1929. Each of the deep-water quay berths is now served by four 3-ton and one 5-ton electric travelling cranes.

The single storey transit sheds at berths Nos. 3 and 4 have each been furnished with five one-ton monorail travelling cranes.

The Harbour Advisory Board held twelve meetings during the year.

During 1929 the earnings of all the harbours on the coast of Kenya amounted to £376,350 as compared with £306,879 in 1928; and the ordinary working expenditure amounted to £224,493 in 1929 as against £194,028 in 1928. Interest and redemption charges total £158,983 and depreciation is assessed at £14,504. The loss on Port working, after taking all these charges into account, was £21,630 in 1929 as compared with £29,360 in 1928.

SHIPPING.

During 1929 the Port of Mombasa was served by seven regular lines of steamers from Europe, i.e., the Union Castle Mail Steamship Co., Ltd., the British India Steam Navigation Co., Ltd., the Messageries Maritimes, the Compagnia Italiana Transatlantica, the Clan Ellerman and Harrison Line, the Holland Africa Line, and the Deutsche Ost-Afrika Line. The Osaka Shosen Kaisha Line and the Nippon Yusen Kaisha maintained a service with Japan, the Ellerman and Bucknall Line maintained a service with America, and calls were made by Belgian, Danish, and Norwegian Lines. Several miscellaneous oil and coal steamers discharged full cargoes at the port.

A service between Bombay and Durban, calling both ways at Mombasa, has been maintained by the British India Steam Navigation Co., Ltd., and coasting services by this line, by the African Wharfage Co., the Shell Company, and Messrs. Cowasjee Dinshaw and Bros., steamers have been fairly regular.

The total tonnages (import and export) handled at Kilindini Harbour and Mombasa Old Port during the year are as follows. These figures do not include oil imports discharged through the Magadi Company's pipe lines, and soda exported from the Magadi Company's pier, nor do they include coal imports, which are shown separately :—

Coal Imports.

1929. Tons.	1928. Tons.
87,672	47,109

	Imports. (excluding coal.) B/L Tons.	*Exports.* (excluding coal.) B/L Tons.	*Total.* (excluding coal.) B/L Tons.
1928	322,881	262,336	585,217
1929	338,541	287,242	625,783

The total trade of the Port of Mombasa (including Kilindini Harbour and the Old Port) for the year 1929, as compared with 1928, is summarized in the following statement :—

	1929.	*1928.*
No. of steamships	687	637
Net tonnage of steamers ...	1,950,733	1,814,731
Imports B/L tons	522,039	447,301
Exports B/L tons	368,154	314,870
Passengers landed—		
European	8,019	7,864
Non-European	17,573	15,678
Passengers embarked—		
European	7,073	5,951
Non-European	12,897	11,793

The registered tonnage (inwards and outwards) at all Kenya sea-ports during the year, as compared with 1928 was as follows :—

	1929. *Registered Tonnage.*	1928. *Registered Tonnage.*
Vanga	9,997	15,450
Gazi	6,633	6,228
Mombasa	3,965,830	3,680,418
Kilifi	13,835	14,350
Malindi	17,143	16,154
Lamu	90,686	87,802

RAILWAYS.

The Inter-Colonial Advisory Council held five meetings during 1929 : three in Kenya and two in Uganda.

Earnings for the year in respect of railway services (as apart from harbour services) amounted to £2,448,960 and the railway working expenditure to £1,445,070, the surplus of receipts over working expenditure being £1,003,890. After allowing for contributions to renewals funds, interest charges, etc. and an initial contribution of £100,000 to the Interest Reserve Fund the net surplus of this excess transferred to betterment funds, etc., amounted to £208,997. Comparison with the figures for the previous years shows that the railway earnings for 1929 are £134,530 or 5.81 per cent. in excess of the earnings for 1928, and £322,917 or 15.19 per cent. in excess of those for 1927. As against these increases in earnings, the ordinary working expenditure for the year 1929 (exclusive of depreciation) exceeded the ordinary working expenditure for 1928 by £152,331 or 11.78 per cent. and that for 1927 by £294,284 or 25.57 per cent. The percentage ratio of ordinary working expenditure to earnings was 59.01 per cent. in 1929, as against 55.86 per cent. in 1928 and 87.21 per cent. in 1922.

The carriage of public goods provided a revenue of £1,989,080, and the tonnage of this traffic amounted to 952,934 tons, as compared with £1,872,964 and 861,323 tons, respectively, in 1928. The revenue derived from passenger traffic also showed an increase over that of 1928, viz. : 1,161,770 passengers contributed a revenue of £292,385 in 1929 as against 1,102,110 passengers and £283,273 in 1928. Natives continued to use the railway in increasing numbers, as the following figures of passengers carried under the different classes clearly show :—

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1928	18,986	67,385	1,015,739	1,102,110
1929	19,789	60,208	1,081,773	1,161,770

The traffic on the three lakes (Victoria, Kioga, and Albert), on which the Administration maintains steamer services is shown in the following table of earnings, working expenditure, and tonnages carried :—

	1928.	*1929.*
	£	£
Earnings	207,000	214,000
Working Expenditure	106,064	110,000
	Tons.	*Tons.*
Tonnage Carried	152,002	188,611

These figures reflect a satisfactory increase in tonnage carried when compared with 1928.

The following figures show the consumption of coal, wood and oil fuel on the railway during the year :—

Coal ...	76,622	tons consumed at a cost of	£109,138.
Wood ...	202,231	,, ,, ,,	£76,589.
Oil ...	2,737	,, ,, ,,	£9,595.

On the Lake Steamer services 5,017 tons of oil fuel were consumed at a cost of £17,789 and 10,323 tons of wood fuel at a cost of £7,111.

Expenditure on Capital Account (Railways and Harbours) to the end of 1929 amounted to £20,402,407. Of this sum £12,757,201 was derived from interest bearing capital, the balance being provided from :—

	£
Parliamentary Grants, 1896 and 1902	5,686,437
Contributions from Revenue :	
Direct	611,400
Through Betterment Funds	1,347,369

The work of relaying the main line between the Coast and Nairobi with 80-lb. material was completed in the early part of 1929, the heavy rails reaching Nairobi on 28th February, 1929.

The work of lengthening station loops between the Coast and Nairobi to provide for longer trains, which formed part of the relaying programme, was also completed during 1929.

The track was maintained in good condition throughout the system. Between the Coast and Nairobi a large ballasting programme was put in hand. Over 3,000,000 cubic feet of ballast was run out and put into the line, a total of 60 miles being completed.

Bridges and culverts were maintained in good condition. The programme of strengthening bridges was continued and good progress was made on the section between Makindu and Nairobi.

The new headquarter offices at Nairobi were completed in March and the building was officially opened on the 12th July.

The work on the railway portion of the Makupa causeway between Mombasa Island and the mainland was completed, except for lifting and packing, by the end of March and the first train crossed on the 1st April. The railway portion was handed over to open line early in December.

The total route mileage of open lines on the 31st December, 1929, was as follows:—

	Miles.
Main Line (Mombasa to Mbulamuti via Nakuru Junction)	782
Voi-Lake Line	92
Magadi Line (Konza to Magadi)	91
Nyeri Branch (Nairobi to Naro Moru)	127
Thomson's Falls Branch Line (Gilgil to Thomson's Falls)	48
Kisumu Line (Nakuru Junction to Kisumu) ...	131
Solai Branch (Rongai to Lake Solai)	27
Kitale Branch (Leseru to Kitale)	41
Soroti Line (Tororo to Soroti)	100
Busoga Line (Jinja to Namasagali)	61
Port Bell—Kampala Line	6
Total open miles	1,506

The total track mileage, including loops and industrial sidings, amounted to 1,699.5 miles.

The branch line from Gilgil to Thomson's Falls, the construction of which was commenced in January, 1928, was handed over to open lines on the 31st August, 1929. The line is 48 miles in length and cost £158,000 or approximately £3,291 per mile.

The second and final section of 65 miles of the line from Tororo to Soroti was taken over by open lines on 1st October, 1929. The first section, i.e., from Tororo to Mbale (35 miles) was opened under open lines conditions on 17th December, 1928. The total length of the line is 100.5 miles, and the cost is £534,910, or approximately £5,322 per mile.

On the Kisumu-Yala branch where construction was commenced in October, 1928, the earthworks were almost completed at the end of 1929, and plate-laying had reached mile 12. It is anticipated the line will be handed over to open lines early in July, 1930. The delay in completion has been due to the effect of unexpectedly severe rains during 1929. When completed, this branch will be 32.50 miles in length, and will have cost approximately £168,270, or approximately £5,178 per mile.

The Jinja-Kampala line was commenced during the first week of January, 1929, and by the end of December the whole of the earthworks were completed, and plate-laying commenced in

September, and at the end of the year 50 miles of track had been laid. The plate-laying of the whole line, with the exception of the Nile Bridge, was completed in January, 1930. When completed, this line will be 57.88 miles in length, and the estimated cost is £493,178, or approximately £8,521 per mile.

The Naro Moru-Nanyuki extension is still under construction, and the earthwork, bridges and culverts were well advanced at the end of the year, although heavy rains seriously impeded progress.

In view of the possible extension of the main line westward from Kampala, survey parties are now in the field investigating possible routes to the Belgian Congo Frontier, south of Ruwenzori and south of Lake Albert.

During the year, reconnaissance surveys of a proposed line to the Kericho and Sotik Areas and from Voi to Bura were undertaken. A survey of the main line from Makupa to Mazeras, with the object of eliminating the heavy grade existing on that section, as well as smaller surveys for diversions and minor improvements, were also undertaken.

ROADS.

The public road system, exclusive of that of the Nairobi Municipality, now comprises 2,578 miles of main and township road and about 6,422 miles of other classes of road of less importance. With effect from the beginning of the year, Municipal Boards, constituted under the Local Government (Municipalities) Ordinance, took over the administration of township roads in Mombasa, Nakuru, and Eldoret, while District Councils, constituted under the Local Government (District Councils) Ordinance, assumed control of district roads in the European settled rural areas of Nairobi, Nakuru, Uasin Gishu, Naivasha, and Kisumu-Londiani, leaving the main country road system, certain township and district roads where no local bodies had yet been formed, and roads in Native Reserves under the control of the Central Government through the agencies of the Public Works Department and the Administration. The local bodies mentioned were responsible for about 1,800 miles of road, and the Central Government 7,200 miles.

Most of the country roads are still only earth roads, but a vigorous campaign of widening, culverting, and draining has been prosecuted by the various responsible Road Authorities, and hard-surfacing on marshy sections and some of the more important traffic routes has been carried out wherever possible. Most of them are now passable throughout the year, except on rare occasions during exceptionally heavy rains.

Upon the road system under Government control the direct capital expenditure out of revenue on new roads and bridges amounted to £68,461. Expenditure was also incurred out of loan funds to the extent of £64,851 upon new district roads to link up producing areas with the railway system. Maintenance and improvement of the system absorbed the sum of £69,747.

The amounts spent by Municipal Boards (exclusive of the Nairobi Municipality) and District Councils on their road systems totalled £8,243 and £16,169 respectively.

POSTS AND TELEGRAPHS.

The results of the year's working show a steady increase in the activities of the Department. The cash revenue for the combined Kenya and Uganda service amounted to £234,420 and the recurrent expenditure to £168,157, representing increases of 6.8 per cent. and 5.85 per cent. respectively over the previous year. The total capital expenditure was £20,931, which includes a sum of £4,579 expended in Uganda specially provided out of the Protectorate's surplus balances. The figures for Kenya separately are :—cash revenue £182,158; recurrent expenditure £124,407—increases of 6 per cent. and 7 per cent. respectively over 1928. Capital expenditure in Kenya amounted to £14,276. Excluding capital expenditure and indirect expenditure, such as pension liabilities and interest and depreciation on the capital value of telegraph and telephone plant, the net contribution to the general revenue of the Colony by the Department amounted to £57,750.

There was a slight increase in the value of money orders issued in Kenya for payment abroad, the sum of £221,339 having been remitted overseas as compared with £219,278 in 1928. Remittances to India accounted for £191,197 or 86 per cent. of the total.

The total number of items of mail matter dealt with in Kenya increased from 12,320,600 to 13,475,200 or 9.3 per cent. The number of parcels from abroad rose from 92,032 to 92,859 and the value of the goods so imported was approximately £314,700, of which £245,500 was from Great Britain. The cash-on-delivery service, which so far as overseas is concerned is restricted to Great Britain, continues to expand. The number and value of goods imported under this arrangement showed an increase of 28 per cent. and 10 per cent. respectively over the figures for the previous year.

The overseas mail services were regular and there were no prolonged intervals between despatches or arrivals. English mail arrivals averaged 1.2 per week and despatches 1.4 per week, the average time taken in transit each way being approximately 19 days. The Indian and South African services were also well maintained. There were no exchanges of air mails during the year.

The overseas telegraph services were satisfactorily maintained. Only two interruptions, covering a period of 12 days, occurred in the length of cable connecting Mombasa with the Company's main system at Zanzibar. As alternative routes—one being the Government Wireless Stations at Mombasa and Zanzibar—were available, the breakdowns did not result in any public inconvenience.

The short-wave wireless service with Great Britain (known as Kenyaradio), which has been working since June, 1928, was satisfactorily maintained. This service is still restricted to the deferred classes of traffic, of which it handles a fairly considerable volume. The service dealt with over 44,500 messages totalling 1,071,000 words, figures which represent more than half of the total volume of telegraphic correspondence to and from Great Britain. As a result of the diversion of this traffic from the Cable Company's system the volume of overseas traffic for all places handled by the Eastern Telegraph Company showed a reduction of 7 per cent. over the previous year's figures. The effect of the cheaper Kenyaradio rates, as compared with the cable rates, is revealed by the fact that of the total traffic in the deferred classes of messages between Great Britain and Kenya and Uganda, 88.5 per cent. was handled by the Kenyaradio service.

The Government Wireless Station at Mombasa, which provides a service with Italian Somaliland and Zanzibar in addition to one with ships at sea, was efficiently maintained, but the volume of traffic handled showed no increase over that for the previous year.

The broadcasting service, which is being conducted under licence by the British East African Broadcasting Company, still suffers from lack of reasonable public support. The number of listeners' licences issued during the year amounted only to 319 and yielded to the Company a revenue of approximately only £700. The service is consequently far from self-supporting and having regard to this and the necessarily limited local entertainment resources, the programmes broadcasted, while leaving room for improvement, cannot be regarded as unsatisfactory.

There has been an encouraging growth in the demand for telephone services both in urban and rural areas and these demands are being met as they arise. In particular considerable impetus was given to the demand for farmers' lines by a reduction in the subscription rates for such lines which was effected during the year following upon a report of a committee appointed to review the rates and conditions applicable to lines of this character. The policy adopted has been to supply such lines on a self-supporting basis so far as direct charges are concerned, and the rates now in force are very nearly, but not quite, as low as in South Africa. The policy of Government is to foster rural telephone development to the fullest extent, consistent with the service not becoming a direct burden on the general taxpayer.

Large rural schemes in the Molo and Kericho districts were completed during the year and work was begun on a fairly extensive scheme in the Sotik area. Work was also begun on the Nairobi-Nakuru trunk telephone line, which is the first section of an approved trunk system of communication between Mombasa and Nakuru. In addition certain minor trunk services were provided in country areas.

The telegraph system, which links all the principal business and administrative centres in the Colony, was extended by the construction of a new route along the new Branch Railway line from Gilgil to Thomson's Falls. Congestion still obtains, at times, on certain of the main routes and will probably continue until additional facilities are available by the completion of the Mombasa-Nairobi-Nakuru telephone trunk lines.

The total telegraph and telephone route mileage of the Colony is 2,557 and the wire mileage 11,250.

POST OFFICE SAVINGS BANK.

The figures for the year's working show that the bank's activities are expanding in a satisfactory manner. The amount standing to the credit of depositors rose from £100,403 at the end of 1928 to £120,375 an increase of £19,972 or 19.89 per cent. Deposits exceeded withdrawals by £16,960, whilst the interest credited to depositors amounted to £2,502. The number of Europeans, Asiatic, and African depositors in the Savings Bank at the end of the year was 1,825, 3,709, and 985 respectively as compared with 1,676, 3,156, and 878 at the close of the previous year. The average amount standing to the credit of each account in the three classes was £16 6s., £21 1s., and £10 1s. respectively. Efforts to popularize the bank among the native population are, however, not meeting with the measure of success that Government would wish.

VI.—JUSTICE, POLICE, AND PRISONS.

JUSTICE.

The total number of civil cases filed in the Supreme Court during 1929 was 665, showing a decrease of 145 as compared with 1928. Of these cases 380 were filed in Nairobi, 146 in Mombasa, 61 in Nakuru, 23 in Kisumu, and 55 in Eldoret.

The number of Probate and Administration Causes filed in 1929 was 217, as compared with 213 in 1928; of Bankruptcy Causes 94, as compared with 110 in 1928; of Trust Causes 3, as compared with 4 in 1928. There were 55 civil appeals from Subordinate Courts, 169 original criminal cases committed for trial to the Supreme Court, 49 criminal appeals from Subordinate Courts, 659 confirmation cases, and 130 criminal revision cases, giving a total of 2,041 cases filed in the Supreme Court in 1929, as compared with 2,363 in 1928.

The number of Bankruptcy Causes shows a decrease from the 1928 figure. Petty traders, mainly Asiatic, continue to provide the greater number of bankruptcies. The majority of the debtors elected to file petitions as an alternative to civil imprisonment.

The 659 confirmation cases involved 867 persons and 940 convictions and sentences. Of the sentences 791 were confirmed without alteration and 60 were reduced. In 42 convictions a re-trial was ordered and in 46 convictions the accused were acquitted. In two cases the findings and sentences were reversed and the accused persons committed by the Supreme Court for trial. In one case the sentence was increased by the Supreme Court.

The proportion of convictions confirmed without alteration was 84.148 per cent. in 1929 as compared with 88.523 per cent. in 1928.

There were 12 Europeans committed for trial in 1929 and of these eight were acquitted and four convicted. The number of Europeans committed for trial in 1928 was 41.

During the year Resident Magistrates operated at Nairobi, Mombasa, Nakuru, Kisumu, and Eldoret. These Courts dealt with 8,132 civil cases and 17,096 criminal cases. The Courts at Nairobi and Mombasa dealt with 5,825 civil cases and 10,239 criminal cases as compared with 6,284 and 7,891 respectively in 1928.

The total number of civil cases tried in all Courts in Kenya was 12,164, a decrease of 79 as compared with 1928.

A total of 35,699 persons were brought before the criminal courts during 1929. Of these 2,622 were Europeans, 2,738 Asiatics, and 30,339 Africans. There were 29,783 persons convicted including 2,004 Europeans, 2,007 Asiatics and 25,772 Africans. The number of convictions is 5,088 more than the corresponding figure for 1928. This large increase does not, however, represent any considerable growth in serious crime. Convictions in respect of offences against Revenue Laws, Municipal, Road and other Laws relating to the social economy of the Colony numbered 22,449, this figure being 4,428 higher than the corresponding figure in 1928. Convictions under laws relating to the employment of natives (i.e. the Employment of Natives Ordinance and the Resident Native Labourers Ordinance) accounted for a total of 2,393, an increase of 237 over the 1928 figure.

Convictions for serious crime show a decrease in the case of offences against the person (910) of 127 and an increase in the case of theft of stock and produce (917) of 161. There is a decrease of 35 convictions for malicious injury to property (173) and an increase of 388 convictions for other offences against property (2,537). This figure includes theft other than of stock or produce or housebreaking.

His Majesty's Court of Appeal for Eastern Africa held four ordinary sessions during 1929. The total number of appeals filed was 93 of which 33 were civil appeals and 60 criminal appeals.

The number of Advocates who renewed their practising certificates or were admitted during 1929 was 64 as compared with 60 in 1928.

POLICE.

The police force is comprised of Africans under European officers, non-commissioned officers, and constables, with a small proportion of Asiatic subordinate officers. It is responsible for policing the settled and urban areas of the Colony and also provides police for special duty in the Northern Frontier Province and Turkana. African police are also supplied to Native Reserves, where they operate under the direction of officers of the Administration. The administration of justice in Native Reserves is largely assisted by the Native Authorities. In 1929 the police force extended its sphere of responsibility to Marsabit and Moyale in the Northern Frontier Province where detachments commanded by police officers took over duty from the King's African Rifles.

An increase in crime occurred in 1929 which may be attributed partly to the famine conditions which occurred in a number of native areas during the year, caused by drought and the ravages of locusts. There was a considerable increase in cases of theft of stock accentuated in many cases by famine conditions, as the beasts were slaughtered for food immediately after theft.

The total of actual crime, i.e., cognizable offences was 4,023 cases as compared with 3,231 cases in 1928. The increase for the year, therefore, was 792 or 24 per cent.

Crime in Kenya in comparison with the criminal statistics of countries further East is neither prevalent nor generally serious. There does, however, exist a class of African who has become addicted to crime particularly in the neighbourhood of the larger towns. Careful supervision over the habitual criminal and comprehensive systems of night patrolling form the strongest weapons in the police defence against predatory activities.

Unrest among the Lumbwa necessitated the despatch in October of a special force of police to maintain order.

Nine police motor cars, specially designed and fitted, were issued to certain districts to provide speedy and adequate transport facilities for police purposes.

PRISONS.

There was a considerable increase, amounting to over 28 per cent. in the total number of persons committed to prison or to detention camps during 1929 as compared with the preceding year, the grand total having risen from 13,551 in 1928 to 17,414 in 1929. This increase is mainly in persons committed to detention for petty offences, and in remand prisoners discharged from prison custody. There was a slight decrease in the number of Europeans and Asiatics committed to serve sentences of imprisonment.

The general health of prisoners showed an improvement as compared with 1928, the daily average number on the sick-list having fallen from 98 or 4.1 per cent. of the prison population to 82 or 3.5 per cent., but the number of deaths (83) was one higher than in 1928.

nsiderable improvement in the training of African prisons was effected by the institution of a proper recruits' training t under the supervision of European prisons officers.

he training of long term convicts in masonry, building, and entry by European Technical Instructors on the prison staff made good progress, and much useful work has been achieved convict artizans at various places. It is believed that by afford- convicts opportunities for obtaining well-paid employment on ease from prison a step has been taken towards reduction of recidivism.

VII.—PUBLIC WORKS.

BUILDINGS AND WATER SUPPLIES.

The progress of the Colony during the last few years has enabled gradually increasing sums to be provided annually for public works, especially for public buildings, roads, and town water supplies. During the year 1929, the expenditure on public works services controlled by the Public Works Department amounted to £967,161, of which the sum of £423,583 was expended on works under construction out of loan.

Amongst the other more important buildings taken in hand during the year were various schools, hospitals, post offices, police posts, as well as a large and modernly equipped medical laboratory at Nairobi. Particulars of note in connection with their construction will be found under the appropriate sections of this Report.

Steady progress was maintained in erecting suitable accommodation for the European, Asian, and native staff of Government to replace old structures built many years ago and to provide for the increased staff necessitated by the expansion of services.

Progress was maintained in the provision of water supplies for those towns and stations which had reached such a stage in their development as to justify piped supplies being laid on or an improvement of an existing supply. New water works for Eldoret were completed in 1929. The replacement of the existing gravitation main for the water works of Mombasa, capable of conveying 600,000 gallons per day, by a cement lined pipe capable of carrying 2,000,000 gallons per day, which was commenced in 1928, was continued throughout the year. A new project was begun for the township of Kitale, and small piped supplies were in hand at Kericho, Kilifi, Kiambu, and Nyeri.

Boring for water was continued with success. The water boring organization is a branch activity of the Public Works Department, and most of the drilling was carried out for farmers in European areas and for local Native Councils in Native Reserves. For the greater part of the year 8 machines were at work, and 4 were acquired. The latter arrived late in the year and were to be put into commission by its close.

The demand for authority to divert water from public str for farming and other purposes was well maintained, indicati healthy increase in farming activity. Little progress was, ever, made in the development of the water power resources of Colony, construction being confined to a large number of small projects in connection with farming operations. Thirty- permits were issued during the year for the development in th aggregate of 178 horse-power and the utilization therefor of 7 cubic feet of water per second.

VIII.—PUBLIC HEALTH.

The medical history of the country during 1929 was comparatively uneventful. No outbreak of epidemic disease of any magnitude occurred and the malaria which made its presence felt so severely in 1928 lost its epidemic character. Cases of plague came under observation in the endemic areas of the Nyanza, Kikuyu, and Ukamba Provinces, but the incidence was not such as to cause uneasiness. The large centres were practically free. No cases occurred at Mombasa, only one in Nairobi, and two at Kisumu. One case of smallpox only, imported from India, came under observation. Vaccination has proceeded steadily and methodically; the position in this respect has steadily improved and may be regarded as fairly satisfactory.

In the absence of statistics it is impossible to make detailed observations on the state of the public health but it does not appear that there has been any marked change. Among the native population, the largest section, the occurrence of preventable endemic disease remains at a high level. There are indications, however, that a forward movement is starting and that propaganda is beginning to bear fruit.

In two instances definite improvement has taken place. As a result of the sanitation and hookworm campaign carried out in 1929 in the Digo District the population is now at a distinctly higher level of physical efficiency than previously; this was determined by clinical re-examination of groups of individuals. The appointment of a farm Medical Officer in the Trans-Nzoia District has resulted in general improvement in conditions in that area.

A new vote for propaganda purposes was included in the estimates of the Medical Department for 1929. This form of activity is becoming increasingly prominent.

Pneumonia and lung disease maintain a high incidence and continue to be responsible for a high mortality.

Syphilis presents a problem of some magnitude in certain districts mainly in the Nyanza Province. Treatment centres are being multiplied and improved, but without a rise in the scale of civilization of the population it is at least doubtful whether the problem can be satisfactorily dealt with by means of treatment.

Investigations on mosquito conditions and their relation to the problem of malaria were continued and extended. New centres were opened for this purpose.

Progress was made with the building of hospitals either to replace existing unsatisfactory, often temporary, buildings or to inaugurate new centres. Only one hospital, situated in the Kikuyu Reserve, was actually completed, but work was well forward at the end of the year with six others. The most important event in connection with the provision of new buildings was the commencement of the new Medical Laboratory.

The expenditure of the Medical Department in 1929 amounted to £222,184, an increase of £27,023 over 1928.

At the close of the year twenty-eight medical stations were maintained. Government hospitals for the accommodation of Europeans numbered three, and for natives, of permanent construction seventeen and, of temporary construction, eleven. In addition there existed two non-Government European hospitals and six Mission hospitals for natives. These latter received financial support from Government.

The expenditure estimates passed in 1929 for 1930 provided for a large increase of medical activities during the latter year.

IX.—EDUCATION.

ADMINISTRATION.

During the year 1929 there was no change in the strength of the Administration. In this branch of the Department there were :—

Director of Education.
Chief Inspector of Schools.
Supervisor of Technical Education.
Five Inspectors of Schools.
Office Superintendent.
Accountant.
Nine European Clerks.
Two African Clerks.

EUROPEAN EDUCATION.

Further progress may be recorded in connection with the building programme. Fine school buildings at Nakuru were in use; the boarding and tuition blocks at Eldoret were opened early in the year. The new accommodation for boarding at Kitale was available for use before the end of the year and the tuition block was well advanced. In Nairobi two new junior schools at Parklands and Westlands were actually brought into use, while the third of this series of schools, that at Kilimani, was completed by the end of the year. In August the foundation stone of the new Senior Secondary School for Boys at Kabete was laid by His Excellency the Governor. In Mombasa, the Elementary School was enlarged to provide additional accommodation.

In European schools the total average roll for the year was 962 pupils in 16 schools as compared with 740 pupils in 15 schools in the previous year. The number of pupils in private European schools showed a small decrease over the same period; the average roll was 301 as compared with 348 in 1928.

The staff employed in European Government Schools was as follows :—

11 Principals.
2 Senior Assistant Masters.
3 Senior Assistant Mistresses.
13 Assistant Masters.
27 Assistant Mistresses.
3 Matrons.
8 Assistant Matrons.
3 Clerks.
4 Part time Medical Officers.

In addition there were 2 Masters and 6 Mistresses employed in small Farm Schools on the Plateau.

INDIAN EDUCATION.

The Indian Senior Secondary School, a splendidly equipped new building, was opened in Nairobi in the early part of the year. Here there will be facilities for higher education for students from the various Indian schools throughout the country. Progress was made with the hostel attached to the school and this will be ready for occupation in 1930.

There were 9 Government schools as compared with 8 in the previous year; the average roll for these schools rose to 1,895 from 1,543 in the year 1928.

These Government Schools employed :—

2 European Principals.
6 Indian Principals.
1 European Assistant Master.
71 Indian Assistant Masters.
1 Indian Principal (woman).
7 Indian Assistant Mistresses.

Sixteen private schools with an average roll of 1,155 pupils were in receipt of grants-in-aid, while twenty-two other private establishments provided for the education of 603 pupils. All these figures show a steady increase on the previous year.

ARAB AND AFRICAN EDUCATION.

Although comparative statistics seem to indicate that progress in African education has not been proportionate to that in the two previous sections, developments have been all that could have been expected. Interest has declined in the system of village schools in the Ukamba Reserve, the average roll having decreased by 150. The matter is engaging the serious attention of the Administration, and Jeanes teachers are at work reviving interest in these out-schools. In all central schools steady increases were apparent. There were 31 Government schools with an average roll of 2,070 as against 28 Government schools in 1928 with an average roll of 2,007.

Teaching in these schools there were :—

10	European Principals.
18	European Assistant Masters.
2	European Assistant Mistresses.
19	European Artizans.
138	African Assistant Masters.

The Jeanes School continues its useful contribution to the education of the African, and there are now 29 teachers who have received their training at this school working with their wives in all parts of the country. The standard of education of those entering improves each year, adding to the value of the training given and the utility of the teachers when they leave the school for work in the field.

Excellent progress is recorded at the Native Industrial Training Depot at Kabete. The average roll exceeded 500 during the year, and much useful work has been accomplished by gangs under the supervision of European artizans. Gangs have been employed both on loan works and on departmental buildings in various parts of the country.

With regard to non-Government schools difficulty is still experienced in obtaining reliable statistics although each year their value is being realized more and more. As far as can be ascertained there appear to be 88 central schools of various denominations with European supervision and 2,198 bush schools of varying sizes; these schools have an average roll of 82,455 pupils.

The sum of £39,554 was paid in respect of grants in aid to 23 schools of different denominations.

FINANCIAL.

The following amounts were spent on the Administration of the Department and on the various races in the country. Expenditure for other years is given for purposes of comparison.

	1927.	*1928.*	*1929.*
	£	£	£
Administration	15,387	14,765	16,064
European Education	36,092	42,915	51,125
Indian Education	17,318	23,113	26,325
Arab and African Education ...	52,429	81,592	83,180
Total	£121,226	£162,385	£176,694

EXAMINATIONS.

Statistics with regard to candidates taking examinations conducted by examining bodies overseas were as follows :—

Cambridge Examinations.

	Preliminary.		*Junior.*		*Senior.*	
	Entered.	*Passed.*	*Entered.*	*Passed.*	*Entered.*	*Passed.*
Europeans ...	58	40	51	23	9	6
Indians	41	35	38	20	–	–

Matriculation (London).

	Entered.	*Passed.*
Europeans	3	1
Indians	16	4

Departmental Examinations were conducted for Africans with the following results :—

	1928.	1929.
i. Elementary B School Certificate Examination.		
No. of candidates entered	720	975
No. of candidates passed	414	659
ii. Elementary C School Certificate Examination.		
No. of candidates entered	203	237
No. of candidates passed	97	102
iii. Junior Secondary School Certificate Examination.		
No. of candidates entered	35	40
No. of candidates passed	13	15
iv. Senior Secondary School Certificate Examination.		
No. of candidates entered	6	—
No. of candidates passed	5	—
v. Elementary B Teachers' Certificate Examination.		
No. of candidates entered	193	188
No. of candidates passed	139	142

vi. Elementary C Teachers' Certificate Examination.		
No. of candidates entered	32	47
No. of candidates passed	22	28
vii. Junior Secondary Teachers' Certificate Examination.		
No. of candidates entered	7	14
No. of candidates passed	4	6
viii. Junior Secondary Clerks' Certificate Examination.		
No. of candidates entered	—	4
No. of candidates passed	—	1

ADVISORY COMMITTEES.

The Central Committee on European Education did not meet during the year, owing to the fact that the outstanding question in regard to European education, the introduction of compulsory education, had been carefully examined in 1928. A meeting was called in the latter part of the year but was postponed to January, 1930. The other Central Committees met.

School Area Committees met regularly and were of great assistance advising on area problems. Though not statutory bodies the Boards of Governors with their local knowledge of and interest for the various schools were found to be extremely helpful to the Principals.

MEDICAL INSPECTION.

The School Medical Officer appointed in the previous year was able to organize his work thoroughly, and during the year made many detailed inspections and gathered some very useful statistics. His observations on the conditions of health, living, and diet of the various races will form an extremely valuable record for future reference.

X.—LANDS, SETTLEMENT, AND SURVEY.

LANDS AND SETTLEMENT.

In the Annual Report for 1928 a general and brief outline was given of the history of land alienation and of the decentralization scheme which came into operation at the beginning of that year. During 1929 no further changes in matters of principle were effected. The district organization of land work was carried on by the respective District Commissioners with the assistance of the Land Assistants appointed to their districts.

The Land Board, to whose appointment reference was made in the Annual Report for 1928, met on fifteen occasions during the year and dealt with about one hundred separate subjects. The personnel of the Board remained unchanged.

Little progress was made in respect of the operation of the Closer Settlement Scheme approved by the local legislature in 1928, as the Land Bank Bill, on which the Closer Settlement Scheme is for the most part dependent, still remained in abeyance. Steps were taken by the Land Board during this interim period to have further investigations made of the areas available and suitable for settlement and to have surveyed the Laikipia, Thomson's Falls, and Ol Bolossat groups. These surveys were still in progress at the end of the year.

A general scheme for the alienation of Coast land, inaugurated in 1921, outlined in General Notice No. 79 of 1921, was suspended in order that before further alienations took place the success of the scheme might be investigated. The whole situation was carefully reviewed during the year and it was considered that the time was ripe for a further stage in the alienation of land at the Coast, but on development conditions in some respects more stringent than those prescribed by Notice No. 79 of 1921. General Notice No. 1319 of 1929 was promulgated. The principal conditions of this Notice are as follows :—

(1) A probationary period of 2 years will be imposed during which occupation will be authorized by means of a licence. Within the first period of 12 months the survey of the land must be completed at the expense of the applicant, and during the 2 years probationary period the land must be developed to the satisfaction of the Commissioner for Local Government, Lands and Settlement.

(2) At the expiration of the probationary period if conditions have been fulfilled a grant for 999 years will be issued subject to the ordinary conditions of the Crown Lands Ordinance, but with the following special development conditions :—

(i) Within a period of two years from the commencement of the term of the grant at least one-twelfth of the area must be put under cultivation, and so maintained. This cultivation may include development done under the licence.

(ii) Within a further period of two years an additional one-twelfth part of the area must be put under cultivation, and so maintained.

(iii) Within a further period of five years an additional one-sixth part of the area must be put under cultivation, and so maintained.

(iv) For ten years after the commencement of the term of the grant, the grantee shall in the month of January of each year forward to the Commissioner for Local Government, Lands and Settlement, a progress report accompanied by a plan, both of which shall be dated and signed. In the report the grantee shall certify the area under cultivation; and on the plan he shall indicate the position of cultivation, and all other improvements temporary and permanent. The statement and plan shall be certified by affidavit.

(3) Applications should be made to the Commissioner for Local Government, Lands and Settlement, through the District Surveyor, Mombasa, and must be accompanied by satisfactory evidence of financial competency and a definite development programme.

Two grants of 790 and 7,500 acres respectively situate at Kilifi have been made under these conditions.

The Advisory Land Board had under consideration during the early months of the year two applications for permission to bore for water over large blocks of land on the Serengetti Plains on condition that successful water boring was to be rewarded by grants of land on a 999 years title. The Board made the following recommendation to Government :—

> "1. That this Board does not in general approve of the principle of making grants of land as a reward for water finding, and considers that waterless land should not be alienated until Government has tested its possibilities in accordance with the policy of water-boring already initiated.
>
> "2. If, however, funds for carrying out this policy are not available, or if, as regards any particular area, it is improbable that Government examination can be undertaken within a reasonable time, the Board recommends the utilization of private enterprise with a view to the earlier development of such land, and would be prepared to advise on the conditions to be imposed."

This recommendation was subsequently adopted by the Government. In accordance with this policy provision has been made in the Estimates for 1930 for the purchase of two water boring plants which it is proposed shall operate on unalienated Crown land.

Quarterly returns of all land transactions and outstanding applications have been published in the Official Gazette.

An auction of farm land was held on the 25th March, when 34 farms situated in various localities were offered for sale. Of these farms only 13 were sold and the bidding for these was not spirited. For the remaining farms the upset price was not obtained and they were accordingly withdrawn.

On the advice of the Land Board and the District Councils concerned, 15 direct grants of farm lands in the highlands were made, comprising 41,316 acres.

During the year, tenders were invited for various lands at Muhoroni and Taveta. Five grants were made as a result, comprising a total area of 12,620 acres.

Messrs. Libby, McNeil and Libby, Chicago, sent representatives to Kenya during the year for the purpose of investigating the possibilities of establishing a pineapple growing and canning industry. These representatives were very favourably impressed by their investigations and secured an option of Crown land in the Trans Nzoia. This option was relinquished early in 1930 in favour of options at the Coast and at Voi, where active experiments are being carried out.

Auction sales of township plots were held in Nakuru, Kitale, Molo, Kericho, Kisumu, Nyeri, Muhoroni. The sales advertised for Muhoroni and Kisumu (Godown Plots) were abortive, as prospective purchasers objected to certain of the conditions of sale. The Kisumu plots were again offered after the close of the year, and some were sold.

Tenders were also invited for plots at Londiani, Nakuru, Lumbwa, Mombasa and Kibwezi, and grants were issued in accordance with the accepted tenders.

In August, 1928, seven residential plots at Mombasa were offered for sale by auction, but their disposal has been held in abeyance pending the result of an appeal to the Privy Council on a test case on the principle of restricting the bidding and the occupation of these plots to Europeans only, in consequence of an injunction granted by the Court.

Apart from minor instances of acquisitions for the purposes of roads and railways, two large areas have been purchased by Government for public purposes.

(1) 200 acres at Kilifi from Messrs. The British East African Corporation, Ltd., for the purpose of extending the township, at a cost of £600.

(2) 700 acres at Mtwapa from Mr. Byromji Rustomji at a cost of £7,000. The primary object of this acquisition was to provide land for an Arab school. The remainder of the area after the school requirements have been met will be available for other Government purposes, or for sub-division and sale as residential plots. In addition, a farm in Laikipia was acquired under the Land Acquisition Act for the extension of the North Rumuruti Forest Reserve, and proceedings were begun with a view to acquiring 46 acres of land adjoining Turbo railway station for township purposes.

Two farms reverted to Government during the year.

Various sub-divisions of township land, chiefly in Nairobi, have been sanctioned on the recommendations of the local authorities.

The Public Health (Division of Lands) Ordinance which controls sub-divisions of land into lots of less than 20 acres outside Municipalities and townships, has been in operation throughout the year. Several applications were made to the Board and, with one exception, all were approved.

Two hundred and eighty-five schemes of sub-division of agricultural land were approved during the year.

In last year's report reference was made to the appointment of a Committee under the Chairmanship of the Solicitor-General to examine and review the general position regarding the system or systems of Titles Registration desirable for use both in the Colony and Protectorate. This Committee continued to meet and submitted a report to Government early in 1930.

Statistics of Areas.—The following analysis of various areas in the Colony and Protectorate reflects the position as at 31st December, 1929 :—

	Sq. miles.	*Sq. miles.*
Total Area of Colony and Protectorate		224,960
1. Native Reserves		48,295
2. Forest Reserves		4,167
(In addition there are 119 sq. miles of Forest Reserve within the boundaries of Native Reserves, and also large forest areas not yet defined.)		
3. Surveyed into Farms :		
Alienated	10,572	
(In addition there are included in Native Reserves 73 sq. miles of alienated land and 6 sq. miles of land surveyed for alienation)		
Township Reserves	322	
Government Reserves ...	242	
Available for alienation ...	1,395	
	12,531	12,531
4. Northern Frontier Province ...		95,479
5. Turkana		8,867
6. Extension from Uganda ...		15,859
7. Unclassified Areas (Including 1,835 sq. miles of water) ...		39.762
		224,960

Apart from township plots the land actually alienated during the year 1929 amounts to 93,576 acres or 146.37 square miles, but owing to minor adjustments such as land reverting to Government, and rectification of errors made in previous years, the net increase of alienated land for the year is reduced to 100 square miles.

The revenue derived from sales and rents of land totalled £111,323 in 1929 as compared with £109,367 in the previous year.

The Railway Administration collected during the year a sum of £6,058 on account of land sales and £5,397 on account of rents. These amounts are not included in the foregoing schedule.

SURVEY.

During the year 1929 the Survey and Registration Department was organized in two divisions under the direction of the Surveyor-General.

The Survey Division increased the scope of its activities by taking over the surveys of Forest Reserves which had previously been executed by the Forest Department. It was also engaged in surveys for the registration of title to land, the production and maintenance of maps showing landed properties, the demarcation of Native Reserve boundaries, the inspection and valuation of land, the control of surveys effected by licensed surveyors, and in assisting town planning authorities in the preparation and execution of their schemes.

The Registration Division was responsible for the registry of titles and also for the collection of revenue under the Stamp Act. In addition the duties of Recorder of Titles under the Land Titles Ordinance and Warden of Mines under the Mining Ordinance were carried out by officers of the division.

No topographical or geological survey section was maintained during the year.

XI.—LABOUR.

The average number of adult male natives who were reported to be in employment during the year was 160,000, which includes natives from Uganda and Tanganyika. This number represents about 35 per cent. of the Kenya able-bodied male population. There were also a large number of squatters and day labourers of whom no complete statistics are available. In addition to the males a number of women and children are habitually employed during the coffee picking and maize harvest season, when the conditions under which they work are rather like those of the Kentish hop pickers except that they usually return to their homes in the evening.

The flow of labour was sufficient to meet the demand, but this might not have been so had both native and non-native crops been good. Many natives turned out to work for wages owing to the loss of their crops from locusts and drought, and at the same time the demand for labour on estates and farms was less than usual.

The rates of wages did not differ from those of previous years. It is considered that those rates are fair, in view of the quality and quantity of the work performed, both of which are often very low. These rates in the cases of adult male agricultural labourers varied from Shgs.12/- to Shgs.16/- a month; and for other labourers from Shgs.16/- to Shgs.20/- a month. Squatters' wages were from Shgs.8/- to Shgs.12/- a month. Women earned about Shgs.10/- a month, and children Shgs.8/- a month. In the harvest season payment is made according to the amount of work done.

For coffee pickers this averaged Shgs.20/- a month for adults and Shgs.12/- a month for children at the rate of from cents 20 to 30 a *debbe* or tin of four gallons.

Rations varying in value from Shgs.4/- to Shgs.6/- a month are provided for all labourers, as well as quarters; there is certain provision for the supply of medical attention and medicine; and often, in addition, travelling expenses (including train fare) and blankets are provided. If all these items are added to the cash payment earnings are fair for the work done. In fact, it is doubtful whether the value of most produce would allow for any considerable rise in wages unless output is increased.

The ordinary labourer appears to be satisfied with his present remuneration which provides adequately for himself and his family in their present low standard of living. As this standard improves, so will the labourer's demands increase, and it seems possible that they will be able to be met by the increased output he will then be able to make. A higher standard of living means greater efficiency in every way, and it is encouraging to see that employers are realizing this to an increasing extent.

The health of labourers was generally good. There was a good deal of malaria on the Uasin Gishu farms, and ulcers and scurvy were serious on two or three estates in the Voi-Makindu area.

Several estates have built proper permanent sanitary houses in place of their former insanitary grass huts. Such improvement in housing always result in improvement in the health and morale of the labourers.

The number of native artizans is negligible and the few that exist are so far incapable of competing with Asians in skill or reliability. They can, however, do useful work under supervision. A number are employed by the Kenya and Uganda Railway which also has a well organized apprenticeship scheme, and Government maintains several technical schools.

Relations between employees and employed continued to be generally excellent.

XII.—LEGISLATION.

Thirty-eight Ordinances were passed during the year 1929, of which the following are the more important :—

Food Control Ordinance No. 1 provides for the conservation, control and distribution of food stuffs in the Colony during the year 1929. Prolonged drought and an invasion of locusts had lead to a threatened famine in some parts of the Colony, and this Ordinance was passed to give the Government control over the distribution of foodstuffs in case of necessity.

Abuse of Opiates Prevention (Amendment) Ordinance No. 2 makes provision for enforcing the requirements of the General

Opium Convention of the 19th February, 1925, which relates to the observance of certain regulations in the case of certain drugs in transit.

Stage Plays and Cinematograph Exhibitions (Amendment) Ordinance No. 8 provides that no person shall direct, take part in, or assist in, the making within the Colony of any cinematograph picture unless a licence to make such picture shall have been previously obtained. In addition, the definition of "cinematograph exhibition" in the Principal Ordinance has been amended so as to include "Talkie" films.

Registration of Domestic Servants Ordinance No. 11 provides for the registration of domestic servants. Employers must cause servants in their service at the coming into operation of the Ordinance to be registered, and servants, on being registered, are to be issued with pocket registers containing certain particulars. No unregistered servant is to be employed. Penalties are provided for offences against the Ordinance by employers and servants. Any servant, the total value of whose wages, together with the estimated value of food supplied by the employer, exceeds £10 per month is exempted from the provisions of the Ordinance.

Explosives Ordinance No. 13 consolidates the law with regard to explosives previously contained in the Indian Explosives Act, 1884, as applied to the Colony, and makes certain new provisions with regard both to classification of explosives and the amendment, transfer, and revocation of licences.

Weights and Measures (Amendment) Ordinance No. 17 brings the law relating to weights and measures hitherto in force in the Colony into line with modern English law.

Malaria Prevention Ordinance No. 19 gives Government power, in the interests of public health, to prevent the owner or leaseholder of land in townships from having on such land places in which mosquitoes may breed, and provides that proper and adequate steps shall be taken by the owner or leaseholder to remove such potential breeding-places from such land to the satisfaction of the local authority, who is empowered to deal with such places at the expense of the owner or leaseholder if such owner or leaseholder refuses or neglects to do so.

Local Government (Loans) Ordinance No. 22 enables Government to provide the necessary funds for making loans to local authorities, and lays down the procedure and the general terms and conditions upon which such loans shall be granted.

Trustees Ordinance No. 28 is based on the English Trustee Act of 1925, and brings trustee law in this Colony into line with modern English law.

Fencing Ordinance No. 31 regulates the law as to the fencing of farms and other holdings. The Ordinance defines the relations which are to exist between owners of adjoining holdings who fence the boundaries of their holdings and the relations between the Railway Administration, Road Authorities, Local Authorities, and members of the public in regard to the fencing of highways. The Ordinance further provides that landowners in a district may adopt a system of compulsory fencing in order that a concerted effort may be made against stock diseases.

Cattle Cleansing Ordinance No. 32 provides for the cleansing of cattle, and was passed with a view to circumscribing the incidence of East Coast Fever amongst cattle. The Ordinance provides for the cleansing of cattle by immersion in a dipping tank, and for the construction of dipping tanks for that purpose by owners of land. Dipping is made obligatory in every area in the Colony in which a two-thirds majority of the landowners in that area pass a resolution to that effect.

Fire Enquiry Ordinance No. 33 provides for the holding of investigations in cases of fire.

Water Ordinance No. 35 makes provision for the employment and conservation of waters and for the regulation of water supply, irrigation, and drainage. The Ordinance establishes the ownership of all natural bodies of water in the Crown, vesting the right of control in the Governor in Council, and provides for the establishment of a controlling body designated " The Water Board " for the purpose of granting water rights according to the procedure set forth in the Ordinance. The Ordinance also makes detailed provision for the principles of the relationship between Government as the granter of the water rights and the licensees as recipients and holders of the water rights. The Ordinance also provides for penalties for offences against its provisions.

Alteration of Time (Repeal) Ordinance No. 57 repeals the Alteration of Time Ordinance, 1928, which gave effect to the principle of Daylight Saving by advancing the clocks half-an-hour. After Daylight Saving had been in operation for 18 months, a Committee was appointed to enquire into the whole matter and, as a result, the Colony has gone back to the old time.

Map.

PREFATORY NOTE.

GEOGRAPHY.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian Line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East Longitude to 41° East. The land area is 219,731 square miles and the water area 5,229 square miles, making a total area of 224,960 square miles. The water area includes the larger portion of Lake Rudolf and the eastern waters of the Victoria Nyanza, including the Kavirondo Gulf.

The official time used is the zone time two-and-a-half hours fast on Greenwich.

HISTORY.

A note of the history of the Colony and Protectorate will be found in the Report for 1929—Colonial Reports No. 1510.

LANGUAGES.

The principal African language in use in Kenya is Swahili, a language evolved from Arab contact with Bantu tribes, which has become a medium of conversation with and between Africans of different tribes not only in Kenya but over a wide area in East and Central Africa. There are numerous native languages of local importance. Among these are :—

Hamitic Languages—Somali, Galla, and Boran.

Lowland Bantu Languages—Nyika (including Giriama), Rabai, Ribe, Jibana, Chonyi, Kauma, Kambe, Digo, Durama, and Pokomo.

Highland Bantu Languages—Kamba, Kikuyu, Embu, Chuku, and Meru.

Lakeland Bantu Languages—Bantu Kavirondo and Kisii.

Nilotic Languages—Masai, Samburu, Turkana, and Nilotic Kavirondo.

Nilotic-Hamitic Languages—Nandi, Lumbwa, Kamasia, Elgeyo, Suk, Elgonyi, and Marakwet.

CURRENCY.

The currency originally consisted of the Indian rupee as the standard coin, with smaller local coins and notes of higher denominations, all expressed in terms of the rupee; the British sovereign was also legal tender at Rs. 15. The exchange value of the rupee, after being maintained for many years by the Government of India at 1*s*. 4*d*. began to rise in 1917, and early in 1920 reached 2*s*. 9*d*. It was then decided to fix the rate in the East Africa Protectorate, the Uganda Protectorate, and the Tanganyika Territory at 2*s*. sterling to the rupee, and to issue a new currency in local rupee coin and notes, but subsequently it was decided that the new coinage should be expressed in terms of florins, instead of rupees, the 50 cent piece being alternatively termed a shilling. Some rupee notes were introduced but no rupee coins. Later the shilling was made the standard coin instead of the florin, and arrangements were made to withdraw the Indian rupee, which was demonetized from July, 1921, from circulation. The nickel-bronze coins (1, 5 and 10 cents of a rupee) have been withdrawn from circulation, and new copper-bronze coins (cents of a shilling) have been introduced.

The old Local Board of Currency Commissioners has been abolished and the currency of the Colony and Protectorate is now in the hands of the East Africa Currency Board in London, represented locally by the Treasurer.

WEIGHTS AND MEASURES.

The weights and measures in use in the Colony are the same as those used in Great Britain.

I.—GENERAL.

The Governor, Lieutenant-Colonel Sir Edward William Macleay Grigg, K.C.M.G., K.C.V.O., D.S.O., M.C., left the Colony on the termination of his term of office on 27th September. From then until the end of the year the Government was administered by Mr. Henry Monck-Mason Moore, C.M.G., Colonial Secretary.

On 11th February, His Royal Highness the Prince of Wales arrived at Mombasa to spend a little under a month in Kenya. The visit of His Royal Highness was entirely private and unofficial and was spent largely on safari.

On 30th December, 1929, Mr. Neville Chamberlain arrived at Mombasa. He spent about three weeks in Kenya, during which time he travelled extensively, seeing as much of the local conditions as possible before leaving for Uganda.

On 4th February, Prince de Ligne and Dr. Derscheid, President and Secretary of the Parc National Albert arrived at Mombasa. After a short stay in Kenya they proceeded to Entebbe on 13th February.

On 17th November, Monsieur Charles, Secretary-General to the Belgian Ministry of Colonies, arrived in Mombasa. From 19th to 24th November he remained in Nairobi, and then proceeded to Uganda.

On 25th September, a party of 4 staff and 28 boys from various English Public Schools arrived at Eldoret. Between that date and 26th October, when the party sailed from Mombasa, visits were paid to various districts and the boys obtained as comprehensive a picture of the conditions of life in the Colony as was possible in the limited time available.

The Legislative Council held four sessions during the year and sat on 40 days (including three days in January, 1931, during the fourth session).

Two by-elections were held : one in Mombasa on 26th July on account of the resignation of Mr. J. Cumming; and the other in the Rift Valley on 15th October on account of the resignation of Mr. E. Powys Cobb.

In the former constituency which was contested, Mr. F. A. Bemister and Mr. P. H. Clarke being the candidates, the former was returned : while in the latter the Rt. Hon. Lord Delamere, K.C.M.G., was returned unopposed. The four vacancies for Nominated Indian Members remained unfilled throughout the year.

On 22nd December, Mr. Conway Harvey resigned from Executive Council in favour of the Rt. Hon. Lord Delamere, K.C.M.G.

From 7th January to 11th January, 1930, a Conference of the Governors of Kenya, Uganda, and Tanganyika was held at Nairobi. On a long agenda the matters of major importance were Customs

Tariffs, Country Produce Rates on the Kenya and Uganda Railway, Railway Development, and Reorganization of the King's African Rifles.

The Agricultural Commission which sat under the Chairmanship of Sir Daniel Hall, K.C.B., LL.D., F.R.S., in 1929, recommended, in its report, the appointment of an Agricultural Board. This recommendation was put into effect in April when the constitution of the Board was announced. During the year the Board investigated numerous local agricultural problems including the question of agricultural credits, cost of production of crops, financial assistance to producers, and the organization of marketing of dairy produce.

During the year Mr. G. R. Mayers made a gift of £50,000 to the Colony for the purpose of establishing the Horace Russell Mayers Memorial Home at the Coast.

The MacMillan Memorial Library was built by Lady MacMillan in Nairobi, in memory of the late Sir Northrup MacMillan.

Successful applications for grants under the Colonial Development Fund were made in respect of three projects :—

Description of Scheme.	*Purpose.*	*Condition of Grant.*
Cape to Cairo Air Service. Ground facilities.	Provision of ground organization at Kisumu.	Direct grant of £47,300.
Colonial Veterinary Scholarship Scheme.	Provision for meeting one third of the cost of the scheme.	Direct grant of £4,150 apportionable between the ten Colonies who are participators in the scheme. Payment of grant spread over a period of three years.
Investigation in connexion with Standardization of Railways in Africa.	As stated.	Direct grant of £5,000 (half the estimated cost of the investigation), spread over a period of three years. The balance is to be found, as to two-thirds by the K.U.R. Transport Administration, and one-third by the Tanganyika Railway Department.

On 5th September, 1930, a delegation to represent publicly the views of the European community in Kenya on the subject of closer union in East Africa, left for England. The delegates were the Rt. Hon. Lord Delamere, K.C.M.G., Mr. T. J. O'Shea, and Mr. W. McLellan Wilson, O.B.E. Lady Eleanor Cole, the nominee of the East African Women's League, joined the delegates in England.

In Kenya, where agriculture forms the main and almost the sole industry, the welfare of the country is dependent on the prosperity of the various branches of agricultural development which are being pursued within it. That in its turn is governed largely by climatic conditions, and by the margin of profit which is made available by sale of produce in the world's markets.

Early in 1930 it seemed to be justifiable to assume that, in each of these respects, it would be possible to look forward to a period of, at least, normal prosperity. The previous year had been one of considerable hardship. Locusts had done much damage in many parts of the Colony and drought conditions had aggravated the situation to the extent of reducing parts of certain native reserves, particularly in the Kikuyu and Ukamba Provinces, to a state of famine. By the end of that year, however, abundant short rains had removed any fear of continuance of the food shortage, and the locust menace had considerably abated. Abundant crops of maize and wheat were anticipated, and, apart from a few isolated swarms, locusts had, by March, almost become a thing of the past. A record coffee crop and a largely increased quantity of sisal were expected to be available for export. The dairy industry particularly had reacted to the increased rainfall, and much larger quantities of exportable dairy produce were being produced than during the previous year.

So far as the actual volume of agricultural produce was concerned, the first three months of the year tended to do more than justify the hopeful forecasts which had been made. Unfortunately, however, the second essential to prosperity, namely, the maintenance of the market price for primary products at a point which would allow of a reasonable margin of profit to the producer, tended in an increasing degree to become unlikely of achievement. Owing to a multitude of causes, political and economic, a general and unforeseen depreciation in market prices for primary products had begun, which more than counterbalanced the benefit to be derived from increased production and increase in the volume of exports. Grain growers were the most adversely affected by this fall in prices and dairy farmers, perhaps, least so. Hopes, which had existed at the end of the first quarter of the year, that prices would rise, or, at least, that there would be no further appreciable drop, were doomed to disappointment. A progressive decline manifested itself during the second quarter, and by the middle of the year the Colony, in common with almost every other country in the world, was faced with a situation of considerable gravity. Grain growers particularly were confronted with the prospect not merely of being unable to sell their produce at a price which would allow them a reasonable margin of profit but of being unable to realize any profit at all. All branches of agricultural industry were similarly affected in varying degrees. Nor was there any prospect of improvement in the immediate future.

The uncertainty in regard to the proposals for Closer Union between the East African Dependencies was a complicating factor in the year under review.

Progressively throughout the year various measures were taken to relieve the burden which had been imposed on the agricultural industry, both by economic depression and by abnormally heavy rainfall, which retarded harvesting, transport and preparation for export of crops during the earlier months of the year. The assistance afforded by Government to the agricultural industry during 1930 and the opening months of 1931 may be tabulated as follows :—

	£
Freight rate reductions to the Cereal Industry (recoverable)	33,330
Waiving of Conditioning Charges	15,071
Subsidy to Maize Industry	81,000
Advances under Agricultural Advances Ordinance (recoverable)	100,000
Reduction in freight and storage charges—	
Kenya and Uganda Railways	33,330
Harbours	23,434
Total	£286,165

A detailed account of these measures will be found under Head III, Production.

The creation of a Land and Agricultural Bank in Kenya to afford a means for making available for farmers long term loans on first mortgage of land has received the consideration of Government for some years. The depressed conditions prevailing in 1930 rendered the creation of such a Bank more than ever desirable, and, with the permission of the Secretary of State, the Land Bank Bill was passed by Legislative Council in November, before receiving his final approval. The Land Bank, with a capital of £240,000, began operations in July, 1931.

At the beginning of 1930 the Surplus Balances of the Colony stood at £707,976. In the Budget for the year the approved estimate of Revenue was £3,461,612 and the approved estimate of Expenditure £3,555,535, that is, provision was made for a deficit of £93,923 on the year's working. When the Budget was approved there was every prospect that a period of normal prosperity and expansion was at hand. With the advance of the year, however, the world rapidly entered on a period of acute depression. This fact affected the finances of the country in two ways. First, the probability of a serious decrease in the revenue during the year manifested itself, and secondly as the depression increased it became necessary to incur expenditure, for which no provision had been made in the approved estimates. Despite a progressive fall throughout the year in commodity prices the total value of Kenya produce exported in 1930 exceeded that of any previous year.

As soon as it became apparent that these developments were likely to take place vigorous action was taken to reduce expenditure as far as possible, in order to offset the anticipated shortfall in the receipt of revenue. As a result, savings to the extent of £116,661 were effected on the estimated expenditure for the year. This revised figure of expenditure fell within the original estimated revenue for the year, namely, £3,461,612. Owing, however, to a shortfall in revenue of £220,012, the actual deficit on the year's working amounted to £197,274, or £103,351 more than was estimated. At the end of the year the Colony's Surplus Balances amounted to £510,702.

In December a loan of £3,400,000 was floated in London at £98 10s. with an interest yield of 4½ per cent. The Loan, which was not fully payable until February, 1931, provided additional sums for Colonial Development in respect of Public Buildings, Water Supplies, Loans to Local Authorities, and Communications, and made £240,000 available for the purpose of a Land and Agricultural Bank. Provision totalling £1,132,881 was made for Railway and Port Development.

At the end of the year the total Public Debt of the Colony, including this new issue, stood at £16,900,000 allocated as follows:—

	£
Colony	3,648,192
Railway	9,752,765
Port	3,499,043
	£16,900,000

Of the £5,000,000 raised under Ordinance No. 22 of 1927 £4,809,297 had been expended on 31st December, 1930. Of the £3,500,000 loan of 1928, expenditure of £3,406,130 had been incurred by the end of 1930.

The effect of the Customs Tariff Ordinance, 1930, is discussed under Head XII, Legislation.

Local Government Administration was maintained satisfactorily during the year. No constitutional changes occurred, but the Indian community held aloof from municipal government throughout the year. A District Council was established in the Trans Nzoia District early in 1930. Road work in all the Council areas progressed well, and a marked improvement in all the more important of these roads is noticeable. Towards the end of the year the Eldoret Municipal Board and the Uasin Gishu District Council agreed to take over the European Hospital in that town from the Eldoret Hospital

Company. The hospital cannot be maintained without substantial contributions over and above the sums received in fees and these authorities have agreed to raise a special hospital rate for the purpose. This arrangement will come into force in 1931. The Local Government legislation enacted during 1930 consisted of amendments to the District Councils, Municipalities, and Rating Ordinances.

The Naro-Moru-Nanyuki, and Kisumu-Yala Branch Lines were completed respectively in October and November, 1930; while the Jinja-Kampala line was opened on the completion of the Nile Bridge on 4th January, 1931. This subject is dealt with in greater detail under Head V, Communications.

In October, the negotiations for a subsidized Air Mail Service culminated in the completion of an agreement for the establishment of a weekly service for the transport of passengers, mails, and freights between Alexandria or Cairo and Cape Town. The principal places on the route are Cairo, Khartoum, Butiaba, Port Bell, Kisumu, Nairobi, Moshi, Dodoma, and thence via Broken Hill, Salisbury, and Bulawayo, through the Union territory to the Cape. The necessary preparations at Kisumu were begun during the year, and arrangements were made for enlarging the aerodrome, the provision of a slipway for marine aircraft, for embarkation facilities, and for the construction of hangars for two marine and two land aircraft, together with workshops. By the end of the year the following Government aerodromes and landing grounds had been established :—

Customs aerodromes at Mombasa, Nairobi, and Kisumu.
Landing grounds at Nakuru, Naivasha, Voi, and Makindu.

A Royal Air Force flight from Cairo to Cape Town was carried out early in the year. Kisumu and Nairobi were visited both on the outward journey and on the return, when three machines of the South Africa Air Force accompanied the flight.

The following tables show comparisons between the estimated population at the end of 1929 and the estimated figures at the end of 1930 :—

	1929.	1930.
Europeans	16,663	16,842
Indians	35,514	39,594
Goans	3,990	3,959
Arabs	12,504	12,162
Other Races	3,883	1,331
Total Non-Native Population ...	72,554	73,888
Estimated Native Population ...	2,930,604	2,951,023
Total Estimated Population ...	3,003,158	3,024,911

In the 1926 Census the figures for non-native population and the estimate of native population were as follows :—

Europeans	12,529
Asiatics	30,583
Arabs	10,557
Total Non-Native Population	53,669
Native Population (1928 estimate)	2,838,022
Total	2,891,691

Increases in population since 1926 are thus approximately as follows :—

	Per cent. (approx.)
Europeans	34
Asiatics	42
Arabs	15
Natives	4
Total population	4.6

Native Administration, Native Affairs, and Native Interests.

The year under review has been one of peace, with a fair measure of prosperity, and a very considerable degree of progress.

The number of Local Native Councils was increased from 20 to 24. The value of these Councils is being increasingly appreciated by the natives, and particularly in the case of the more advanced Councils a marked progress towards a better understanding of the principles of Government has been shown. The activities of the Councils have been mainly directed towards the building of hospitals, schools, dispensaries, council houses, rest houses, etc.; the establishment of tree nurseries; the repair of roads and the building of concrete bridges, and the improvement of water supplies.

A comparative table showing the total revenue and expenditure of Local Native Councils in 1930 is given below :—

REVENUE.

Rates.	*Land Rents, Dues, etc.*	*Other.*
Shs.	Shs.	Shs.
801,376	375,424	158,142

EXPENDITURE.

Education.	*Medical.*	*Agriculture and Forestry.*	*Roads and Bridges.*	*Water Supplies.*	*Famine Relief.*	*Other.*
Shs.	Shs.	Shs.	Shs.	Shs.	Shs.	Shs.
146,958	97,321	130,523	227,906	97,802	14,588	224,476

At the end of the year the total Surplus Balances of all Local Native Councils amounted to £118,196.

Improvement in the efficiency of Native Tribunals has been satisfactory particularly in regard to civil causes. Owing to the lack of full appreciation in the native mind of the true significance of an offence against the State, a greater degree of supervision has to be exercised over Tribunals sitting to decide criminal matters.

The system of a Central Tribunal of Appeal worked excellently in the Kikuyu and Nyanza Provinces.

Special development has taken place in the sphere of public health in native areas. The demand for better clothing, better houses, cleaner surroundings, and more hygienic conditions of life has been general and very marked. In particular the digging of latrine pits is a reform which is becoming increasingly popular, is spreading rapidly through many of the Native Reserves, and, in view of the prejudices and superstitions which have had to be surmounted, is a notable sign of grace. The year has been generally free from epidemics, though plague has caused no little anxiety, and sleeping sickness has not yet been eradicated in Nyanza.

Rainfall was adequate and harvests were generally abundant. The fall in prices, however, prevented the realization of their normal economic value.

Communications have been largely extended and improved.

The following Ordinances particularly affecting native interests were passed during the year :—

(1) The Native Lands Trust Ordinance.
(2) The Native Tribunals Ordinance.
(3) The Northern Frontier Province Poll Tax Ordinance.
(4) The Collective Punishments Ordinance.

Their effect is discussed under Head XII, Legislation.

II.—FINANCE.

In the following table appear the totals of Revenue and Expenditure for the five years ending 31st December, 1930.

Year.	*Revenue.*	*Expenditure.*
	£	£
1926	2.627,223	2.414.681
1927	2,846,110	2,515.115
1928	3.020,694	2.834.647
1929	3,333,742	3,505.072
1930	3.241,599	3,438,874

STATEMENT OF LOAN POSITION OF COLONY AT 31ST DECEMBER, 1930.

(a) *Public Debt.*

Floated.	*Amount of Issue.*	*Rate of Interest.*	*Price of Issue.*	*Redeemable.*	*Expenditure at 31/12/30.*
	£	Per cent.	Per cent.		£
1921 ...	5,000,000	6	95	1946/56	5,000,000
1927 ...	5,000,000	5	99½	1948/58	4,809,297
1928 ...	3,500,000	4½	95	1950	3,406,130
	£13,500,000				£13,215,427

(b) *Sinking Funds.*

Sinking fund contributions in respect of the above loans must not be less than 1 per cent. and must commence at the expiration of three years from the date of issue.

A further issue of £3,400,000 4½ per cent. stock was made in December, 1930, at £98 10s. per cent. This was not to be fully subscribed until 17th February, 1931.

For particulars of flotation of the earlier loans cf. Annual Report for 1929.

STATEMENT OF ASSETS AND LIABILITIES OF THE COLONY AND PROTECTORATE OF KENYA ON 31ST DECEMBER, 1930.

III.—PRODUCTION.

This year was one of general world-wide over-production of staple crops, and the consequent depression has been markedly felt in Kenya. The heavy rains of late 1929 produced large crops of maize and wheat, which ended a more or less severe shortage of food felt in 1929 throughout some Native Reserves, particularly Meru, Embu, and Kitui. The prolongation of these rains into 1930 produced difficulties, both in regard to speedy preparation of surplus crops for export, and in some cases, to the transport of crops from the farms.

The first consignment of maize was received at the Coast on 15th January, and 13 days later continuous working was started at the conditioning plant, which ran day and night until 19th November. Considerable congestion of maize awaiting conditioning was unavoidable.

As a result of the world-wide depression it became necessary to afford some measure of financial assistance to the agricultural industry. A review of the whole question of the conditions of agricultural credits operating in the Colony resulted in the enactment of the Agricultural Advances Ordinance on 31st May. A Central Board, in which was invested the sole authority for making advances, and advisory Local Boards in various centres, were appointed. Provision was made for the sum of £100,000 to be available for these advances and by the end of the year some £68,000 had been advanced in various forms. It was considered advisable to carry over the sum of £32,000 remaining to enable further advances to be made in 1931. This measure had a steadying effect on what threatened to become a very serious situation.

Further emergency measures to assist the maize and wheat industries took the form of a refund of four-fifths of the Grading and Inspection Charges, made on the 1929-1930 crops of maize and wheat, and a remission by the Kenya and Uganda Railways of four-fifths of the Port Storage Charges on those crops. By July, market prices of grain had dropped to a parity of approximately Shs.5/55 and Shs.9/- per 200 lb. bag of maize and wheat respectively and to Shs.2/20 per 180 lb. bag of barley f.o.r. Kenya stations. The resulting collapse in grain markets created a serious crisis. Further assistance to the agricultural industry became imperative. A committee was appointed to enquire into the situation and as a result of its recommendations it was decided to appropriate the sum of £35,000 from the Colony's Surplus Balances, to enable a refund to be made of the whole or part of the railway rates and port charges in respect of maize, wheat, and barley harvested late in 1929 and early in 1930, and exported during 1930.

The railways and harbours were prepared to co-operate in this project to the extent of bearing half the cost involved. Such refunds which might be made were to be recoverable in a form and manner which was to be decided later.

Towards the end of the year it became apparent that, by reason of the improbability that world conditions would improve appreciably in the near future, it was necessary to afford certain industries still further assistance during the forthcoming season. A Maize Conference was convened in December to enquire into the state of the maize industry and to seek means for assisting the industry during the period of depression. The Report of this Conference, and the measures which resulted from it, fall within the year 1931. In effect assistance was given to the producers of the 1930 crop, in general, by means of a repayable subsidy on exports averaging Shs.1/63 per bag.

During the year it became increasingly evident that some reorganization in the wheat and flour industry would be necessary to ensure that producers should share, in ratio to the amount of their production, the loss entailed by the Colony's production being in excess of its requirements, and the fact that the export price for wheat was considerably less than that for wheat sold for local consumption. The Sale of Wheat Ordinance was passed and a Board was created in December to effect this object. This Board confirmed draft Rules under the Ordinance and the wheat " pool " was formed.

1930—1931	200,926	1,649,728	8·21	—

Heavy rains, far in excess of the average, considerably raised the yields in the drier maize-growing areas, but in the Trans Nzoia, which normally has an ample rainfall, the continuance of heavy rain after planting, in many cases, caused deterioration by facilitating the growth of parasitic organisms. Considerable attention has been paid to the effect of various diseases in reducing yields of maize. Work on maize selection is being carried out at Njoro, at the Scott Agricultural Laboratories, and in other parts of the Colony, notably in the Kitale area.

The Kenya Farmers' Association Maize Growing Competition for the highest yield was won by Mr. J. E. A. Wolryche-Whitmore, of Rongai, with a yield over 25 acres of 29.92 bags per acre.

The Grading and Conditioning Services worked at high pressure through the year and the efficiency of this section was maintained at a high level.

1929–1930 ...	63,217	293,468	4·64	170,181
1930–1931 ...	68,851	194,337	2·82	—

The decline in production in the 1930-1931 crop was due to the damp weather and greater prevalence of rusts which, owing to the abnormal weather conditions, were very prevalent during the year under review. Yellow rust was epidemic and extended into altitudes below 6,000 feet—a very rare occurrence. Stem rust was very prevalent, while leaf rust was common especially on Kenya Standard. Experiments, the object of which is to evolve a wheat strongly resistant to all forms of rust, were continued throughout the year and were attended with a fair degree of success.

The introduction of wheat into the Native Reserves made steady progress, and the benefit to the native of the addition of this cereal to his diet is becoming more appreciated. This crop is replacing some of the millet crops hitherto grown at high altitudes, which were uncertain in their growth and of low yield.

Coffee.—The total area under coffee as at the 28th February, 1931, is returned as 96,689 acres, an increase of 6,484 acres over the figures for July, 1929. In 1930, 15,5[illegible] tons of value £1,426,869 were exported. The quantity of coffee produced from the 1930-1931 crop amounts to 250,919 cwt. clean coffee, and 26,806 cwt. of mbuni, a record output, the previous highest output (the 1927-1928 crop) being 213,671 cwt. clean coffee and 32,621 cwt. mbuni. Early in the year the 1930 crop was estimated at 16,000 tons but losses from pests and diseases, climatic and physiological causes, reduced the actual crop to approximately 13,000 tons. Despite this, the average yield per acre was approximately 4 cwt., which is a good average when compared with other coffee producing countries. Early in the year Kenya coffee sold at Shs.124/- per cwt., but in July the average price had fallen to Shs.54/-. This price improved to Shs.80/- towards the end of the year. Kenya coffee of attractive roast and liquor sold at a very considerable premium over the next best during the year and its high quality and reputation in the world's market is established. It has evolved special characteristics of liquor and appearance which cannot be produced in any other country.

A considerable measure of control has been established over most of the diseases and pests of coffee which have caused considerable losses in past crops. Mealy bug caused comparatively small loss in the 1930 crop, while there is a marked decrease in the number of plantations infested with Stephanodores and Sophronica—a fact which may be attributed to the rigid control measures enforced. The white borer, which gave cause for considerable alarm in certain districts in 1929, was located on a greater number of plantations than during that year, but has been kept well under control. Manurial experiments, in connexion with mealy bug infestation and coffee berry disease, are being continued for two more years. Experimental work at the Scott Laboratories has been continued in connexion with manuring, pruning, vegetable propagation, shading, seed selection and establishing varieties and types. The co-operative experiments with coffee growers have been extended.

The Diseases of Plants Prevention (Coffee) Rules were revised and came into force in June. Designed to prevent the spread of pests, the powers thus vested in the Agricultural Department had to be exercised in the case of 63 coffee plantations which were in a neglected condition. Two meetings of the Coffee Consulting Committee were held during the year to consider questions affecting the industry.

Tea.—The area under tea as at 28th February, 1931, was 10,052 acres as compared with 5,593 acres on 31st July, 1929, an increase of 4,459 acres. 930,209 lb. of " prepared " tea were produced during the year. Of this quantity 160,608 lb. valued at £8,193 were exported.

Sisal.—The total area under sisal at 28th February, 1931, was 137,299 acres, an increase of 27,924 over the figures of 31st July, 1929. Exports of sisal fibre and tow increased from 15,647 tons in 1929 to 15,947 tons in 1930. The respective values of these exports was £553,572 and £437,269. Towards the end of the year the general depression in agriculture affected the sisal industry severely. From the 1929 price of £39 15s. per ton a decrease to £35 15s. was shown in January, 1930, and by the end of that year the price had fallen to £21 10s. per ton, at which figure an average loss of about £3 was entailed on every ton sold in Europe.

Sugar.—The area planted with sugar cane on European holdings on 28th February, 1931, amounted to 13,493 acres (2,332 acres more than on 31st July, 1929), and that on farms occupied by Indians to 9,120 acres, making a total for the Colony of 22,613 acres. The output of crystallized sugar increased from 123,040 cwt. in 1929 to 181,820 cwt. in 1930. 15,047 cwt. of refined sugar, valued at £19,250 were exported in 1930 as against 15,343 cwt. valued at £25,181 in the previous year.

The industry has not felt the general depression in commodity prices to the same extent as other industries, as sugar is protected and the amount produced mainly consumed locally or in the neighbouring territories. An exportable surplus is, however, produced and, in order to organize the industry on the most economical basis and to stimulate local consumption, the East African Sugar Association, representing the interests in Kenya and Uganda, was formed.

Coconuts.—The area of European-owned coconuts as at 28th February, 1931, was returned as 8,499 acres, a decrease of 69 acres as compared with the previous year. The export of copra declined from 3,240 cwt., valued at £3,444, in 1929 to 3,140 cwt., valued at £2,886, in 1930. Investigation showed that cost of production varied from £8 to £12 per ton, a figure which allows but a small margin of profit. The main objective, in common with all crops in the Colony, is to devise means for reducing the cost of production.

Wattle.—The area under wattle on European holdings as at 28th February, 1931, was 11,702 acres, and production of dried bark for 1930 was 599 tons. A considerable increase in the export of wattle bark is recorded, 131,141 cwt. valued at £44,680 being exported in 1930 as compared with 63,342 cwt. valued at £25,336 in the previous year. The export of wattle extract, however, declined from 21,776 cwt. valued at £28,311 in 1929 to 16,730 cwt. valued at £18,400 in 1930.

Rules were promulgated in 1930 under the Crop Production and Livestock Ordinance, 1926, to regulate the planting of wattle in the Colony.

Potatoes.—There was a considerable decline in the export of potatoes during the year as is shown in the following table :—

	1926.	1927.	1928.	1929.	1930.
	Cwts.	Cwts.	Cwts.	Cwts.	Cwts.
Quantity exported ...	44,019	43,105	57,296	82,755	45,018
	£	£	£	£	£
Value	10,999	10,036	16,990	27,050	11,138

The export trade from Kenya is almost entirely to the Bombay market. It is disappointing to note that the crop did not maintain the standard of uniformity of the previous year.

Live Stock.

The total number of cattle in the ownership of Europeans over the last five years is estimated in the following table :—

	1926.	1927.	1928.	1929.	1930.
Cattle—Total	**213,423**	**215,650**	**216,961**	**218,390**	**236,895**
(*a*) Breeding stock ...	**105,556**	**107,434**	**110,796**	**115,777**	**135,530**
(*b*) Oxen	**107,867**	**108,213**	**106,165**	**102,613**	**101,365**
Horses	**1,844**	**2,137**	**2,172**	**2,288**	**2,263**
Mules	**780**	**719**	**709**	**632**	**492**
Donkeys	**931**	**1,046**	**1,238**	**1,235**	**951**
Sheep (Wool-bearing) ...	**162,848**	**172,299**	**176,261**	**210,912**	**218,845**
Sheep (Native)	**43,057**	**32,972**	**20,603**	**24,568**	**27,507**
Goats	**4,454**	**3,697**	**3,211**	**3,926**	**2,972**
Pigs—					
(*a*) Breeding Sows ...	**1,714**	**2,896**	**3,455**	**3,108**	**2,691**
(*b*) All others	**7,411**	**10,061**	**14,697**	**14,638**	**12,539**
Poultry	**35,728**	**43,988**	**38,845**	**35,786**	**49,183**

The Colony continued to participate with the Empire Marketing Board in defraying the cost of shipping freight on pure bred stock imported from Great Britain. On this service the sum expended by this Government amounted to £253 in 1930. Grants-in-aid were paid in respect of 15 bulls, four heifers, and four sheep. A decrease in the numbers of female stock imported was noted.

Kenya butter is rapidly establishing itself on the London market and a steady expansion of this trade may be confidently expected.

An increasing demand for animal products is occurring in native areas, and native stockowners are being encouraged to meet this demand.

Efforts towards creating an improvement in the methods of preparation for market of hides and skins, and of animal husbandry generally, in the Reserves, were maintained as far as resources would permit.

Unfortunately, financial stress prevented the operation of the ncing and Cattle Cleansing Ordinances which became law in 29.

Experiments in problems of animal nutrition have been carried t by the Rowett Research Institute on the old government farm Naivasha. Much time was necessarily spent in reconstructing e farm, but by the end of the year it was in full working order d experimental work was well under way.

The sheep industry passed through a difficult period in 1930 ing largely to the cold and wet conditions which prevailed. Wool lues remained low. The export of wool decreased from 9,125 t. in 1929 to 8,335 cwt. in 1930 and the value from £98,872 £70,615 respectively.

The local pig market remained saturated during 1930: a fact ich is reflected in the reduction in the number of sows to 2,691, ich is still in excess of local requirements. An improvement s noted in the type of pig supplied to the factories.

A serious drop in market prices accounts for a decrease amounting £156,613 in the export values of hides and skins.

Animal Products.

The following is a comparative table of the animal products sold Europeans during the last five years :—

Milk (Whole).	*Cream.*	*Butter Fat.*	*Butter.*	*Cheese.*	*Ghee.*	*Bacon and Hams.*	*Wool.*
Gal.	*Gal.*	*Lb.*	*Lb.*	*Lb.*	*Lb.*	*Lb.*	*Lb.*
1,101,704	145,796	614,790	313.694	131,168	114,527	699,080	654,846
791,452	212,914	—	290,905	145,609	65,215	603,233	938,619
421,779	75,764	—	324,593	130,553	78,528	519,463	420,575
617,747	92,640	—	216,863	148,305	124,057	No return.	632,088
395,031	72,693	—	291,894	144,070	115,815	430,119	670,752

The increases in milk and its derivatives are noteworthy as show- that the very considerable expansion of the dairying industry iced in 1929 has been maintained.

Native Agriculture.

Eleven officers were devoted to this section in 1930, four in uyu, four in Nyanza Province, two in the Coast Province, and at Headquarters. To supplement the work of these officers, inspectors and 54 labourers were employed by the Department, eight instructors and 30 labourers by Local Native Councils. etings of these officers were held in January and August and a rt course of instruction for officers at the Scott Agricultural

Laboratories was arranged before the January meeting, during which lectures were given by the scientific staff, and the work being done was discussed.

With the exception of the Coast, the year's main feature was the very heavy long rains which injured crops by prolonging the growing period. The food shortage which prevailed in parts of Kikuyu and Ukamba Provinces at the end of 1929 terminated in February, 1930, when the yield of the short rain crops became available. Since then, again with the exception of the Coast where drought was experienced, food supplies have been abundant.

Agricultural progress in native areas has been steady, though the fall in the world's prices caused a decrease in the value of native produce exported—particularly in the case of hides and skins. So far as quantity of exports is concerned the 1930 figures are higher than the previous year particularly in regard to hides and skins. An improvement in the variety of foodstuffs grown is having a beneficial effect on the health of the people. With the object of improving the balance of diet of natives generally, encouragement has been given to the cultivation of fruit.

For the first time in the history of Kenya a census of native agricultural production was taken in 1930. Rules under the Crop Production and Livestock Ordinance, 1926, regarding the sale of maize, wattle, and simsim, were promulgated in December. Instruction in the building of better types of stores for grain was designed to assist the object of these rules, namely, the raising of the standard of native produce destined for export.

Three Native Agricultural Shows were held during the year. They proved their value in arousing the interest of natives in superior kinds of produce.

The Agricultural Department's estimate of the exports of native origin for the last eight years are as follows :—

	1923.	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	£	£	£	£	£	£	£	£
Animals	10,000	20,000	16,000	11,000	12,000	11,000	10,300	8,600
Copra and Coconuts ...	10,280	35,000	28,000	20,600	12,000	23,000	2,500	2,250
Cotton	—	11,860	41,000	32,750	15,000	24,000	24,800	17,200
Cotton Seed	—	—	—	—	—	—	5,400	5,000
Groundnuts	24,000	26,000	19,000	31,000	22,500	19,659	29,500	16,500
Maize	120,000	130,000	100,000	70,000	75,000	50,000	45,000	75,000
Millets	4,000	300	865	2,750	3,350	423	240	2,800
Pulse	12,000	15,000	16,000	20,400	19,900	13,000	12,500	14,000
Simsim	22,000	84,000	65,000	76,500	67,350	27,355	27,500	15,200
Hides	60,000	121,000	210,000	140,000	160,000	200,000	220,000	105,000
Skins	3,000	30,000	50,000	51,000	56,000	100,000	87,000	73,000
Oils—Simsim	2,400	2,200	3,000	5,500	3,550	5,000	10,000	6,700
Potatoes	3,000	4,000	4,000	7,250	7,500	7,000	24,000	10,500
Miscellaneous	1,000	1,000	1,000	2,000	2,600	2,000	2,000	2,000
Wattle Bark Extract ...	—	—	—	—	—	—	35,000	42,000
Total £	271,680	480,360	564,865	470,750	497,780	482,437	535,740	395,750

The Department's estimate of native live stock made in 1930 is contained in the following figures :—

	Cattle.	*Sheep.*	*Goats.*
In Native Reserves ...	4,742,000	2,805,000	4,036,000
Property of natives resident on European holdings	223,000	191,000	284,000
	4,965,000	2,996,000	4,320,000

Some districts are overstocked and no real improvement in the quality of the native stock has occurred.

A fall in the price of ghee and failure of natives to accustom themselves to market fluctuations caused a decrease in production. Consumption in the Colony is far in excess of present production.

Locusts.

Anti-hopper operations which began in November, 1929, were continued during January in the Northern Frontier Province, Embu, Kitui, and Voi Districts. In April laying occurred on a small scale in Baringo and Northern Turkana. Temporary Locust Officers operated in the former locality, using bran bait ; and in the latter natives beat hoppers under the general supervision of Administrative Officers. By the end of July the Colony was practically free from the desert locust.

Forestry.

The total revenue from forests was £40,225 of which £2,173 was revenue collected on behalf of Local Native Councils. The total revenue accruing to Government was £38,052 or £2,368 less than in 1929. The total expenditure was £38,751. 1,222,595 cubic feet of timber were sold, a decrease on any of the four previous years, and at the end of the year mills were working very short time and had considerable stocks on hand of which they could not dispose. An increased quantity of wood fuel was sold and for the first time the revenue from fuel exceeded that from timber.

Wood Fuel Sold.	*Cubic Feet.*
For domestic and industrial consumption ...	2,782,878
For railway consumption	8,768,957
Total	11,551,835

The total quantity of timber exported was 159,554 cubic feet. Of this quantity 35,496 cubic feet consisted of cedar pencil slats : almost double that of the previous year. The balance went mainly to Uganda and Tanganyika. With a view to discovering the possibilities of an export market, logs of East African camphor, African olive and pencil cedar (the most abundant species available in the Colony) were sent to the Forest Products Research Laboratory in England for mechanical and working tests. Efforts were made both by the Forest Department and the Lumbermen's Association of East Africa to find overseas markets for local timbers. Prospects are not unpromising. The export of mangrove poles amounted to 278,672, about 18,000 less than the previous year. An increased demand for mangrove bark slackened towards the end of the year.

Plentiful and well distributed rainfall contributed largely to the successful furthering of the reafforestation programme. 4,429 acres were planted and 1,763 acres turned over to encourage natural regeneration. The planting was mainly of eucalyptus for fuel and species of cupressus for soft wood timber production. Much cedar was also planted as well as mangroves and other valuable indigenous timbers. At the end of the year the areas of established plantations in forest reserves amounted to 11,761 acres of indigenous and 19,524 acres of exotic species. Of the 8,901,602 seedlings raised in the departmental nurseries, 539,694 were sold to private customers: a considerable decrease on the previous year owing to the general depression of trade.

Tenders were invited in respect of an area of 50,000 acres of bamboo forest for the manufacture of paper pulp. Negotiations were in train at the end of the year.

Much progress was made with forest surveys and the management of the Nairobi forests was placed on a satisfactory basis by the completion of a detailed working plan.

Three further areas amounting to 238,861 acres were proclaimed as forest reserves during the year.

Fisheries.

A scientific expedition, organized by Professor Stanley Gardiner, F.R.S., Professor of Zoology, Cambridge University, under the leadership of Dr. Worthington, and financed partly by the Royal Society, visited the Colony towards the end of the year to carry out research on the fish and other fauna of Lakes Rudolph and Baringo.

IV.—TRADE AND ECONOMICS.

General.

Kenya and Uganda form a single unit for purposes of Customs and there is, in consequence, complete freedom of trade between the two territories. A detailed examination of the external trade of Kenya alone is therefore a difficult matter, particularly as almost the whole of the imports and exports of both Dependencies passes through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £468,862 was transported through Kenya and shipped at Mombasa during the year, and goods valued at £667,405 were imported into Kenya and subsequently transferred to Tanganyika Territory.

The combined value of trade imports and total exports (i.e., exports of domestic produce and re-exports) of Kenya and Uganda during the year amounted to £13,871,883, as compared with £18,062,190 in 1929 and £17,512,448 in 1928, the total volume of trade of all classes, including importations on Government Account, transit and transhipment traffic, being valued at £15,400,376 as against £19,837,533 in 1929. The value of merchandise cleared for home consumption during the year was £6,820,712 as against £8,607,910 in 1929, a decrease of £1,787,198 or 20.76 per cent.

Exports of domestic produce of the territories were valued at £5,483,024 as compared with £7,020,668 in the previous year. Of this total, goods to the value of £3,422,571 originated in Kenya; the domestic exports of Uganda, calculated in terms of f.o.b. value at the port of final shipment from the two territories, being valued at £2,060,453.

The very serious fall in the world values of all primary products is naturally reflected in the external trade figures of the territories in relation both to imports and to exports. From April a contraction in the volume of imports became apparent. This was due to both importers and retail purchasers operating on minimum requirements. Trading under these conditions was naturally difficult and at the close of the year prospects were by no means bright. At the same time, the effects on the bazaar of the phenomenal and to a large extent unexpected slump in trade might have been a great deal more serious and the position was rendered less difficult of recovery by reason of the fact that unsold stocks were low. Bonded stocks on hand on 31st December, 1930, were valued at £415,860 or £145,037 less than at the end of 1929.

So far as the export trade in Kenya produce is concerned, yields of the principal commodities were very satisfactory, and despite the fall in world market prices the value of Kenya produce exported during the year was £676,661 in excess of the figure for 1929, the total of £3,422,571 being the highest recorded in the history of the Colony. Shipments of maize amounted to 2,222,528 cwt. valued at £565,517 as compared with 764,769 cwt. valued at £305,872 exported in 1929. Coffee shipments amounted to 310,088 cwt. valued at £1,426,869 as against 133,091 cwt. of a value of £702,760 exported in the previous year.

Compared with general world conditions the Colony has been relatively fortunate both as regards the volume and the quality of its principal exports. If costs of production can be reduced without detriment to the quality of the products the ill effects of the present depression should not be permanent.

As was foreshadowed in the 1929 Report, a modernized and amended Customs Tariff common to the territories of Kenya, Uganda, and Tanganyika was enacted in April, 1930. Apart from small increases in the duties on tobacco and beer, amendments to ratings were generally in the nature of a decrease, the most important reductions being in respect of grey sheetings, cement, and vehicles. The principle of suspended duties has been applied to certain specially protected articles in order to allow of a defined margin of elasticity in dealing with the taxation of these articles on introduction into the several territories. The opportunity was also taken to bring the definition of value for duty purposes more into conformity with the general practice in other countries.

Net collections of Customs Revenue amounted to £1,139,031 as compared with £1,390,026 in 1929. Of this sum £814,334 was allocated to Kenya and £324,697 to Uganda.

Imports.

The following table gives comparison between the values in 1930 of trade imports from the various countries, and similar values for 1929 :—

	1930. *Per cent.*	1929. *Per cent.*
Great Britain	37.10	36.83
British Possessions	22.89	23.10
United States of America	11.25	12.03
Japan	6.74	5.67
Netherlands	4.78	5.12
Germany	4.01	4.62
Other Countries	13.23	12.63

The percentage division of trade remained virtually undisturbed despite a marked diminution in the value of almost every commodity imported.

The following summary shows the values of the principal commodities imported from the various countries in 1930 and 1929.

Country of Origin.	*Commodity.*	*Value 1930 Imports.*	*Value 1929 Imports*
		£	£
Great Britain and Northern Ireland.	**Whisky... ... ...**	80,304	85,617

Cotton Textiles.—The value of trade imports of cotton textiles of all descriptions amounted to £926,484 as compared with £1,271,738 in 1929, the customs duty collected thereon amounting to £176,395 or 15.5 per cent. of the total net duty collections. Transfers to Uganda were valued at £354,296. All classes of cotton textiles show a decrease in value as compared with importations during 1929. The average value per yard of imported cotton textiles was 5.8d. as compared with 5.7d. in 1929 and 6d. in 1928. Cotton blankets decreased in value from 1/8.3d. to 1/7.2d. Great Britain continues to supply the better qualities of cotton textiles, though Japan is becoming a serious competitor; Holland and Belgium provide the bulk of cotton blankets, and grey sheeting is supplied principally by Japan and the United States of America.

Vehicles.—The following table shows the comparative figures for imports of motor vehicles and bicycles in 1930 and 1929.

1930 Imports.		*Value.*	*1929 Imports.*		*Value.*
		£			£
1,269	Motor Cars ...	363,414	1,552	Motor Cars ...	553,226
904	Motor Lorries		1,486	Motor Lorries	
196	Motor Tractors		378	Motor Tractors	
125	Motor Cycles...	5,458	267	Motor Cycles...	10,579
7,056	Pedal Cycles ...	34,072	10,976	Pedal Cycles ...	61,900

The main sources of supply of cars, lorries and tractors were the United States of America and Canada, the value of motor vehicles of the above descriptions originating in Great Britain being £33,625 or 9.3 per cent. of the total.

Great Britain continued to be the main supplier of cycles of all kinds. The drop in imports of motor cycles may be attributed to the increasing popularity of small cars, while that in pedal cycles is possibly due both to the decreased prosperity in Uganda and to an increase in motor omnibus facilities in that territory.

Other Imports.—With the exception of bagging, sacking, and motor spirit a consistent shrinking in all classes of imports is to be noted.

Re-Export, Transit, and Transhipment.

The value of goods re-exported during 1930 amounted to £1,465,194 or 21.16 per cent. of the total value of trade imports.

Transit and transhipment traffic were valued at £127,255 and £237,101, respectively, as compared with £121,020 and £238,760 in 1929.

Exports.

The domestic exports of Kenya and Uganda are largely agricultural, the main exceptions being carbonate of soda from Lake Magadi in Kenya and tin ore from Uganda. The value of domestic produce from Kenya and Uganda in 1930 amounted to £5,483,024 as compared with £7,020,668 in 1929. A partial failure of the Uganda cotton crops and the fall in world market prices were responsible for this decrease.

Empire markets absorbed 76.02 per cent. of the total exports. The principal foreign markets were Belgium 6.65 per cent., Japan 4.47 per cent., and the United States of America 3.70 per cent.

The following summary shows the principal exports and the markets in which they were absorbed, giving comparative figures for 1929.

Notes.

(1) Average declared value per cental, 1930: £3 0s. 2d. Average declared value per cental, 1929: £4 1s. 2d.

(2) Average declared value per cwt., 1930: Sh.88/1·67d. Average declared value per cwt., 1929: Sh.100/11·6d. Great Britain provided the principal market for coffee, receiving Kenya and Uganda coffee to the value of £1,380,536. Shipments were made to thirty countries.

(3) Unfavourable weather conditions at the time of harvesting caused considerable difficulty in drying maize prior to shipment, 376,236 bags being handled by the drying and conditioning plant at the port. This largely increased quantity of maize was shipped, however, without complaint of delay or congestion in the port transit sheds.

(4) Average value per ton on shipment, 1930: £27 8s. 5d. Average value per ton on shipment, 1929: £35 7s. 7d.

Tea.—Both import and export figures are considerably affected by the local production of tea, imports decreasing from 8,094 cwt. in 1929 to 3,788 cwt. in 1930; exports increased from 83 cwt. to 1,443 cwt. in the same period.

Other Produce.—Satisfactory increases are recorded in the exports of cedar wood, wattle bark, and essential oils, whilst decreases have taken place in respect of potatoes, vegetable oils, wool, and soap.

Inter-Territorial Trade.

In addition to the foreign trade of Uganda, virtually all of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1930 the value of local produce sent from Kenya to Uganda amounted to £182,026 as compared with £189,938 in 1929 and £236,255 in 1928, the principal commodities involved being wheat meal and flour, maize meal and flour, live animals, soap, and timber.

The value of Kenya produce exported to Tanganyika amounted to £172,737 in 1930 and £178,346 in 1929. Produce imported from Tanganyika Territory for consumption in Kenya and Uganda was valued at £125,226.

The Customs Agreement of 1927, whereby the free interchange of imported goods between Kenya, Uganda, and Tanganyika is allowed, has stimulated this class of trade, which now assumes very considerable proportions, the value of imported merchandise transferred from Kenya and Uganda to Tanganyika Territory during 1930 amounting to £667,405 (including specie valued at £74,428), and the total customs duty collected by the Kenya and Uganda Customs Administration and transferred to Tanganyika under this agreement amounting to a total of £105,611.

Traffic in imported goods in the reverse direction was valued at £168,222 (including specie valued at £66,000), the customs duty involved being £9,981. Tanganyika produce passing through Kenya for shipment at Mombasa amounted in value to £468,862.

Air Traffic.

Under the Air Navigation Directions, 1928, aircraft are subject to strict control, certain aerodromes called "Customs Aerodromes" being approved for the use of aircraft arriving in or departing from the territories. Considerable use of the Customs Aerodromes established at Nairobi and Kisumu was made during the year by aircraft on foreign service.

Ivory.

Arrangements were completed whereby the sales of all ivory, rhinoceros horn, and hippopotamus teeth belonging to the Governments of both Kenya and Uganda shall take place in Mombasa. By agreement with the Tanganyika Territory authorities sales will be held in future at quarterly intervals approximately as follows :—

Mombasa—May and November.
Dar-es-Salaam—February and August.

To assist overseas purchasers ivory catalogues are being prepared somewhat more elaborately, and are printed in sufficient time to allow of their receipt in London and India prior to the date of sale. During the year 63,898 lb. of Government ivory (30,526 lb. from Uganda and 33,372 lb. from Kenya) were sold at Mombasa realizing £28,322.

For more detailed particulars regarding imports, exports, sources of supply, countries of destination, etc., attention is invited to the Annual Trade Report of Kenya and Uganda or to the Annual Blue Book of the Colony.

V.—COMMUNICATIONS.

Harbours.

At the end of the year the construction of Berth No. 5 at Kilindini Harbour together with a double-storeyed shed was nearing completion. They were handed over to the Administration in February, 1931, and it is estimated that the berth, shed, and equipment cost approximately £550,000. The new oil jetty and lighterage wharf at Shimanzi, which is estimated to have cost £71,000, was also completed early in 1931.

The completion of these works by the Administration's contractors, Messrs. Pauling and Company, concludes the existing programme of works and rendered Kilindini an up-to-date and well-equipped port capable of accommodating at any one time at the deep-water berths six of the largest vessels plying on the East Coast together with an oil tanker at the new jetty.

Shipping.

The total tonnages (import and export) handled at Kilindini Harbour and Mombasa Old Port during the years 1929 and 1930 are given in the tables below. These figures do not include oil imports discharged through the Magadi Company's pipelines, nor soda exported from that Company's pier. Coal imports are shown separately.

COAL IMPORTS.

1930.	1929.
108,017 tons.	87,672 tons.

IMPORTS AND EXPORTS OTHER THAN COAL.

Year.	*Imports.* *B/L tons.*	*Exports.* *B/L tons.*	*Total.* *B/L tons.*
1929	338,541	287,242	625,783
1930	271,974	319,953	591,927

The total trade of the Port of Mombasa (including Kilindini Harbour and the Old Port) for the year 1930 as compared with 1929 is summarized in the following statement :—

	1930.	1929.
Number of Steamships	663	687
Net tonnage of Steamers ...	1,904,266	1,950,733
Imports—B/L tons	467,327	522,039
Exports—B/L tons	370,444	368,154
Passengers landed :		
European	7,272	8,019
Non-European	16,724	17,573
Passengers embarked :		
European	7,008	7,073
Non-European	15,239	12,897

The registered tonnage (inwards and outwards) at all Kenya seaport during the year as compared with 1929 was as follows :—

	Registered Tonnage. 1930.	*Registered Tonnage.* 1929.
Vanga	13,795	9,997
Gazi	13,032	6,633
Mombasa	3,873,219	3,965,830
Kilifi	12,618	13,835
Malindi	16,332	17,143
Lamu	71,025	90,686

Railways.

The carriage of public goods provided a revenue of £1,766,516 and the tonnage of the traffic amounted to 898,280 tons, as compared with £1,989,080 and 952,934 tons respectively in 1929.

Passenger Traffic.—Revenue derived from passenger traffic also showed a decrease on 1929 figures. In 1930, 1,106,106 passengers contributed a revenue of £286,363, while in 1929, 1,161,770 passengers contributed £292,385. Large numbers of natives continued to use the Railway as the following figures clearly show :—

Passengers Carried.

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1929 ...	19,789	60,208	1,081,773	1,161,770
1930 ...	19,085	59,479	1,027,542	1,106,106

The traffic on Lakes Victoria, Kioga, and Albert on which the Administration maintains steamer services is shown in the following table :—

	1929.	1930.
Earnings	£214,000	£207,000
Working Expenditure ...	£110,000	£101,785
Tonnage carried	188,611 tons	148,596 tons

Fuel Consumption.—The following figures show the consumption of coal, wood, and oil fuel on the Railway during the year :—

Coal ... 69,913 tons consumed at a cost of £95,395.
Wood ... 221,865 tons consumed at a cost of £89,803.
Oil ... ... 960 tons consumed at a cost of £3,378.

On the Lake Steamer Services the figures were :—

Wood ... ... 11,495 tons consumed at a cost of £6,997.
Oil ... ... 4,054 tons consumed at a cost of £14,740.

Permanent Way.—The main line track was maintained in good condition throughout the system. Repairs were required on the Thomson's Falls and Magadi Branches, and the section of the line between Limoru and Kijabe was relaid with 50-lb. N.S. rails.

New Construction.—The Naro-Moru-Nanyuki extension was completed in October, 1930. The mileage is 17.1 and the total cost £54,780 or £3,200 per mile. The Kisumu-Yala Branch was handed over to open line on 1st November, 1930. The mileage is 32.5 and the total cost £168,598 or £5,200 per mile. The Jinja-Kampala line was practically completed at the end of the year. It was opened on 14th January, 1931, on the completion of the Nile Bridge. Its length is 57.88 miles.

On the completion of the above-mentioned lines no further work is on hand, with the exception of a small extension of approximately 10 miles from Yala to Butere.

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1930 are shown in the following table :—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	2,214,229	355,492	2,569,721
Ordinary Working Expenditure	1,441,285	200,457	1,641,742
Surplus of Receipts over Ordinary Working Expenditure	£772,944	£155,035	£927,979

The expenditure on capital account to the end of 1930 amounted to £21,463,704. Interest bearing capital provided £13,097,160 of this sum, the balance being made up as follows :—

	£
Parliamentary Grants, 1896 and 1902 ...	5,683,611
Accrued Interest on 1924 Loan	391,318
Contributions from Revenue :	
Direct (formerly termed Expenditure Extraordinary)	630,890
Through Betterment Funds (capitalized)	1,616,363
Through Marine Insurance Fund (capitalized)	44,362
	£8,366,544

The interest upon the capital, totalling £13,097,160, is a charge upon the Railways and Harbours Administration and is ultimately guaranteed by the respective Governments in the following proportions :—

	£
Kenya Government	12,227,161*
Uganda Government	869,999
	£13,097,160

Roads.

No considerable extension of the public road system of the Colony took place during the year. Almost all areas in the Colony had already been opened up by pioneer roads at small cost, and there are few parts which are not accessible by motor vehicle, though with some difficulty and delay during wet weather.

The country road system is about 9,350 miles in length, of which 2,323 miles are classified as main roads. Of the remainder, 2,227 miles are district roads in European areas, about 1,600 miles of these being maintained by District Councils out of Government grants for the purpose. The mileage of roads in Native Reserves, Turkana, and the Northern Frontier Province, is approximately 4,800. In some Native Reserves sums are allotted by Native Councils from their own funds for the maintenance and improvement of roads, and also for capital construction in enhancement of the Government grants.

Omitting the roads maintained by District Councils in European areas, which are under separate management, the expenditure by Government on the country road system, inclusive of the roads in the smaller towns, was £182,644. Of this sum £73,047, partly from loan and partly from revenue, was spent on substantial improvement of a capital character, and £109,597 on maintenance and minor improvements. The latter sum includes £24,606 incurred on repairing damage done to parts of the road system by the exceptional rains experienced during the year.

---

* Of this total the Uganda Government has accepted responsibility for approximately £2,000,000 representing assets constructed in Uganda and a share of rolling stock expenditure.

Many of the country roads are still merely pioneer tracks, and only 344 miles have been provided with improved wearing surfaces. As the soil over most of the highlands is clay, of one kind or another, presenting difficulties to vehicular traffic when wet, the problem of providing "all weather" roads is difficult, for the volume of traffic is usually insufficient to justify high expenditure. Moreover, the absence, over much of the Colony, of readily procurable gravel or other inexpensive surfacing material renders the problem more difficult than in most other countries where such materials are better distributed.

A number of important bridges were under construction during the year; the principal one being a single span of 205 feet, for heavy traffic, with one abutment carried on a caisson sunk 49 feet, across the Sabaki River near its mouth. The chief object of the bridge is to enable produce from a fertile native area north of the Sabaki River to reach Malindi, its port for shipment.

Posts and Telegraphs.

The total cash revenue for the combined Kenya and Uganda service shows at £222,115, a decline of £12,305, or 5.25 per cent., as compared with the previous year. It is estimated that £9,500 of this short fall is due to the reduction in the letter rate of postage from 20 cents to 15 cents per oz. which came into effect on the 1st April. The fall in revenue due to the severe trade depression which prevailed throughout the year, particularly during the latter part, amounted therefore to only £2,800 or 1.19 per cent., a not unsatisfactory result. Recurrent expenditure amounted to £181,267, an increase of 7.79 per cent. Expenditure on capital account amounted to £35,810. The figures for Kenya separately are : Cash Revenue £173,525, Recurrent Expenditure £135,523—a decrease of 4.74 per cent. (or .40 per cent. if allowance be made for loss involved in rate reductions) in revenue, and an increase of 8.93 per cent. in expenditure over 1929. Capital expenditure in Kenya amounted to £29,815. The net contribution to the general revenue of the Colony —excluding capital and indirect expenditure, such as pension liabilities and interest and depreciation on the capital value of telegraph and telephone plant—amounted to £38,000.

Money orders issued in Kenya for payment abroad amounted to £182,526 as compared with £221,339 during the previous year. Remittances to India which represented 84.33 per cent. of the 1930 total, dropped from £191,197 to £153,931.

Compared with the previous year the total number of items of mail matter dealt with in Kenya increased from 13,475,200 to 14,701,800 or 9.1 per cent. The number of parcels from abroad fell, however, from 92,859 to 85,455, and the value of the goods so imported was approximately £282,700 (£314,732 in 1929) of which £221,700 was from Great Britain. The number of parcels and the value of the goods imported under the C.O.D. system showed decreases of 10 per cent. and 7.5 per cent. respectively.

The overseas mail services were satisfactorily maintained. English mail arrivals averaged 1.3 per week and despatches 1.5 per week, the average time taken in transit each way being approximately 19 days. The Indian and South African services were fairly regular and frequent. There were no exchanges of air mails during the year.

Two interruptions, covering a period of 50 days, occurred in the length of cable connecting Mombasa with the Company's main system at Zanzibar. Alternative routes—one being the Government Wireless Stations at Mombasa and Zanzibar—were, however, available and no public inconvenience occurred.

The "Kenyaradio" short wave wireless service with Great Britain continued to deal satisfactorily with the deferred classes of traffic to which the service is, at present, restricted. 43,429 messages totalling 1,060,903 words were dealt with representing 82.17 per cent. of the total deferred traffic to and from Great Britain.

The Government Wireless Station at Mombasa, which provides a service with Italian Somaliland and Zanzibar in addition to one with ships at sea, was efficiently maintained. The normal volume of traffic passing through the station showed no increase. As a result of strong representations from shipping interests at the Coast, the hours of attendance at the station were extended, in January, to give a 24-hours service, but the benefits of this extension were largely nullified by the abnormal atmospherics which prevail at the Coast during the night hours throughout the year.

The broadcasting service, which is conducted, under licence, by the British East African Broadcasting Company, continues to suffer from lack of public support. The number of listeners' licences issued during the year amounted to 419, and yielded to the Company a revenue of nearly £1,000 as compared with £700 in the previous year. The programmes consist mainly of reproductions of records, British Official Press, local news items, market and weather reports. Transmission is on 350 metres and 49.5 metres simultaneously.

A very extensive programme of telephone development in rural areas was carried out during the year. District schemes were completed at Sotik, Njoro, and Kikuyu and a beginning was also made on a system designed to serve the Turbo-Kipkarren area. The Nairobi-Nakuru trunk telephone line, which is the first section of an approved trunk system of communication between Mombasa and Nakuru, was completed and opened for service on the 1st September. Work was begun on the Nairobi-Mombasa section during the last quarter of the year. In addition certain minor trunk services were provided in country areas. The general depression in business had little effect on telephone development.

Work was begun locally in July on the installation of an automatic exchange at Nairobi and, though not completed by the end of the year, construction was sufficiently advanced to enable arrangements to be made for the cut over from the manual exchange to take place in January. The installed capacity of the exchange is 1,000 lines and the ultimate capacity 2,000 lines.

The telegraph system, which links all the principal business and administrative centres in the Colony, was extended by the construction of new routes along the new branch railway lines between Kisumu and Yala and Naro Moru and Nanyuki. Congestion still obtains, at times, on certain of the main routes but the additional line facilities which will be available upon the completion of the Mombasa-Nairobi telephone trunk lines, now in course of construction, will afford the necessary relief.

The total telegraph and telephone route mileage of the Colony is 2,521 and the wire mileage 11,979.

A new wing to the Nairobi Post Office was completed during the year. The additional accommodation thus provided has led to much improved working conditions and should have a beneficial effect on the health of the staff.

Post Office Savings Bank.

The trade depression accounts for the fact that there was little or no expansion of the Bank's business during the year. Withdrawals at £114,423 exceeded deposits at £112,330 by £2,093. Interest credited to depositors' accounts amounted, however, to £2,708 with the result that the total amount standing to the credit of depositors at the end of the year was at £120,631, greater by £256 than at the end of the previous year. The number of European, Asiatic, and African depositors at the end of the year was 1,947, 4,075, and 1,157 respectively as compared with 1,825, 3,709, and 985 at the close of the previous year. The average amount standing to the credit of each account in the three classes was £14 10s., £19 12s., and £9 11s., respectively. Efforts continue to be made to popularize the Bank among the African population but progress remains slow.

VI.—JUSTICE, POLICE, AND PRISONS.

Justice.

The following table gives comparisons between the causes filed in His Majesty's Supreme Court in 1930 and 1929.

—	*1929.*	*1930.*	*Increase.*	*Decrease.*	*Nairobi.*	*Mombasa.*	*Nakuru.*	*Kisumu.*	*Eldoret.*	*Notes.*
Civil Cases ...	665	757	92	—	440	184	53	7	73	—
Probate and Administration Causes.	217	173	—	44	113	47	3	4	6	—
Bankruptcy Causes.	94	141	47	—	113	28	—	—	—	(*1*)
Trust Causes ...	—	3	—	—	1	2	—	—	—	—
Civil Appeals from Subordinate Courts.	55	44	—	11	—	—	—	—	—	(*2*)
Criminal Cases committed for trial to the Supreme Court	169	178	9	—	—	—	—	—	—	(*3*)
Criminal Appeals from Subordinate Courts.	49	69	20	—	—	—	—	—	—	(*4*)
Revision of Cases tried by Subordinate Courts.	130	46	—	84	—	—	—	—	—	(*5*)
Confirmation of Sentences imposed by Subordinate Courts.	659	626	—	33	—	—	—	—	—	(*6*)

Notes.

(*1*) In the majority of cases, as in previous years, the petitions were filed by the debtor in person as an alternative to civil imprisonment, and in the greater number of bankruptcies the assets were infinitesimal.

(*2*) Of these 44 appeals, 8 were allowed in whole or in part, 20 were dismissed or withdrawn, and 16 were pending or remitted for trial at the end of the year.

(*3*) These 178 cases involved 266 charges, 254 against males and 12 against females. 127 acquittals were recorded (Europeans 12, Asiatics 11, and natives 104). Europeans were found guilty on 6 charges; Asiatics on 20 charges, and natives on 113, a total of 139 convictions.

The death sentence was passed on 21 persons tried in 14 cases. Five persons were hanged, on 5 the death sentence was commuted to life imprisonment, and at the end of the year the final orders on 11 persons were either awaiting appeal or the Governor's orders.

The number of capital sentences imposed in 1930 was four more than in 1929.

(4) Of these 69 appeals, 20 were dismissed or withdrawn, in 10 cases a re-trial was ordered or the order of the Subordinate Court varied, 36 of the appeals were allowed, and at the end of the year 3 were pending.

(5) Of these 46 cases revised by the Supreme Court, in 7 cases the sentences imposed by the Subordinate Courts were confirmed, in 24 cases a re-trial was ordered or the sentence of the lower Court varied, and in 15 cases the judgments and sentences of the lower Courts were reversed.

(6) 823 persons and 893 convictions were involved in these confirmation cases. 91·041 per cent. (as compared with 81·148 per cent. in 1929) of the convictions of Subordinate Courts were confirmed by the Supreme Court without alteration.

Resident Magistrates operated at Nairobi, Mombasa, Nakuru, Kisumu, and Eldoret. Their Courts dealt with 9,612 civil and 22,051 criminal cases. The Nairobi and Mombasa Courts dealt with 7,263 civil and 11,945 criminal cases as compared with 5,825 civil and 10,239 criminal cases in 1929.

A total of 46,991 charges were brought in Criminal Courts of the Colony during 1930 in which 36,584 convictions and 10,141 acquittals were recorded in the lower Courts. Of this total of 46,991 charges, 2,650 were against Europeans, 3,102 against Asiatics, and 41,239 against natives. 1,922 convictions were recorded against Europeans, 2,201 against Asiatics, and 32,600 against natives. There were 6,940 more convictions than in 1929, an increase of 23.3 per cent.

In the following table comparison is made with regard to convictions under various classes of offence with the 1929 figures :—

	1929.	*1930.*	*Increase.*	*Decrease.*
1. Offences against the person ...	910	1,231	321	—
2. Offences against property and malicious injury to property.	2,710	2,991	281	—
3. Highway Revenue and Social Economy.	—	10,948	—	—
4. Stock and Produce Theft ...	917	787	—	130
5. Employment of Natives Ordinance.	1,492	1,614	122	—
6. Township and Municipal Rules	5,255	8,275	3,020	—
7. Native Registration Ordinance	4,943	5,069	126	—
8. Native Hut and Poll Tax Ordinance.	1,421	4,417	2,996	—
9. Resident Native Labourers' Ordinance.	901	903	2	—
10. Other Offences	404	488	84	—

His Majesty's Court of Appeal for Eastern Africa held four Ordinary Sessions during 1930. Thirty-four civil and 87 criminal appeals were filed of which 46 (21 civil and 25 criminal) originated in Kenya.

Sixty-nine advocates renewed their practising certificates or were admitted during 1930 as against 64 in 1929, 60 in 1928, and 63 in 1927.

Police.

The personnel of the Kenya Police consists of Africans under the command of European officers and non-commissioned officers, with a small proportion of Asiatic non-commissioned officers and subordinate officers. The main responsibility of the Force is the policing of settled and urban areas of the Colony, of Turkana and the Northern Frontier Province. African Police also are provided in Native Reserves where they operate under the direction of local Administrative Officers, although the enforcement of law and order in the Reserves is carried out by Tribal Police working in conjunction with the Native Authorities.

The introduction during 1930 of the new Penal and Procedure Codes for the Colony and the consequent abolition of those previously in use affected police work to some extent. Criminal statistics under the new Code show a consequent tendency to rise in view of more offences being now rendered cognizable to the police.

In settled and urban areas cognizable offences under criminal law in 1930 totalled 4,171 of which 3,982 were found to be true cases. Police investigation resulted in the accused in 3,067 of that number being brought before Courts for trial. The figure 4,171 is 148 or 3.6 per cent. higher than that total in 1929. Police reports of murder numbered 17. Housebreaking and stock theft, offences which under the conditions pertaining to the Colony and its indigenous inhabitants require, and receive, special police preventative measures, reflected a decrease, the totals for the year being 525 and 254 respectively. Serious crime in Kenya, in comparison with other countries, continues to be almost negligible despite the existence of a type of African who has adopted predatory crime as a means of livelihood. The numbers comprising this category of habitual criminal while small at the moment continue year by year to increase and the most careful police supervision is necessary to check their criminal predilection.

The fleet of motor cars specially designed and fitted for speedy and efficient performance of police duties at stations in out-districts was increased by 11 cars during the year. The first ambulance in the Force also was provided to deal with casualties resulting from accidents in Nairobi and district.

A special force of police stationed towards the end of 1929 in the Lumbwa Reserves to maintain law and order between that tribe and its neighbours was very considerably reduced, conditions in that locality having returned to normal.

Prisons.

The total number of persons committeed to prisons and detention camps during 1930 was 21,267, representing an increase over the total, 17,414, in 1929. The increase was mainly in persons committed to detention for minor offences, who numbered 8,746, an increase of over 60 per cent. over the 5,431 so committed in the previous year. In spite of the growing tendency on the part of Magistrates to commit petty offenders to detention camps rather than to prisons, which was facilitated by the enactment of an Ordinance extending the scope of the Detention Camps Ordinance 1925, the number of persons sentenced to penal imprisonment rose from 6,385 in 1929 to 6,762 in 1930. Of these 97 per cent. were Africans. The number of Europeans sentenced to imprisonment rose from 17 to 28, and of Asiatics from 135 to 175. Under trial prisoners, civil debtors, and lunatics all showed an increase over the 1929 figures.

The general health of the prisoners was not so good as in 1929, the daily average on the sick list having risen from 81 or 3½ per cent. of the inmates to 95 or 4 per cent. in 1930; but the number of deaths, over 80 in the two preceding years, fell to 29 in 1930, thus reducing the death-rate from 36 per 1,000 to 12 per 1,000. The improvement was mainly at Nairobi Prison, where, however, the death-rate was still as high as 19 per 1,000.

The training of convicts in masonry, building, and carpentry by European technical instructors on the Prisons Staff continued to make good progress, and two model small prisons were built by convict artisans during the year without assistance beyond occasional supervision by the Public Works Department staff.

Although convict labour is used by Government Departments free of charge, the earnings from prison industries paid into the Colony's revenue reached a total of £8,856, equivalent to about one-fifth of the total cost of the Prisons Department.

The classification of convicts, and their segregation in different classes which was begun in 1929, has been continued in the three main prisons, and although the inadequacy and unsuitability of the accommodation, consisting almost entirely of association wards, renders it difficult, much has been done apart from the detention camp system to separate first offenders from recidivists and adolescent prisoners from adults.

VII.—PUBLIC WORKS.

Progress was well maintained on the programme for the construction of buildings, roads, and water supplies which the improved prospects of the Colony during the last few years appeared to justify. The expenditure on public works and allied services during the year amounted to £722,463, and the direct revenue collected by the Public Works Department from various undertakings totalled £54,528. Of the total sum expended during the year, works to the value of £201,132 were financed out of loan, the balance of expenditure being incurred against the revenue of the Colony renewal funds for waterworks, and funds allotted by Local Native Councils and other authorities.

The year was very wet, except in districts adjacent to the Coast, and some of the services administered by the Public Works Department suffered in consequence. Transport work was often carried on under difficulties, and delay was caused to the progress of works by some of the country roads becoming impassable.

The sanctioned programme for the construction of new schools, hospitals, police stations, post offices, and other buildings was carried on vigorously, bringing the value of Government buildings throughout the Colony and Protectorate at the close of the year to about £1,400,000, of which the sum of £189,929 was expended during the year.

Except for the Arab School at Mtwapa near Mombasa, the construction of which is a means for training African artisan apprentices under the Education Department, the sanctioned programme for schools was finished during the year, the last to be completed being the Prince of Wales School at Kabete. The provision made for the education of European and Asian children during the last five years consists of nine schools accommodating 300 boarders and 2,100 day scholars.

The programme for the construction of quarters for the European, Asian, and African servants of Government was well advanced at the end of the year and has resulted in a marked improvement of the conditions under which they live. During the last few years 140 quarters for Europeans, 142 for Asians, and 882 for Africans have been finished and occupied. Of these, 30 quarters for Europeans and 35 for Asians were completed during the year, while others in addition were the subject of design or in process of construction at the end of the year.

A large Medical Research Laboratory at Nairobi and a Store Building for medical requirements were in course of construction, and eight hospitals, of which seven were for natives and one for Europeans, were finished in various localities. The total new hospital provision during the last few years has been for 440 beds and several other hospitals in native areas are the subject of design.

Waterworks for four small townships were carried out, and those for Kitale were still in hand when the year closed. The extensive works, estimated to cost £227,000, for the supply of Mombasa with water were well advanced, and parts of the new works were brought into use. Waterworks for ten townships were administered and maintained by the Public Works Department. The total revenue collected amounted to £46,867.

Twelve machines for boring for water were in commission during the year and three more came to hand near the close of the year. Operations were much interfered with by wet weather which often rendered the plant immobile for long periods. The financial depression was reflected in the decreased demand for new boreholes on farms and in native areas on payment. Fifty-three boreholes were sunk and the degree of success obtained was very good.

The demand for licences authorizing the diversion and use of water from public streams for various purposes showed some falling off as compared with the preceding year. The total water-power development authorized amounted to only 672 horse power spread over 31 separate small installations for farm purposes. The long continued wet weather interfered with hydrographic survey, for the streams were high during most of the year; 58 regular gauging stations were read at weekly intervals and 112 measurements at miscellaneous stations were made.

Success attended the use for joinery of local timbers, chiefly camphor wood, satin wood and podocarpus, after kiln-seasoning in accordance with the drying schedules for different species and sizes which had been established as a result of research.

VIII.—PUBLIC HEALTH.

There was a definite, though not alarming, increase in epidemic diseases during the year 1930. The incidence of plague in the Kavirondo and Kikuyu Provinces, two of the endemic centres, was more pronounced. Associated with this there seems to have been an increase in the number of rats. Cases were reported from Kisumu, Nakuru, and Eldoret, all centres on the Railway, but it is satisfactory to note that only three occurred at Mombasa, two of which were undoubtedly imported from up-country.

The infection of smallpox was introduced into Mombasa, almost certainly from India, a passenger developing the disease very shortly after landing. A total of 21 cases occurred of which 20 were detected in Mombasa itself. The small number of cases is undoubtedly due to the satisfactory vaccination state of the Mombasa population. In spite of this, however, compulsory vaccination or re-vaccination was instituted and in less than a fortnight over 70,000 persons had been dealt with. The systematic vaccination which has been proceeded with steadily throughout the country was continued, the Masai and South Kavirondo Reserves mainly being dealt with during the year.

Without adequate statistics it is impossible to make detailed observations with regard to the state of the public health. All the available information is to the effect that the amount of preventable disease is high among the natives who compose the greater part of the population. This is only what is to be expected among persons living at a low level of civilization and improvement can only be expected as a result of education. There are many indications, however, of a desire towards improvement and of a willingness to adopt improved methods of life, particularly with regard to housing. The campaign of education in this direction is being steadily pursued. Large numbers of the public attended successful health exhibitions which took place at Nairobi and Mombasa. Advantage is taken of the opportunity afforded by the agricultural shows held in the native reserves of presenting health propaganda, and great interest is evinced by the natives. Care is taken that the health exhibits are linked up with the agricultural and other exhibits so as to form a comprehensive picture of all-round development.

Respiratory diseases and particularly pneumonia have been responsible, as in previous years, for a large number of deaths in hospitals outside the Reserves. In the larger urban centres pneumonia continues to head the list of the causes of death.

The building programme has been pursued during the year. The native hospitals at Kiambu, Teita, and Nakuru have been completed and handed over. The first two are new institutions which have come about as a result of the programme of development accepted by Government a few years ago. The third replaces the unsatisfactory and insanitary building which has existed at Nakuru since the days of the construction of the Kenya and Uganda Railway. All the new hospitals are provided with quarters for nursing sisters. The building of the new Laboratory was continued during the year and was approaching completion at its end.

At the close of the year thirty medical stations were maintained. Government hospitals for the accommodation of Europeans numbered three, and there were twenty of permanent construction for natives and ten of temporary construction. In addition there existed two non-Government European hospitals and six Mission hospitals for natives. These latter received financial support from Government.

The recurrent expenditure of the Medical Department in 1930 amounted to £236,729, an increase of £14,545 over expenditure in 1929. Extraordinary expenditure was £6,536 less than in the preceding year.

IX.—EDUCATION.

European Education.

The building programme of the Department, so far as it had received sanction, was completed by the erection of large new buildings for the Prince of Wales School at Kabete, near Nairobi. This made it possible to give complete effect to the organization of mixed primary schools in Nairobi, and in outlying towns and rural areas, in relation to the secondary schools for boys and girls respectively in and near Nairobi. A private school for girls at Limoru was re-established under diocesan auspices.

The total average roll for the year was 1,032 pupils in 17 schools, as compared with 962 pupils in 16 schools in 1929. The average roll in private schools was 329 as compared with 301 in 1929.

The staff employed in Government schools was increased by three teachers.

Indian Education.

The Hostel attached to the Government Indian Boys' Secondary School at Nairobi was opened. It was not filled, and it will, no doubt, take some time before Indian opinion becomes accustomed to this new departure.

A new system of grants in aid of Indian education was introduced from the middle of the year. An annual grant calculated at Shs.70/- a head, subject to the results of inspection, was given.

The total average roll in Government schools was 2,115 pupils in 10 schools, compared with 1,842 pupils in 9 schools in 1929. The number of teachers sanctioned increased by 21. Thirty other schools received grants-in-aid as compared with 16 schools in 1929. These schools accommodated an average roll of 1,422 pupils.

Arab and African Education.

The year was marked by a clash of opinion between some of the Missions and a number of their adherents on the question of female circumcision. This affected the arrangement of, and attendance at, some Mission out-schools. Apart from this, most of the Missions have continued to make good progress in education.

The quality of the Akamba out-schools definitely improved and in several districts young children replaced older ones in the lower classes of the schools. This is already favourably affecting the quality and number of pupils available for the higher schools connected with general and technical education and the training of teachers.

At the end of 1930 the number of Government Arab and African schools was 33 with an average roll of 2,479, as against 31 Government schools with an average roll of 2,038 in 1929. The number of aided and private schools was 12,041 with an estimated roll of 83,403 pupils.

The number of Europeans engaged in Government schools remained as before, namely, 33 with 10 leading artisans. Expenditure on African instructors and teachers rose by £590.

Buildings for an Arab boarding school were begun at Mtwapa near Mombasa and should be completed in 1931. The coastal region presents separate problems which have received special attention, notably in connexion with the relation of the demand for Koran teaching to the provision of a suitable general curriculum.

The number of Jeanes School teachers now at work is 50. They are generally well reported on and are in demand.

Very valuable building work has been done by Native Industrial Training Depot gangs in various parts of Kenya and the system appears to be proving itself sound in the development of the apprentices. Other schools, both Mission and Government, with technical departments are now more regularly sending in their quota of better educated apprentices.

The standard attained by the Protestant Alliance High School at Kikuyu is steadily rising and should soon reach its aim, namely, the intellectual standard of the London University Matriculation, though with a totally different syllabus of studies designed for Africans in Africa. The Catholic school at Kabaa is moving in the same direction.

Financial.

Recurrent.

The following sums were spent by the Department on the services stated :—

	1928.	*1929.*	*1930.*
	£ sh.cts.	£ sh.cts.	£ sh.cts.
Administration	14,764.14.38	16,064.8.73	17,539.18.29

Statutory Advisory Bodies.

These have rendered valuable advice to the Director during the year.

Medical Inspection.

The School Medical Officer continued his investigations, and tendered useful advice to the Department on a number of cases.

X.—LANDS, SETTLEMENT, AND SURVEY.

Lands and Settlement.

No important changes in land administration took place during the year 1930. The district organization of land work continued under the control of the respective District Commissioners.

The Land and Agricultural Bank Ordinance on which further progress with the approved closer settlement scheme depended for finance passed its third reading in Legislative Council in December. In pursuance of the policy inaugurated during 1929 of testing the water-bearing possibilities of dry land prior to alienation, boring plant has been operating in several areas. The programme includes water-boring in N.E. Laikipia, the Yatta Plateau, the area between Sultan Hamud and Makindu and the Serengetti Plains.

The policy of alienating Coast land under special development conditions, which was revived towards the close of 1929 by General Notice No. 1319 was continued. Seven grants have been approved under the revised conditions comprising an aggregate area of 10,232 acres.

An auction of farm lands was held on the 31st March when 60 farms, situate at Kibos, Solai, Athi, Kijabe, Naivasha, Nyeri, Nanyuki, and Laikipia, were offered for sale, of which 44 were sold. Fifteen direct grants of farm lands were made aggregating an area of 30,329 acres. Most of these grants were made to adjoining owners for the purpose of giving access to water, increased grazing areas or for other adequate reasons. In addition eight farms comprising 27,642 acres were alienated by tender. Six farms, comprising in the aggregate about 12,0[illegible] acres, reverted to the Crown during the year for various reasons.

Auction sales were held of plots at Nakuru, Thomson's Falls, Kisumu, Nyeri, Kitale, and Kibwezi Townships, and two hotel plots at Thomson's Falls and Nanyuki were alienated by tender.

Steady progress was made during the year with the preparation of town planning schemes for those portions of the Nairobi Municipality not included in the commercial area.

Apart from acquisitions of small areas mainly for the purposes of roads and railways, four land purchases for public purposes were made totalling 593 acres and including two houses at a total cost of £9,411. In addition to this, Sir Ali bin Salim, K.B.E., C.M.G., generously gave 100 acres of land for the extension of Kilifi Township.

Several subdivisions of township land, chiefly in Nairobi, have been scrutinized and approved during the year on the recommendation of the Municipal Council.

Five meetings of the Public Health (Division of Lands) Board have been held and twenty-four applications in respect of sub-divisional schemes were considered and approved. The Public Health (Division of Lands) Amendment Ordinance was enacted during the year.

Statistics of Areas.—The following analysis of various areas in the Colony and Protectorate shows the position as at the 31st December, 1930:—

	Sq. Miles.	*Sq. Miles.*
Total Area of Colony and Protectorate		224,960
1. Native Reserves		48,295
2. Forest Reserves		4,296
(In addition there are 119 square miles of Forest Reserve within the boundaries of Native Reserves, and also large forest areas not yet defined.)		
3. Surveyed into Farms—		
Alienated	10,699	
(In addition there are included in Native Reserves 73 square miles of alienated land and 6 square miles of land surveyed for alienation.)		
Township Reserves	338	
Government Reserves	231	
Available for alienation	1,321	
	——	12,589
4. Northern Frontier Province ...		95,479
5. Turkana Province		24,726
6. Unclassified Areas (including 1,835 square miles of water) ...		39,575
		224,960

Apart from township lands, the land actually alienated during the year 1930 amounts to 155,628 acres or 243 square miles, but the correction of various areas in previous classifications, reversions to Government, and alterations in municipal boundaries, reduce the net increase of alienated farm lands to 127 square miles.

The revenue derived during the year in respect of land sales and rents and royalties on beche-de-mer totalled £98,111 as compared with £111,722 in the previous year. In addition the Railway Administration collected a sum of £6,347.17.34 on account of land sales and £5,828.11.75 on account of rents.

Survey.

The duties under this heading were undertaken in 1930 as in the preceding year by the Survey and Registration Department under the Surveyor General.

The functions of the Survey Division included surveys for the registration of title to land, the production and maintenance of maps showing property boundaries, the demarcation of the boundaries of Native Reserves, the inspection and valuation of farms and the control of licensed surveyors. Officers of the Department were also engaged in assisting town planning authorities in the preparation and execution of their schemes.

The Registration Division was responsible for the registration of titles and also for the collection of revenue under the Stamp Act. In addition the duties of Recorder of Titles under the Land Titles Ordinance, and Warden of Mines under the Mining Ordinance were carried out by officers of the Division.

No topographical or geological survey section was maintained during the year.

Mining.

No discoveries of importance were reported during the year.

There was an increase in the footage of development work effected as compared with 1929, and the following figures show a comparison of this work during the last five years :—

	Feet.
1926	2,916
1927	2,697
1928	3,132
1929	1,136
1930	4,192

There are at present in existence 395 claims, four sole prospecting licences and two mining leases.

Progress was made with a new mining law which was designed to be uniform in its main principles with that of Uganda and Tanganyika. The new law was passed by Legislative Council.

No further progress was made in regard to the provision of a geological survey of the Colony, but advantage was taken of a favourable opportunity to obtain the services of Mr. Wayland, the Director of Geological Survey in Uganda, to make a geological reconnaissance of the Southern Kavirondo area. Mr. Wayland's report, which was of considerable interest, was published in 1931.

The production of gold was 1,789 ounces valued at £7,490; of silver, 155 ounces valued at £11; of marble, 400 tons valued at £4,000; and of lime 1,800 tons valued at £1,800.

XI.—LABOUR.

The average number of adult male natives reported in employment during the year shows an increase over the previous year, but towards the end of the year many natives willing to work found employment unobtainable owing to agricultural and trade depression.

In addition to natives reported as being in employment there are thousands of natives living on farms under the Resident Native Labourers Ordinance, and casual daily labour such as women and children employed and paid by the day on coffee farms, and the casual labour employed on similar terms by the various shipping and stevedoring companies at Mombasa.

For the first time in many years the supply of native labour slightly exceeded the demand.

With regard to labour on long contracts of service there was little difference in regard to rates of wages as compared with previous years. On monthly contracts, however, wage reductions of Shs.3/- or Shs.4/- were made in many cases, but always on the higher and never on the lower rates of pay. For instance railway contractors who paid in previous years from Shs.12/- to Shs.22/- per month are now paying from Shs.12/- to Shs.18/- per month. Resident natives' wages have not altered and range from Shs.8/- to Shs.12/-, but in some special cases Shs.6/- is accepted. Money earned by casual workers varies more than wages earned by natives in regular employment. Experienced men at the Coast sometimes earn as much as Shs.5/- per day offloading coal or working on ships but the average wage for a casual worker is Shs.1/50 per day on a set task.

Rations to the value of about Shs.6/- per month are provided to all labour on long contracts of service. This practice is also followed with regard to monthly contracts, but natives show an increasing desire for the value of their rations to be added to their pay and to feed themselves. In towns this is certainly preferable to an issued ration, because a native obtains a far greater variety in his diet if he forages for himself.

The only new legislation brought into force during the year was the Registration of Domestic Servants Ordinance which has been applied to Nairobi alone.

The health of native labour has, with a few exceptions, been good. Natives of South Kavirondo working on the Yala Railway Construction suffered from malaria, and on one sugar estate there occurred a very bad outbreak of ulcers.

As a general rule, wattle and daub huts are provided for labourers on estates, while corrugated iron shelters are usually found in contractors' camps. Owing largely to the generally depressed conditions prevailing, little replacement of insanitary types of houses by permanent buildings has taken place.

The Marine and Railway Workshops continue successfully to train apprentices. There is a growing tendency for natives to pay premia to Indians and Goans to be taught a trade—chiefly motor driving and tailoring.

The system of inspection of labour camps and general labour conditions was, as far as possible, continued by Labour Officers of the Native Affairs Department throughout the year. This system is beneficial to native labourers in many ways, in effecting recovery of wages from defaulting employers, in obtaining compensation for injured workmen, in remitting wages of deceased workmen to their relatives, and in the supervision and general welfare of natives travelling in search of employment. The benefits to the employer are no less important and consist mainly in the enforcement of contracts and the breaking of strikes, which become more frequent each year.

In general, considering the difficult conditions of the year, the labour conditions throughout the year were good both from the point of view of the employer and the employee.

XII.—LEGISLATION.

Sixty-four Ordinances were passed during the year 1930, of which the following are the more important :—

Customs Tariff.—Ordinance No. 1 is the outcome of prolonged discussions between the Governments of Kenya, Uganda, and Tanganyika, and it is intended to bring into effective operation a common tariff designed to meet present needs and conditions in the three territories. Section 3 introduces into the tariff a new feature in the form of "suspended duties," and authorizes the Governor, with the approval of the Legislative Council, to impose such duties up to the amount specified in the Schedule to the Ordinance. This method maintains the principle of the common tariff but allows of a limited elasticity so far as the small number of items chargeable with suspended duties is concerned. The items involved are the protected articles. In the case of the protected articles a basic revenue duty is fixed, suspended duties being applied up to the maximum figure specified in the Schedule, in any of the territories, when it is decided that additional protection through the medium of the customs tariff is desirable in that territory.

The Food and Drugs (Adulteration).—The object of Ordinance No. 6 is to prevent the adulteration of articles of food and drugs with ingredients and materials of an inferior nature and the fraudulent sale of such articles to the prejudice of the consumer. The Ordinance confers powers and duties for the enforcement of its provisions on local authorities and details the duties of sampling officers and procedure to be followed in the taking of samples and their submission for analysis. Provision is made for the making of regulations prescribing standards of quality in regard to foods the constituents of which are liable to variation.

The Native Lands Trust Ordinance, 1930.—This Ordinance provides for the reservation of lands for the use and benefit of the native tribes of the Colony and for the management and control of lands so reserved. A Native Lands Trust Board has been established and all lands in native reserves and all matters relating to such lands are declared to be under the management and control of such Board. All such lands will be administered for the use and benefit of the native tribes for which they have, respectively, been reserved. In every administrative district in which one or more native reserves may be situate there is established an Advisory Board and it is the duty of the Native Lands Trust Board to consult such Advisory Board on matters affecting such native reserves. Necessary provision is made for the exclusion of any land which may be required for certain public purposes and for due compensation to be made in such cases.

The Penal Code.—Ordinance No. 10 establishes a Code of Criminal Law in the Colony based on English Criminal Law and in substitution for the Indian Penal Code.

The Criminal Procedure Code.—Ordinance No. 11 makes provision for the procedure to be followed in criminal cases.

The Agricultural Advances Ordinance, 1930.—This Ordinance sets up the machinery of a Central Board and Local Boards for the purpose of making agricultural advances to farmers. Such advances become a charge on the farm and its crops, produce, and live stock subject to existing encumbrances. Advances take priority as from the date on which they are made. No advance may be attached or may be levied upon.

The Legitimacy Ordinance, 1930, provides that where the parents of an illegitimate person marry or have married one another, the marriage should, if the father of the illegitimate person was or is at the date of the marriage resident in the Colony, render that person, if living, legitimate.

The Chattels Transfer.—Ordinance No. 24 makes provision relating to chattels securities and the transfer of chattels.

The King's African Rifles Ordinance, 1930, amends the law governing the administration of the King's African Rifles, which amendment is necessitated by its reorganization.

The Bankruptcy Ordinance, 1930.—This Ordinance brings the Kenya law on the subject of bankruptcy into exact accord with the law on the subject in force in Uganda and Tanganyika. It provides for reciprocity in bankruptcy between the Colony and other East African territories.

The Sale of Goods.—Ordinance No. 33 which is modelled on the English Act of 1893 replaces Chapter VII of the Indian Contract Act as applied to the Colony.

The Arbitration (Foreign Awards) Ordinance, 1930, gives the Supreme Court the power to enforce foreign awards, subject to the production of certain evidence and to certain safeguards.

The Trade Marks.—Ordinance No. 35 attempts to achieve uniformity in legislation in the East African Dependencies on the subject of trade marks. The Ordinance is based on the United Kingdom Trade Marks Acts of 1905-1919. Special provision is, however, made with regard to cotton and metal marks.

The Native Liquor Ordinance, 1930.—This Ordinance consolidates and amends the law on the subject of native liquor.

The Prisons Ordinance, 1930, consolidates and amends the law relating to prisons, provides for the organization, discipline, powers, and duties of the prison officers, and matters incidental thereto.

The Deeds of Arrangement Ordinance, 1930.—This Ordinance provides a simple machinery whereby (*a*) a debtor may have his affairs managed for the benefit of his creditors until their claims are discharged; or (*b*) an insolvent debtor may do the same thing for the benefit of any three or more of his creditors. The stigma of bankruptcy is avoided, but the chances of fraud are obviated by full publicity.

The Native Tribunals Ordinance, 1930, introduces three material changes in the law governing the jurisdiction and procedure of native tribunals in the Colony, viz., (1) jurisdiction is conferred on native tribunals over all natives, including Somalis and Swahilis, and also over Arabs if the Arabs consent to such jurisdiction. Provision is also made for the establishment of Somali courts to have jurisdiction over Somalis as well as over natives. Before the enactment of this Ordinance a Council of Elders had jurisdiction only over the members of their own tribe; (2) advocates are debarred from appearance before a native tribunal or on appeal from a native tribunal; (3) appeals from native tribunals lie to the Supreme Court by way of stated case in criminal cases in which a sentence of four months' imprisonment or a fine of fifteen pounds is imposed and in civil cases where judgment is given for a sum exceeding fifty pounds. No such appeal lies in cases relating to marriage, inheritance or land. The Ordinance also provides powers of revision by administrative officers and transfer of cases to Subordinate Courts.

The Sale of Wheat Ordinance, 1930, enables the Governor in Council to appoint one or more selling and distributing agencies to control the movement of locally grown wheat. On such appointment no person may sell or purchase wheat except to or from an agency.

The Foreign Prisoners Detention Ordinance, 1930.—The object of this Ordinance is to provide machinery whereby a person sentenced to a term of imprisonment in any of the adjacent territories may be transferred to and serve his sentence in a prison within the Colony.

The Shipping Ordinance, 1930, makes the Merchant Shipping Acts effectual in their application to the Colony. The Ordinance provides machinery with regard, *inter alia*, to the detention of unsafe ships, inquiries and investigations as to shipping casualties, the survey of steamships, wreck and salvage, and the repatriation of seamen.

The Northern Frontier Province Poll Tax Ordinance, 1930.—This Ordinance provides for the payment of a poll tax by the people of the Northern Frontier Province without distinction between natives and non-natives.

The Collective Punishment Ordinance, 1930, replaces Chapter 77 of the Revised Edition and introduces certain changes in the law relating to collective punishment. Sections 4 and 5 import two new provisions, viz., power to return the whole or part of a fine after a period of good behaviour and power to order the delivery up of arms.

The Fraudulent Transfer of Businesses.—Ordinance No. 55 provides that the transfer of a business should be done with a certain degree of publicity in the interests of the creditors of the transferor. The provisions of the Ordinance do not apply to the transfer of a business in consequence of the winding up or reconstruction of a company.

The Brokers Ordinance, 1930, makes provision for the licensing and control of the businesses of brokers, moneychangers, and goldsmiths and silversmiths.

The Lakes and Rivers Ordinance, 1930.—This Ordinance regulates dredging in lakes and rivers and also gives power to the Governor in Council to make rules, *inter alia*, for (*a*) regulating the use of steam vessels on any lakes; (*b*) prohibiting the use of steam vessels or any particular description of steam vessel on any lake; (*c*) for regulating the traffic on any lake; (*d*) for protecting bird and animal life on or in any lake.

The Townships Ordinance, 1930.—This Ordinance is designed to give effect to certain recommendations of the Local Government Commission, 1927, in connexion with townships which are not sufficiently advanced to receive municipal status.

The Police Ordinance, 1930, provides for the organization, discipline, powers, and duties of the Police Force and for matters incidental thereto.

APPENDIX.

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian line 37½° East of Greenwich. It extends from [illegible] North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,731 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is the zone time 2½ hours fast on Greenwich. Physiographically Kenya consists of: (1) a region generally poorly watered comprising some three-fifths of the total area of the Colony; (2) a plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Nakuru, Naivasha, and others; (4) a portion of the basin of the Lake Victoria Nyanza which is 3,726 feet above sea-level. The

Nzoia, Yala, Kuja, and Amala Rivers flow into Lake Victoria Nyanza, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya, and from the Aberdares there flow numerous tributaries of the Tana River which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 58°F.—65°F. in the highland areas.

The rainfall is generally well-distributed and ranges from about 10 inches per annum in the arid northern areas to 86 inches per annum in the vicinity of Lake Victoria Nyanza. The average rainfall in the main agricultural and pastoral areas ranges from 35 to 40 inches. The heaviest rainfall occurs from March to June and from October to December.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498 Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829 Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the east coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848 Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw the Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887 Seyyid Bargash, the Sultan of Zanzibar, granted a concession on the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889 a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha, and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892 the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895 a British Protectorate was declared over the Company's territory between the Coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902 the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903 there were nearly 100 European settlers in or near Nairobi.

In 1905 the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transferred to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the War.

Nominated unofficial members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923 this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony; the coastal belt remains a Protectorate. In 1925 the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council and in 1925 the office of the High Commissioner for Transport was established.

II.—GOVERNMENT.

His Excellency Sir Joseph Byrne, K.C.M.G., K.B.E., C.B., assumed the administration of the Government on 13th February, 1931.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council of eight *ex officio* members, and such other official and unofficial members as may be appointed. The Colonial Secretary is the Chief Executive Officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners who are responsible for their execution. The Colony is divided into nine Provinces, each in the charge of a Provincial Commissioner. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Officers.

The Legislative Council consists of the Governor as President, eleven *ex officio* members, not more than nine Nominated Official Members, eleven European Elected Members, not more than five Indian Elected Members, one Arab Elected Member, and one Nominated Unofficial Member to represent the interests of the African community. If one of the Nominated Official Members is not specifically appointed to represent the interests of the Arab community, an additional Unofficial Member is nominated to represent such interests. The Governor has the right to veto any measure passed by the Legislative Council. Certain minor powers are vested in the District and Municipal Authorities in settled areas and in the Local Native Councils in the native areas.

Local Government.

Settled areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the case of the more important townships. In the rural settled areas they had the advice of District Committees and a measure of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru, and Eldoret, with Municipal Boards, and District Councils were established in the settled portions of the districts of Nairobi, Kyambu, Fort Hall, Naivasha, Nakuru, Kisumu-Londiani, Uasin-Gishu, and Trans-Nzoia. At the same time a Local Government Inspector was appointed to deal with local government administration under a Commissioner for Local Government, an office which was combined with that of Commissioner of Lands, and forms part of the present Secretariat organization.

The constitution of municipal bodies provides for elected European and Indian members, and nominated members representing Government interests ; at Mombasa for an Arab member ; and in all cases the District Commissioner, who is chairman of the three Municipal Boards at Mombasa, Nakuru, and Eldoret, is included and represents native interests. Members of District Councils are elected on a ward system.

The year 1931 was the third year of operation of the new system. No important changes in constitution or legislation were effected during the year, and the financial stringency tended to concentrate attention on the possibility of fulfilling the financial obligations to local authorities which the Government had accepted in 1928. The total gross revenue of the four municipalities in 1929 amounted to £177,450, of which the Government contributed £53,542, or 32 per cent. In 1931 their total gross revenue amounted to £192,119, of which the Government contributed £42,637, or 22 per cent. (These figures for 1931 are subject to audit which has not yet been completed). A further reduction in Government grants is contemplated for 1932. The grants payable by Government in Nairobi and Mombasa are (*a*) a contribution in lieu of rates on unalienated Crown land, (*b*) one-half of expenditure on main roads, (*c*) one-half of public health expenditure, (*d*) a proportion of the revenue collected in respect of motor vehicles, and (*e*) one-third of the emoluments of certain officers. Municipal authorities may levy assessment rates on capital value, up to a maximum of 2 per cent. on site values. No improvement rate or special rate, for which provision is also made, has yet been levied, and assessment rates have not yet been imposed outside Nairobi and Mombasa. Nakuru and Eldoret rely at present on municipal licence fees and charges and on revenue from municipal undertakings to supplement the Government grants, which amounted in each of these two cases to £3,000 in 1931. In Nairobi, in 1931, £97,794, compared with a total revenue of £125,745, was paid by the public in rates and charges, and in Mombasa £27,165 of a total revenue of £45,401.

Nairobi and Nakuru control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town-planning schemes are in progress under the Town Planning and Development Ordinance, which was passed in 1931. The execution of Mombasa town-planning scheme was continued under the loan of £179,000 which the Municipal Board took over from Government for this purpose during the year. In Eldoret the European Hospital was taken over by the local authorities, who have imposed a poll tax for hospital purposes. In the rural areas, the six District Councils confine their executive functions to roads, the funds for which are at present derived solely from Government grants. In 1931 the basic grants amounted to £36,412 and the additional grants to £7,006, a total of £43,418 as compared with £53,098 in 1930. The Councils obtain sums in addition from vehicle licences. The Councils have succeeded in improving their district roads in a generally satisfactory manner. Various causes have combined to delay the consideration by Councils of the means legally provided for them of raising their own revenues. In so far as the

District Councils are financially dependent on central Government grants and deal only with roads, they represent a modified and incomplete form only of local government. It is in the urban areas that local government has been more rapidly developed and there is no reason to be dissatisfied with the progress made. The smaller urban areas such as Kisumu, Kitale, Thika, and Machakos were declared " Grade A " townships in 1931 (the second of the four stages of municipal development contemplated by the Local Government Commission) with Township Committees appointed by the Governor.

Native Areas.—The Local Native Councils in Kenya are a deliberate creation under the Native Authority (Amendment) Ordinance, 1924. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance, and regulation of food and water-supplies, forests, roads, bridges, culverts, public health, the use of land, education, markets and market dues, agriculture, and livestock, etc. The District Commissioner is the President of the Council and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. The funds, which are controlled by the Councils, are derived from two main sources :—(*a*) from the proceeds of local native rates which they are empowered to impose on the inhabitants of the areas over which they have control; (*b*) from the proceeds of the rents of land, forest royalties, etc., levied within those areas.

At the present time in the majority of the Councils a greater portion of the members are illiterate.

Amongst the various services rendered by the Local Native Councils during 1931 the provision of educational facilities occupies perhaps the foremost place. During the year the number of Local Native Councils was reduced from 24 to 22 on the amalgamation of two Councils in two separate districts.

Comparative Table of Revenue and Expenditure of Local Native Councils in 1931.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926, and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table :—

	1911.	*1921.*	*1926.*	*1931.*
European, males	2,022	5,800	7,199	9,404
„ females	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
„ females	—	11,640	14,841	20,388
Total males	—	30,142	33,498	46,151
„ females	—	15,491	20,171	27,796

The percentage increase in each section of the population during the last two decades is :—

	European.	*Asiatic.*
1911–1921	204	203
1921–1931	74	59

The proportions in which the various races entered into the total of the non-native population in Kenya at each census year will be seen from the following summary :—

Racial proportions of the total non-native population.

	Year 1911.		*Year 1921.*		*Year 1926.*		*Year 1931.*	
	Number.	*Per cent.*	*Number*	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*
European ...	3,175	13·1	9,651	21·1	12,529	23·3	16,812	22·7
Indian ...	10,651	44·1	22,822	50·0	26,759	49·9	39,644	53·6
Goan ...	1,136	4·7	2,431	5·3	2,565	4·8	3,979	5·4
Arab ...	9,100	37·7	10,102	22·1	10,557	19·7	12,166	16·5
Others ...	99	0·4	627	1·5	1,259	2·3	1,346	1·8
Totals ...	24,161	100·0	45,633	100·0	53,669	100·0	73,947	100·0

The ratio of females to males at each census for the two main racial sections of the community is :—

	Europeans. (*females to* 100 *males*).	*Asiatics.* (*females to* 100 *males*).
1911 ...	57	—
1921 ...	66	48
1926 ...	74	56
1931 ...	79	55

The age distribution in ten-yearly age groups will be seen from the two following tables :—

Europeans.

	1921.	*1926.*	*1931.*
0– 9	1,604	2,253	2,872
10–19	850	1,303	1,583
20–29	2,160	2,439	3,403
30–39	2,694	3,220	4,010
40–49	1,535	2,024	2,640
50–59	583	868	1,293
60 and over	225	422	1,011

Asiatics.

	1921.	*1926.*	*1931.*
0– 9	7,865	9,895	14,505
10–19	5,501	7,037	9,835
20–29	9,731	9,478	13,273
30–39	6,886	7,469	9,497
40–49	3,360	3,784	5,073
50–59	1,498	1,767	2,024
60 and over	1,141	1,710	2,928

The occupations classified under eight main heads are as follows :—

Europeans.

	1921.	*1926.*	*1931.*
Agriculture	1,893	2,199	2,522
Industry	559	607	991
Commerce	937	1,290	2,168

Personal or domestic	1,241	961	1,452
Retired, married women, and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these main eight divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows :—

	European.		*Asiatic.*	
	1926. *Per cent.*	*1931.* *Per cent.*	*1926.* *Per cent.*	*1931.* *Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal ...	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children ...		43		

A recent investigation into the question of length of residence in Kenya has enabled the following table to be drawn up. The question is an important one in reference to problems of settlement :-

Years of residence.	*Europeans.*	*Asiatics.*
1–5	7,207	20,847
6–10	3,402	7,610
11–15	1,820	4,536
16–20	1,805	3,459
21–25	772	1,565
26–30	272	1,150
31–35	80	639
36–40	9	372
41–45	4	151
46–50	1	147
51–55	—	39
56–60	—	75
61–65	—	24
66–70	—	27
71–75	—	11
76–80	—	9
81–85	—	—
86–90	—	4
91–95	—	2

The last census was taken on 6th March, 1931. Since 1930 the migration returns have been carefully analysed and controlled in the Statistical Department and it is now possible to make a reasonably accurate estimate of population each month. Since the census in March, 1931, up to the end of December, 1931, there has been a steady decrease in the non-native population due to migration. This has affected principally the Asiatic community. The total increase or decrease up to the end of 1931 is indicated as follows :—

	Census figure.	*Natural increase.*	*Migration.*	*Estimated total.*
Europeans	16,812	+ 84	+ 61	16,957
Indians	39,644	+ 330	− 2,778	37,196
Goans	3,979	+ 33	− 581	3,431
Arabs	12,166	+ 102	− 517	11,751
Others	1,346	+ 10	+ 18	1,374
Estimated total 31st December, 1931.	73,947	+ 559	− 3,797	70,709

It will be seen that while the European population has increased by 145 the Indians have decreased 2,448, the Goans 548, and the Arabs 415, while the total non-native population has decreased 3,238.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and related to the number of male adult taxpayers in the various districts. They are in consequence subject to a comparatively wide margin of error. The estimated native population in 1931 was 2,966,993 as compared with an estimate in 1926 of 2,682,848 which represents an increase over that period of 10·5 per cent.

No reliable figures of births, deaths, and infantile mortality are obtainable.

Distribution of Population.

The geographical distribution of the population is as follows :—

	*European.**	*Asiatic.**	*Native.*	*Total.*
Coast Province	1,317	26,168	218,376	245,861
Ukamba Province	334	1,579	413,776	415,689
Kikuyu Province	8,021	19,228	807,797	835,046
Masai Province	95	380	48,470	48,945
Naivasha Province	880	510	28,812	30,202
Rift Valley Province ...	1,791	2,379	68,238	72,408
Nzoia Province	3,175	1,905	125,163	130,243
Nyanza Province	1,035	4,793	1,111,487	1,117,315
Turkana Province	16	28	79,874	79,918
Northern Frontier Province	14	122	65,000	65,136
In transit	134	43	—	177
	16,812	57,135	2,966,993	3,040,940

IV.—HEALTH.

General Administration and Organization.

In Kenya, as elsewhere, the ultimate responsibility for the safeguarding and promotion of the public health rests with the Central Government. In recent years, however, there has been a certain amount of decentralization and the position now is that in every area of the Colony there is a " local authority " which to a greater or less degree has, under the general supervision of the State, responsibility in health matters. In Nairobi the authority is the Municipal Council and in that town the greater part of the health staff is employed by the local authority. Mombasa also employs a considerable part of the local health staff. In the other towns, in the settled European farming districts and in the native reserve districts, the authority is the District Commissioner and the health staff consists of Government servants. Where in the smaller towns there is a Municipal Board, the Board in effect, though not in law, is the local " health authority " since its opinion is always sought by the executive authority. In the native reserves also there has been some administrative development since it is now the custom to make every endeavour to interest the Local Native Council in health affairs and in not a few reserves the Councils have shouldered financial responsibility for minor services. Supervising the activities of all these local authorities are the Commissioner of Local Government for the towns and European districts and the Chief Native Commissioner for the native reserves. In consonance with general Government policy the Director of Medical and Sanitary Services is responsible for providing and distributing both medical relief and health staff to the extent provided in the sanctioned Estimates, and he acts in consultation with both the Commissioner of Local Government and the Chief Native Commissioner.

---

* N.B.—The figures of European and Asiatic population are taken from the 1931 census.

Sanitary Work and Administration.

In Nairobi, Mombasa, Nakuru, and Eldoret sanitary work and administration is in effect almost wholly a function of the local representative authorities and on the whole has been effectively carried out. In Nairobi notable achievements have been the completion of an excellent and very up-to-date public market and the commencement of a modern and adequate abattoir, while consideration has been given to the important matter of dealing on a comprehensive scale with the native housing question. In Eldoret a notable event was the opening of a new native location which is in every respect a credit to the local authority concerned.

In the native reserves the year has been marked by the progress which has, in certain districts, attended the efforts which have been made to encourage the building of better houses and to provide pit latrines. With regard to housing, progress has been most notable in those reserves to which it has been possible for the Medical Department to post a European Sanitary Inspector. Gratifying results in the installation of pit latrines occurred in one of the coast districts where particular attention was given to the matter by the District Commissioner. Other activities in the reserves have been the distribution of quinine by native distributors employed by the Local Native Councils concerned, the provision of Local Native Council butcheries and slaughter-houses and, in some cases, the protection of local water-supplies.

Medical Relief.

In some of the towns medical relief for Europeans is still provided in Government hospitals, but in others, and to an increasing extent, advantage is being taken of private nursing homes. In one town the local authority has now become responsible for the administration of the European hospital and has obtained powers to impose, and has imposed, a local hospital rate. A non-Government European hospital exists at Nakuru.

In the native reserves, however, medical relief, though to some extent provided by, or through, the agency of Missionary Societies, is for the most part supplied directly by the State and the greater part of the provision made under the medical estimates is expended on this service. During the year under review a new Government native hospital was opened at Kericho, a new native hospital at Kabarnet was building, and a commencement was made with new native hospitals at Kilifi and in Digo.

At the close of the year 33 Government medical stations were in existence, the native hospitals of permanent construction numbering 23 and those of temporary construction 10. Seven hospitals for Africans were maintained by Missionary Societies and of these six received financial support from Government. In connexion with the Government hospitals in the native reserves there were over 100 out-dispensaries in charge of African dressers.

At the Government native hospitals there were treated during the year the following number of patients :—

In-patients	30,090
Out-patients	246,335

while at the out-dispensaries there were over half a million attendances.

Of the cases of disease treated in hospital the most important and, generally speaking, the most serious were those of pneumonia. Next in importance perhaps are the cases of malaria and of infestation with intestinal worms. In most hospitals the number of cases admitted for surgical treatment is steadily increasing, and in almost all the admissions for tropical ulcer presented both a clinical and an administrative problem. A feature of the year has been the increasing number of women admitted as in-patients and the more general use of the facilities for maternity cases. This increase in the admission of females has followed on the improvement in the construction and equipment of the hospitals which has taken place in recent years, and is closely associated with the posting of trained European nursing sisters to some of the outlying native reserve hospitals. The latter represents an important advance not only in connexion with the efficiency of the relief offered but as a means for utilizing the hospitals as educational and social forces.

Special Clinics.

Clinics for the treatment of venereal disease, for ante-natal work, and for child welfare were held regularly throughout the year at five centres in Mombasa and at four centres in Nairobi by the women child-welfare medical officers maintained by Government in these towns.

Health of Employed Labourers.

Employed labourers, their places of employment and their housing accommodation, are subject to inspection by the Labour Inspectors of the Department of Native Affairs and by Health Officers. During the year no notable outbreaks of disease occurred among this section of the population and on the whole the health of the labourers was fairly good. Owing to the depression in trade no major housing schemes were embarked on by employers.

Vital Statistics and the Public Health.

The recording of vital statistics even in the towns of Kenya is still far from satisfactory, while owing to the fact that no machinery is in operation for the registration or notification of births among Africans no infant mortality rates can be determined for that race.

The death-rates for the two most important towns, namely Nairobi and Mombasa, were as follows :—

Nairobi (*total population* 47,919).

Crude	death-rate,	all races	16·21	per thousand.
Recorded	,,	,,	13·78	,,
,,	,,	Europeans	4·78	,,
,,	,,	Asians	14·31	,,
,,	,,	Africans	15·23	,,

Mombasa (*total population* 43,252).

Crude	death-rate,	all races	17·25	per thousand.
Recorded	,,	,,	16·6	,,
,,	,,	Europeans	5·03	,,
,,	,,	Asians (Indians and Goans)	15·09	,,
,,	,,	Arabs	24·25	,,
,,	,,	Africans	16·17	,,

In considering these figures it is necessary to remember, firstly, that except in the case of Europeans (and perhaps of Asiatics) the figures recorded may be, and probably are, smaller than the true figures, secondly, that the European population is to a certain extent a picked one, and thirdly that the African population contains a large number of young unmarried males.

With regard to the African population of the native reserves there are no figures either for births or deaths and there is, therefore, no information which might form the basis of a close appreciation of the state of the public health.

It is, however, of the first importance that this absence of detailed figures should not be allowed to divert attention from the undoubted fact that the native population as a whole suffers severely from preventable disease, and, on that account, and on account of generally insanitary conditions and of an inadequate and ill-balanced dietary, is on the whole more unfit and less well developed than might otherwise be the case.

Ill-health and poor nourishment are to a greater or less degree the lot of all but a few members of the African population at the present time, and this regardless of the fact that in some years the incidence of the major epidemic diseases may be, relatively speaking, low. In 1931, it is true, plague was less evident than in 1930, and throughout the year the Colony remained entirely free from smallpox, while no explosive outbreak of malaria occurred. Nevertheless as usual pneumonia took its toll of deaths, malaria and intestinal worms were the causes of much invalidity, and poor food and maternal ignorance must have been the cause of much disability and sickness among adults and children.

In the period of a year it is impossible to record any considerable alteration in the basic conditions which govern the state of the public health. There is, however, no decrease in the widespread desire among the native population for education and improvement. Wherever facilities for instruction are instituted a gratifying response is obtained. Particularly noticeable in this respect has been the demand for help and instruction in the improvement of housing. Improvement of housing and living conditions must, however, be limited by the economic status of the people concerned. There was considerable evidence during 1931 that the effects of the world-wide financial depression had made themselves felt in the native reserves and this will result in the curtailment of building and other activities on which social improvement depends. Added to the slump in prices for primary products the ravages of locusts cannot have failed to have their effect.

Propaganda.

Three health exhibits were organized during the year in connexion with agricultural shows. The first was staged at the show of the Royal Agricultural and Horticultural Society of Kenya, the chief European agricultural show of the year. One part of the exhibit consisted of a complete farm homestead such as might be erected and maintained by a progressive African native in connexion with a small farm in a native reserve. The second was staged at a large native agricultural show and was designed to show the inter-relationship of better farming, better living, and better business. All the Government Departments connected with developmental activities co-operated. The third exhibit was a feature of a small European agricultural show held at Eldoret.

Laboratories.

A noteworthy event in connexion with public health and medical activities was the opening in the early part of the year of the new Laboratory. Modern facilities and a sufficiency of space are provided in place of the generally unsatisfactory and crowded conditions which existed in the old building.

V.—HOUSING.

European.

European housing in the towns of Kenya is, on the whole, good. For the most part the houses are of stone or concrete. There is at present no lack of housing. European housing in the rural areas is steadily improving and much of it is now, generally speaking, good.

Indian.

The Indian population of Kenya lives almost entirely in the towns and in almost every town in Kenya, and particularly in Nairobi and Mombasa, there is much Indian housing which can only be described as slum property. The factors involved in the improvement of existing conditions are the poverty and ignorance of the inhabitants, lack of better housing facilities, vested interests in a large amount of slum property, and lack of funds. The solution of the problem lies chiefly in the proper education (using that word in its broadest sense) of the rising Indian generation, and the consequent improvement in the standard of living of the Indian community. The provision of adequate educational facilities has been pressed forward as rapidly as possible, but during the year under review financial stringency necessitated considerable modification in the programme of development.

Arab.

The housing of an urban Arab population is a problem only in Mombasa and there the conditions which give rise to the problem and the methods of solution are the same as those in the case of the Indian community.

African.

It is in connexion with African native housing that the largest and most important problems arise both in the towns and in the rural areas.

African native housing in urban areas.—The African inhabitants of Mombasa who represent a large proportion of the total population, may be divided into two classes : (*a*) a stable population most of whom have been born and bred in the town, and (*b*) a large immigrant floating population of natives who, in increasing numbers, are drifting to the town in search of work. The problems presented by the stable African population are similar to those of the Asiatic residents. The houses are generally superior to the huts in the reserves and are fairly well lit and ventilated. But these houses are built of materials which do not allow of the maintenance of high standards of cleanliness. The problem of affording this class of the community more satisfactory habitations is one of the most urgent with which the local government authority is faced.

The floating immigrant African population are housed for the most part as lodgers in the houses of the more permanent residents. The solution of the problem presented by these people is being found in the provision of locations where they can hire rooms or houses, and where adequate provision can be made for their social needs.

In Nairobi the problem is somewhat different from that in Mombasa since there is no large section of the African population which has urban culture or experience. Wages, too, are generally lower and the standard of living consequently more primitive. The position up to the present has been largely met in much the same manner as in Mombasa, namely, that some Africans have built houses and have let these houses in lodgings to others. There are these differences, however, that firstly, owing to the absence of good building poles and suitable earth and also owing to a lack of building experience, the houses are much poorer than in Mombasa, and secondly the supply is far from adequate and serious overcrowding is almost universal. An attempt at a solution has been made in Nairobi by the provision of permanent housing by the Municipal Council and further provision is proposed.

In the smaller towns the problem though less acute is similar to that in Nairobi. Within the past year a model location has been established in Eldoret which is an example of African town planning carried out with due regard to the social needs of the community.

Rural African housing in the European settled areas in fuel camps, etc.—On a few European estates excellent permanent housing has been provided in the past few years. On the great majority of the larger estates and on almost all the smaller farms, however, such is not the case. The defect is mainly attributable to financial causes. The Government carries out a programme of systematic propaganda which has led to improvement.

The housing of Africans in the native reserves.—It is in the native reserves that the essential housing problem of the Colony lies.

In three at least of the Kikuyu Districts, in three in Nyanza, and in the Machakos, Teita, Digo, and Kilifi Districts there are thousands of African natives who, given the necessary knowledge of designing and building, are anxious to build better houses and to improve their amenities, and many hundreds who are in a financial position to do so. To furnish the necessary social knowledge it has been the policy of the Medical Department during recent years to post to the more developed districts, qualified European Sanitary Inspectors who have technical experience and who have been specially trained to undertake work among Africans. There are five Districts to which European Sanitary Inspectors have been appointed. These Inspectors are not required to carry out sanitary inspections as ordinarily understood. Their business is to teach, and to provide practical assistance and advice in the designing and construction of houses in accordance with the means of the builders, and the available building materials. In the District where most interest is at present being displayed by the natives in new housing the Sanitary Inspector has been able to establish a brick-burning industry in three separate areas where the art was previously unknown. Apart from affording advice and supervising the actual construction of houses the Sanitary Inspectors, in consultation with the Agricultural Officers, advise with regard to the construction of latrines, grain stores, fowl houses and runs, cow, calf, and cart sheds, the conservation of manure, the digging of manure pits, and the construction of carts. It is often necessary for the Inspectors to restrain a desire on the part of the natives to incur premature expenditure on building, and to indicate the advisability of first improving the general productivity of their holdings, and so affording themselves the means not only of building better houses but also of maintaining them in a proper state of cleanliness and repair when built.

A powerful aid in the improvement of housing in native reserves is the provision of demonstration houses, homesteads, and farms. Some are already in existence and the Local Native Councils are taking a praiseworthy interest in the matter.

VI.—PRODUCTION.

Mineral.

Considerable activity occurred during 1931 in prospecting and exploiting the gold resources of the Colony. During the year 405 ordinary prospecting licences were issued, as compared with 15 in 1930, and 748 claims were pegged and registered as compared with 64 in 1930. The discovery of gold was reported in September from the North Kavirondo District near Kakamega and great interest was soon manifested in the area. Operations were mainly confined to the prospecting of alluvial deposits which were found to occur in nearly every valley adjacent to the Yala River and its tributaries. The activity had not reached its zenith at the end of the year.

The mineral production in 1930 and 1931 was :—

	1930.		*1931.*	
	Weight.	*Value.*	*Weight.*	*Value.*
		£		£
Gold	1,789 oz.	7,490	2,531 oz.	13,194
Silver	155 ,,	11	288 ,,	25
Lime	1,800 tons	1,800	940 tons	940
Marble	400 ,,	4,000	410 ,,	4,100

44,170 tons of sodium carbonate valued at £199,389 were produced for export in 1931 as against 49,270 tons valued at £222,305 in 1930.

Agriculture.

The economic welfare of the Colony is based almost entirely on agricultural production. The main products are coffee, sisal, tea, barley and oats, and essential oils, which are cultivated almost exclusively on European plantations and estates, maize, wheat, pulses of many varieties, coco-nuts, sugar-cane and wattle, potatoes, ground nuts, and fruit, which are cultivated both by Europeans and by natives in the reserves ; and sim-sim, millets, sorghums, cotton, certain pulses and root crops such as yams, which are mainly produced by natives.

Reliable figures of total native production are not available, and in the following table the acreages, yields and estimated values of the main crops under cultivation by Europeans are shown :—

	1930–1931.			*1931–1932.*		
Crop.	*Acreage.*	*Yield.*	*Value.* £	*Acreage.*	*Yield.*	*Value.* £
Coffee ...	96,689	310,168 cwt.	1,427,536	98,874	245,991 cwt.	986,988
Sisal ...	137,299	18,858 tons		143,660	14,674 tons	
Tea ...	10,052	930,209 lb.		11,258	1,500,249 lb.	
Maize ...	200,926	1,649,728 bags		160,546	762,622 bags	
Wheat ...	68,851	194,337 ,,		43,168	86,862 ,,	
Barley ...	1,967	*		2,330	*	
Coco-nuts ...	8,499	3,810 cwt.		8,121	4,736 cwt.	
Sugar-cane	13,493	77,120 ,,		12,363	104,700 ,,	
Wattle ...	11,702	*		13,308	*	

Livestock.

The animal industry is an important factor in the Colony's economic structure. Milk, cream, butter-fat, butter, cheese, bacon, ham, and wool are produced mainly by Europeans, while both Europeans and natives supply the market with mutton, beef, ghee, and hides and skins. Considerable quantities of mutton, beef, milk, and ghee are consumed by their native owners, these commodities together with blood drawn from the living animal forming the main articles of diet of certain of the pastoral tribes, particularly the Masai, Nandi, Turkana, etc., and the tribes which inhabit the Northern Frontier Province. The animal products sold by Europeans during the last two years are shown in the following table :—

Animal Products.

	1930.	*1931.*
Milk	1,101,704 gal.	1,108,868 gal.
Cream	145,796 ,,	77,063 ,,
Butter-fat	614,790 lb.	676,910 lb.
Butter	312,694 ,,	285,320 ,,
Cheese	131,168 ,,	111,582 ,,
Ghee	114,527 ,,	96,471 ,,
Bacon, ham	699,080 ,,	*
Wool	654,846 ,,	813,662 ,,

Fisheries.

A considerable fishing industry is in being both on the coast and on Lake Victoria Nyanza. Fish are supplied to Nairobi and other accessible towns from both these sources. No figures indicative of the volume of this trade are available.

---

* Figures not available.

Manufactures.

Beer and Stout.—gallons (standard) 101,968, worth (approximately) 4*s*. per gallon.

Soap.—Approximately 120,000 cases of common soap were manufactured in 1931. 6,967 cwt. were exported, mostly to Zanzibar.

The manufacture of aluminium hardware at the coast is progressing steadily and the falling off of duty collections on this class of commodity from £4,109 in 1929 to £333 in 1931 reflects the development of the local industry.

Organization of Production.

The mineral development in the Colony is conducted, at present, almost entirely by individual syndicates. The organization of agricultural production varies in accordance with the nature of the produce. As regards European cultivation the production of sisal, requiring as it does large capital outlay, is conducted mainly by companies. Coffee is produced partly by companies and partly by individual agriculturists, though mainly by individuals. The cultivation of maize, wheat, barley, etc. and the livestock industry is chiefly in the hands of the individual agriculturist, though the manufacture of butter is largely conducted by co-operative creameries.

In regard to native agriculture production is almost entirely conducted by individuals, who, in the main, cultivate sufficient crops to supply the food requirements of themselves and their families, and sell the surplus to obtain money with which to supply their requirements in the way of clothing, etc., and to pay their taxes.

The manufacture of beer is in the hands of a company.

Soap is manufactured by companies mainly situated on the coast.

In addition, bacon, hams, and various food products are manufactured at the Uplands Bacon Factory. Figures to indicate the volume of jams, cordials, etc. which are made in small quantities in various parts of the Colony are not available.

All unskilled and much of the skilled labour on estates is performed by African natives. Recently the tendency has been for employers to recruit their labour themselves, or by sending a reliable native headman to the reserves, rather than to rely on the services of licensed European or Indian professional recruiters. The tendency is to the advantage of the employer in that he obtains his labour at a smaller initial cost, and equally to the advantage of the labourers in that they are enabled to obtain more complete and accurate information as to the conditions, nature, and whereabouts of their employment before engaging their services. Professional recruiters tend to be concerned less with the actual recruitment of labour, and more with supervising the arrangements necessary for feeding, clothing, and transporting to their destination recruits enrolled by the employers' representatives.

The engagement of labour on a monthly contract is gaining ground at the expense of contracts for longer periods. Actually the labourers do not remain in service for shorter periods of time, and the development is a satisfactory one in that it affords the parties to the contract more freedom of choice in regard to its termination and indicates the growth of a greater degree of confidence both in the employer and the employee than has existed in the past. Labourers are generally employed on a monthly "ticket" on which is entered a record of each completed day's work. On the completion of 30 days' work, which the labourer is generally required to perform within 42 days of the commencement of his employment, the labourer becomes entitled to payment at the agreed rate of wage. It is usual for the employer to provide housing and food, and in many cases blankets and cooking utensils, etc., and he is by law required to keep sufficient medicines and medical comforts for the requirements of his employees. The enforcement of the law governing the relationship of master and servant and the general welfare of the labourer, is primarily the function of the Labour Inspectors. These matters, however, fall within the duties of all Provincial Commissioners and District Officers. The average number of units of labour employed monthly on European holdings during the census year ending February, 1931, was 120,210, of which number 89,856 were men, 3,387 women, 19,393 children, and 7,574 casual workers. The figures show a decrease of 5,675 as compared with the previous year. In addition, 1,671 units were employed monthly by Indian cultivators.

Cultivation by non-Europeans.—Indian cultivation is limited to the Kibos-Miwani area, where mainly sugar is grown, and the coast, where the cultivation of coco-nuts predominates, and is relatively unimportant in comparison with the total agricultural activities of the Colony. Considerable areas on the coast are under cultivation by Arabs who produce coco-nuts for export as well as food for local consumption.

Native Agriculture is becoming increasingly recognized as an important factor in the economic structure of the Colony, and during the year under review considerable attention has been paid to the encouragement and instruction of native cultivation through the District and Departmental Officers. The introduction of new economic crops and the improvement of existing forms of cultivation have advanced and efforts have been made to improve the existing marketing facilities in native reserves.

In common with all forms of agriculture, with the possible exception of coffee, native agriculture suffered considerably during 1931 both from the general depression in the prices of primary products, and from the depredations of locusts.

In the main crop-producing areas of Kikuyu and Nyanza Provinces, the favourable weather produced very promising crops, but locust damage was severe, and natives tended towards reducing the acreage planted to cereals, and were active in planting such locust proof crops as potatoes and cassava. The steady progress noted in recent years in the improvement of the quality of crops grown, particularly those which are marketed, was maintained and in some areas the maize is now of a high standard. This improvement is particularly noted in those parts which, by their proximity to the railway, are in close contact with markets and export facilities. The natives in these areas are rapidly becoming alive to the advantage of organized marketing, and the year has been marked by the institution of co-operative societies and similar trading organizations, which have established godowns at railway stations, and formed trade connexions with European agencies which carry out the actual sales of produce. Another important feature in Nyanza and on the coast has been the recovery of the cotton crop. By a large increase in the output of cotton over the previous year, which was an unfavourable one, Nyanza's total is but little short of the 1929–30 crop, while on the coast the total for that year has been exceeded.

A most successful Native Agricultural Show was held in North Kavirondo in February, and numerous classes of native produce at the Show held by the Royal Agricultural and Horticultural Society of Kenya at Nairobi in January received many entries; competition was keen and the produce shown was of a high standard.

The number of pupils at the Native Agricultural School at the Scott Agricultural Laboratories, Nairobi, was maintained at 60, while the number of those at Bukura School increased from 48 to 51.

Local Native Councils are taking an increasing interest in agricultural services and by votes for the upkeep of seed farms, the purchase of seed and implements, the engagement of instructors and similar purposes they are actively assisting the development of their areas.

Development of the native stock industry is hampered by the existence of certain enzootic diseases, which necessitate quarantine regulations prohibiting the movement of cattle from the reserves except through authorized quarantine stations. In some cases this results in a complete prohibition of the movement of cattle. The situation is not so serious in respect of enzootic sheep diseases and in consequence movement is less restricted. Native sources supply a considerable number of the sheep required for slaughter purposes. There are, nevertheless, strong indications that the veterinary services rendered in the reserves are receiving an increasing measure of appreciation and Local Native Councils have shown their readiness to vote funds for these services and for instruction in animal husbandry. In particular, ghee-making dairies and hide-drying stations are strongly supported. The production of ghee continues to make satisfactory progress in spite of the catastrophic fall in the price of this commodity.

VII.—COMMERCE.

General.

Kenya and Uganda form a single unit for purposes of Customs and there is in consequence complete freedom of trade between the two territories. A detailed examination of the external trade of Kenya alone is therefore a matter of considerable difficulty, more particularly as virtually the whole of the imports and exports of both Dependencies passes through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £410,306 was transported through Kenya and shipped at Mombasa during the year, goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1931 being valued at £427,301. The combined value of trade imports and total exports (i.e., exports of domestic produce and re-exports) of Kenya and Uganda during the year amounted to £10,597,969 as compared with £13,871,883 in 1930 and £18,062,190 in 1929, the total volume of trade of all classes, including importations on Government account, transit and transhipment traffic, being valued at £11,543,651 as against £15,400,376 in 1930 and £19,837,533 in 1929. The value of merchandise cleared for home consumption during the year was £5,148,050 as against £6,820,712 in 1930, a decrease of £1,672,662 or 24·52 per cent. Exports of the domestic produce of the territories were valued at £4,322,136 as compared with £5,483,024 in the previous year. Of this total, goods to the value of £2,343,874 originated in Kenya, the domestic exports of Uganda, calculated in the terms of the f.o.b. value at the port of final shipment, being valued at £1,978,262.

Bonded stocks on hand at 31st December, 1931, were valued at £246,505 or £169,355 less than the value of goods remaining on hand in bonded warehouses at the end of the previous year. So far as the export trade in Kenya produce is concerned, a decrease in value of £1,078,697 or 31·52 per cent. as compared with exports during the previous year is recorded, this serious contraction being due to the combined effects of a further fall in world market prices and to a decrease in the actual quantities available for export. Among the more important commodities exported, sisal alone reflects a small increase in the tonnage shipped, but the price had so far depreciated that a fall in value of £204,705 as compared with the previous year is shown. Exports of coffee decreased by 64,185 cwt. in quantity and £440,440 in value, maize exports being 362,968 cwt. less in quantity and £145,961 less in value than in the previous year. Trading conditions during 1931 were extremely difficult, no period of the year being free from grave and constant anxiety. The progressive contraction in the purchasing power of the population consequent upon a sustained period of world depression and the havoc caused by locusts was reflected in a marked decrease in consumption of all classes of goods, including locally produced food-stuffs. Importations were restricted to minimum requirements, the abnormally low level of both bonded and open stocks held by wholesale and retail merchants being a feature of trading operations during the year. This exercised a steadying influence on the local import markets and prevented a general collapse, which might have resulted from the acute and long continued depression had less prudent methods been adopted.

The forced abandonment of the Gold Standard by the British Government in September, 1931, was of some assistance to the East African territories where sterling costs of production and marketing (apart from an increase of 15 per cent. in shipping freights) remained virtually unaffected by the change. The consequential improvement in the price of exportable commodities on the world's markets quoted in terms of sterling thus increased the possibility of effecting sales overseas at remunerative rates. Unfortunately, the continued infestation of locusts coupled with financial stringency minimized the benefits which otherwise would have accrued to the territories, as on the one hand full advantage of the firmer markets could not be taken owing to a shortage of exportable commodities, and on the other hand a contraction of working capital did not permit of a normal replenishment of stocks.

Net collections of Customs revenue amounted to £1,002,001 as compared with £1,139,031 accruing in 1930. Of this sum £698,571 was allocated to Kenya and £303,430 to Uganda.

Imports.

The following table gives comparisons between the values in 1931 of trade imports from the various countries, and corresponding values for 1930 :—

	1931. *Per cent.*	1930. *Per cent.*
United Kingdom	38·11	37·10
British Possessions	20·17	22·89
United States of America	9·51	11·25
Japan	9·51	6·74
Netherlands	5·56	4·78
Germany	3·59	4·01
Other Countries	13·55	13·23

The following summary shows the values of the principal commodities imported from the various countries in 1931 and 1930 :—

Country of Origin.	*Commodity.*	*Value 1931.* £	*Value 1930.* £
Great Britain and Northern Ireland.	Whisky	69,594	80,304
	Cigarettes	99,588	129,496
	Cement	72,842	76,991
	Galvanized iron sheets	65,847	83,878
	Tubes, pipes and fittings	31,507	24,073
	Tin, bar, plate, or sheet	8,447	44,426
	Machinery	132,087	208,309
	Cotton textiles	152,732	223,875
	Wearing apparel	25,298	47,093
	Chemicals, drugs, dyes and colours	81,554	86,867
	Lubricating oils and greases	14,142	23,783
	Motor vehicles and bicycles	44,939	72,552
	Tyres and tubes	28,630	32,658
India	Rice	55,840	83,956
	Wheat meal and flour	36,195	48,909
	Tea	8,758	24,019
	Cotton textiles	67,835	80,325
	Jute bags and sacks	125,963	176,000
Union of South Africa	Coal	52,900	67,380
Canada	Motor vehicles	71,110	151,019
	Tyres and tubes	18,810	11,542
Germany	Aluminium hollow-ware	607	10,055
	Agricultural and horticultural tools.	8,197	7,113
	Shovels, spades, axes and matchets.	2,606	7,385
	Machinery	11,238	21,491
	Cotton textiles	13,233	21,681
	Vehicles	11,577	20,859
Netherlands	Tobacco (manufactured)	70,315	70,768
	Cotton textiles	160,718	184,908
Japan	Cotton textiles	317,656	278,840
	Apparel	55,668	55,999
Persia	Fuel oil	99,428	125,807
United States of America.	Machinery	16,126	31,916
	Cotton textiles	50,930	59,280
	Lubricating oils and greases	38,708	65,613
	Petrol	107,740	104,056
	Kerosene	39,523	61,853
	Motor vehicles and bicycles	42,951	166,303
	Tyres and tubes	24,537	38,446
Dutch East Indies	Fuel oil	22,197	24,851
	Petrol	106,074	139,442
	Kerosene	26,822	64,951

Cotton Textiles.—The value of home consumption clearances of cotton textiles of all descriptions amounted to £834,887 as compared with £926,484 in 1930, the Customs duty collected thereon being £178,783 or 17·9 per cent. of the total net duty collections. Transfers to Uganda were valued at £338,092. With the exception of coloured piece-goods, all classes show a decrease in value as compared with importations during the previous year.

The average value per yard of imported cotton textiles was 3·9d. as compared with 5·8d. in 1930 and 5·7d. in 1929, cotton blankets decreasing in value from 1/7·2d. to 1/3·9d. per blanket. The United Kingdom has never been a serious competitor in the valuable market for unbleached sheetings but has hitherto been the principal source of supply of bleached, printed, and dyed fabrics. During 1931, however, the market for khangas (i.e., dyed piece-goods) has been maintained, but a considerable proportion of the trade in bleached and printed goods has been lost to foreign competitors. In times of financial stringency the price factor naturally becomes a most important consideration and to this fact may largely be ascribed the falling off in the percentage value of the United Kingdom trade in this market. It does not, however, alter the present position and prompt and energetic steps will require to be taken by British manufacturers if their predominant position is to be regained. Holland and Belgium continue to provide the bulk of imported blankets; grey sheeting (Americani) being supplied principally by Japan and the United States of America.

Vehicles.—880 motor cars, 333 motor lorries, and 15 motor tractors valued at £154,251 were imported during the year as against 1,269 motor cars, 904 motor lorries, and 196 motor tractors of the total value of £363,414 imported during 1930. The main sources of supply were Canada, the United States of America, and the United Kingdom—the value of motor vehicles of these descriptions originating in the United Kingdom being £33,048 or 21·4 per cent. of the total. Motor-cycle imports fell from 125 valued at £5,458 in 1930 to 95 valued at £3,576 during 1931. A striking decrease in the trade in imported motor vehicles is recorded, the total value under this heading (not including parts and accessories and tyres and tubes) being £157,827 as against £368,872 in 1930. The share of the United Kingdom in this trade increased from 10·4 per cent. in 1930 to 22·8 per cent. during the year under review. The decrease in importations of pedal cycles, which is very largely a native trade, reflects the general depression, an additional factor militating against an expansion of this trade being the rapid development of motor bus services largely patronized by natives throughout the territories. During the year under review imports decreased from 7,056 bicycles to 1,903. The value of this trade, which is almost entirely with the United Kingdom, amounted to £9,379.

Other Imports.—A consistent shrinkage in imports of all classes is recorded.

Re-Exports, Transit and Transhipment Trade.

The value of goods re-exported during 1931 amounted to £1,183,807 or 23·25 per cent. of the total value of trade imports as compared with £1,465,194 or 21·16 per cent. in 1930. Transit and transhipment traffic were valued at £106,015 and £183,809 respectively, as against £126,108 and £237,101 in 1930.

Exports.

General.—The domestic exports of Kenya and Uganda are mainly agricultural, the principal exception being carbonate of soda procured at Lake Magadi in Kenya. The value of the domestic produce of Kenya and Uganda exported in 1931 amounted to £4,322,136 as compared with £5,483,024 in 1930, a further fall in commodity prices and a decrease in the actual quantities available for export being responsible for this reduction. Empire markets continue to absorb a large proportion of exports, no less than 77·68 per cent. being despatched to destinations within the Empire. The principal foreign markets were Belgium (4·96 per cent.), United States of America (4·61 per cent.), and Japan (3·31 per cent.). The following summary shows the principal exports and the markets in which they were absorbed, giving comparative figures for 1930 :—

Destination.	*Commodity.*	*Value 1931.*	*Value 1930.*
		£	£
Great Britain and Northern Ireland.	Maize	157,071	237,179
	Butter	27,665	43,576

	Sisal	11,459	81

Cotton.—The quantity of raw cotton exported increased from 521,409 centals in 1930 to 758,811 centals in 1931 but as a result of the fall in market prices the value decreased from £1,569,768 in 1930 to £1,509,895 in 1931, the average declared value per cental being £3 0s. 2d. in 1930 and £1 19s. 9d. in 1931. Cotton seed was valued at £149,224 (45,435 tons) as compared with £138,262 (33,783 tons) shipped in 1930. Of the total quantity of cotton exported, 3,131 centals were declared as originating in Kenya, the remainder being the produce of Uganda.

Coffee.—Exports of this commodity amounted to 315,893 cwt. valued at £1,147,818 as compared with 358,944 cwt. valued at £1,581,865 in 1930, the average declared value per cwt. being Shs. 72/8d. as against Shs. 88/1·67d. in 1930. Of the total quantity shipped 245,903 cwt. originated in Kenya and 69,990 cwt. in Uganda, these figures comparing with 310,088 cwt. and 48,856 cwt., respectively, exported in 1930. The United Kingdom continued to provide the principal market, receiving in 1931 Kenya and Uganda coffee to the value of £890,234, though the continued widespread demand for East African coffee is indicated by the fact that shipments consigned to over thirty countries appear in the statistical records.

Maize.—Shipments of maize decreased in quantity by 362,968 cwt. and in value by £145,961 in comparison with the previous year, the 1931 figures being 1,860,120 cwt. valued at £419,684 as against 2,223,088 cwt. valued at £565,645 exported during 1930. The decrease in shipments is directly attributable to the serious effects of locust infestations during the year.

Sisal Fibre and Sisal Tow.—Exports during 1931 were 15,994 tons valued at £232,564 compared with 15,847 tons valued at £437,269 shipped during 1930, the average declared values per ton on shipment being £14 10s. 10d. in 1931 as against £27 8s. 5d. in 1930.

Hides and Skins.—A further decrease in the quantity and value of hides and skins is recorded, exports amounting in value to £151,422 as compared with £245,303 in the previous year. Of the former total, hides and skins to the value of £109,458 originated in Kenya and £41,964 in Uganda.

Carbonate of Soda.—44,170 tons valued at £199,389 were shipped in 1931 as against 49,270 tons of a value of £222,305 exported in 1930.

Wheat.—Exports decreased from 214,528 cwt. valued at £91,449 in 1930 to 63,644 cwt. valued at £15,313 in 1931, whilst importations of wheat meal and flour amounted to 66,844 cwt. in 1931 as compared with 64,037 cwt. in 1930.

Sugar.—The development of the local sugar industry is reflected in the increased exports and decreased imports of this commodity. Shipments during 1931 amounted to 66,191 cwt. valued at £71,223 compared with 21,716 cwt. valued at £27,969 exported in 1930, imports being 6,566 cwt. valued at £6,388 in 1931 and 34,891 cwt. valued at £23,791 in 1930.

Tea.—Both import and export figures are again affected by the local production of tea, imports decreasing from 3,788 cwt. in 1930 to 1,341 cwt. in 1931 whilst exports increased from 1,443 cwt. to 3,184 cwt. in the same period.

Inter-Territorial Trade.

In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1931, the value of local produce sent from Kenya to Uganda amounted to £146,166 as compared with £182,026 in 1930 and £189,938 in 1929, the principal commodities involved being wheat meal and flour, maize meal and flour, animals living—for food, common soap, tea, butter, beer, bacon and ham, and timber. The value of Kenya produce exported to Tanganyika Territory amounted to £122,745 as compared with £172,737 in 1930, Tanganyika Territory produce imported for consumption in Kenya and Uganda being valued at £96,151.

Under the Customs Agreement of 1927, the free interchange of imported goods between Kenya, Uganda, and Tanganyika Territory is allowed, the value of imported merchandise transferred from Kenya-Uganda to Tanganyika Territory during 1931 amounting to £427,301 (including specie valued at £42,380), and the total Customs duty collected by the Kenya and Uganda Customs administration and transferred to Tanganyika Territory under this agreement reaching a total of £78,969. Traffic in imported goods in the reverse direction was valued at £131,297 (including specie to the value of £62,000) the Customs duty involved being £12,380. Tanganyika Territory produce passing through Kenya for shipment at Mombasa amounted in value to £410 306.

Air Traffic.

Considerable use of the Customs aerodromes established at Mombasa, Nairobi, Kisumu, Kampala, and Jinja was made by aircraft on foreign service during the year. 184 arrivals landed 169 passengers and cargo to the value of £11,901 whilst 188 departures shipped 215 passengers and cargo to the value of £14,631 (including bullion valued at £10,800).

Ivory.

The arrangement concluded in 1930 whereby the Customs Department assumes control of the sale of all ivory, rhino horns, or hippopotamus teeth purchased or confiscated by the Governments of both Kenya and Uganda operated satisfactorily during the year under review. By agreement with the Customs Department of Tanganyika Territory, sales in East Africa are now held at regular quarterly intervals, the approximate times being as follows :—

Mombasa :—(sales of all Kenya and Uganda Government ivory, etc.).—May and November.

Dar es Salaam :—(sales of all Tanganyika Government ivory etc.).—February and August.

In conformity with this agreement two sales were held at Mombasa during the year, a total weight of 61,606 lb. of Government ivory realizing £23,994. Of the former figure 41,948 lb. originated in Uganda and 20,108 lb. in Kenya.

For more detailed particulars in regard to imports, exports, sources of supply, countries of destination, etc., reference is invited to the Annual Trade Report of Kenya and Uganda or to the Annual Blue Book of the Colony.

VIII.—WAGES AND COST OF LIVING.

The wages of servants who may be included in the class " domestic servants " are as follows :—

	Range. *Shs. per month.*	*Normal Wage.* *Shs. per month.*
House and Personal Boys	17/- to 80/-	40/- and 30/-
Cooks	22/- „ 100/-	50/-
Dhobies	27/- „ 42/-	30/-
Kitchen Boys	12/- „ 27/-	20/-
Garden Boys	7/- „ 27/-	20/-
Seychellois Ayahs (Nurses)	—	100/-
Native Ayahs „	50/- „ 60/-	60/-
Visiting Sweepers	—	10/-

The rates of wages paid to labourers in the various classes of employment are as follows :—

Government Employ.	*Average wage including value of rations.*
	Shs.
Railway	22/16
Defence	34/32
Other Government Departments ...	26/95
Municipalities	23/45
Agriculture	13/43
Other Employment.	
Mines	23/42
Timber industry	
Firewood	
Building trade, etc.	

A general downward tendency in the wage level has been brought about by the prolonged financial depression. Though it is not possible to indicate numerically the extent of this tendency, it is the case that labourers enjoying comparatively higher rates of wages have suffered a greater percentage reduction than those with smaller wages. A labourer's working day averages eight hours.

There has been considerable reduction in the scales of remuneration of both Europeans and Indians engaged in commerce, and in the rates of wages of Indian carpenters, stone masons, and similar skilled artisans.

Cost of Living.

Cost of living figures and a determination of the price-level of commodities have been obtained by the Statistical Departments since 1927, and an analysis of all available data has been extended backwards to 1924. It has also been possible to obtain prices of about 35 articles in 1912–13 for purposes of comparison with 1931.

The following table shows the index numbers for the period 1924–1931 :—

Year.	*All articles.*	*Locally produced articles.*	*Imported articles.*
1924	100	100	100
1925	101	109	98
1926	99	112	95
1927	95	109	91
1928	96	114	90
1929	95	111	90
1930	92	104	88
1931	87	97	83

The impression which has arisen that prices have fallen to the pre-war level is erroneous. The prices of 35 articles, excluding vegetables, petrol, rents, and servants are still 45–55 per cent. above the pre-war level. If petrol, transport, vegetables, etc., are included the general price-level affecting the cost of living at the end of 1931 cannot be less than 60 per cent. above the pre-war level.

In regard to the cost of living of native labourers, in the great majority of cases the labourer is supplied with rations which consist mainly of maize meal and meat, salt, etc., by the employer. As already stated, the majority of labourers draw their staple food in kind, and not in cash, and are therefore not affected by fluctuations in price. The staple food-stuff is maize meal and the average consumption is 2 lb. per day costing approximately Shs. 3 *per mensem*, and additional rations Shs. 2 *per mensem*. In short, a native labourer receives his board and lodging free plus two to three times its value in cash.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

European Education.

Secondary schools for European boys and girls of the Colony were opened at the beginning of the year, the one for girls in Nairobi and that for boys at Kabete. In Government schools the total average roll for the year was 1,077 in 16 schools as compared with 1,032 pupils in 17 schools in 1930. In private European schools the average roll was 417 as compared with 329 in 1930. There were 11 private schools, two exclusively for boys. Most of the other private schools are mainly for girls but usually cater for a limited number of small boys.

Indian and Goan Education.

Secondary schools exist at Mombasa and Nairobi. An important event was the opening of the Girls' Government School in Nairobi. The total average roll in 12 Government schools was 2,482 as compared with 2,115 pupils in 10 schools in 1930. In three aided schools there were 1,803 pupils as compared with 1,422 in the previous year. A further 828 pupils were attending 15 Indian schools which were unaided.

Arab and African Education.

The opening of the secondary school for Arabs at Shimo la Tewa near Mombasa marked an important development in education in the coast area. Steady development in other areas continues and the school age generally tends to become more normal. Buildings at the new Government Central School at Kakamega (North Kavirondo) were sufficiently advanced to enable the school to open. Substantial progress was made with the new school which is being built close to Nyeri. Both of these schools are erected from Local Native Council funds. Consideration of further applications from other Local Native Councils for similar facilities in their areas has had to be deferred.

At the end of 1931 there were 34 Government schools for Africans with 2,936 pupils on the roll; this compares with 2,271 pupils in 29 schools in 1930. The Jeanes School at Kabete continues its good work of training selected native teachers and their wives in methods of teaching social hygiene and welfare. At the Native Industrial Training Depot apprentices complete their five years' apprenticeship, the first three years of which have been spent at Government or Mission technical schools. Various missionary bodies were assisted by grants-in-aid. In 1931, grants were given in respect of 242 African schools in which there were 19,968 scholars. In addition there were 1,417 schools with 51,399 pupils which were not in receipt of any financial assistance.

In addition to the new secondary school for Arabs referred to above, secondary education was provided at the Protestant Alliance High School at Kikuyu for 85 pupils.

Statutory Advisory Bodies.

The passing of the Education Ordinance assented to in February, 1931, involved the establishment of various advisory councils, school area committees, and school committees which took the place of the bodies constituted under the old Ordinance. All these new bodies rendered very valuable service in advising the Director during the year.

Medical Inspection.

It is a matter of regret that owing to the financial situation it was found necessary to suspend the school medical service. Principals of schools continued to compile statistics periodically which will be of assistance when it is found possible to restore this service.

General.

The Education Ordinance of 1931 (section 4(*d*)) empowers the Governor "from time to time from funds voted for the purpose by the Legislative Council to make grants in aid of such of the following institutions as are constituted and administered in a manner approved by him :—

(i) public libraries and public museums ;
(ii) orphanages, provided that grants in aid of such institutions may include grants in aid of the maintenance of the inmates thereof ;
(iii) creches ;
(iv) institutions or organizations which, in his opinion, promote the education or health of the children of the Colony :
(v) institutions or organizations for the education of adults ; "

It has not yet been found possible to make financial provision for (ii) to (v) under this section.

The Lady Northey Home for European Children is maintained by public subscription and the fees collected. The Lady Grigg Child Welfare Institutions for Indians and Africans have continued to do good work. The League of Mercy, the East Africa Women's League, the British Legion, and the Salvation Army continue their valuable activities on behalf of the needy, especially the children.

The Red Cross, Boy Scout, and Girl Guide Organizations have been active in carrying on their well-known work in an efficient manner. Boy scouts now exist among all races.

A Musical Festival is organized annually and has provided a great stimulus to singing, solo and choral, elocution, and instrumental music, especially among children. An Examiner from the Trinity College of Music, Mr. Albert Mallinson, visited Kenya and met with a satisfactory response. His visit and personality afforded an inspiration to further endeavour. Government provides the remuneration of the Board of Censors for the Cinema, and the Education Department has a representative on the Board. The Natural History Society, which receives a grant from Government, carries on its valuable activities with headquarters in an admirable Museum in the Coryndon Memorial Buildings. The MacMillan Memorial Library receives grants from Government and the Municipality, and, with its associated organizations, including the Kenya (Carnegie) Circulating Library, under the new Librarian, Mr. B. Barton-Eckett, A.L.A., has sprung into great activity and is doing very useful work. The Kenya Arts and Crafts Society holds an Annual Exhibition which has again proved to be most interesting. The Agricultural Show has, with a section for African Arts and Crafts, also provided an incentive in the same direction. Associations and clubs for the encouragement of games and athletics of all kinds continue to increase and flourish, and the African Athletic Association holds competitions for Africans in the districts, and an annual meeting for olympic games in Nairobi.

X.—COMMUNICATIONS AND TRANSPORT.

Posts and Telegraphs.

The outstanding event under this head was the inauguration of a regular weekly air mail service with Great Britain on the opening of the North African section of the London-Cairo-Capetown Imperial Airways air route, the terminal point in the Colony in 1931 being Kisumu on Lake Victoria. This service is of particular value to the Colony and has been popular from the start. It is estimated that 11½ per cent. of the total number of letters and postcards despatched to Great Britain and Europe are sent by air. The southern section of the route had not been opened by the end of the year. In July, pending the opening of the southern section (Kisumu-Capetown), a supplementary and self-supporting local air service connecting with the main service was established between Nairobi and Kisumu and later, in co-operation with the Tanganyika Post Office, between Mombasa and Dar es Salaam via Tanga and Zanzibar. The Nairobi-Kisumu service was maintained by a local company—Wilson Airways, Limited—and the coast service by Tanganyika Government machines.

The ordinary oversea mail services to all parts were reasonably frequent throughout the year. English mail despatches averaged

1·25 per week and arrivals 1·4. The average time in transit each way was 19 days. The internal mail services extend to all parts of the Colony, and except in the case of a few of the more remote districts motor transport has replaced runner services. The internal telegraph and telephone system consists of 2,560 miles of pole route, and a wire mileage of 13,919. Almost all administrative centres are connected by telegraph. Communications in the Northern Frontier and Turkana areas are maintained by a wireless system consisting of eight small stations (500 watts), which are maintained and operated by military units and handle civil as well as military telegrams.

Notwithstanding the general depression there was a substantial increase in the demands for telephone facilities. The number of telephones in use rose by 10·5 per cent. from 2,403 in 1930 to 2,655. A net addition of 67 exchange lines to the Nairobi exchange brought the total number of subscribers to that exchange to 742 at the end of the year. Public exchange facilities are also available at Mombasa (285 subscribers), Nakuru (62 subscribers), Eldoret (59 subscribers), and Kitale (39 subscribers). In addition small rural exchanges exist in various parts of the country. The number of subscribers (mostly farmers) connected with these is 266. The installation of an automatic telephone exchange at Nairobi, on which work commenced in July 1930, was completed and the exchange brought into service at the end of January. The new system is very popular with subscribers and is working very efficiently. The installed capacity is 1,000 lines and the ultimate capacity 2,000. Trunk lines connect the Eldoret and Kitale exchanges and the Nairobi and Nakuru exchanges. Work on the Nairobi-Mombasa new trunk lines, to which reference was made in the 1930 Report, had practically been completed by the end of the year and the service has since been opened.

A comprehensive agreement relating to the Colony's external telegraph communications and to the local broadcasting service was concluded with Imperial and International Communications, Limited, on favourable terms. Under this agreement the Company has (*a*) leased the Government coast wireless station at Mombasa and is under an obligation to maintain there a continuous day and night service, (*b*) acquired the interests of the British East African Broadcasting Company, and subsequently operated the " Kenyaradio " and the broadcasting services, and (*c*) conceded substantial reductions in cable rates between the Colony and Great Britain, India, and the Union of South Africa. The cable and " Kenyaradio " services were satisfactorily maintained during the year. Cable communication with Europe was interrupted for 25 days in August and September owing to a breakdown on the Zanzibar—Aden cable but no public inconvenience was caused as traffic was diverted via " Kenyaradio." The land line route to South Africa, whose length militates against speed and accuracy, is not largely used. The necessary wireless facilities at Nairobi in connexion with the Cape—Cairo air service are provided under an arrangement with Imperial and International Communications, Limited. Independent long and short wave transmitters and receivers have been installed by the Company for the service and these are available, when not engaged on air work, for general purposes if required by Government. The local broadcasting service still suffers from lack of public support and no progress towards greater popularity was made during the year. The number of receiving licences issued was 418 as compared with 419 in 1930. Variety in the programmes —which consist mainly of reproductions of records, British Official Press News, local news items, market and weather reports—is necessarily limited. Transmission is on 350 metres and 49·5 metres simultaneously. Transmission on the former is satisfactory, but reception on the short wave, in certain parts of the country, is not consistently steady.

Roads.

The expenditure on the public road system, exclusive of that incurred on roads vested in local authorities, (*vide* pages 8 and 9) was £92,010, of which £16,032 was on new capital work, and £75,978 on maintenance and improvements. The extension of the mileage of the road system during the year was inconsiderable, as, although several new roads were opened, they replaced pioneer tracks which had previously been in use. The length of the public road system under the Public Works Department for maintenance is approximately 7,750 miles. During the last few years the policy has been to improve its condition by better alignments and higher types of construction rather than to extend its length materially. In 1931, 139 miles of hard surfaceing were carried out, which increased the length of surface road to 483 miles. Five miles of bituminous coating were also laid down and 21 concrete and steel bridges constructed, mostly in replacement of old temporary ones which had become worn out. The rainfall was well distributed through the year and little damage was done to road works by floods.

Revenue derived from public traffic shows some falling off from the figures for the preceding year. Revenue from motor taxation, including drivers' licences, amounted to £53,395, and from the petrol Customs duties and tax to £85,594. Customs duty on vehicles and their accessories yielded £24,491, and the tax on animal-drawn vehicles £431.

Harbours.

The year 1931 saw the completion of the Kilindini Harbour Development Scheme. No. 5 transit shed and adjoining quay, together with the bulk oil jetty and oil wharf were finished and equipped. The capacity of Kilindini Harbour is now 1,000,000 tons of general cargo per annum.

Shipping.

The total tonnages (import and export) handled at Kilindini Harbour and Mombasa Old Port during the years 1930 and 1931 are given below. These figures do not include oil imports discharged through the Magadi Company's pipe lines, nor soda exported from that Company's pier. Coal imports are shown separately.

COAL IMPORTS.

1931.	1930.
61,926 tons.	108,017 tons.

IMPORTS AND EXPORTS OTHER THAN COAL.

Year.	*Imports B/L tons.*	*Exports B/L tons.*	*Total B/L tons.*
1930	271,974	319,953	591,927
1931	273,551	323,569	597,120

The total trade of the Port of Mombasa (including Kilindini Harbour and the Old Port) for the year 1931 as compared with 1930 is summarized in the following statement :—

	1931.	1930.
Number of steamships ...	584	663
Net tonnage of steamers ...	1,800,701	1,904,266
Imports—B/L tons	338,969	467,327
Exports ,, ...	367,739	370,444
Passengers landed :—		
European	6,562	7,272
Non-European	12,349	16,724
Passengers embarked :—		
European	6,577	7,008
Non-European	15,800	15,239

The registered tonnage (inwards and outwards) at all Kenya sea-ports during the year as compared with 1930 was as follows :—

	Registered Tonnage 1931.	*Registered Tonnage* 1930.
Vanga	9,996	13,795
Funzi	8,081	13,032
Mombasa	3,671,081	3,873,219
Kilifi	10,837	12,618
Malindi	18,063	16,332
Lamu	59,819	71,025
Kipini	2,459	—

Railways.

The carriage of public goods provided a revenue of £1,567,429 and the tonnage of the traffic amounted to 801,994 tons, as compared with £1,766,516 and £898,280 in 1930. There was a considerable amount of competitive road traffic parallel to the railway and particularly between Mombasa and Nairobi and Nakuru. By selecting for transport only such articles as are carried by the railway at high rates, this road competition inflicts considerable losses on the railway. The Carriage of Goods by Motor (Control) Ordinance (which was passed in August, 1931), has the effect of regulating, though not of eliminating, competition with the railway by restricting the carriage of goods by road between certain scheduled points to the holders of licences issued by the Road Transport Control Board.

Passenger Traffic.—Revenue from passenger traffic also showed a decrease on 1930 figures. In 1931, 768,224 passengers contributed a revenue of £215,510, while in 1930 1,106,106 passengers contributed a revenue of £286,363. There was an all-round decrease in the number of passengers, as the following figures show :—

Passengers carried.

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1931	12,515	46,224	709,485	768,224
1930	19,085	59,479	1,027,542	1,106,106

The traffic on Lakes Victoria, Kioga, and Albert, and on the River Nile, on which the Administration maintains services, is shown in the following table :—

	1931.	1930.
Earnings	£104,000	£207,000
Total expenditure	£84,653	£101,785
Tonnage carried	93,226 tons	148,596 tons

Fuel Consumption.—The following figures show the consumption of coal, wood, and oil fuel on the railway during the year :—

	1931. *Tons.*	*Cost.* £	*1930.* *Tons.*	*Cost.* £
Coal	60,842	80,545	69,913	95,395
Oil	810	1,900	960	3,378
Wood	196,814	74,512	221,865	89,803

On the lake steamers the figures were :—

	1931.		*1930.*	
	Tons.	*Cost.* £	*Tons.*	*Cost.* £
Oil	2,734	7,540	4,054	14,740
Wood	12,701	7,156	11,495	6,997

Permanent Way.—In spite of a reduction in maintenance staff the main line track was maintained in reasonably good condition. The Thomson's Falls branch gave some trouble during the year, and while it has been put in very fair order, it is not yet fully consolidated.

New Construction.—The Yala-Butere extension to the North Kavirondo branch line, 10·75 miles in length, was completed during the year, at a cost of £36,200. The Kisumu seaplane slipway was completed and handed over to Government.

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1931 are shown in the following table :—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	1,903,726	315,330	2,219,056
Ordinary working expenditure	1,300,805	173,422	1,474,227
Surplus of receipts over ordinary working expenditure.	602,921	141,908	744,829

The expenditure on capital account at the end of 1931 amounted to £22,203,845. Interest-bearing capital provided £13,797,158 of this sum, the balance being contributed by :—

	£
Parliamentary Grants, 1896 and 1902 ...	5,686,437
Accrued Interest on 1924 Loan	420,112
Contributions from revenue—	
Direct (formerly called expenditure extra-ordinary)	629,217
Through Betterment Funds (capitalized)...	1,612,382
Through Marine Insurance Fund (capitalized)...	58,539
	£8,406,687

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony :—

The National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, and Eldoret; the Standard Bank of South Africa, Limited, with branches at Mombasa, Nairobi, Kisumu, Eldoret, Nyeri, Nakuru, and Kitale, and an agency at Nanyuki; and Barclays Bank (D.C. & O) with branches at Mombasa, Nairobi, Eldoret, Kitale, and Nakuru.

During the year a Land and Agricultural Bank under the control of Government was formed, with a capital of £240,000. The Bank makes advances to farmers over periods varying from 10 to 30 years on first mortgage security. At 31st December, 1931, the Bank had made advances totalling £32,300.

Currency.

The standard coin is the East African shilling with subsidiary coinage of the following denominations :—

50 cents (silver);

10 cents, 5 cents, and 1 cent (nickel).

A note issue is maintained and notes of the following denominations are in circulation :—

Shs.
10,000
1,000
200
100
20
10
5

In addition to the above a considerable amount of old rupee and florin currency, both coin and notes, has been in circulation in the Colony but with effect from 1st January, 1932, this currency ceases to be legal tender.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

The standard weights and measures of the Colony are identical with those in use in Great Britain, namely, the Imperial pound, yard, and gallon. Application of the Kenya "Weights and Measures Ordinance" has not yet been extended to the whole Colony. Revised and comprehensive rules relating to examination of weights and measures and prescribing fees for testing were promulgated under the Ordinance during the year. Inspections of weights, measures, etc., on traders' premises were carried out by the Deputy Inspector of Weights and Measures in the more important towns of the Colony. Prosecutions were instituted on 27 charges relating to the use of false and unstamped weights or instruments. Revenue derived from testing and examination amounted to £190.

XII.—PUBLIC WORKS.

The total expenditure incurred through the Public Works Department on public works services amounted to £594,800. Of this sum £300,388 was from funds derived from the revenue of the Colony and provided for under the Public Works Schedules, £242,077 from loan, and £52,335 from various other sources. On account of the economic depression, expenditure from revenue sources on capital works was small, amounting only to £22,905. Much of this was incurred on the completion of various works which had been under construction but not finished during the preceding year. Progress was maintained on the considerable building programme financed from loan monies which has been proceeding during the last few years. Quarters for 33 Europeans, 46 Asians, and 132 Africans were finished and occupied during the year, a large Medical Research Laboratory and a building for the medical stores for the Colony were completed and brought into use, and the construction of the Law Courts in Nairobi was begun. Eleven water-works were maintained and operated, yielding an aggregate revenue of £44,804. Construction progressed on the water-supplies of Kitale and Mombasa. The former water-works were opened in March. The last twelve miles of the gravitation main for Mombasa water-works, estimated with its ancillary works to cost £165,000, were laid, and the 240 foot-span bridge to carry the new main across the estuary of the Mwachi River was well advanced at the close of the year. The distribution system for these water-works, estimated to cost £57,000 on completion, was still the subject of design. The demand by farmers, Local Native Councils, and other authorities for boreholes to tap underground sources of water-supply was small in comparison with previous years. Twenty-nine successful holes were sunk and yielded a supply of 833,000 gallons per day in the aggregate at an average depth of 236 feet. Enterprise in the diversion and use of water from public streams by landholders was well maintained, and the demand shewed an increase on the figures for 1930. One hundred and nine new authorizations were issued. As regards water-power, authority was granted for the development of a total of 7,153·546 horse-power, mostly in small installations. The work on hydrographic survey was much curtailed. Eighty-one regular gauging stations were maintained and over three hundred miscellaneous gaugings and investigations were undertaken in connexion with this service.

Success continued to attend the operations in connexion with the artificial drying of local timbers, and kiln-seasoned local timber is now in use almost universally in the Colony for the joinery for Government buildings.

The head office of the Public Works Department is situated at Nairobi, and five divisional offices are maintained for the control of the construction and maintenance of works and the local administration of other public works services. The head office is chiefly concerned with the general administration of the public works services and with surveys, designs, quantity surveying, and financial arrangements. The divisional offices deal principally with local control of construction, maintenance, and the collection of revenue.

XIII.—JUSTICE, POLICE, AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya, the Uganda, Nyasaland, and Zanzibar Protectorates, and the Tanganyika Territory. The Judges of the Court of Appeal are the Judges and

Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland, and Tanganyika, and His Britannic Majesty's Court for Zanzibar. During 1931 the Court held four ordinary sessions and one special session. The total number of appeals filed was 177, of which 61 were from Kenya.

Throughout the year the Courts operating in the Colony were as follows :—

The Supreme Court sitting at Nairobi, Mombasa, and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged ;

The Courts of the Resident Magistrates at Nairobi (2), Mombasa, Nakuru, Kisumu, and Eldoret, presided over by legally qualified officers ;

The Courts of the 1st, 2nd, and 3rd Class, presided over by Provincial Commissioners, District Commissioners, and District Officers ; and

The Courts conducted by Liwalis, Cadis, and Mudirs.

The Courts Ordinance, 1931, came into operation on 1st October, 1931, and embodied most of the features of the old Ordinance, Cap. 5 of the Revised Laws. According to the new Ordinance the limits within which Subordinate Courts exercise jurisdiction are as follows :—

1st Class—Within the limits of the Province in which situated.

2nd and 3rd Class—Within the limits of the district in which situated.

Liwalis', Cadis', and Mudirs' Courts—In the Coast Province within the limits of the districts in which they are situated.

Section 18 of the new Ordinance sets forth the civil jurisdiction of the respective Courts apart from that of the Supreme Court, which is governed by the Kenya Colony Order in Council, 1921.

The criminal jurisdiction of the various Courts is set forth in sections 7, 9, and 10 of the Criminal Procedure Code, 1930. Section 187 of the Criminal Procedure Code vests in certain of the Subordinate Courts power to try minor offences in a summary manner without recording fully the evidence as is done in the more serious offences.

The Native Tribunals Ordinance (No. 39 of 1930), provides for the establishment of Native Tribunals to be constituted in accordance with the native law or custom of the area in which the Tribunal is to have jurisdiction, and for the determination of the jurisdiction of such Tribunals. Whereas formerly an appeal from a Council of Elders had to be heard as an original case in one of the Colony's Courts, from which Court an appeal lay to the Supreme Court, under the Ordinance under reference appeals against the judgment of the Tribunal in the first instance lie to the Appeal Tribunal (if any), thence to the District Commissioner, and thence to the Provincial Commissioner. In certain circumstances any person aggrieved by the decision of the Provincial Commissioner given on appeal from a District Commissioner may apply to the Provincial Commissioner to state a case to the Supreme Court. The Native Tribunals are therefore largely divorced from the Colony's Courts and it is only as a final Court of Appeal that the latter take cognizance of matters originally adjudicated on by a Native Tribunal. The inauguration of the new system of Native Tribunals made considerable headway during 1931 and reports concerning its success are generally satisfactory.

Police.

The Kenya police is composed of African police, with a small percentage of Asiatic personnel, under the command of European officers and non-commissioned officers. The Force is distributed mainly amongst police stations throughout the settled and urban areas of the Colony and Protectorate. The work of each police station is controlled by a European non-commissioned officer. Stations situated in each district are grouped under the direction of a commissioned officer. Police detachments are stationed in the Northern Frontier Province. African police are stationed also in native reserves where they operate under the direct control of officers of the Administration, although the enforcement of law and order in the reserves is largely the responsibility of the local tribal police. The personnel of the Force was decreased during 1931 on grounds of economy.

Cognizable offences under the Penal Code reported to the police in settled and urban areas in 1931 totalled 5,162. Of that number 4,977 were true cases. An increase is shown of 995 true cases over the total for 1930. Accused persons in 3,889 cases were brought for trial before the Lower or Supreme Courts. The greater volume of crime is in the main attributable to the effect of general unemployment throughout the Colony resulting from prevailing depression in all branches of industry. The bulk of the increase consisted of cases of petty theft, burglary, housebreaking, and stock theft. The total stated value of property stolen was Shs. 308,083/- of which Shs. 115,626/- or 37 per cent. was recovered. No serious outbreak of grave crime occurred during the year.

A small patrol of police continued to be employed on the boundaries of the Kisii-Lumbwa native reserves to maintain order between those tribes. A small area in the Nyanza Province in which gold mining operations were commenced also called for the presence of a few police.

COURTS.

The number of criminal cases committed for trial to the Supreme Court aggregated 175, involving 312 charges against 302 individuals. These figures compare with 178 cases and 266 charges during 1930. Of the total 242 charges actually tried during 1931, 235 were against males and 7 against females. Convictions numbered 138, acquittals 76, and discharges 28. Europeans were convicted on

6 charges, Asiatics on 12 charges, and natives on 120 charges. Of the punishments imposed, 5 convicts were fined, 1 was sentenced to fine and peremptory imprisonment, 75 to peremptory imprisonment, 2 to whipping with fine or imprisonment or both, 1 (a juvenile) to whipping, 7 were bound over or otherwise disposed of, 36 (including 1 female) were sentenced to death, and 11 (including 3 females) were detained during the Governor's pleasure.

The number of Supreme Court civil cases filed during the year was 761, an increase of four over the number for 1930. Probate and administration causes numbered 176 compared with 173 opened in 1930, and 128 bankruptcy petitions were filed compared with 141 for the previous year. In addition, 8 trust causes were opened and 32 divorce causes were filed. There were 50 civil and 65 criminal appeals from Subordinate Courts, 89 criminal revisions, and 680 confirmation cases.

During the year a total of 49,791 persons were charged in Subordinate Courts throughout the Colony, involving 50,927 charges in 44,076 criminal cases, an increase of 4,202 charges over 1930. These charges were disposed of as follows :—

Convictions	43,911
Acquittals	3,441
Discharges	3,575
Total charges ...	50,927

Details of the sentences imposed are as follows :—

Fines	18,215
Detention camp in default of payment of fine or surety	7,360
Imprisonment in default of fine or surety	1,555
Fine and detention camp	319
Fine and peremptory imprisonment	965
Detention Camp	4,022
Peremptory imprisonment	3,832
Whipping with fine or imprisonment or both	100
Whipping	331
Whipping with fine, or detention camp, or both ...	14
Bound over or otherwise disposed of	5,400
Other punishments	1,798
Total convictions	43,911

In addition, 877 charges were brought against juvenile offenders, involving 837 convictions, 28 acquittals, and 12 discharges.

Prisons.

The 63 penal establishments under the administration of the Commissioner of Prisons are composed of three first-class prisons for the accommodation of long-term prisoners (sentenced to three years or over), three second-class prisons for medium-term prisoners (sentenced to between six months and three years), 24 third-class prisons at district headquarters (for those sentenced to less than six months imprisonment). There are also 33 detention camps for the accommodation of natives who have not previously undergone more than one term of imprisonment, and who are sentenced to detention for minor offences, usually imposed in default of payment of fine. No sentence of detention may exceed six months.

The total number of persons committed to prisons and detention camps during 1931 was 26,905, representing an increase of 22 per cent. over the number committed during 1930. The increase in the last three years has been nearly 100 per cent. Of the above total, 6,756 were sentenced to imprisonment, 12,977 were sentenced to detention, 302 were civil debtors, 202 were lunatics, and 6,668 were admitted on remand and subsequently not sentenced to imprisonment. Of the total of 6,756 persons committed to serve sentences of imprisonment, 18 were Europeans, 202 were Goans, Indians, Arabs, and Somalis, and 6,536 were Africans. Female and juvenile convicted prisoners numbered 193 and 316 respectively —a slight drop in the former and a small rise in the latter as compared with the 1930 figures. The general health of prisoners was somewhat better than in 1930, the sick percentage having fallen from 4 to 3·6 per cent., but the total of 56 deaths during the year was nearly double that of 1930, although lower than in previous years.

Only 20 juveniles served short terms of imprisonment and these were all confined in class I and II prisons where there are European officers of the Prisons Department in charge. In every case the juvenile was segregated from adult prisoners whilst undergoing sentence. A further 28 juveniles were sentenced to terms of from 3 to 5 years in a reformatory and were transferred to Kabete, whilst 268 underwent sentences of caning only. The annual increase in juvenile crime though small is steady, and is to be accounted for largely by the influx of natives to the towns and the rise in adult crime which results.

The technical training of convicts under European instructors has progressed. It is also satisfactory to be able to record that employment with furniture makers and builders has been secured by convicts on release who have been trained as carpenters and masons in the prisons workshops. The amount by which the sum paid into the Colony's revenue exceeded the expenditure on raw materials for prisons industries was £3,735 as against £3,717 in 1930. Convict labour, apart from industries, is used by Government Departments free of charge.

At present the teaching of prisoners is confined to religious and secular instruction given voluntarily by various mission bodies; but a step has been taken towards the ultimate improvement of the criminal by first improving the intelligence and education of the prison warder. With this object in view an African schoolmaster was engaged towards the end of the year for the regular instruction of the recruits passing through the Prisons Depot at Nairobi, and for voluntary classes to warders in Nairobi Prison. At the same time grants from the Prisons Rewards and Fines Fund were made to the Superintendents of the other two class I prisons for the pay of African teachers who hold evening classes for the warder staff. The recruiting of the warder staff, which numbers 400 with an average annual wastage of about one quarter of the total, still presents a serious problem. There is no shortage of applicants, but the majority are not of the right type for the work required, which involves long and monotonous hours of duty, night guards, and the probability of a man being posted for years at a time to a station far from his home. Steps are being taken to obtain a more suitable type of recruit.

Under Section 319 of the Criminal Procedure Code (Ordinance No. XI of 1930), discretion is given to the Court passing sentence of a fine, with imprisonment in default of payment, to allow the convicted person time in which to pay the fine imposed; or to direct that the fine imposed shall be paid by instalments, and to suspend the sentence of imprisonment in default to conform with the order as to payment of the fine which has been made by the Court.

The probation system has not been introduced into the Colony.

XIV.—LEGISLATION.

Fifty-eight Ordinances were passed during the year 1931. A summary of the more important enactments is given in each case.

No. 1—*The Mining Ordinance*, 1931.—Ordinance No. 1 of 1931 embodies the recommendations of the Conference of the Mining Departments of Kenya, Uganda, and Tanganyika Territory held in March, 1928, and aims at uniformity in the mining legislation of the various British Dependencies.

No. 2—*The Education Ordinance*, 1931.—This Ordinance makes provision for education in the Colony. It proposes to abolish the School Area Committee for European and Indian Education, while retaining the Advisory Central Committees and at the same time creating school committees for each school. The Ordinance contains a direct enactment of compulsory education for any race in any area prescribed by Proclamation, but provision remains for the retention of fees which may, however, be remitted by administrative act. The Ordinance allows for the introduction of free compulsory education at some future date which may thus be gradual and made to fit the financial position of the Colony.

As regards African education, provision is made for the creation of school area committees based as far as possible on the areas of Local Native Councils. The Local Native Council is given considerable representation on the school area committee and the Provincial Commissioner, or his nominee, is to be Chairman. Advice in regard to Arab education is provided for by the creation of one central committee sitting at the coast.

No. 3—*The Land and Agricultural Bank Ordinance*, 1931.—This Ordinance provides for the establishment and management of a Land and Agricultural Bank to enable farmers and other occupiers of land to secure long-term credits at a reasonable rate of interest for the purpose of approved development of their lands.

No. 4—*The Customs Tariff* (*Amendment*) *Ordinance*, 1931.—This Ordinance amends the Customs Tariff Ordinance, 1930. The duties imposed on wines and spirits under the Wines and Spirits Ordinance, 1926, are embodied in the general Ordinance and certain other existing duties are increased.

No. 18—*The Local Government* (*Eldoret European Hospital Rate*) *Ordinance*, 1931, empowers the Eldoret Municipal Board to impose a special rate for the purpose of establishing and maintaining a hospital for European patients.

No. 19—*The Local Government* (*District Councils*) (*Amendment*) *Ordinance*, 1931, empowers the Uasin-Gishu District Council to impose a special hospital rate towards the maintenance of the Eldoret European hospital.

No. 20—*The Local Government* (*Municipalities*) (*Amendment*) *Ordinance*, 1931, enables Municipal Boards and District Councils to amalgamate for the purpose of establishing and maintaining a hospital.

No. 22—*The Butter Levy Ordinance*, 1931, provides for fostering the export trade in butter by imposing a levy of a sum not exceeding 25 cents a lb. on butter sold in the local market.

No. 23—*The Carriage of Goods* (*Control*) *Ordinance*, 1931, regulates the hitherto indiscriminate competition with the railway by the carriage of goods by motor vehicles.

No. 24—*The Co-operative Societies* (*Registration*) *Ordinance*, 1931, makes provision for the formation, registration, and management of Co-operative Societies.

No. 26—*The Legitimacy* (*Amendment*) *Ordinance*, 1931, amends the Legitimacy Ordinance of 1930. Under that Ordinance the law of legitimacy in Kenya differs in one important respect from that which obtains throughout the British Empire. The difference lies in the omission in the law of this country of that clause which in all similar legislation throughout the Empire debars from the benefit of legitimation all offspring of adulterous intercourse. Inasmuch as domicile is not an essential prerequisite under the Legitimacy Ordinance, 1930, it would be competent to the parents of such offspring to come to this country and there legitimate their offspring with all the consequences of legitimation following on that act. The amending ordinance of 1931, while continuing the omission of the clause debarring from legitimation the offspring of adulterous intercourse, substitutes the test of domicile for the test of residence in applying the provision of the Legitimacy Ordinance, 1930. The other amendments are formal in character.

No. 29—*The Arms (Traffic with Abyssinia) Ordinance,* 1931.—On 21st August, 1930, a Treaty regulating the importation of arms and ammunition was signed on behalf of the Governments of Great Britain and Northern Ireland, France, Italy, and Ethiopia. Article XI of that Treaty provides that the High Contracting Parties undertake that they will immediately put in force in their respective territories adjacent to Abyssinia all the regulations necessary to comply with the conditions imposed on Abyssinia in respect of the importation and use of arms in that Treaty, and this Ordinance was therefore enacted.

No. 31—*The Beer (Amendment) Ordinance,* 1931, doubles the duty upon beer brewed in the Colony.

No. 33—*The Carriage of Goods by Motor (Control) (Amendment) Ordinance,* 1931, amends the Carriage of Goods by Motor (Control) Ordinance, 1931, which provides for the compulsory insurance of vehicles licensed under that Ordinance by inserting a provision to the effect that nothing shall be taken to render void any provision in a policy requiring the person insured to repay to the insurer any sums which the latter may have become liable to pay under the policy and which have been applied to the satisfaction of third parties.

No. 36—*The Game Birds Protection (Amendment) Ordinance,* 1931, gives assistance to owners of land who are desirous of protecting game birds on their land, by making it a criminal offence to trespass and shoot game birds on private land.

No. 37—*The King's African Rifles Reserve of Officers (Amendment) Ordinance,* 1931, makes it possible to grant commissions in the King's African Rifles Reserve to persons other than those who have previously served in His Majesty's Forces, with the object of enabling local residents to be granted commissions in the Supply and Transport Corps.

No. 39—*The Native Liquor (Amendment) Ordinance,* 1931, removes an onus of proof placed on an accused person by the Native Liquor Ordinance, 1930, which was considered inequitable.

No. 40—*The Corporations (Probate and Administration) (Amendment) Ordinance*, 1931, makes it clear that all Trust Corporations covered by the provisions of the principal Ordinance must possess the qualifications of £25,000 capital.

No. 41—*The Penal Code (Amendment) Ordinance*, 1931.—Under the Penal Code there were two scales of imprisonment in default of payment of a fine, namely, one for natives and one for non-natives. It was considered that this differentiation was unjustifiable and the amending Ordinance removes the anomaly.

No. 43—*The Native Authority (Amendment) Ordinance*, 1931, is intended, *inter alia*, to prevent the destruction of game by poison in certain areas, by making the possession, sale, or transfer of such poison, an offence.

No. 45—*The Kenya Royal Naval Volunteer Reserve Ordinance*, 1931, provides for the establishment of a Kenya Naval Volunteer Reserve.

No. 48—*The Town Planning and Development Ordinance*, 1931, repeals and replaces the Town Planning Ordinance (Chapter 85 of the Revised Edition) which had become obsolete.

No. 49—*The Sale of Wheat (Amendment) Ordinance*, 1931, amends the Sale of Wheat Ordinance, 1930, so as specifically to limit the milling of wheat grown by a miller to wheat grown and milled by him for his own consumption.

No. 51—*The Native Christian Marriage and Divorce Ordinance*, 1931, governs the marriage and divorce of Christian natives. It is the outcome of prolonged consideration and is largely due to the representations of various missionary bodies.

No. 52—*The Excise Duties Ordinance*, 1931, is a revenue measure and imposes duties of excise on sugar, tea, cigarettes, and manufactured tobacco manufactured in the Colony on and after the 1st day of January, 1932.

No. 53—*The Excise Duties Agreements Ordinance*, 1931, enables the Governor in Council to enter into agreements, in regard to excise duties, with the Governments of the other East African Dependencies which may become parties to the Customs Union under the Customs Management Ordinance, 1926.

No. 56—*The Entertainments Tax Ordinance*, 1931, imposes a tax on entertainments.

No. 57—*The Levy on Official Salaries Ordinance*, 1931, empowers the Governor in Council by order to impose a levy not exceeding 20 per cent. on the salaries of officers in the public service.

No. 58—*The Levy on Salaries (Transport Services) Ordinance*, 1931, empowers the Governor in Council by order to impose a levy not exceeding 20 per cent. on the salaries of servants of the High Commissioner for Transport.

XV.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

STATEMENT OF REVENUE AND EXPENDITURE FOR FIVE YEARS ENDED 31ST DECEMBER, 1931.

Year.	*Revenue.*	*Expenditure.*

Famine relief measures	12,622
	£361,542

† The Wines and Spirits Consumption Tax was incorporated in the Customs Tariff with effect from 16th June, 1931.

Stamp Duties.

The Colony's stamp duties are laid down in Chapter 57 of the Laws of Kenya and follow very closely upon the system in force in Great Britain. The principal documents subject to stamp duty are Mortgage Deeds, Bills of Sale, Policies of Insurance, Conveyances, Assignments, and Bills of Exchange.

During the year 1931 the revenue derived from this source amounted to £49,904.

Native Hut and Poll Tax.

Rate.—The rates of hut and poll tax imposed by Proclamation under Section 6 of Chapter 51 of the revised edition of the Laws of Kenya (The Native Hut and Poll Tax Ordinance) are as follows :—

Masai	Shs. 20/00 per Hut or Poll.
Other Tribes	Shs. 12/00 per Hut or Poll.

Section 3 of the Northern Frontier Poll Tax Ordinance (No. 53 of 1930) empowers the Governor to order that the poll tax prescribed under Section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier Province.

A Proclamation dated 12th February orders the payment of the prescribed tax by tribesmen of the following tribes ordinarily resident in the Northern Frontier Province : Somali, Galla, Samburu, Ndorobo, Rendille, and Turkana. A Proclamation dated 27th April, 1931, fixes the rate of the poll tax payable at Shs. 10/- per annum. Natives in the Turkana Province and Dorobo pay hut or poll tax at the rate of Shs. 10/- and Shs. 6/- per annum respectively.

Yield.—The yield of native hut and poll tax in 1931 amounted to £530,877.

Method of Assessment.

Hut Tax.—A uniform tax at the prescribed rate is paid on each hut (dwelling house) owned by the taxpayer.

Poll Tax.—A poll tax at the prescribed rate is payable by all able-bodied male natives of the apparent age of 16 years or over who do not pay the hut tax.

Collection.—Hut and poll tax is collected by District Officers. The taxpayer is given a receipt in the form of a hut or poll tax ticket for each tax paid. At the same time the payment is noted in the register of taxpayers.

	MAP.	

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,730 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is the zone time 2½ hours fast on Greenwich. Physiographically Kenya consists of: (1) a region generally poorly watered comprising some three-fifths of the total area of the Colony; (2) a plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Nakuru, Naivasha, and others; (4) a portion of the basin of the Victoria Nyanza which is 3,726 feet above sea-level. The Nzoia, Yala, Kuja, and Amala Rivers flow into Lake Victoria, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya, and from the Aberdares there flow numerous tributaries of the Tana River which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 58°F.—65°F. in the highland areas.

The rainfall is generally well-distributed and ranges from about 10 inches per annum in the arid northern areas to 86 inches per annum in the vicinity of Lake Victoria. The average rainfall in the main agricultural and pastoral areas ranges from 35 to 40 inches. The heaviest rainfall occurs from March to June and from October to December.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498 Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829 Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the east coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848 Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw the Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887 Seyyid Bargash, the Sultan of Zanzibar, granted a concession on the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889 a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha, and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892 the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895 a British Protectorate was declared over the Company's territory between the coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902 the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903 there were nearly 100 European settlers in or near Nairobi.

In 1905 the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transferred to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the Great War.

Nominated Unofficial Members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923 this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony; the coastal belt remains a Protectorate. In 1925 the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council and in 1925 the office of the High Commissioner for Transport was established.

II.—GOVERNMENT.

His Excellency Sir Joseph Byrne, K.C.M.G., K.B.E., C.B., administered the Government throughout the year.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council of eight *ex officio* members, and such other official and unofficial members as may be appointed. The Colonial Secretary is the Chief Executive Officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners who are responsible for their execution. The Colony is divided into nine Provinces, each in the charge of a Provincial Commissioner. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Officers. The Legislative Council consists of the Governor as President, eleven *ex officio* members, not more than nine Nominated Official Members, eleven European Elected Members, not more than five Indian Elected Members, one Arab Elected Member, and one Nominated Unofficial Member to represent the interests of the African community. If one of the Nominated Official Members is not specifically appointed to represent the interests of the Arab community, an additional Unofficial Member is nominated to represent such interests. The Governor has the right to veto any measure passed by the Legislative Council. Certain minor powers are vested in the District and Municipal Authorities in settled areas and in the Local Native Councils in the native areas.

Local Government.

Settled areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the more important townships. In the rural settled areas they had the advice of District Committees and a measure of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru, and Eldoret, with Municipal Boards, and District Councils were established in the settled portions of the districts of Nairobi, Kyambu, Fort Hall, Naivasha, Nakuru, Kisumu-Londiani, Uasin-Gishu, and Trans-Nzoia. At the same time a Local Government Inspector was appointed to deal with local government administration under a Commissioner for Local Government, an office which was combined with that of Commissioner of Lands, and forms part of the present Secretariat organization.

The constitution of municipal bodies provides for elected European and Indian members, and nominated members representing Government interests; at Mombasa for an Arab member: and in all cases the District Commissioner, who is chairman of the three Municipal Boards at Mombasa, Nakuru, and Eldoret, is included and represents native interests. Members of District Councils are elected on a ward system.

No important changes in constitution or legislation were effected during the year. Attention was directed to the possibility of economies both in the expenditure of Local Authorities and in the contributions made by the Government to their revenues. The total gross revenue of the four municipalities amounted in 1932 to £183,092 (subject to audit) of which £121,165 accrued to the Nairobi Municipality. Of this total revenue the Government contributed in grants approximately 22 per cent, as in the previous year, the balance being raised from assessment rates, licence fees, and charges for services rendered. Municipal Authorities may levy assessment rates on capital values, up to a maximum of 2 per cent. on site values. In 1932 a rate of 1 per cent. on site values was levied in Nairobi and yielded £19,538 from rate-payers. In Mombasa a small-improvements rate was imposed in addition to the site-value rate. Nakuru and Eldoret have as yet imposed no assessment rates, but rely on municipal licence fees and charges supplemented by consolidated grants from Government amounting to £2,600 and £2,750 respectively in 1932.

Nairobi and Nakuru control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town planning schemes are in progress under the Town Planning and Development Ordinance, 1931. The execution of the Mombasa town planning scheme was continued under a loan of £250,000, the liability for which the Municipal Board took over from Government for this purpose in 1931.

In the rural areas, the six District Councils confine their executive functions to roads, the funds for which are derived at present solely from Government grants. These grants amounted to £34,598 in 1932, as compared with £43,418 in 1931, and £53,098 in 1930. The Councils have improved their district roads in a generally satisfactory manner. Various causes have contributed to the postponement by Councils of the imposition of local rates, and in so far as Councils remain financially dependent on Government grants and deal only with roads, they represent only a modified and incomplete form of local government. In 1932 the Trans Nzoia District Council imposed a hospital-rate in the nature of a poll tax on adult male Europeans resident in the district, for the purpose of maintaining the Kitale Hospital which the Council acquired during the year, and a similar rate is also levied in the Uasin-Gishu District for the purposes of the Eldoret Hospital, which is maintained jointly by the District Council and the Eldoret Municipal Board.

In other rural settled areas and townships, District Committees, Road Boards, and Township Committees continued to do useful work.

Native areas.—The Local Native Councils in Kenya are a deliberate creation under the Native Authority (Amendment) Ordinance, 1924. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance, and regulation of food and water-supplies, forests, roads, bridges, culverts, public health, the use of land, education, markets and market dues, agriculture, and live-stock, etc. The District Commissioners are the Presidents of the Councils and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. At the present time in the majority of the Councils a greater portion of the members are illiterate. The funds, which are controlled by the Councils, are derived from two main sources: (*a*) from the proceeds of local native rates which they are empowered to impose on the inhabitants of the areas over which they have control; (*b*) from the proceeds of the rents of land, forest royalties, etc., levied within those areas. The number of Councils remained at 22 throughout the year.

The provision of educational facilities continues to occupy the foremost place amongst the various services rendered by Local Native Councils during 1932.

As a result of the locust invasion and failure of the rains in certain areas, nine Local Native Councils spent nearly £10,000 between them in famine relief measures. Details of revenue and expenditure are shown in the following comparative table:—

COMPARATIVE TABLE OF REVENUE AND EXPENDITURE OF LOCAL NATIVE COUNCILS IN 1932.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926, and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table :—

	1911.	*1921.*	*1926.*	*1931.*
European, males	2,022	5,800	7,199	9,404
„ females	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
„ females	—	11,640	14,841	20,388
Total males	—	30,142	33,498	46,151
„ females	—	15,491	20,171	27,796

The percentage increase in each section of the population during the last two decades is :—

	European.	*Asiatic.*
1911–1921	204	203
1921–1931	74	59

The proportions in which the various races entered into the total of the non-native population in Kenya at each census year will be seen from the following summary :—

Racial proportions of the total non-native population.

—	*1911.*		*1921.*		*1926.*		*1931.*	
	Number.	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*
European	3,175	13·1	9,651	21·1	12,529	23·3	16,812	22·7
Indian	10,651	44·1	22,822	50·0	26,759	49·9	39,644	53·6
Goan	1,136	4·7	2,431	5·3	2,565	4·8	3,979	5·4
Arab	9,100	37·7	10,102	22·1	10,557	19·7	12,166	16·5
Others	99	0·4	627	1·5	1,259	2·3	1,346	1·8
Totals	24,161	100·0	45,633	100·0	53,669	100·0	73,947	100·0

The ratio of females to males at each census for the two main racial sections of the community is :—

	Europeans. (*females to* 100 *males*).	*Asiatics.* (*females to* 100 *males*).
1911 ...	57	—
1921 ...	66	48
1926 ...	74	56
1931 ...	79	55

The age distribution in ten-yearly age groups will be seen from the two following tables :—

Europeans.

	1921.	*1926.*	*1931.*
0– 9	1,604	2,253	2,872
10–19	850	1,303	1,583
20–29	2,160	2,439	3,403
30–39	2,694	3,220	4,010
40–49	1,535	2,024	2,640
50–59	583	868	1,293
60 and over	225	422	1,011

Asiatics.

	1921.	*1926.*	*1931.*
0– 9	7,865	9,895	14,505
10–19	5,501	7,037	9,835
20–29	9,731	9,478	13,273
30–39	6,886	7,469	9,497
40–49	3,360	3,784	5,073
50–59	1,498	1,767	2,024
60 and over	1,141	1,710	2,928

The occupations classified under eight main heads are as follows :—

Europeans.

	1921.	*1926.*	*1931.*
Agriculture	1,893	2,199	2,522
Industry	559	607	991
Commerce	937	1,290	2,168
Government and municipal	1,082	1,294	1,735
Professional	441	706	1,124
Personal or domestic	182	310	343
Retired, married women, and children	1,350	1,830	2,215

Asiatics.

	1921.	*1926.*	*1931.*
Agriculture	498	755	640
Industry	3,679	4,924	6,446
Commerce	6,086	7,769	14,338
Government and municipal	3,390	3,181	2,972
Professional	50	181	264
Personal or domestic	1,241	961	1,452
Retired, married women, and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these main eight divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows :—

	European.		*Asiatic.*	
	1926.	*1931.*	*1926.*	*1931.*
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal ...	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children ...		43		

A recent investigation into the question of length of residence in Kenya has enabled the following table to be drawn up. The question is an important one in reference to problems of settlement :—

Years of residence.	*Europeans.*	*Asiatics.*
1–5	7,207	20,847
6–10	3,402	7,610
11–15	1,820	4,536
16–20	1,805	3,459
21–25	772	1,565
26–30	272	1,150
31–35	80	639
36–40	9	372
41–45	4	151
46–50	1	147
51–55	—	39
56–60	—	75
61–65	—	24
66–70	—	27
71–75	—	11
76–80	—	9
81–85	—	—
86–90	—	4
91–95	—	2

The last census was taken on 6th March, 1931. Since 1930 the migration returns have been carefully analysed and controlled in the Statistical Department and it is now possible to make a reasonably accurate estimate of population each month. Since the census in March, 1931, up to the end of December, 1932, there has been a steady decrease in the Asiatic population due to migration.

The following table shows the numbers of each race during 1931 and 1932 :—

	Census population.	*Estimated population.*	
	6th March, 1931.	*31st December, 1931.*	*31st December, 1932.*
Europeans ...	16,812	16,957	17,249
Indians	39,644	37,196	34,966
Goans	3,979	3,431	3,369
Arabs	12,166	11,751	11,752
Others	1,346	1,374	1,362
Total :... ...	73,947	70,709	68,698

Note.—No reliable returns of births and deaths are available. The estimates in the above table are based on an assumed natural increase of 6 per cent per annum for Europeans and 10 per cent. per annum for Asiatics, and on the annual excess of migration via Mombasa.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and are related to the number of male adult taxpayers in the various districts. They are, in consequence, subject to a comparatively wide margin of error. The estimated native population in 1932 was 3,007,645 as compared with an estimate in 1927 of 2,793,963, which represents an increase over that period of approximately 13 per cent. No reliable figures of births, deaths, and infantile mortality are obtainable.

Distribution of Population.

The geographical distribution of the population is as follows :—

Province.	*European.*	*Asiatic.*	*Native.*	*Total.*
Coast	1,160	24,595	263,483	289,238
Ukamba	205	926	391,669	392,800
Kikuyu	7,637	17,107	823,249	847,993
Masai	103	416	48,381	48,900
Rift Valley	2,720	2,549	93,508	98,777
Nzoia	3,108	1,795	127,086	131,989
Nyanza	2,266	3,597	1,123,570	1,129,433
Turkana	27	129	72,356*	72,512
Northern Frontier	23	335	64,343	64,701
Totals:	17,249	51,449	3,007,645	3,076,343

IV.—HEALTH.

General Administration and Organization.

In Kenya, as elsewhere, the ultimate responsibility for the safeguarding and promotion of the public health rests with the Central Government. In every area of the Colony, however, there is a " Local Authority " which to a greater or less degree has, under the general supervision of the State, responsibility in health matters. In Nairobi and Mombasa the greater part of the health staff is now employed by the Local Authority. In the other towns, in the European settled areas and in the native reserves the authority is the District Commissioner and the health staff is employed by Government. Where in the smaller towns there is a Municipal Board, the Board is in effect, though not in law, the Local Health Authority as its opinion is always sought by the Executive Authority. In the native reserves every endeavour is made to interest the Local Native Council in health matters and these endeavours are meeting with considerable success. Supervising the activities of all these Local Authorities are the Commissioner for Local Government for the towns and European areas and the Chief Native Commissioner for the native reserves. In consonance with Government policy the Director of Medical and Sanitary Services is responsible for providing and distributing both medical relief and health staff to the extent provided in the sanctioned Estimates, and he acts in consultation with both the Commissioner for Local Government and the Chief Native Commissioner.

---

* It should be observed that 7,646 Suk natives have recently been temporarily included in Uganda, thereby reducing the total number of Suk in Kenya to 24,029.

Sanitary Work and Administration.

In Nairobi, Mombasa, Nakuru, and Eldoret sanitary work and administration is almost wholly a function of the local representative authorities and, on the whole, has been effectively carried out. In Nairobi a notable event was the opening of a new abattoir, of modern construction, providing adequate accommodation for the present and future needs of the town. At Eldoret the native location which was opened last year provides good urban housing for Africans and its administration is in every respect a credit to the Municipal Board concerned.

In the native reserves good progress has been maintained in the improved housing and pit latrine campaigns, more particularly in those reserves to which it has been found possible to post a European Sanitary Inspector. Amongst other activities in the reserves may be mentioned the protection of local water-supplies, the provision of butcheries and slaughter houses and the reclamation of swamps which is being carried out both as an anti-malarial and agricultural measure.

Medical Relief.

In some of the towns medical relief for Europeans is still provided in Government hospitals, but non-Government hospitals and private nursing homes are gradually being established and are being increasingly used by the European population.

In the native reserves some medical relief is provided by or through the agency of Missionary Societies, though it is for the most part supplied directly by the State and the greater part of the provision made under the Medical Estimates is expended on this service. During the year new native hospitals were opened at Kilifi, Digo, Narok, Nyeri, and Muriranjas, and there are now over 100 out-dispensaries in charge of African dressers connected with Government hospitals in the native reserves.

The following numbers of patients were treated during the year at Government native hospitals :—

In-patients	27,647
Out-patients	254,718

while at the out-dispensaries attendances numbered 646,033.

Amongst the diseases treated in hospital pneumonia remains the most important ; malaria and helminthic infections follow. In most hospitals the number of cases admitted for surgical treatment is steadily increasing and admissions for tropical ulcer still present both a clinical and an administrative problem. The number of women admitted as in-patients continues to increase and more use is being made of the facilities for maternity cases. This increase in the admission of females is clearly associated with the posting of trained European Nursing Sisters to native hospitals.

Special Clinics.

Clinics for the treatment of venereal disease, for ante-natal work, and for child welfare are now established at a number of centres and Government maintains a staff of two women Medical Officers and five Health Visitors for this work.

Health of Employed Labourers.

Employed labourers, their places of employment and their housing accommodation are subject to inspection by the Labour Inspectors of the Department of Native Affairs and by Health Officers. No notable outbreak of disease occurred amongst this section of the population and on the whole the health of labourers was good. No major housing schemes were embarked upon by employers.

Vital Statistics and the Public Health.

The recording of vital statistics even in the towns of Kenya is still far from satisfactory and as no machinery is yet in operation for the registration or notification of births among Africans, no infant mortality-rates can be determined for that race.

The death-rates for Nairobi, so far as it has been possible to estimate them, were as follows :—

Nairobi (*total population* 47,919).

Crude death-rate, all races	13·51	per thousand.
Recorded death-rate, Europeans ...	5·63	,, ,,
,, ,, Asians	13·57	,, ,,
,, ,, Africans	10·79	,, ,,

In the absence of statistical information no reliable figures are available for Mombasa or other towns.

With regard to the African population of the native reserves, there are no figures either for births or deaths. It is an undoubted fact that the native population as a whole suffers severely from preventable disease and on that account, and on account of general insanitary conditions and of an inadequate and ill-balanced dietary, is on the whole more unfit and less well developed than might otherwise be the case.

Ill-health and poor nourishment are to a greater or less degree the lot of all but a few of the African population. In 1932 the incidence of major epidemic disease was, relatively speaking, low, but pneumonia, malaria, intestinal worms, poor food, and maternal ignorance were the cause of much morbidity and mortality.

In the period of a year it is impossible to record any considerable alteration in the basic conditions which govern the state of the public health; there has, however, been a demand for help and instruction in the improvement of housing.

Propaganda.

Health exhibits are now organized by the Medical Department in connexion with agricultural shows held both in the European settled areas and in the native reserves. For financial reasons activities in this direction had to be considerably curtailed during 1932. Health propaganda was, however, carried out in a number of areas by individual officers.

Laboratories.

The new Medical Laboratory which was completed in 1931 provides excellent modern facilities and a sufficiency of space for research and routine work.

V.—HOUSING.

European.

European housing in the towns of Kenya is, on the whole, excellent, and for the most part the houses are built of brick, stone, or concrete. There is at present no lack of housing. In the rural areas European housing is steadily improving.

Indian.

The Indian population of Kenya lives almost entirely in the towns and in almost every town in Kenya and particularly in Nairobi and Mombasa, there is much Indian housing which is far from satisfactory. The poorer classes still occupy housing which can only be described as slum property. Amongst the wealthier classes of this community, however, there has been a marked improvement in housing during the past few years, and in Nairobi numerous houses constructed of brick, stone, or concrete and of good design have been built.

Arab.

Housing conditions amongst this community which is confined to the coastal districts and towns cannot be described as satisfactory.

African.

Many important problems arise in connexion with African native housing both in the towns and in the rural areas.

African native housing in urban areas.- In Mombasa the African inhabitants, who represent a large proportion of the total population, may be divided into two classes, (*a*) a stable population most of whom have been born in the town, and (*b*) a large immigrant floating population of natives who, in increasing numbers, are drifting to the town in search of work. The stable African population is accommodated in housing which is much superior to the huts found in the reserves, but materials which do not permit of a high standard of cleanliness are used. The provision of good housing for this class of the community presents one of the most difficult problems with which the Local Authority is faced. The floating African population is housed for the most part in lodgings kept by the more permanent residents. This arrangement is far from satisfactory and the provision of properly planned native locations is becoming urgent.

In Nairobi the problem is somewhat different from that in Mombasa because there is no large section of the African population which has urban culture or experience. Wages are generally lower and the standard of living more primitive. The supply of housing is far from adequate and serious overcrowding is almost universal. An attempt at a solution of the problem has been made by both Government and the Municipal Council by the provision of native locations. Good housing is now provided by the Kenya and Uganda Railways and Harbours Administration for all its native employees.

In the smaller towns the problem, though less acute, is similar to that in Nairobi, though at Eldoret a solution has been found by the provision of a model location.

African housing in the European settled areas.—On the great majority of estates and farms permanent housing has not yet been provided for African employees, but on a few estates excellent housing has been built. Most employers of African labour now appreciate the benefit of good housing for their employees. Owing, however, to the prevailing depression little progress has been possible during the past year.

The housing of Africans in the native reserves.—The essential housing problem of the Colony lies in the native reserves. In many parts of the country there are thousands of African natives who are anxious to build better houses and improve their amenities, and there are many hundreds who are in a financial position to do so. In order to assist natives in this matter it has been the policy of the Medical Department during recent years to post to the most advanced districts qualified European Sanitary Inspectors, with some technical experience, who have been especially trained to undertake work amongst Africans. The business of these Inspectors is to teach and to provide practical assistance and advice in the designing and construction of houses in accordance with the financial means of the builder and the available building materials. Apart from affording advice and supervising the actual construction of houses, the Sanitary Inspectors, in consultation with the Agricultural Officers, also advise with regard to the construction of grain stores and other agricultural buildings. During 1932 considerable success attended these efforts.

VI.—PRODUCTION.

Mineral.

Throughout 1932 increasing interest was shown in the Kakamega goldfield. The favourable report of Sir Albert Kitson, C.M.G., C.B.E., published in October, greatly stimulated the activity of prospectors in this area and in the previously explored field at Lolgorien. At the end of the year 4,573 reef and 2,785 alluvial precious mineral claims were in existence. Some 5,900 square miles in Nyanza Province adjoining these goldfields were excluded from prospecting and the whole of this area remains to be exploited later.

In the open areas the smaller alluvial propositions tended to be worked out by the end of the year, but the larger schemes requiring plant and capital were only beginning to be developed. Serious reef prospecting and mining began and many of the more promising propositions are being acquired by companies with experience and capital.

One exclusive prospecting licence for precious minerals and one for coal were issued during the year.

The mineral production in 1931 and 1932 was :—

	1931.		*1932.*	
	Weight.	*Value.*	*Weight.*	*Value.*
		£		£
Gold	2,591 oz.	13,194	9,052 oz.	53,527
Silver	288 ,,	25	1,118 ,,	97
Lime	940 tons	940	900 tons	900
Marble	410 ,,	4,100	400 ,,	4,000
Sodium Carbonate ...	44,170 ,,	199,389	37,263 ,,	169,972

Agriculture.

The main products grown by Europeans are coffee, sisal, tea, wheat, and essential oils. Maize, sugar-cane, wattle, numerous kinds of beans, potatoes, coconuts, and fruit are produced by both Europeans and natives, and cotton, sorghums, millets, and miscellaneous root crops and other crops are grown almost exclusively by natives in their reserves.

In common with other parts of the world, Kenya was affected adversely by low prices ruling for primary products during the year. Producers of maize, wheat, sisal, and sugar continued operations under considerable difficulties, and coffee, the price of which had remained at a remunerative level in previous years, fell somewhat in value in 1932. Locusts caused very considerable loss to cereal and other crops and to pasture, though less damage was done than in the previous year.

The local production of wheat was insufficient to meet the local demand and in consequence it was necessary to import larger quantities of wheat than in the previous year. (See also under Exports, Head VII, Commerce.)

Acreages and yields of crops produced under European supervision during the census year 1st March, 1932, to 28th February, 1933, compared with those of the previous year, were as follows:—

Crop.	*1932–1933.*		*1931–1932.*	
	Acreage.	*Yield.*	*Acreage.*	*Yield.*
Coffee	100,387	303,998 cwt.	98,874	170,091 cwt.
Maize	164,018	1,139,616 bags	160,546	762,622 bags
Wheat ...	30,114	63,498 bags	43,168	86,862 bags
Barley	3,025	15,845 bags	2,330	7,126 bags
Sisal	139,834	17,369 tons	145,660	14,674 tons
Tea	12,034	2,421,056 lb.	11,258	1,500,249 lb.
Sugar	12,088	106,320 cwt.	12,363	104,700 cwt.

Reliable figures of native production are not available.

A table showing in detail comparative values of total exports of agricultural produce will be found under the heading "Exports."

The estimated values of agricultural exports of native origin for the last six years were as follows:—

	1927.	*1928.*	*1929.*	*1930.*	*1931.*	*1932.*
	£	£	£	£	£	£
Animals	12,000	11,000	10.300	8,600	5,000	3,600
Copra and coconuts	12,000	23,000	2,500	2,250	1,200	500
Cotton	15,000	24,000	24,800	17,200	6,500	8,600
Cotton seed ...	—	—	5,400	5,000	—	500
Groundnuts ...	22,500	19,659	29,500	16,500	6,000	1,200
Maize	75,000	50,000	45,000	75,000	—	12,500
Millets	3,350	423	240	2,800	20	100
Pulse and beans	19,900	13,000	12,500	14,000	6,000	6,000
Simsim ...	67,350	27,355	27,500	15,200	5,000	28,500
Hides	160,000	200,000	220,000	105,000	60,000	86,500
Skins	56,000	100,000	87,000	73,000	35,000	15,700
Oils—various ...	3,550	5,000	10,000	6,700	3,200	5,600
Potatoes ...	7,500	7,000	24,000	10,500	13,000	9,300
Miscellaneous ...	2,600	2,000	2,000	2,000	2,000	4,000
Wattle Bark and extract	—	—	35,000	42,000	71,000	79,500
Totals ...	456,750	482,437	535,740	395,750	213,920	262,100

Low prices on oversea markets, destruction of crops by locusts, and increased domestic consumption were the main factors which affected the quantities of agricultural produce exported.

A large proportion of the produce grown by Europeans is exported while native produce supplies requirements for domestic consumption in towns and for native labour on farms and estates owned by Europeans. Some 500,000 bags of maize were sold from native reserves during 1932 for food for native labour on coffee, sisal, and other estates, and in townships. Exports of wattle bark and simsim in 1932 exceeded those of any previous year, and a recovery in the prices of hides occurred.

Rules are promulgated from time to time under the Crop Production and Livestock Ordinance, by which power is conferred to inspect and control the type of crop planted and the quality of produce offered for sale. Under this Ordinance the Department of Agriculture administers rules for the marketing of maize, wattle, simsim, and groundnuts. This legislation has been most beneficial in raising the standard of produce. A promising export trade in cashew nuts is anticipated.

Livestock.

As a result of the low prices for crops increasing attention was paid by Europeans to livestock farming. Though development in this direction was hampered by lack of sufficient financial resources considerable progress was made.

Animal products sold by Europeans during the past six census years have been as follows :—

	Milk (whole). gal.	*Cream. gal.*	*Butterfat. lb.*	*Butter. lb.*	*Cheese. lb.*	*Ghee. lb.*	*Wool. lb.*
1932–33	1,138,743	73,387	923,042	350,405	155,525	47,110	721,542
1931–32	1,018,868	77,063	675,910	285,320	111,582	96,471	813,662
1930–31	1,101,704	145,796	614,790	312,694	131,168	114,527	654,846
*1929–30	1,027,375	287,657	(*a*)	371,675	108,875	116,117	893,258
*1928–29	791,452	212,914	(*a*)	290,905	145,609	65,215	939,619
*1927–28	421,779	75,764	(*a*)	324,593	130,538	78,528	420,575

* In respect of the period 1st August to 31st July.
(*a*) Included in "Cream."

Exports of the principal animal products of European origin were as follows :—

	Butter.		*Cheese.*		*Bacon and Ham.*	
	Quantity. lb.	*Value. £*	*Quantity. lb.*	*Value. £*	*Quantity. Cwt.*	*Value. £*
1932 ...	1,035,104	40,604	57,344	2,421	543	3,498
1931 ...	708,512	35,618	73,248	2,916	857	5,252
1930 ...	873,448	53,065	58,352	2,919	1,311	6,318

There was an increased consumption of meat and clarified butter (or ghee) by natives in agricultural districts. The production of ghee continues in spite of the continued fall in the price of this commodity. The Colony now produces sufficient for domestic requirements but continues to import low priced ghee from Tanganyika. Exports from Kenya in 1932 showed an increase of 70 per cent on the previous year's figures. The populations of pastoral districts depend very largely upon meat, milk, and ghee for their subsistence. Nairobi, Mombasa, Kisumu, and other towns provide markets for cattle and sheep, both graded and native.

The presence of disease necessitates the strict administration of quarantine regulations prohibiting the movement of cattle from the native reserves, except through authorized quarantine stations.

Fisheries.

The fishing industry of Lake Victoria has not progressed appreciably, but that of Mombasa is increasing and is finding larger markets in supplying ships and Nairobi.

Lake Naivasha provides increasing quantities of fish to the population of adjacent areas.

Manufactures.

Beer and Stout.—Standard gallons produced in 1932 amounted to 93,852.

Soup.—Exports of local manufacture during the year amounted to 8,676 cwt. valued at £8,125.

Aluminium Hollow-ware.—The progress of local manufacture is reflected in the following figures :—

	Imports.		*Exports of Local Manufacture.*	
	Tons.	£	*Tons.*	£
1930	89	14,470	3	444
1931	12	2,322	18	2,935
1932	2	957	21	4,271

Organization of Production.

The mineral development in the Colony is gradually passing into the hands of prospecting and development companies which have acquired many of the interests formerly held by mining syndicates and partnerships.

As regards European cultivation the production of sisal, requiring as it does large capital outlay, is conducted mainly by companies. Coffee is produced partly by companies but mainly by individual agriculturists. The cultivation of maize, wheat, barley, etc., and the livestock industry, is chiefly in the hands of the individual agriculturist, though the manufacture of butter is largely conducted by co-operative creameries. The average number of native labourers employed on European holdings during 1932–33 was as follows :—

Men...	79,749
Women	3,506
Children	14,610
Casual	7,160
	105,025

No significant change occurred as compared with the previous year.

In regard to native agriculture, production is almost entirely conducted by individuals who, in the main, cultivate sufficient crops to supply the food requirements of themselves and their families, and sell the surplus to obtain money for their requirements.

The manufacture of beer is in the hands of a company.

Soap is manufactured by companies, mainly situated on the coast.

Indian Agriculture.—Indian cultivation is limited to the Kibos-Miwani area in the Nyanza Province and to small scattered areas in the Ukamba and Coast Provinces. A census of Indian agriculture was not taken during the year, but in the Nyanza Province it was estimated that 4,274 acres were under sugar-cane and 1,942 acres planted with maize. In the Coast Province some 3,800 acres are held by Indians, this area being devoted almost exclusively to coconuts.

Native Agriculture.—Considerable progress has been achieved during recent years in the improvement in the quality and variety of crops grown, in cultural methods, and in marketing. The benefits derived from the trial and acclimatization of crops conducted in former years are now becoming apparent.

Improvement of crops largely depends upon ample supplies of seed of high yielding quality and in the past this was provided from public funds. Local Native Councils have now provided the land and funds for seed farms in most agricultural Provinces. These farms have now proved their value and will be extended as circumstances permit. Local Native Councils also devote funds to the payment of a certain number of Native Agricultural Instructors.

Native Agricultural Schools have been established at Nairobi mainly for the Kikuyu and Ukamba Provinces, and at Bukura for the Nyanza and Nzoia Provinces. At these schools the importance of maintenance of soil fertility and prevention of soil erosion is stressed in addition to ordinary crop and routine farm work. The problem of soil erosion continued to receive attention and successful reclamation for demonstration purposes in the Ukamba Province has aroused the keen interest of the natives.

Three Animal Husbandry Centres are now in full operation, and three more should be in full working order in 1934. The varied branches of the management of cattle and treatment of disease are taught, and because quarantine stations are centred on these schools, facilities are given for instruction in the control of disease. Under supervision pupils carry out inoculations of cattle and other work of a similar nature.

An important branch of work in native reserves is the organization of marketing of native produce with the object of raising prices and the standard of quality. The system consists of marketing produce through a commission agent. Local Native Councils erect suitable stores as collecting centres adjacent to railway stations. At present organized marketing is limited to wattle bark in the Kikuyu Province, cotton in the Nyanza Province, and cotton and cashew nuts in the Coast Province.

Propaganda for the better preparation of hides and skins continues. The premium offered for shade-dried as compared with sun-dried hides is now sufficient to induce natives to undertake the extra work involved in shade-drying their hides.

VII.—COMMERCE.

General.

Because Kenya and Uganda are one administrative unit for the purposes of Customs, an accurate estimate of the balance of trade of the territories individually is impracticable. On the one hand, Kenya is largely a distributing centre and, on the other, the overseas trade of Uganda passes, in the main, through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £538,867 was transported through Kenya and shipped at Mombasa during the year, and goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1932 were valued at £494,659. The combined value of trade imports and total exports (i.e., exports of domestic produce and re-exports) of Kenya and Uganda for the year 1932 amounted to £10,533,567 as compared with £10,597,969 in 1931, and £13,871,883 in 1930, the total volume of trade of all classes, including importations on Government account, transit and transhipment traffic, being valued at £10,959,941 as against £11,543,651 in 1931 and £15,400,376 in 1930. The value of total imports during the year was £4,874,572 as against £5,747,884 in 1931, a decrease of £873,312 or 15·19 per cent. Exports of the domestic produce of the territories were valued at £4,505,860 as compared with £4,322,136 in 1931. Of this total, goods to the value of £2,280,982 originated in Kenya, the domestic exports of Uganda calculated in terms of the f.o.b. value at the port of final shipment from the two territories being valued at £2,224,878. Bonded stocks on hand at 31st December, 1932, amounted to £245,600 or £905 less than the value of goods remaining on hand in bonded warehouses at the end of the previous year.

So far as the export trade in Kenya produce is concerned, a decrease in value of £62,892 or 2·60 per cent. as compared with the exports during the previous year is recorded. Locust infestation resulted in a contraction in maize exports of 67,188 tons in quantity, the decrease in value being £301,713. Sisal shipments diminished in value by £45,990 as compared with the corresponding figures for 1931. In other directions, however, a satisfactory expansion is noted, coffee, butter, potatoes, tea, cedar slats, wattle bark and extract, and gold being among the commodities exported in greater volume than in the previous year. From a trading point of view, 1932 must be characterized as a year of unremitting anxiety;

the deferment of hopes in the matter of improved commodity prices on the overseas markets and of relief from the continued locust infestation produced feelings of uncertainty and depression. The decrease in the spending power of the local population is reflected in the figures of trade imports, inward traffic during the earlier part of the year being confined to the barest necessities. Some improvement in both import and export trade became noticeable in the later months, a prospect of less serious damage from locusts, increased crop yields in Kenya and Uganda, and greater activity in the development of mineral resources assisting in the partial removal of the depression in its most acute form. World conditions, however, continue to be the dominant factor and complete recovery cannot be expected until the prices of primary products upon which the prosperity of the territories ultimately depends, again reach an ecomonic level.

Net collections of Customs revenue amounted to £882,500 as compared with £1,002,001 accruing in 1931. Of this sum £597,316 was allocated to Kenya and £285,184 to Uganda.

*Imports.

The percentage division of trade between the principal sources of supply during the past two years was as follows :—

	1931. *Per cent.*	1932. *Per cent.*
United Kingdom	44·53	39·29
British Possessions	18·65	24·11
TOTAL BRITISH EMPIRE ...	63·18	63·40
Germany	3·18	2·61
Belgo-Luxemburg Economic Union	1·36	1·60
France	1·44	1·61
Italy	1·44	1·24
Netherlands	4·36	3·97
Japan	8·55	10·99
Persia	1·89	2·52
United States of America ...	8·91	5·28
Dutch East Indies	2·60	3·35
Other Foreign Countries	3·09	3·43
TOTAL FOREIGN COUNTRIES ...	36·82	36·60

---

* At the request of the Board of Trade and in order to bring the Report into closer conformity with similar publications relating to other parts of the Empire, import particulars, unless otherwise stated, have reference to total imports, including imports on Government account, and not to "home consumption" clearances as heretofore.

The following summary shows the values of the principal commodities imported from the various countries in 1931 and 1932 :—

Country of Origin.	*Commodity.*	*Value.*	
		1931. £	*1932.* £
United Kingdom.	Whisky	70,067	62,625
	Cigarettes	102,363	72,586
	Cement	89,697	38,747
	Galvanised sheets	69,314	37,914
	Tubes, pipes, fittings	52,052	51,335
	Tin, bar, plate or sheet	8,447	19,873
	Aluminium sheets	17,408	16,970

Cotton Textiles.—During 1932 the value of cotton textiles imported was £707,806 or 14·52 per cent. of all goods imported. Transfers to Uganda were valued at £339,013.

The average value per yard of imported cotton textiles was 3·4d. as compared with 4·3d. in 1931 and 5·7d. in 1930; cotton blankets showed a value per blanket of 1s. 4·6d. as against 1s. 3·9d. in 1931 and 1s 7·2d. in 1930.

Although the share of the United Kingdom in this trade improved slightly in 1932, it continues to compare very unfavourably with the percentage value of textiles procured from foreign sources, the disparity being still more marked if calculations are made on a yardage basis. Importations from Japan show a further increase, amounting in 1932 to 43 per cent. of the total textile trade as compared with 41 per cent. in 1931 and 29 per cent. in 1930.

Belgium, Holland, Czechoslovakia, and Italy provide the bulk of imported cotton blankets, grey sheeting (americani) being supplied principally by Japan and to a less extent by the United States of America.

Vehicles.—689 motor cars, 408 motor lorries, 4 motor tractors, 90 motor cycles and 1,295 pedal cycles valued at £215,176 were imported during the year as against 891 motor cars, 336 motor lorries, 15 motor tractors, 98 motor cycles, and 1,187 pedal cycles of a total value of £240,672 in the previous year. Imports from the United Kingdom were valued at £83,528 or 39 per cent. of the total as against £69,970 or 29 per cent. in 1931.

Importations of tyres and tubes were valued at £89,331 as compared with £100,793 in 1931, the principal sources of supply being the United Kingdom (£37,242), France (£23,836), Canada (£18,412), and the United States of America (£6,526).

Building Materials.—A considerable contraction in the quantity of building materials imported (corrugated iron sheets, cement, timber, etc.) is noted, importations of cement decreasing from 31,164 tons in 1931 to 16,445 tons in the year under review. Of this latter figure the United Kingdom supplied 12,296 tons and 4,008 tons originated in Japan.

Other Imports.—Apart from minor increases in quantity but not in value, a general shrinkage falls to be recorded.

Re-Exports, Transit and Transhipment Trade.

The value of goods re-exported during 1932 amounted to £1,364,848 or 29·27 per cent. of the total value of trade imports as compared with £1,183,807 or 23·25 per cent. in 1931. Transit and transhipment traffic reached the values of £60,247 and £154,414 respectively, as against £106,015 and £183,809 in 1931.

Exports.

General.—The domestic exports of Kenya and Uganda are mainly agricultural, the principal exception being carbonate of soda procured at Lake Magadi in Kenya. The value of the domestic produce of Kenya and Uganda exported in 1932 amounted to £4,505,860 as compared with £4,322,136 in 1931. Apart from a serious decline in the quantity and value of shipments of maize and wheat, the position with regard to the export trade generally has been well maintained, a considerable expansion in the export of a wide variety of commodities to an increasing number of markets being noticeable. Empire markets continue to absorb a large proportion of exports, no less than 82·90 per cent. of the total value thereof as compared with 78·33 per cent. in the previous year being despatched to destinations within the Empire. The increase is due in part to the world currency position, and during the later months of the year to the application of the Ottawa Agreements. The principal foreign markets were Belgium (2·77 per cent.), Japan (2·75 per cent.), United States of America (2·01 per cent.), and Germany (1·99 per cent.). The following summary shows the principal exports and the markets in which they were absorbed, giving comparative figures for 1931 :—

Cotton.—Exports of raw cotton amounted to 829,303 centals originating in Uganda and 4,516 centals in Kenya, the total value being £1,592,761, and show an increase in quantity of 75,008 centals with an increase in value of £82,866 as compared with 1931. The declared value per cental of 100 lb. was £1 18s. 3d. as against £1 19s. 9d. in 1931. Cotton seed exported during the year under review increased to 56,481 tons valued at £168,899 as against 45,435 tons valued at £149,224 in 1931.

Coffee.—The following table indicates considerable expansion in shipments, viz. :—

	Produce of Kenya.		*Produce of Uganda.*	
	Quantity.	*Value.*	*Quantity.*	*Value.*
	Cwt.	£	*Cwt.*	£
Exports, 1932	275,916	1,213,715	87,077	223,162
Exports, 1931	245,903	986,429	69,990	161,389
Increase	30,013	227,286	17,087	61,773

Maize.—Owing to locust infestation shipments decreased in quantity by 1,343,764 cwt. and in value by £301,713 in comparison with the previous year, the 1932 figures being 516,356 cwt. valued at £117,971 as against 1,860,120 cwt. valued at £419,684 in 1931.

Sisal Fibre and Sisal Tow.—Exports of sisal fibre show a decrease in quantity of 653 tons, and a decrease in value of £44,955, the 1931 figures being 15,482 tons valued at £226,144. Sisal tow exports increased to 556 tons in quantity but decreased in value to £5,285 as against 512 tons valued at £6,420 in 1931. The average declared value of sisal fibre and tow per ton was £12 2s. 6d. in 1932 as compared with £14 10s. 10d. in 1931 and £27 8s. 5s. in 1930.

Hides and Skins.—Exports show a slight increase in value, comparative figures being 1931, £151,422, and 1932, £151,432. Exporters' declarations show that hides and skins to the value of £34,270 originated in Uganda in 1932.

Gold.—Exports increased from 4,721 oz. troy valued at £19,955 in 1931 to 14,913 oz. troy valued at £64,845, the Uganda share being 569 oz. troy valued at £3,470.

Sodium Carbonate.—Exports show a decrease of 6,907 tons in quantity and £29,417 in value as compared with the 1931 figures of 44,170 tons and £199,389.

Wheat.—Domestic exports decreased from 63,644 cwt. valued at £15,313 in 1931 to 1,727 cwt. valued at £525 in 1932.

Sugar.—Exports of sugar decreased to 56,617 cwt. valued at £62,629 from 66,191 cwt. valued at £71,223 in 1931. The principal source of supply was Uganda and the principal country of destination Tanganyika Territory.

Tea.—Export figures for 1932, viz., 6,369 cwt. valued at £29,829, as compared with 3,184 cwt. valued at £16,925 in 1931 reflect considerable expansion in local production.

Inter-Territorial Trade.

In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1932, the value of local produce sent from Kenya to Uganda amounted to £140,160 as compared with £146,166 in 1931, and £182,026 in 1930, the principal commodities involved being soap, wheat meal and flour, maize meal and flour, animals (living) for food, beer, tea, timber, and coconut oil. The value of Kenya produce exported to Tanganyika Territory amounted to £99,710 as compared with £122,745 in 1931.

Under the Customs Agreement of 1927 the free interchange of imported goods between Kenya, Uganda, and Tanganyika Territory is allowed, the value of imported merchandise transferred from Kenya-Uganda to Tanganyika Territory during 1932 amounting to £466,342 (including specie valued at £109,543) and the total Customs duty collected by the Kenya and Uganda Customs Administration and transferred to Tanganyika Territory under this Agreement reached a figure of £83,298. Traffic in imported goods in the reverse direction was valued at £98,836 (including specie to the value of £48,905) the Customs duty involved being £8,532. Tanganyika Territory produce passing through Kenya for shipment at Mombasa amounted in value to £538,867.

Air Traffic.

Considerable use of the Customs aerodromes established at Mombasa, Nairobi, Kisumu, Kampala, and Entebbe was made by aircraft on foreign service during the year and comparative figures are as follows :—

		Landed.			*Shipped.*	
Year.	*Number of craft arrived.*	*Number of Passengers.*	*Value of cargo.*	*Number of craft departed.*	*Number of Passengers.*	*Value of cargo.*
			£			£
1931 ...	184	169	11,901	188	215	14,631
1932 ...	434	441	6,321	436	449	72,152

Outward cargo during 1931 and 1932 included bullion valued at £10,800 and £64,815 respectively.

Excise and Beer Duties.

Excise duties at the rate of £1 per ton on sugar, cents 10 per lb. on tea, cents 75 per lb. on cigarettes, and cents 50 per lb. on other manufactured tobacco were imposed in Kenya, Uganda, and Tanganyika Territory on such articles locally manufactured on and after 1st January, 1932, and the duty on Kenya brewed beer was increased from Sh. 20 to Sh. 40 per standard barrel of 36 gallons with effect from the same date. Inter-territorial arrangements for the allocation of duty collections to the territory of final consumption were completed on lines parallel to the existing Customs Agreement.

Sugar.—Eight sets of premises were licensed during the year (5 in Kenya and 3 in Uganda), deliveries from factories amounting to 13,656 tons of which 3,452 tons were manufactured in 1931 and therefore not chargeable with duty. The total sum brought to account during the year in respect of the Kenya and Uganda excise duty on sugar was £9,211, allocated as follows : Kenya £5,855, Uganda £1,905, Tanganyika Territory £1,451, and Kenya in addition being credited with £6 from Tanganyika Territory.

Tea.—Fourteen sets of premises were licensed during the year (8 in Kenya and 6 in Uganda), deliveries from factories amounting to 1,807,130 lb. of which 290,184 lb. were manufactured in 1931. Excise collections in Kenya and Uganda realized £5,139, allocated as follows : Kenya £3,024, Uganda £1,203, Tanganyika Territory £912, and Kenya in addition being credited with £4 from Tanganyika Territory.

Cigarettes and Tobacco.—187,337 lb. of cigarettes and 54,397 lb. of tobacco were delivered from the three factories licensed during the year, 2 in Uganda and 1 in Kenya, the amount of Kenya and Uganda Excise duty brought to account being £7,441, allocated as follows : Kenya £847, Uganda £5,083, Tanganyika Territory £1,511, and Kenya in addition being credited with £682 from Tanganyika Territory.

Beer.—Two breweries, both situated in Kenya, were licensed during the year, comparative revenue figures for 1931 and 1932 being £2,596 and £5,214 respectively. The inter-territorial allocation for 1932 was Kenya £4,539, Uganda £372, Tanganyika Territory £303.

Ivory.

Two sales by public auction of Kenya and Uganda Government ivory were undertaken by the Department during the year, the prices realized being satisfactory in comparison with world market rates which were depressed. The total weight of ivory sold was 60,673 lb. (Kenya 23,198 lb., Uganda 37,475 lb.) and the total amount realized was £23,139 (Kenya £8,849, Uganda £14,290).

For more detailed particulars in regard to imports, exports, sources of supply, countries of destination, etc., reference is invited to the Annual Trade Report of Kenya and Uganda or to the Annual Blue Book of the Colony.

VIII.—WAGES AND COST OF LIVING.

The wages of " domestic servants " approximate to the following averages :—

	Range. *Sh. per month.*	*Normal Wage.* *Sh. per month.*
House and Personal Boys ...	17 to 52	40 and 30
Cooks	22 ,, 52	50
Dhobies	27 ,, 42	30
Kitchen Boys	12 ,, 27	20
Garden Boys	7 ,, 27	20
Seychellois and Arab Nurses ...	—	100
Native Nurses	50 to 60	60
Visiting Sweepers	—	10

Comparison with the corresponding figures for 1931 shows that there have been considerable reductions at the upper end of the range.

The absence of later data precludes the inclusion in this Report of figures of the rates of wages of labourers in the various classes of employment more recent than those included in the Report for the year 1931, which were as follows :—

Government Employ.	*Average monthly wage including value of rations.* Sh.
Railway	22/16
Defence	34/32
Other Government Departments ...	26/95
Municipalities	23/45
Agriculture	13/43
Other Employment.	
Mines	23/42
Timber industry	
Firewood	
Building trade, etc.	

The general downward tendency in the wage level, due to the prolonged financial depression, has continued during 1932 and it has been estimated that the average wage level for that year was as much as from 15 to 25 per cent. below the corresponding level in 1931. Labourers enjoying comparatively higher rates of wages have suffered a greater percentage reduction than those with smaller wages. A labourer's working day averages eight hours.

There has been no improvement in the scales of remuneration of Europeans and Indians engaged in commerce, nor in the rates of wages of Indian carpenters, stone masons, and similar skilled artisans.

Cost of Living.

Cost of living figures and a determination of the price-level of commodities have been obtained by the Statistical Department since 1927, and an analysis of all available data has been extended backwards to 1924. It has also been possible to obtain prices of about 35 articles in 1912–13 for purposes of comparison with 1931.

The following table shows the index numbers for the period 1924–1932 :—

Year.	*All articles.*	*Locally produced articles.*	*Imported articles.*
1924	100	100	100
1925	101	109	98
1926	99	112	95
1927	95	109	91
1928	96	114	90
1929	95	111	90
1930	92	104	88
1931	87	97	83
1932	84	93	82

The impression which has arisen that prices have fallen to the pre-war level is erroneous. The prices of 51 articles, excluding vegetables, petrol, rents, and servants, are still 45 to 55 per cent. above the pre-war level. If petrol, transport, vegetables, etc., are included the general price-level affecting the cost of living at the end of 1932 must be about 60 per cent. above the pre-war level.

In regard to the cost of living of native labourers, in the great majority of cases the labourer is provided with rations which consist mainly of maize meal and meat, salt, etc., by the employer. The majority of labourers draw their staple food in kind, and not in cash, and are therefore not affected by fluctuations in price. The staple food-stuff is maize meal and the average consumption is 2 lb. per day costing approximately Sh. 3 per mensem, and additional rations Sh. 2 per mensem. In short, a native labourer receives his board and lodging free plus two or three times its value in cash.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

European Education.

The improvement effected by the centralization of secondary education has been consolidated during this second year since the opening of the schools. At the Prince of Wales School, Kabete, a

Sixth Form course has been started, leading to the Higher School Certificate Examination. An agricultural course has also been introduced in collaboration with the Agricultural Department. The School Certificate Examination is taken at the Girls' Secondary School, Nairobi. In Government schools the total roll at the end of the year was 1,138 (449 boarders and 689 day pupils). In private schools there was a total roll of 420 (266 boarders and 154 day pupils). There were 12 private schools, two being preparatory schools for boys who are being prepared for entrance to public schools overseas.

Indian and Goan Education.

Two large Government secondary schools, one in Nairobi and the other in Mombasa, take pupils up to the London Matriculation Examination. A hostel for pupils from outlying districts is attached to the Nairobi Secondary School. Forty-one boarders were in residence at the close of the year. Altogether there were 13 Government schools with a total roll of 2,602 at the end of the year. Although it has been necessary to reduce the rate of grant-in-aid, it has been found possible to place a much larger number of schools on the grant list. Thirty-two schools were aided during the year in which the total roll was 1,971. In six unaided schools the total roll was 283. The Goan community in Mombasa erected a handsome school building during the year, but the school was not actually opened until the beginning of 1933.

Arab and African Education.

The three Arab schools at the Coast, Mombasa, Malindi and Shimo-la-Tewa, to which Africans are also admitted, showed a total roll of 337. There was also a Government night school at Lamu with 40 pupils. Thirty-nine Government African schools had a total roll at the end of the year of 3,155. The Local Native Councils continued to show great interest in educational development. The new school erected from Local Native Council funds close to Nyeri was opened early in 1933 as the Government Kikuyu School. The Local Native Councils spent £12,786 in all on education during the year, for the erection of schools and for aiding existing Government and Mission schools in various ways. The work of the Jeanes school, Kabete, has been extended to include the training of agricultural and welfare workers as well as supervisors of native teachers. The number of technical apprentices at the Native Industrial Training Depot had to be reduced somewhat to meet changed conditions. The total roll at the end of the year was 478.

The various Missionary Societies continued to conduct the bulk of village elementary and sub-elementary education based on their primary and technical schools at central stations in the reserves. There are now two Mission secondary schools, the Protestant Alliance High School at Kikuyu and the Roman Catholic School at

Kabaa. Grants-in-aid to Missions during the year reached a total of £33,820, which figure included special provision for secondary education and for the training of women, but did not include the two-thirds of the salaries paid to Jeanes teachers.

Administration.

On the abolition of the post of Chief Inspector at the close of the year the staff consisted of the Director, the Supervisor of Technical Education, and four Inspectors of Schools. Three Inspectors were stationed in outlying Provinces most of the year.

The four Advisory Councils, for European, Indian, Arab, and African Education respectively, and the various school committees and African School Area Committees rendered valuable service in advising the Director during the year.

Examination Results.

The following tables show the number of candidates who entered and passed overseas secondary education examinations during the period 1928 to 1932 :—

Cambridge Junior.

NOTE.—For more detailed information on educational matters attention is invited to the Annual Report of the Education Department.

Welfare Institutions.

The Lady Northey Home for European children is maintained by public subscription and the fees collected. The Lady Grigg Child Welfare Institutions for Indians and Africans have continued to do good work. The League of Mercy, the East Africa Women's League, the British Legion, and the Salvation Army continue their valuable services on behalf of the needy, especially children.

---

* A pass with the necessary credits gives London Matriculation exemption.

X.—COMMUNICATIONS AND TRANSPORT.

Posts and Telegraphs.

On the 2nd February the Nairobi-Mombasa telephone trunk service was opened. It links the capital with the coast. Telephone communication is now possible between Nairobi and Tanga and the service will shortly be extended to Dar es Salaam. Communication by telephone to Tanganyika Territory was previously possible only from Mombasa.

Despite unfavourable trade conditions, there was an increase in the number of telephone exchange connexions during 1932. A new rural system was opened at Thika and serves 34 subscribers. The principal public exchanges and the number of subscribers at each are as follows :—

Nairobi ...	758	Nakuru ...	57
Mombasa ...	294	Eldoret ...	55

The internal telephone and telegraph system consists of 2,664 miles of pole route and a wire mileage of 14,786. Nearly all Administrative centres are connected by telegraph. Communication in the Northern Frontier and Turkana areas is maintained by a wireless system consisting of eight small stations (500 watts), in addition to one at Kitale opened in 1932, which are maintained and operated by military units and handle civil as well as military telegrams.

A wireless station was installed at Kisumu solely for aircraft purposes and is operated and maintained by Imperial Airways, Limited. Telegraph communication overseas is maintained by Imperial and International Communications, Limited, through a wireless station at Nairobi and a cable from Mombasa. This Company also operates the coast wireless station at Mombasa and gives a continuous service there. Overseas telegraph traffic decreased. The Kenya radio service dealt with 72·14 per cent. of the traffic to and from Great Britain.

The number of broadcasting licences increased from 418 to 635. The local broadcasting station transmits on 350 metres and 49·5 metres simultaneously. Reception on the former wave is satisfactory and has improved on the short wave. The programmes consist mainly of the reproduction of gramophone records, British Official wireless Press, local news, market and weather reports.

In January the London-Cape Town air mail service, previously operating between London and Kisumu only, was extended to Cape Town. The flight was maintained with satisfactory regularity during the year and the popularity of the service steadily increased. A supplementary air service was arranged locally to serve Nairobi, Mombasa, Tanga, Zanzibar, and Dar es Salaam and to link the coast towns with the main London-Cape Town flight. The local service is operated by Messrs. Wilson Airways, Limited, and performed its weekly journey in each direction with unbroken regularity from the 18th August to the end of the year.

The number of mails despatched to Great Britain by surface transport was 65 and the number received 62. The average time in transit was 19 days. One mail was received in 14 days from London, a time only once previously equalled. Internal mail services extend to all parts of the Colony, and motor transport is steadily displacing the native runner.

Roads.

The expenditure on the public road system, exclusive of that incurred on roads vested in local authorities (vide page 5) was £67,808, of which £4,038 was on capital work and £63,770 on maintenance and improvements. No marked increase of the mileage of public roads maintained through the Public Works Department took place during the year, and the length of public road system (exclusive of the portions in District Council areas amounting to about 1,671 miles) remains approximately 7,750 miles. Owing to financial limitations, it was only possible to carry out a strictly limited programme of improvement. This was chiefly confined to those cases where realignments, new drainage or surfacing would render upkeep easier as well as provide better traffic facilities.

The principal items of road improvement dealt with during the year consisted in the aggregate of : (1) 106·8 miles of realignments, (2) construction of 12 bridges, (3) 187 miles of surfacing, mostly laterite and other soft stone, and (4) 240·2 miles of catchwater drain and a large number of culverts.

Harbours.

The total tonnages (import and export) handled at Kilindini Harbour and Mombasa Old Port during the years 1931 and 1932 are given below. These figures do not include oil imports discharged through the Magadi Company's pipe lines, nor soda exported from that Company's pier. Coal imports are shown separately.

COAL IMPORTS.

1932.	1931.
55,166 tons.	61,926 tons.

IMPORTS AND EXPORTS OTHER THAN COAL.

Year.	*Imports B/L tons.*	*Exports B/L tons.*	*Total B/L tons.*
1931	273,551	323,569	597,120
1932	233,674	324,344	558,018

The total trade of the Port of Mombasa (including Kilindini Harbour and the Old Port) for the year 1932 as compared with 1931 is summarized in the following statement :—

	1932.	1931.
Number of steamships ...	515	584
Net tonnage of steamers ...	1,684,696	1,800,701
Imports—B/L tons	289,684	338,969
Exports ,, ...	351,447	367,739
Passengers landed :—		
European	5,391	6,562
Non-European	10,209	12,349
Passengers embarked :—		
European	5,356	6,577
Non-European	12,332	15,800

Shipping.

The registered tonnage (inwards and outwards) at all Kenya sea-ports during the year as compared with 1931 was as follows :—

	1932. Registered Tonnage	1931. Registered Tonnage
Vanga	6,773	9,996
Funzi	10,077	8,081
Mombasa	3,410,273	3,671,081
Kilifi	6,238	10,837
Malindi	21,098	18,063
Lamu	27,785	59,819
Kipini	2,280	2,459

Railways.

The carriage of public goods provided a revenue of £1,564,182 and the tonnage of the traffic amounted to 723,453 tons, as compared with £1,567,429 and 801,994 tons in 1931. Having regard to the economic position of the territories served by the Administration, it is encouraging to observe that the 1932 revenue was only 0·21 per cent. below the revenue for 1931.

Legislation prohibiting competitive road traffic on certain roads parallel to the railway was introduced on the 17th January, 1933.

Passenger Traffic.—Revenue from passenger traffic also showed a decrease on 1931 figures. In 1932 558,492 passengers contributed a revenue of £169,159, while in 1931 768,224 passengers contributed a revenue of £215,510. There was an all-round decrease in the number of passengers, as the following figures show :—

Passengers carried.

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1932	8,366	31,426	518,700	558,492
1931	12,515	46,224	709,485	768,224

The traffic on Lakes Victoria, Kioga, and Albert, and on the River Nile, on which the Administration services are maintained, is shown in the following table :—

	1932.	1931.
Earnings	£91,854	£104,000
Total expenditure	£64,250	£84,653
Tonnage carried	71,611 tons	93,226 tons

Fuel Consumption.—The following figures show the consumption of coal, wood, and oil fuel on the railway during the year :—

	1932.		*1931.*	
	Tons.	*Cost.* £	*Tons.*	*Cost.* £
Coal	56,790	68,536	60,842	80,545
Oil	85	292	810	1,900
Wood	132,656	47.315	196,814	74,512

On the lake steamers the figures were :—

	1932.		*1931.*	
	Tons.	*Cost.* £	*Tons.*	*Cost.* £
Oil	2,776	7,634	2,734	7,540
Wood	8,150	4,315	12,701	7,156

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1932 are shown in the following table :—

	Railways. £	*Harbours.* £	*Total.* £
Earnings	1,838,661	282.354	2,121 015
Ordinary working expenditure	1,014,161	125.224	1,169,385
Surplus of receipts over ordinary working expenditure.	794,500	157.130	951,630

The expenditure on capital account at the end of 1932 amounted to £22,319,691. Interest-bearing capital provided £13,919,403 of this sum, the balance being contributed by :—

	£
Parliamentary Grants, 1896 and 1902 ...	5,686,437
Accrued Interest on 1924 Loan	420,118
Contributions from revenue :—	
Direct (formerly called expenditure extra-ordinary)	629,217
Through Betterment Funds (capitalized)...	1,588,743
Through Marine Insurance Fund (capitalized)	75,773
	£8,400,288

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony:—

The National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, and Eldoret ; the Standard Bank of

South Africa, Limited, with branches at Mombasa, Nairobi, Kisumu, Eldoret, Nyeri, Nakuru, and Kitale, and an agency at Nanyuki; and Barclays Bank (D. C. & O.) with branches at Mombasa, Nairobi, Eldoret, Kitale, and Nakuru.

During 1931 a Land and Agricultural Bank under the control of Government was formed, with a capital of £240,000. The Bank makes advances to farmers over periods varying from 10 to 30 years on first mortgage security. At 31st December, 1932, the Bank had made advances totalling £227,700.

Currency.

The standard coin is the East African shilling with subsidiary coinage of the following denominations:—

50 cents (silver);
10 cents, 5 cents and 1 cent (nickel).

A note issue is maintained and notes of the following denominations are in circulation:—Shs. 10,000, 1,000, 200, 100, 20, 10, 5.

In addition to the above a considerable amount of old rupee and florin currency, both coin and notes, has been in circulation in the Colony, but on the 1st January, 1932, this currency ceased to be legal tender.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

The standard weights and measures of the Colony are identical with those in use in Great Britain, namely the Imperial pound, yard, and gallon. The Kenya Weights and Measures Ordinance is now applicable to the whole Colony and Protectorate, although annual verifications and periodical inspections are only carried out in the towns and larger trading centres. A total of 16,000 weights, measures, and instruments were stamped, adjusted or rejected, from which was derived revenue amounting to £307. A further total of 3,000 weights, measures, and instruments were examined during the course of visits of inspection resulting in prosecutions on nine charges relative to the use, or possession, of false or unstamped weights, measures, or instruments.

XII.—PUBLIC WORKS.

The total expenditure incurred through the Public Works Department on public works services amounted to £366,269. Of this sum £232,047 was from funds derived from the revenue of the Colony and provided for under the Public Works Schedules, £89,475 from loan, and £44,747 from various extra-departmental sources. The revenue collected by the Department was £57,102.

The expenditure in direct charges on works of a capital character was £104,687, of which £33,737 was from revenue sources, and £70,950 (exclusive of Establishment charges) from loan. The distribution according to the nature of the works of the revenue expenditure of £33,737 was :—

	£
Buildings	1,665
Water and drainage	28,787
Roads and bridges	2,583
Miscellaneous	702

The distribution of the loan expenditure was :—

	£
Buildings	49,402
Water and drainage	20,093
Roads and bridges	1,455

The principal capital work in progress during the year was the construction of Mombasa Water Works, the estimated cost of which is £227,000 (£165,000 from loan and £62,000 from Renewals Fund). The expenditure during the year was £22,538 out of loan and £26,840 from Renewals Fund. The third and last section of the gravitation main from the intake works at Mreri to the service tanks at Changamwe comprising 7·9 miles of the total length, together with various subsidiary works including the 210 feet span bridge across the Mwachi River Estuary, was finished during the year and brought into use after testing. Considerable progress was also made with the laying of the distribution system from the Changamwe service tanks to and through the town of Mombasa. These pipes range from 24 inches diameter downwards.

XIII.—JUSTICE, POLICE, AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya, the Uganda, Nyasaland, and Zanzibar Protectorates, and the Tanganyika Territory. The Judges of the Court of Appeal are the Judges and Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland, and Tanganyika, and His Britannic Majesty's Court for Zanzibar. During 1932 the Court held four ordinary sessions and two special sessions. The total number of appeals filed was 245, of which 136 were from Kenya.

Throughout the year the Courts operating in the Colony were as follows :—

The Supreme Court sitting at Nairobi, Mombasa, and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged ;

The Courts of the Resident Magistrates at Nairobi (2), Mombasa, Nakuru, Kisumu, and Eldoret, presided over by legally qualified officers ;

The Courts of the 1st, 2nd, and 3rd Class, presided over by Provincial Commissioners, District Commissioners, and District Officers; and

The Courts conducted by Liwalis, Cadirs, and Mudirs.

The Northern Frontier and Turkana Provinces have been created special districts within the meaning of sections 14 and 15 of the Criminal Procedure Code and the Provincial Commissioners of these Provinces are the Officers specially authorized under the latter section. The District Commissioners in the Northern Frontier Province have been given the powers of First Class Magistrates.

Police.

The Kenya police is composed of Africans and a small percentage of Asiatic personnel under the command of European officers and non-commissioned officers. The Force is distributed mainly at police stations throughout the settled and urban areas of the Colony and Protectorate. The work of each police station is controlled by a European or Asiatic non-commissioned officer and the stations are grouped under the direction of a commissioned officer. Police detachments are stationed in the Northern Frontier Province. African police are stationed in native reserves and Turkana, where they operate under the direct control of officers of the Administration, although the enforcement of law and order in the reserves is largely the responsibility of the local tribal police. The personnel of the Force was further decreased during 1932 on grounds of economy, necessitating the closing of several police stations.

Cognizable offences under the Penal Code reported to the police in settled and urban areas in 1932 totalled 5,686. Of that number 5,370 were true cases, an increase of 393 true cases over the total for 1931. Accused persons in 3,924 cases were brought for trial before the Lower or Supreme Courts. Much of the crime is attributable to the prevailing economic conditions with resultant unemployment. The main increases are in regard to housebreaking, burglary, petty thefts, and stock and produce thefts. The total stated value of property stolen was Sh. 342,556, of which Sh. 123,528 or 36 per cent. was recovered. No serious outbreak of grave crime occurred during the year.

A small patrol of police was employed throughout the year to maintain order on the boundaries of the Kisii-Lumbwa native reserves. A patrol also was in operation for several months on the boundaries of the Masai-Lumbwa native reserves. A detachment continued to be posted in the gold mining area at Kakamega.

COURTS.

The number of criminal cases committed for trial to the Supreme Court aggregated 171, involving 236 charges against 223 individuals. These figures compare with 175 cases and 312 charges during 1931. Of the total 282 charges actually tried during 1932, 275 were against males and 7 against females. Convictions numbered 200, acquittals 47, and discharges 35. Europeans were convicted on 9 charges, Asiatics on 6 charges, and natives on 185 charges. Of the punishments imposed, 1 convict was fined, 68 were sentenced to peremptory imprisonment, 14 to whipping with fine or imprisonment or both, 1 to whipping, 4 (including 2 females) were bound over or otherwise disposed of, 92 were sentenced to death, and 16 were detained during the Governor's pleasure. Of the 92 persons sentenced to death, 60 were concerned in one case. The death sentences imposed on these 60 persons were subsequently commuted.

The number of Supreme Court civil cases filed during the year was 585, a decrease of 176 on the number for 1931. Probate and administration causes numbered 173 compared with 176 opened in 1931, and 72 bankruptcy petitions were filed compared with 128 for the previous year. In addition, 5 trust causes were opened and 35 divorce causes were filed. There were 49 civil and 35 criminal appeals from Subordinate Courts, 18 criminal revisions, and 812 confirmation cases.

During the year a total of 51,477 charges were brought in Subordinate Courts throughout the Colony, an increase of 550 over 1931. These charges were disposed of as follows :—

Convictions	46,051
Acquittals	1,898
Discharges	3,528
Total charges ...	51,477

This includes 1,050 charges brought against juvenile offenders, involving 984 convictions, 29 acquittals, and 37 discharges.

Details of the sentences imposed are as follows :—

Fines	13,938
Detention camp in default of payment of fine or surety	10,187
Imprisonment in default of fine or surety	1,843
Fine and detention camp	398
Fine and peremptory imprisonment	1,329
Detention Camp	3,388
Peremptory imprisonment	3,911
Whipping with fine or imprisonment or both	88
Whipping	304
Whipping with fine, or detention camp, or both ...	38
Bound over or otherwise disposed of	6,115
Other punishments	4,501
Detained pending Governor's orders	4
Committed to prison for failure to find security ...	7
Total convictions	46,051

Prisons.

The 64 penal establishments under the administration of the Commissioner of Prisons are composed of three first-class prisons for the accommodation of long-term prisoners (sentenced to three years or over), three second-class prisons for medium-term prisoners (sentenced to between six months and three years) and 24 third-class prisons at district headquarters (for those sentenced to less than six months imprisonment). There are also 34 detention camps for the accommodation of natives who have not previously undergone more than one term of imprisonment, and who are sentenced to detention for minor offences, usually imposed in default of payment of fine. No sentence of detention may exceed six months.

The total number of persons committed to prisons and detention camps during 1932 was 31,542, representing an increase of 17 per cent. over the number committed during 1931. The increase in the last four years has been over 100 per cent. Of the above total, 7,054 were sentenced to imprisonment, 16,234 were sentenced to detention, 279 were civil debtors, 162 were lunatics, and 7,813 were admitted on remand and subsequently not sentenced to imprisonment. Of the total of 7,054 persons committed to serve sentences of imprisonment, 18 were Europeans, 216 were Goans, Indians, Arabs and Somalis, and 6,820 were Africans. Female and juvenile convicted prisoners numbered 231 and 357 respectively—a rise in both figures as compared with 1931. The general health of prisoners was slightly better than in 1931, the sick percentage having fallen from 3·6 to 3·5 per cent. The total of 33 deaths during the year was 23 lower than the total for 1931.

Forty-four juveniles served short terms of imprisonment and these were all confined in Class I and II prisons where there are European officers in charge. Juveniles were segregated from adult prisoners whilst undergoing sentence. A further 30 juveniles were sentenced to terms of from 3 to 5 years in a reformatory and were transferred to Kabete, whilst 283 underwent sentences of caning only. Out of the total 58 had been previously convicted.

Release on licence is granted to certain offenders on completion of two-thirds of their sentences of not less than three years. During 1932 67 convicts were released on licence, as compared with 81 in 1931. Three licences were revoked for breach of conditions.

The technical training of convicts, which is carried on in the three Class I prisons of the Colony, and consists of tailoring, carpentry, sisal mat, string, and rope making, coir and grass mat making, has made satisfactory progress. All uniforms for the prisons staffs and all convict clothing are made in the prisons' workshops, while large orders for uniforms for other Government Departments are obtained annually. The output from the tailors' shops is increasing. The number of convicts employed in the carpenters' shop at Nairobi was considerably augmented to cope with the increased number of orders received. During 1932, £3,318 was expended on raw materials for prison industries. The amount paid into the Treasury as revenue derived from prison industries was £7,575. Of this sum £2,434 was obtained from the hire of convict labour.

At 19 of the 30 prisons the cultivation of foodstuffs for prisoners' food is undertaken. During 1932 £1,117 worth of foodstuffs was grown for this purpose, the principal crops being maize (193½ tons), beans (18¼ tons), and potatoes (38½ tons).

Since the inception in 1931 of the system of periodical review by the Governor of all sentences, including commuted death sentences, of ten years and over, the cases of 29 convicts have been submitted for review. Of these 17 convicts were promised accelerated release subject to continued good behaviour, and the cases of 12 convicts were deferred for reconsideration at a later date. One convict was released after serving 15 years of his sentence of 22 years.

In the report for 1931 mention was made of steps that were being taken to obtain a better type of recruit and to train him into a better warder. Formerly a recruit who passed a height standard and the medical officer and received a "clean" report from the Central Finger Print Bureau entered the Department and went through a short course of drill, musketry, and training in prison duties. Now endeavour is made, with fair success, to secure for each training course, which lasts six months, a mixture of ex-soldiers of the King's African Rifles, ex-constables of the Kenya police, trained artisans—principally boys from the Native Industrial Training Depot, Kabete, and Government School, Machakos—and literary natives from such schools as the Government African School, Kapsabet. After going through the recruits' course, which in addition to drill, prison training, and musketry, now includes one hour a day in school and three hours a week in the prisons' workshops, artisan recruits are posted to the prisons' workshops where they act not only as warders but also as instructors.

The engagement of an African teacher at the end of 1931 for the Prisons Depot has proved a success. The recruits are divided into three sections for all training, and for one hour daily each section attends school, where reading, writing, simple arithmetic and a little geography are taught. In the afternoons the teacher takes sections in baton drill and musketry instruction and assists in the supervision of organized games. In the evenings he holds voluntary classes in the school. These classes are well attended by the prison non-commissioned officers and warders, many of whom exhibit a surprising keenness to educate themselves in spite of long hours on duty in the prison and with outside parties. The teaching of prisoners is at present confined to religious and secular instruction given voluntarily by various mission bodies.

XIV.—LEGISLATION.

Fifty-three Ordinances were passed during the year 1932. A summary of the more important enactments is given below.

No. 6—*The Local Government (District Councils) (Amendment) Ordinance*, 1932.—The object of this Ordinance is to allow a District Council and township to associate in the maintenance of a hospital and to levy a rate for that purpose within the township.

No. 7—*The Land and Agricultural Bank (Amendment) Ordinance*, 1932.—This Ordinance amends the Land and Agricultural Bank Ordinance, 1930, so as to empower the Land Bank Board to make advances for the purpose of fencing and dipping tanks, with a maximum limit of £200 for either purpose in addition to advances made under Section 28 of the Principal Ordinance with no limit other than that the total advances shall not exceed the maxima set out in Section 27 of the Principal Ordinance.

No. 8—*The Co-operative Societies (Registration) (Amendment) Ordinance*, 1932.—This Ordinance amends the Co-operative Societies (Registration) Ordinance, 1931. It is designed to assist Co-operative Societies and to enlarge their scope and activities. It makes it clear that Co-operative Societies with limited liability may be formed under the Principal Ordinance. It also adds a definition of " producers of agricultural products " to enable persons, partnerships, and companies who cut timber and prepare timber and timber products for market to form Co-operative Societies if desired. Provision is also made for the appointment of persons to investigate the accounts and general affairs of registered societies.

No. 10—*The Trading Centres Ordinance*, 1932.—This Ordinance makes provision for the establishment of trading centres, and is, in this respect, a corrollary to the Townships Ordinance, 1930, which provides for the establishment of townships. The Ordinance provides that a trading centre shall be administered by the District Commissioner of the district in which it is situated. It also confers power on the Governor to make rules for the good order and government of such trading centres.

No. 14—*The Civil Procedure (Amendment) Ordinance*, 1932.—This Ordinance effects certain amendments recommended by the Civil Procedure Rules Committee which functions under the Civil Procedure Ordinance, 1924.

No. 15—*The Mining (Amendment) Ordinance*, 1932.—This Ordinance amends the Mining Ordinance, 1930, in various ways. It provides *inter alia* that samples of minerals exported for the purpose of assay may be exempted from liability to royalties. The provision in the Principal Ordinance restricting each prospector to one alluvial claim has been found to impose an unnecessary hardship on the mining community and has accordingly been repealed.

No. 21—*The Traffic (Amendment) Ordinance*, 1932.—This Ordinance makes provision for a refund of proportionate licence fees in respect of a motor vehicle which has been destroyed, broken up or permanently removed from the Colony, or which for some other reason will not be used in the Colony for the currency of the licence.

No. 22—*The Minimum Wage Ordinance*, 1932.—This Ordinance gives effect to the provisions of a Convention for the Creation of Minimum Wage Fixing Machinery, adopted by the International Labour Conference in June, 1928, whereby minimum rates of wages may be fixed for workers employed in certain trades in which no arrangements exist for the effective regulation of wages.

No. 31—*The Sisal Bag Industry Ordinance*, 1932.—This Ordinance gives protection from unfair competition to the promoters of an industry in Kenya for the manufacture of bags from sisal. The Ordinance prevents the manipulation of prices in such a way as to result in unfair competition, and controls the erection of factories for the manufacture of sisal bags. Power is also given to the Governor in Council to refuse to issue licences to manufacture sisal bags on the ground that a sufficient number of licences in an area have already been granted, or on any other sufficient ground.

No. 34—*The Prisons (Amendment) Ordinance*, 1932.—This Ordinance amends the Prisons Ordinance, 1930. Among other matters it defines the terms " penal diet " and " reduced diet." It makes clear (*a*) that if a criminal prisoner is undergoing sentence of imprisonment for a term of six months or more he is not entitled to any remission until six months have been served, and (*b*) that the grant of ordinary remission as provided under Section 40 of the Principal Ordinance, applies to prisoners to whom licences to be at large are granted.

No. 35—*The Native Tribunals (Amendment) Ordinance*, 1932.—This Ordinance amends the Native Tribunals Ordinance, 1930, and provides that an appeal to the Supreme Court by way of a case stated may be made by either party to a suit in which the amount involved is more than £50.

No. 36—*The Chattels Transfer (Amendment) Ordinance*, 1932.—In spite of the exclusion of mortgages or charges granted or created by a company incorporated or registered under the Companies Ordinance (Chapter 93 of the Revised Edition) from the definition of " Instrument," certain local companies had in good faith borrowed money on the security of chattel mortgages, and these mortgages were duly registered as instruments under the Chattels Transfer Ordinance, 1930. In order to regularize the position this Ordinance amends, with retrospective effect to 13th June, 1930, the definition of " Instrument."

No. 37—*The Estate Duty (Consolidation) (Amendment) Ordinance*, 1932.—This Ordinance, which empowers the Estate Duty Commissioners to impose terms and conditions in cases where estate duty on immovable property is being paid by instalments, is designed to protect the Commissioner against the risk of having an estate sold to a bona fide purchaser for value, though instalments of duty are outstanding in respect of such estate.

No. 40—*The Contracts in Restraint of Trade (No. 2) Ordinance*, 1932.—This Ordinance repeals the Contracts in Restraint of Trade Ordinance, 1932, and re-enacts it in an altered form, thus accurately reflecting the principles laid down by the House of Lords in the Nordenfelt case.

No. 42—*The Compulsory Labour (Regulation) Ordinance*, 1932.—Great Britain along with 22 other Members of the League of Nations adopted a Convention of the International Labour Conference held at Geneva in June, 1930, concerning forced or compulsory labour, and this Ordinance makes provision for the regulation and control of such labour in Kenya Colony.

No. 43—*The Dangerous Drugs Ordinance*, 1932.—This Ordinance repeals the Abuse of Opiates Prevention Ordinance (Chapter 121 of the Revised Edition) and consolidates the law on the lines in force in the United Kingdom, on the subject of importation, exportation, manufacture, sale and use, of opium and other dangerous drugs.

No. 45—*The Money-Lenders Ordinance*, 1932.—This Ordinance makes provision for the regulation of the business of money-lending.

No. 46—*The Carriage of Goods by Motor (Prohibition) Ordinance*, 1932.—This Ordinance prohibits on certain roads in the Colony uneconomic motor competition with the railway. It is to remain in force until the 31st December, 1933, but may be renewed by Proclamation of the Governor with the approval of Legislative Council.

No. 50—*The Coffee Industry Ordinance*, 1932.—This Ordinance makes provision for the advancement and control of the coffee industry.

No. 51—*The Native Lands Trust (Amendment) Ordinance*, 1932.—This Ordinance amends the Native Lands Trust Ordinance, 1930, so as to provide that, where land is excised from a native reserve with a view to the granting of a lease for the purpose of working Crown minerals, a temporary excision may be made, the compensation being (in view of the temporary nature of the excision) paid in money instead of in the form of an addition of land to the reserve as is provided for in the Principal Ordinance. The amount of compensation to be paid will not be less than that payable in similar circumstances to any holder of private land outside the reserve.

No. 52—*The Mining (Amendment) (No. 2) Ordinance*, 1932.—Experience of the working of the Mining Ordinance, 1931, has indicated the necessity of amending the Principal Ordinance in certain respects. The amending Ordinance provides *inter alia* for mining by means of registered locations and leases, rather than by claims and exclusive prospecting licences and leases. Provision is also made to prevent unauthorized representation and irregular pegging.

XV.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

STATEMENT OF REVENUE AND EXPENDITURE FOR FIVE YEARS ENDED 31ST DECEMBER, 1932.

Year.	*Revenue.*	*Expenditure.*

Estate Duty	6,815
European Education Tax	10,314
Asiatic Education Tax	11,179
Entertainment Tax	4,555
	£1,239,473

Customs Tariff.

Amendments to the Customs Tariff in 1932 were of a minor character being confined to a reduction in the duty on currants from 20 per cent. *ad valorem* to Shs. 1·75 per 100 lb. and to the insertion of authority to the Commissioner of Customs to compute for purposes of assessment of duty the freight on goods conveyed by air at a figure not less than one-fourth of the sum actually charged.

Stamp Duties.

The Colony's Stamp Duties, as laid down in Chapter 57 of the Laws of Kenya, follow very closely on the system in force in Great Britain. The principal documents subject to Stamp Duty are Mortgage Deeds, Bills of Sale, Policies of Insurance, Conveyances, Assignments and Bills of Exchange. The yield of stamp and excise duties during 1932 was :—

	£
Stamp Duties, various revenue purposes	43,663
Beer, Excise Duty	4,539
Sugar, Excise Duty	5,762
Tea, Excise Duty	3,020
Tobacco, Excise Duty	847
	£57,831

Native Hut and Poll Tax.

Rate.—The rates of hut and poll tax imposed by Proclamation under Section 6 of Chapter 51 of the revised edition of the Laws of Kenya (The Native Hut and Poll Tax Ordinance) are as follows :—

Masai	Sh. 20/00 per Hut or Poll.
Other Tribes	Sh. 12/00 per Hut or Poll.

Section 3 of the Northern Frontier Poll Tax Ordinance (No. 53 of 1930) empowers the Governor to order that the poll tax prescribed under Section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier Province.

A Proclamation dated 12th February, 1931, orders the payment of the prescribed tax by tribesmen of the following tribes ordinarily resident in the Northern Frontier Province : Somali, Galla, Samburu, Ndorobo, Rendille, and Turkana. A Proclamation dated 27th April, 1931, fixes the rate of the poll tax payable at Sh. 10/- per annum. Natives in the Turkana Province and Dorobo pay hut and poll tax at the rate of Sh. 10/- and Sh. 6/- per annum respectively.

Method of Assessment.—A uniform tax at the prescribed rate is paid on each hut (dwelling house) owned by the taxpayer.

A poll tax at the prescribed rate is payable by all able-bodied male natives of the apparent age of 16 years or over who do not pay the hut tax.

Hut and poll tax is collected by District Officers. The taxpayer is given a receipt in the form of a hut or poll tax ticket for each tax paid. At the same time the payment is noted in the register of taxpayers.

Yield.—The yield of native hut and poll tax in 1932 amounted to £515,277 :—

The whole fiscal system of the Colony came under the review of Lord Moyne, who was appointed by the Secretary of State on the 28th January, 1932, as Financial Commissioner to Kenya with the following terms of reference :—

> " (1) To inquire into the matters specified in paragraph 105(i) of the Report of the Joint Select Committee on Closer Union in East Africa, viz. :—
>
> (*a*) the contribution made to taxation, both direct and indirect, by the different racial communities ;
>
> (*b*) railway freights and import duties, with a view to discovering the extent to which each community benefits or suffers by them ;
>
> (*c*) the amount of money expended in the interests of each community, in particular on natives and non-natives ; and
>
> (*d*) the degree and manner in which financial responsibility should be conferred on the Native Councils.
>
> (2) So far as may be necessary for the purposes of the above inquiry to consider the general financial and economic situation of the Colony and Protectorate of Kenya ; and
>
> (3) To make a Report."

On the 7th April, 1932, a supplementary instruction was issued in the following terms :—

> " In order to make it clear that you are authorized to review the general budgetary position of the Colony, I have added the following to the terms of reference of your inquiry : 'To make recommendations as to the re-adjustment of taxation and expenditure if examination of the present position under the original terms of reference discloses a case for change.' "

The various recommendations made by Lord Moyne and published in his Report of May, 1932, were under consideration at the end of the year.

Map.

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by Meridian line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,730 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is the zone time 2½ hours fast on Greenwich. Physiographically Kenya consists of: (1) a region poorly watered comprising some three-fifths of the total area of the Colony; (2) a plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Nakuru, Naivasha, and others; (4) a portion of the basin of the Victoria Nyanza which is 3,726 feet above sea-level. The Nzoia, Yala, Kuja, and Amala Rivers flow into Lake Victoria, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya and from the Aberdares there flow numerous tributaries of the Tana River which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 58° F.—65° F. in the highland areas.

The rainfall is generally well-distributed and ranges from about 10 inches per annum in the arid northern areas to 86 inches per annum in the vicinity of Lake Victoria. . The average rainfall in the main agricultural and pastoral areas ranges from 3 to 40 inches. The heaviest rainfall occurs from March to June and from October to December.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498 Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829 Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the east coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848 Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw the Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887 Seyyid Bargash, the Sultan of Zanzibar, granted a concession on the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889 a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha, and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892 the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895 a British Protectorate was declared over the Company's territory between the coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902 the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903 there were nearly 100 European settlers in or near Nairobi.

In 1905 the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, and Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transferred to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the Great War.

Nominated Unofficial Members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923 this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony; the coastal belt remains a Protectorate. In 1925 the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council and in 1925 the office of the High Commissioner for Transport was established. The High Commissioner is the Governor of Kenya, and in that capacity he is advised by a Railway Council, consisting of official and unofficial representatives of Kenya and Uganda.

II.—GOVERNMENT.

His Excellency Sir Joseph Aloysius Byrne, G.C.M.G., K.B.E., C.B., proceeded on sick leave on 11th June and returned to duty on 17th November. During his absence the Government was administered by the Colonial Secretary, Henry Monck-Mason Moore, Esq., C.M.G.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council of eight *ex-officio* members, and such other official and unofficial members as may be appointed.

During 1933, four unofficial members were so appointed, two being European Elected Members of the Legislative Council, one an Indian Elected Member, and one a Nominated Unofficial Member representing native interests.

The Colonial Secretary is the Chief Executive Officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners who are responsible for their execution. The Colony is divided into four Provinces, each in the charge of a Provincial Commissioner, and three extra-Provincial Districts. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Officers. The Legislative Council consists of the Governor as President, eleven *ex officio* members, not more than nine Nominated Official Members, eleven European Elected Members, not more than five Indian Elected Members, one Arab Elected Member, and one Nominated Unofficial Member to represent the interests of the African community. If one of the Nominated Official Members is not specifically appointed to represent the interests of the Arab community, an additional Unofficial Member is nominated to represent such interests. The Governor has the right to veto any measure passed by the Legislative Council. Certain minor powers are vested in the District and Municipal Authorities in settled areas and in the Local Native Councils in the native areas.

Local Government.

Settled areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the more important townships. In the rural settled areas they had the advice of District Committees and a measure

of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru, and Eldoret, with Municipal Boards, while District Councils were established in the settled portions of the districts of Nairobi, Kyambu, Fort Hall, Naivasha, Nakuru, Kisumu-Londiani, Uasin-Gishu, and Trans-Nzoia. At the same time a Local Government Inspector was appointed to deal with local government administration under a Commissioner for Local Government, an office which was combined with that of Commissioner of Lands, and until the end of 1933 formed part of the Secretariat organization.

The constitution of municipal bodies provides for elected European and Indian members, and nominated members representing Government interests ; at Mombasa for an Arab member ; and in all cases the District Commissioner is included and represents native interests. Members of District Councils are elected on a ward system.

As the result of legislation introduced during the year Municipal Boards now elect their own Chairman, with the exception of Mombasa where the District Commissioner is still statutorily Chairman of the Board. Attention was directed to the possibility of further economies both in the expenditure of local authorities and in the contributions made by the Government to their revenues. The total gross revenue of the four municipalities amounted in 1933 to £194,069 (subject to audit) of which £129,262 accrued to the Nairobi Municipality. Of this total revenue the Government contributed in grants approximately 20 per cent., the balance being raised from assessment rates, licence fees and charges for services rendered. Municipal Authorities may levy assessment rates on capital values up to a maximum of 2 per cent. on site values. In 1933 a rate of 1⅛ per cent. on site values was levied in Nairobi and yielded £23,945 from ratepayers. In Mombasa a small improvements rate was imposed in addition to the site value rate. Nakuru and Eldoret have as yet imposed no assessment rates, but rely on municipal licence fees and charges supplemented by consolidated grants from Government amounting to £2,300 and £2,450 respectively in 1933.

Nairobi, Nakuru and Eldoret control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town planning schemes are in progress under the Town Planning and Development Ordinance, 1931. The execution of the Mombasa town planning scheme was continued under a loan of £250,000, the liability for which the Municipal Board took over from Government in 1931.

In the rural areas, the six District Councils confine their executive functions to roads, the funds for which are derived at present solely from Government grants. These grants amounted to £32,186 in 1933,as compared with £34,598 in 1932, £43,418 in 1931, and £53,098 in 1930. The Councils have improved their district roads in a satisfactory manner. Various causes have contributed to the postponement by Councils of the imposition of local rates, and in so far as Councils remain financially dependent on Government grants and deal only with roads, they represent only a modified and incomplete form of local government. In 1932 the Trans-Nzoia District Council again imposed a hospital-rate in the nature of a poll tax on adult male Europeans resident in the district, for the purpose of maintaining the Kitale Hospital which the Council acquired during 1932, and a similar rate is also levied in the Uasin-Gishu District for the purposes of the Eldoret Hospital, which is maintained jointly by the District Council and the Eldoret Municipal Board.

In other rural settled areas and townships, District Committees, Road Boards, and Township Committees continued to do useful work.

Native areas.—The Local Native Councils in Kenya are a deliberate creation under the Native Authority (Amendment) Ordinance, 1924. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance, and regulation of food and water-supplies, forests, roads, bridges, culverts, public health, the use of land, education, markets and market dues, agriculture, and livestock, etc. The District Commissioners are the Presidents of the Councils and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. At the present time in the majority of Councils a greater portion of members are illiterate. The funds, which are controlled by the Councils, are derived from two main sources : (*a*) from the proceeds of local native rates which they are empowered to impose on the inhabitants of the areas over which they have control ; (*b*) from the proceeds of the rents of land, forest royalties, etc., levied within those areas. The number of Councils remained at 22 throughout the year.

The provision of educational facilities continues to occupy the foremost place amongst the various services rendered by Local Native Councils during 1933.

Details of revenue and expenditure are shown in the following comparative table :—

COMPARATIVE TABLE OF REVENUE AND EXPENDITURE OF LOCAL NATIVE COUNCILS IN 1933.

Province and Council.	REVENUE.			EXPENDITURE (including expenditure on building).							Surplus Balance in hand at end of 1933.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926, and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table :—

	1911.	*1921.*	*1926.*	*1931.*
European, males	2,022	5,800	7,199	9,404
„ females	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
„ females	—	11,640	14,841	20,388
Total males	—	30,142	33,498	46,151
„ females	—	15,491	20,171	27,796

The percentage increase in each section of the population during the last two decades is :—

	European.	*Asiatic.*
1911–1921	204	203
1921–1931	74	59

The proportions in which the various races entered into the total of the non-native population in Kenya at each census year will be seen from the following summary :—

Racial proportions of the total non-native population.

	1911.		*1921.*		*1926.*		*1931.*	
	Number.	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*
European ...	3,175	13·1	9,651	21·1	12,529	23·3	16,812	22·7
Indian ...	10,651	44·1	22,822	50·0	26,759	49·9	39,644	53·6
Goan ...	1,136	4·7	2,431	5·3	2,565	4·8	3,979	5·4
Arab ...	9,100	37·7	10,102	22·1	10,557	19·7	12,166	16·5
Others ...	99	0·4	627	1·5	1,259	2·3	1,346	1·8
Totals ...	24,161	100·0	45,633	100·0	53,669	100·0	73,947	100·0

The ratio of females to males at each census for the two main racial sections of the community is :—

	Europeans. *(females to* 100 *males).*	*Asiatics.* *(females to* 100 *males).*
1911 ...	57	—
1921 ...	66	48
1926 ...	74	56
1931 ...	79	55

The age distribution in ten-yearly groups will be seen from the two following tables :—

Europeans.

	1921.	*1926.*	*1931.*
0- 9	1,604	2,253	2,872
10–19	850	1,303	1,583
20–29	2,160	2,439	3,403
30–39	2,694	3,220	4,010
40–49	1,535	2,024	2,640
50–59	583	868	1,293
60 and over	225	422	1,011

Asiatics.

	1921.	*1926.*	*1931.*
0- 9	7,865	9,895	14,505
10–19	5,501	7,037	9,835
20–29	9,731	9,478	13,273
30–39	6,886	7,469	9,497
40–49	3,360	3,784	5,073
50–59	1,498	1,767	2,024
60 and over	1,141	1,710	2,928

The occupations classified under eight main heads are as follows :—

Europeans.

	1921.	*1926.*	*1931.*
Agriculture	1,893	2,199	2,522
Industry	559	607	991
Commerce	937	1,290	2,168
Government and municipal	1,082	1,294	1,735
Professional	441	706	1,124
Personal or domestic	182	310	343
Retired, married women, and children	1,350	1,830	2,215

Asiatics.

	1921.	*1926.*	*1931.*
Agriculture	498	755	640
Industry	3,679	4,924	6,446
Commerce	6,086	7,769	14,338
Government and municipal	3,390	3,181	2,972
Professional	50	181	264
Personal or domestic	1,241	961	1,452
Retired, married women, and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these eight divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows :—

	European.		*Asiatic.*	
	1926.	*1931.*	*1926.*	*1931.*
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal ...	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children ...		43		

A recent investigation into the question of length of residence in Kenya has enabled the following table to be drawn up. The question is an important one in reference to problems of settlement :-

Years of residence.	*Europeans.*	*Asiatics.*
1–5	7,207	20,847
6–10	3,402	7,610
11–15	1,820	4,536
16–20	1,805	3,459
21–25	772	1,565
26–30	272	1,150
31–35	80	639
36–40	9	372
41–45	4	151
46–50	1	147
51–55	—	39
56–60	—	75
61–65	—	24
66–70	—	27
71–75	—	11
76–80	—	9
81–85	—	—
86–90	—	4
91–95	—	2

The following table shows the approximate number of each race during 1932 and 1933 :—

	Census population.	*Estimated population.*	
	6th March, 1931.	*31st December, 1932.*	*31st December, 1933.*
Europeans ...	16,812	17,249	17,332
Indians	39,644	34,966	33,735
Goans	3,979	33,369	3,246
Arabs	12,166	11,752	11,932
Others	1,346	1,362	1,390
Total	73,947	68,698	67,635

Note.—No reliable returns of births and deaths are available. The estimates in the above table are based on an assumed natural increase of 6 per cent. per annum for Europeans and 10 per cent. per annum for Asiatics, and on the annual excess of migration via Mombasa.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and are related to the number of male adult taxpayers in the various districts. They are, in consequence, subject to a comparatively wide margin of error. The estimated native population in 1933 was 3,017,117 as compared with an estimate in 1927 of 2,793,963, which represents an increase over that period of approximately 13 per cent. No reliable figures of births, deaths, and infantile mortality are obtainable.

Distribution of Population.

The geographical distribution of the population is as follows :—

Province.	*European.*	*Asiatic.*	*Native.*	*Total.*
Coast	1,128	26,297	265,677	293,102
Ukamba	205	955	404,625	405,785
Kikuyu	8,702	19,839	810,251	838,792
Masai	117	463	51,681	52,261
Rift Valley	2,449	2,547	88,870	93,866
Nzoia	2,930	1,976	125,830	130,736
Turkana	23	107	73,300	73,430
Northern Frontier District ...	25	520	68,343	68,888
Nyanza	2,041	3,802	1,128,540	1,134,383
Totals	17,620	56,506	3,017,117	3,091,243

IV.—HEALTH.

General Administration and Organization.

In Kenya, as elsewhere, the ultimate responsibility for the safeguarding and promotion of the public health rests with the Central Government. In every area of the Colony, however, there is a " Local Authority " which to a greater or less degree has, under the general supervision of the State, responsibility in health matters. In Nairobi and Mombasa the greater part of the health staff is now employed by the Local Authority. In the other towns, in the European settled areas and in the native reserves the authority is the District Commissioner and the health staff is employed by Government. Where in the smaller towns there is a Municipal Board, the Board is in effect, though not in law, the Local Health Authority as its opinion is always sought by the Executive Authority. In the native reserves every endeavour is made to interest the Local Native Councils in health matters and these endeavours are meeting with some success. In consonance with Government policy the Director of Medical Services is responsible for providing and distributing both medical relief and health staff to the extent allowed in the sanctioned Estimates, and he acts in consultation with both the Commissioner for Local Government and the Chief Native Commissioner.

Sanitary Work and Administration.

In Nairobi, Mombasa, Nakuru, and Eldoret, sanitary work and administration is almost entirely a function of the local representative authorities and on the whole has been effectively carried out. No major improvements regarding sewage disposal, scavenging, refuse disposal, drainage or water supplies were undertaken during the year in either urban or rural areas of the Colony.

In the native reserves, despite the prevailing depression, fair progress has been maintained in the improved housing and pit latrine campaigns. Some advance can also be recorded in connexion with the protection of local water supplies, the improvement of sanitation at trading centres, reclamation of swamps, etc.

Medical Relief.

In three towns medical relief for Europeans is still provided in Government hospitals, but non-Government hospitals and private nursing homes are now established in a number of the larger centres and are being increasingly used by the European population.

In the native reserves, although medical relief is provided by or through the agency of Missionary Societies, medical services are for the most part provided directly by the State. The greater part of the provision made under the Medical Estimates is expended on this service.

In 1933, the total number of new cases treated at Government hospitals, hospital dispensaries, and out dispensaries for the first time exceeded 1,000,000. Amongst the more important diseases treated, pneumonia, malaria, and helminthic infections may be mentioned. The number of cases admitted to hospitals for surgical treatment continues to increase and admissions for tropical ulcers are still numerous throughout the Colony. As a result of the posting of trained European Nursing Sisters to native hospitals the number of African women admitted as in-patients is steadily increasing.

Special Clinics.

Special clinics for maternity and child welfare work, and for the treatment of venereal disease, have been established at a number of centres. Increasing use is being made of the facilities provided.

Health of Employed Labourers.

Labour conditions on estates, on the railway, and in townships have remained much the same as in the preceding two years, as employers of labour have had no funds at their disposal for major improvements. No serious outbreak of disease occurred and on the whole the health of labourers was satisfactory.

Vital Statistics and the Public Health.

The position with regard to the registration of births and deaths remains unsatisfactory. It has not been possible to provide for the registration and notification of births and deaths amongst Africans, and therefore, no mortality rates can be determined for that race.

The death-rates per thousand of the population for Nairobi, so far as it has been possible to estimate them, are as follows :—

Crude death-rate, all races	17·84	per thousand.
Recorded death-rate, all races ...	14·03	,,
,, ,, European ...	7·19	,,
,, ,, Asian ...	14·89	,,
,, ,, African ...	15·05	,,

No reliable figures are available for Mombasa or other towns or in respect of the African population in the native reserves.

Propaganda.

Large numbers of health pamphlets in English and Kiswahili were issued during the year. At the end of the year a " Development Exhibit " was staged at the December Show of the Royal Agricultural and Horticultural Society of Kenya, which was held in Nairobi. The Exhibit was arranged by the Agricultural, Education, Forest, Medical, and Post Office Departments in co-operation, and took the form of part of a model African village of the future. Parties of chiefs, headmen, and local native councillors, from all over the Colony, were personally conducted round the Exhibit, and there has been evidence since that the Exhibit as a whole was of considerable value.

V.—HOUSING.

European housing in the towns of Kenya is on the whole excellent, and in the rural areas it is slowly but steadily improving. Asian housing in almost every town still leaves much to be desired, but a marked improvement in the housing of this section of the community has taken place during the past few years. As regards African housing, no major schemes were adopted in the urban areas during the year. In the native reserves, however, many improved houses were erected, and the movement for better housing is growing, partly as a result of propaganda on the part of the Medical Department, and of other Departments and bodies engaged in social and educational work. Many of these houses are surprisingly good and with a return of prosperity further progress in this direction may be confidently expected.

VI.—PRODUCTION.

Mineral.

Prospecting was continued throughout the Kakamega and Logorien fields in June, and a third area was thrown open to general prospecting. At the end of the year surface activity at Kakamega contracted a great deal, but a considerable programme of underground exploration was being conducted by four of the bigger companies. In the Logorien and Gori areas, prospecting had brought to light three or four promising lode deposits. In September, an exclusive prospecting licence over an area of 1,450 square miles in North Kavirondo was issued to Tanganyika Concessions Limited.

Few of the alluvial propositions which had at first attracted the individual prospector were at that time being worked, but progress was being made with larger schemes requiring capital and expensive plant.

In June, Government invited applications for exclusive prospecting licences in respect of Areas 3 and 4 of the Kitson Report, applicants being required to furnish evidence of sufficient capital and details of the methods which they proposed to adopt for the proper prospecting of the area. Approximately 1,220 square miles were granted to three companies commanding considerable capital, leaving a balance of approximately 1,646 square miles unallotted.

The mineral production in 1932 and 1933 was :—

	1932.		*1933.*	
	Quantity.	*Value.*	*Quantity.*	*Value.*
		£		£
Gold	9,052 oz.	53,527	10,531 oz. (fine)	67,665
Silver	1,118 „	97	1,613 „ (fine)	113
Lime	900 tons	900	750 tons	750
Marble	400 „	4,000	250 „	2,500

Agriculture.

The main products at present grown exclusively by Europeans are coffee, sisal, tea, wheat, and essential oils. Maize, sugar-cane, wattle, numerous kinds of beans, potatoes, and fruit are produced by Europeans, Indians, and natives. Cotton, sorghums, millets, miscellaneous root crops and other crops are grown almost exclusively by natives in their reserves.

Though certain prices exhibited a measure of recovery during the year, Kenya was still affected adversely by the low prices ruling for primary products. Producers of maize, wheat, sisal, and sugar continued operations under considerable difficulties, and the price of coffee fell to new low levels.

The local production of wheat was again insufficient to meet the local demand, and in consequence importations were necessary.

Acreages and yields of crops produced under European supervision during the census year 1st March, 1933, to 28th February, 1934, compared with those of the previous year, were as follows :—

Crop.	*1933–1934.*		*1932–1933.*	
	Acreage.	*Yield.*	*Acreage.*	*Yield.*
Coffee	102,238	235,009 cwt.	100,387	303,998 cwt.
Maize	112,949	746,893 bags	164,018	1,139,616 bags
Wheat	35,001	145,581 bags	30,114	63,498 bags
Barley	4,435	22,824 bags	3,025	15,845 bags
Sisal	141,495	20,127 tons	139,834	17,369 tons
Tea	12,471	3,063,687 lb.	12,034	2,421,056 lb.
Sugar	12,704	112,980 cwt.	12,088	106,320 cwt.

Reliable figures of native production are not available.

The estimated values of agricultural exports of native origin for the last six years are as follows :—

	1928.	*1929.*	*1930.*	*1931.*	*1932.*	*1933.*
	£	£	£	£	£	£
Animals	11,000	10,300	8,600	5,000	3,600	2,300
Copra and coconuts	23,000	2,500	2,250	1,200	500	1,000
Cotton	24,000	24,800	17,200	6,500	8,600	23,600
Cotton seed ...	—	5,400	5,000	—	500	300
Groundnuts ...	19,659	29,500	16,500	6,000	1,200	3,200
Maize	50,000	45,000	75,000	—	12,500	36,000
Millets	423	240	2,800	20	100	300
Pulse and beans	13,000	12,500	14,000	6,000	6,000	6,000
Simsim ...	27,355	27,500	15,200	5,000	28,500	36,700
Hides	200,000	220,000	105,000	60,000	86,500	130,000
Skins	100,000	87,000	73,000	35,000	15,700	20,000
Oils—various ...	5,000	10,000	6,700	3,200	5,600	6,000
Potatoes ...	7,000	24,000	10,500	13,000	9,300	8,000
Miscellaneous ...	2,000	2,000	2,000	2,000	4,000	5,000
Wattle Bark and extract	—	35,000	42,000	71,000	79,500	66,000
Total ...	482,437	535,740	395,750	213,920	262,100	344,400

A large proportion of the produce grown by Europeans is exported, while native produce is mainly consumed in the Colony. Exports of cotton and simsim in 1933 exceeded those of any previous year, as did those of tea and sugar. Conversion of wattle bark into extract for export again became of importance.

Rules are promulgated from time to time under the Crop Production and Livestock Ordinance, by which power is conferred to inspect and control the type of crop planted and the quality of produce offered for sale. Under this Ordinance the Department of Agriculture administers rules for the marketing of maize, wattle, simsim, and groundnuts. This legislation has been most beneficial in raising the standard of produce. A promising export trade in cashew nuts is anticipated. Legislation to provide for more intensive control of native marketing is under consideration.

Livestock.

As a result of the low prices for crops increasing attention was paid by Europeans to livestock farming. Though development in this direction was hampered by lack of sufficient financial resources considerable progress was made.

Animal products sold by Europeans during the past six census years have been as follows :—

	Milk (whole).	*Cream.*	*Butterfat.*	*Butter.*	*Cheese.*	*Ghee.*	*Wool.*
	gal.	*gal.*	*lb.*	*lb.*	*lb.*	*lb.*	*lb.*
1933–34	939,434	85,678	754,808	307,349	140,633	35,708	931,330
1932–33	1,138,743	73,387	923,042	350,405	155,525	47,110	721,542
1931–32	1,018,868	77,063	675,910	285,320	111,582	96,471	813,662
1930–31	1,101,704	145,796	614,790	312,694	131,168	114,527	654,846
*1929–30	1,027,375	287,657	(*a*)	371,675	108,875	116,117	893,258
*1928–29	791,452	212,914	(*a*)	290,905	145,609	65,215	939,619

* In respect of the period 1st August to 31st July.

(*a*) Included in "Cream."

Exports of the principal animal products of European origin were as follows :—

	Butter.		*Cheese.*		*Bacon and Ham.*	
	Quantity. lb.	*Value.* £	*Quantity.* lb.	*Value.* £	*Quantity.* Cwt.	*Value.* £
1933 ...	841,568	27,268	52,976	2,186	691	4,638
1932 ...	1,035,104	40,604	57,344	2,421	543	3,498
1931 ...	708,512	35,618	73,248	2,916	857	5,252
1930 ...	873,448	53,065	58,352	2,919	1,311	6,318

There was an increased consumption of meat and clarified butter (or ghee) by natives in agricultural districts.

Manufactures.

Beer and Stout.—Standard gallons produced in 1933 amounted to 112,914.

Soap.—Exports of local manufacture during the year amounted to 12,977 cwt. valued at £9,468.

Aluminium Hollow-ware.—The progress of local manufacture is reflected in the following figures :—

	Imports.		*Exports of Local Manufacture.*	
	Tons.	£	*Tons.*	£
1930	89	14,470	3	444
1931	12	2,322	18	2,935
1932	2	957	21	4,771
1933	3	827	34	6,951

Organization of Production.

As regards European cultivation the production of sisal, requiring as it does large capital outlay, is conducted mainly by companies. Coffee is produced partly by companies but mainly by individual agriculturists. The cultivation of maize, wheat, barley, etc., and the livestock industry, is chiefly in the hands of the individual agriculturist, though the manufacture of butter is largely conducted by co-operative creameries. The average numbers of native labourers employed on European holdings during 1933–34 were as follows :—

Men...	81,883
Women	3,536
Children	14,771
Casual	6,685
	106,875

No significant change occurred as compared with the previous year.

In regard to native agriculture, production is almost entirely conducted by individuals who, in the main, cultivate sufficient crops to supply the food requirements of themselves and their families, and a surplus which they sell in order to obtain money for their other requirements.

The manufacture of beer is in the hands of a company.

Soap is manufactured by companies, mainly situated on the coast.

Indian Agriculture.—Indian cultivation is limited to the Kibos-Miwani area in the Nyanza Province and to small scattered areas in the Central and Coast Provinces. A census of Indian agriculture was not taken during the year, but in the Nyanza Province it was estimated that 4,884 acres were under sugar-cane and 1,681 acres planted with maize. In the Coast Province some 3,800 acres are held by Indians, this area being devoted almost exclusively to coconuts.

Native Agriculture.—Considerable progress has been achieved during recent years in the improvement in the quality and variety of crops grown, in cultural methods, and in marketing. The benefits from the trial and acclimatization of crops conducted in former years are now becoming apparent.

Improvement of crops largely depends upon ample supplies of seed of high yielding quality and in the past this was provided from public funds. Local Native Councils have provided land and funds for seed farms in most agricultural districts. These farms have now proved their value and will be extended as circumstances permit. Local Native Councils also vote funds for the payment of a certain number of Native Agricultural Instructors.

Native Agricultural Schools have been established at Nairobi mainly for the Kikuyu and Ukamba Provinces, and at Bukura for the Nyanza and Rift Valley Provinces. At these schools the importance of maintenance of soil fertility and prevention of soil erosion is stressed in addition to ordinary crops and routine farm work. The problem of soil erosion continued to receive attention and successful reclamation for demonstration purposes in the Central Province has aroused the keen interest of the natives.

Five Native Animal Husbandry Training Centres are now in full operation. The varied branches of the management of cattle and treatment of disease are taught, and because quarantine stations are centred on these schools facilities are given for instruction in the control of disease. Under supervision, pupils carry out inoculations of cattle and other work of similar nature.

An important branch of work in native reserves is the organization of marketing native produce with the object of raising prices and the standard of quality. The system consists of marketing produce through a commission agent. Local Native Councils erect suitable stores as collecting centres adjacent to railway stations.

At present organized marketing is limited to wattle bark in the Central Province, cotton in the Nyanza Province, and cotton and cashew nuts in the Coast Province.

Propaganda for the better preparation of hides and skins continues. The premium offered for shade-dried as compared with sun-dried hides is now sufficient to induce natives to undertake the extra work involved in shade-drying hides.

The production of ghee continues in spite of the continued fall in price of this commodity. The Colony now produces sufficient for domestic requirements, but continued to import low-priced ghee from Tanganyika. Exports from Kenya in 1933 showed a further increase. Prospects of an export trade appear promising. The populations of pastoral districts depend very largely upon meat, milk, and ghee for their subsistence. Nairobi, Mombasa, Kisumu, and other towns provide markets for cattle and sheep, both graded and native. A new departure of considerable promise is the supply of cream from native reserves to the co-operative creameries in operation in the Colony.

The presence of disease necessitates the strict administration of quarantine regulations prohibiting the movement of cattle from the native reserves, except through authorized quarantine stations, but sufficient movement is permitted to supply market requirements.

VII.—COMMERCE.

General.

Because Kenya and Uganda are one administrative unit for the purposes of Customs, an accurate estimate of the balance of trade of the territories individually is impracticable. On the one hand, Kenya is largely a distributing centre and, on the other, the overseas trade of Uganda passes, in the main, through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £525,355 was transported through Kenya and shipped at Mombasa during the year, and goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1933 were valued at £536,172. The combined value of trade imports and total exports (i.e., exports of domestic produce and re-exports) of Kenya and Uganda for the year 1933 amounted to £11,993,318 as compared with £10,533,567 in 1932, and £10,597,969 in 1931, the total volume of trade of all classes, including importations on Government account, transit and transhipment traffic, being valued at £12,471,539 as against £10,959,941 in 1932 and £11,543,851 in 1931. The value of total imports during the year was £4,898,722 as against £4,874,572 in 1932, an increase of £24,150 or ·495 per cent. Exports of the domestic produce of the territories were valued at £5,711,609 as compared with £4,505,860 in 1932. Of this total, goods to the value of £2,246,999 originated in Kenya, the domestic exports of Uganda calculated in terms of the f.o.b. value at the port of final shipment from the two territories being valued at £3,464,610. Bonded stocks on hand at 31st December, 1933, amounted to £201,628 or £43,972 less than the value of goods remaining on hand in bonded warehouses at the end of the previous year.

So far as the export trade in Kenya produce is concerned, a decrease in value of £33,983 or 1·49 per cent. as compared with exports during the previous year is recorded. Coffee exports decreased by 18,944 cwt. in quantity and £382,518 in value and wattle bark by 20,464 cwt. in quantity and £32,197 in value. There were, however, encouraging increases in quantity and value for the following commodities, viz., maize 616,632 cwt., £95,022; sugar 66,646 cwt., £49,118; tea 11,210 cwt., £47,405; sisal fibre 4,311 tons, £62,063; hides and skins 38,227 cwt., £45,036; wattle extract 18,950 cwt., £13,095; sodium carbonate 5,788 tons, £24,941; cotton 6,144 centals, £14,995.

Commodity prices for various primary products have shown a hardening tendency during the year and continued activities in the development of mineral resources and the absence of locust infestation combined with the cumulative effects of measures of economic reconstruction in the producing industries of the territories engendered a feeling of cautious optimism; the trading position, nevertheless, has remained obscure. The very considerable expansion in the value of exports during the year has not resulted in an equivalent increase in the value of dutiable imports and the spending power of the community obviously has been subjected to the limitation imposed by obligations to reduce liabilities incurred during the darker periods of depression and has been diverted to some extent by an inclination to purchase locally produced commodities in preference to the imported article with a resultant encouragement to local industries established within the Customs and Excise Agreement Zone of Kenya, Uganda and Tanganyika Territory.

In times of restricted spending capacity the element of price as opposed to quality assumes a greater importance than is the case in ordinary circumstances and it became necessary therefore in June of the year under review to effect tariff adjustments on an alternative specific or *ad valorem* basis for certain goods in order to secure a duty approximately equivalent to the contribution to the Revenue exacted from similar goods before depreciated currencies, low costs of production and other incidental factors stimulated importations at abnormally low prices. As noted in the Report for the year 1932, world conditions continue to be the dominant factor and trade recovery cannot be expected until primary product prices maintain a level sufficient to build up internal reserves for import and export trade expansion unfettered by the liabilities imposed by the depression period.

Net collections of Customs revenue amounted to £871,909 as compared with £882,500 accruing in 1932. Of this sum £581,706 was allocated to Kenya and £290,203 to Uganda.

Imports.

The percentage division of trade between the principal sources of supply during the past two years is as follows :—

	1932. *Per cent.*	1933. *Per cent.*
United Kingdom	39·29	38·28
British Possessions	24·11	25·14
TOTAL BRITISH EMPIRE ...	63·40	63·42
Germany	2·61	3·13
Belgo-Luxemburg Economic Union	1·60	1·85
France	1·61	1·24
Italy	1·24	1·13
Netherlands	3·97	3·43
Japan	10·99	12·92
Persia	2·52	2·97
United States of America ...	5·28	4·34
Dutch East Indies	3·35	1·83
Other Foreign Countries	3·43	3·74
TOTAL FOREIGN COUNTRIES ...	36·60	36·58

The following is a summary of the main items from the principal sources of supply, values in respect of 1932 being given in brackets :—

United Kingdom :—Whisky, £61,294 (£62,625) ; cigarettes, £75,542 (£72,586) ; cement, £36,620 (£38,747) ; galvanized sheets, £35,755 (£37,914) ; tubes, pipes and fittings, £23,228 (£51,335) ; tin, bar, plate or sheet, £25,421 (£19,873) ; aluminium sheets, £12,951 (£16,970) ; agricultural and horticultural tools, £12,305 (£14,727) ; electrical goods and apparatus, £36,644 (£35,254) ; electrical machinery, £13,249 (£22,886) ; industrial machinery, £92,477 (£40,894) ; cotton textiles, £146,022 (£153,965) ; fishing and trawl nets, £17,966 (£14,816) ; wearing apparel, £28,073 (£35,539) ; chemicals, drugs, dyes and colours, £105,710 (£113,072) ; lubricating oils and greases, £20,174 (£13,495) ; soap, £18,989 (£19,028) ; paper and stationery, £66,619 (£62,149) ; motor vehicles and bicycles, £89,148 (£83,528) ; tyres, £32,479 (£37,242) ; total, £1,875,113 (£1,915,374).

India :—Rice, £22,311 (£28,539) ; wheat meal and flour, £13,411 (£20,902) ; cotton textiles, £38,194 (£45,974) ; jute bags and sacks, £127,456 (£127,851) ; total, £318,147 (£350,221).

Union of South Africa :—Coal, £95,392 (£71,975) ; total, £119,620 (£94,116).

Canada :—Motor vehicles, £58,688 (£50,764) ; tyres, £18,450 (£18,412) ; total, £92,777 (£76,508).

Australia :—Wheat, £33,806 (£30,293) ; total, £36,948 (£34,625).

Germany :—Agricultural and horticultural tools, £13,513 (£19,272) ; shovels, spades, axes and matchets, £5,512 (£3,932) ; cotton textiles, £7,486 (£4,594) ; total, £153,077 (£127,195).

Netherlands :—Tobacco, manufactured, £51,127 (£72,801) ; cotton textiles, £87,917 (£78,726) ; total, £167,801 (£193,415).

Japan :—Cotton textiles, £383,415 (£306,614) ; artificial silk piece-goods, £67,616 (£73,056) ; apparel, £62,086 (£62,137) ; total, £633,007 (£535,669).

Persia :—Fuel oil, £90,511 (£110,107) ; motor spirit, £31,385 (£23) ; kerosene, £22,981 (£12,296) ; total, £145,369 £122,860).

United States of America :—Cotton textiles, £17,237 (£28,446) ; lubricating oils and greases, £24,798 (£27,883) ; motor spirit, £13,504 (£33,460) ; kerosene, £8,434 (£13,249) ; motor vehicles, £62,638 (£76,114) ; tyres, £11,864 (£6,526) ; total, £212,763 (£257,611).

Dutch East Indies :—Fuel oil, £19,801 (£17,452) ; motor spirit, £54,112 (£111,972) ; kerosene £11,331 (£28,560) ; total, £89,694 (£163,516).

Cotton Textiles.—During 1933 the value of cotton textiles imported was £745,320 or 15·21 per cent. of all goods imported. Transfers to Uganda were valued at £315,634.

The average value per yard in imported cotton textiles was 3·0d. as compared with 3·4d. in 1932 and 4·3d. in 1931 ; cotton blankets showing a value per blanket of 1s. 2·9d. as against 1s. 4·6d. in 1932 and 1s. 3·9d. in 1931.

Importations from Japan show an increase in value as compared with importations from all other sources amounting in 1933 to 51 per cent. of the total textile trade as compared with 43 per cent. in 1932 and 41 per cent. in 1931. The share of the United Kingdom in this trade has slightly declined in value and the increase in importations from Japan has been mainly at the expense of other foreign countries. If calculations are made on a yardage basis, however, the dominant position of Japan in this trade is accentuated.

Belgium, Holland, and Czechoslovakia provide the bulk of imported cotton blankets, grey sheeting (americani) being supplied principally by Japan and to a less extent by the United States of America.

Vehicles.—720 motor-cars, 532 motor-lorries, 7 motor-tractors, 67 motor-bicycles, 2,845 pedal cycles, valued at £216,498, were imported during the year as against 689 motor-cars, 408 motor-lorries, 4 motor-tractors, 90 motor-cycles, and 1,295 pedal cycles, of a total value of £215,176, in the previous year. Imports from the United Kingdom were valued at £89,148, or 41 per cent. of the total, as against £83,528 or 39 per cent. in 1932.

Importations of tyres and tubes were valued at £93,520, as compared with £89,331 in 1932, the principal sources of supply being as follows (figures for 1932 being given in brackets); United Kingdom, £32,469 (£37,242); Canada, £18,450 (£18,412); France, £12,979 (£23,836); United States of America, £11,864 (£6,526); Japan, £7,852 (£1,545); Italy, £7,218 (£159). The increasing interest of the United States of America, Japan, and Italy in this market is noted.

Building Materials.—Importations of building materials have increased in quantity during the year, cement rising from 16,445 tons in 1932 to 19,260 tons. Of this latter quantity the United Kingdom supplied 12,203 tons as compared with 12,296 tons in the preceding year and Japanese importations increased from 4,008 tons in 1932 to 6,930 tons in the year under comment. Importations of cement clinker for use in the first Kenya established industry for the manufacture of cement, commenced in July and totalled 4,995 tons valued at £6,994 by the end of the year, the country of origin being the United Kingdom.

Galvanized corrugated iron sheets increased from 2,782 tons, valued £35,895, in 1932 to 4,244 tons, value £56,384, in 1933, the principal countries of supply (figures for 1932 being given in brackets) being United Kingdom 2,347 tons, value £31,882 (2,739 tons, value £35,351); Belgo-Luxemburg Economic Union 1,894 tons, value £24,469 (43 tons, value £544). A remarkable increase in supplies of Belgian manufacture is evidenced by these figures.

Re-Exports, Transit and Transhipment Trade.

The value of goods re-exported during 1932 amounted to £1,595,687 or 34·05 per cent. of the total value of trade imports, as compared with £1,364,848 or 29·27 per cent. in 1932. Transit and transhipment traffic reached the values of £68,805 and £196,716 respectively, as against £60,247 and £154,414 in 1932.

Exports.

General.—The domestic exports of Kenya and Uganda are mainly agricultural, the principal exceptions being carbonate of soda procured at Lake Magadi in Kenya and tin ore mined in Uganda, and were valued at £5,711,609, as compared with £4,505,860 in 1932 an increase of 26·76 per cent.

The state of the Kenya wheat industry was such as to prevent any revival in the export trade of this commodity which in 1931 totalled 63,644 cwt. Coffee and wattle bark together account for a decrease of £427,239 in value. Otherwise and in addition to the outstanding increase in shipments of Uganda cotton and to the forced exportation of surplus stocks of sugar, the export trade has shown an encouraging measure of expansion.

The percentage division of trade between the principal overseas markets during the past two years is as follows :—

Countries of Destination.	1932. *Per cent.*	1933. *Per cent.*
United Kingdom	39·32	35·67
British Possessions	43·58	42·32
Total British Empire	82·90	77·99
Foreign Countries :—		
Germany	1·99	1·48
Belgo-Luxemburg Economic Union	2·77	3·06
France	0·61	0·64
Italy	0·91	0·89
Netherlands	1·09	1·06
Hadramaut	0·30	0·24
Japan	2·75	7·88
Egypt	0·95	0·71
United States of America ...	2·01	1·65
Italian Somaliland and Colonia Erytrea	0·97	1·84
Other foreign countries	2·75	2·56
Total Foreign Countries ...	17·10	22·01

The increased percentage of exports consigned to Japan, is noticeable, as also is the decline in shipments to the United Kingdom.

The following is a summary of the principal commodities exported to the more important markets, relative figures for 1932 being given in brackets :—

United Kingdom.—Coffee, £566,052 (£1,055,701) ; cotton, £530,730 (£144,470) ; cotton seeds, £26,848 (£137,888) ; sisal fibre and tow, £75,440 (£57,529) ; hides and skins, £51,081 (£58,190) ; maize, £141,999 (£53,361) ; gold bullion, £69,437 (£63,735) ; butter, £17,061 (£33,444) ; tin ore £40,809 (£45,504) ; wool, £27,210 (£28,221) ; total, £2,037,254 (£1,771,559).

Aden.—Coffee, £53,070 (£61,842) ; total, £54,539 (£66,953).

India.—Cotton, £1,806,392 (£1,428,019) ; sodium carbonate, £12,826 (£28,025) ; total, £1,835,313 (£1,473,764).

Canada.—Coffee, £68,251 (£80,963) ; total, £77,884 (£86,142).

Australia.—Sodium carbonate, £49,500 (£28,575) ; coffee, £19,232 (£16,923) ; total, £68,907 (£57,846).

Tanganyika Territory.—Sugar, £60,764 (£60,423) ; wheat meal and flour, £23,568 (£20,163) ; cigarettes, £13,232 (£17,947) ; tea, £10,530 (£10,819) ; soap, £8,395 (£6,958) ; butter, £5,934 (£5,557) ; maize, £11,331 (£841) ; total, £200,083 (£165,317).

Union of South Africa.—Coffee, £94,657 (£46,215); sodium carbonate, £6,857 (£3,467); groundnuts, £1,701 (£6,355); total, £110,660 (£58,889).

Germany.—Coffee, £5,694 (£5,859); sisal fibre, £26,768 (£20,824); hides and skins, £21,855 (£17,016); barks for tanning, £8,077 (£17,613); seeds, sesame, £348 (£8,084); total, £84,448 (£89,747).

Belgo-Luxemburg Economic Union.—Sisal fibre and tow, £102,557 (£75,003); hides and skins, £36,452 (£24,222); wool, £11,271 (£9,334); total, £174,853 (£124,782).

France.—Coffee, £17,086 (£12,925); hides and skins, £12,576 (£9,347); total, £36,640 (£27,661).

Italy.—Seed, sesame, £6,571 (£12,943); hides and skins, £33,357 (£18,403); sisal fibre, £1,749 (£3,389); total, £51,012 (£41,098).

Netherlands.—Maize, £5,802 (£4,875); wattle bark, £21,777 (£25,608); sisal fibre, £16,451 (£10,476); total, £60,738 (£49,058).

Japan.—Sodium carbonate, £110,612 (£93,604); cotton, £324,074 (£4,751); barks for tanning, £12,555 (£5,017); total, £450,042 (£123,903).

United States of America.—Coffee, £72,352 (£55,355); skins, £6,887 (£13,282); wattle bark, £4,192 (£9,641); sisal fibre, £2,375 (£4,674); total £94,132 (£90,448).

Cotton.—Exports of raw cotton amounted to 1,179,315 centals originating in Uganda and 10,660 centals in Kenya, the total value being £2,705,794, and show an increase in quantity of 356,156 centals with an increase in value of £1,113,033 as compared with 1932. The declared value per cental of 100 lb. was £2 5s. 6d. as against £1 18s. 3d. in 1932. Cotton seed exported during the year under review increased to 81,377 tons valued at £262,848 as against 56,481 tons valued at £168,899 in 1932.

Coffee.—Coffee takes second place in domestic exports. Details are as follows:—

Description.	*Produce of Kenya.*		*Produce of Uganda*		*Total Shipments.*	
	Quantity.	*Value.*	*Quantity.*	*Value.*	*Quantity.*	*Value.*
	Cwt.	£	Cwt.	£	Cwt.	£
Hulled...	247,269	823,708	100,116	210,161	347,385	1,033,869
Parchment	291	712	273	437	564	1,149
Unhulled (cherry) ...	9,412	6,777	55	40	9,467	6,817
Total 1933	256,972	831,197	100,444	210,638	357,416	1,041,835
Exports during 1932 were...	275,916	1,213,715	87,077	223,162	362,993	1,436,877
Decrease	18,944	382,518	—	12,524	5,577	395,042
Increase	—	—	13,367	—	—	—

Maize.—Exports of this commodity increased in quantity by 616,813 cwt. and in value by £95,015 in comparison with the previous year, the 1933 figures being 1,133,169 cwt. valued at £212,986 as against 516,356 cwt. valued at £117,971 exported during 1932.

Sisal fibre and sisal tow.—Exports of sisal fibre show an increase in quantity of 4,311 tons and in value of £62,063.

Sisal tow exports increased to 710 tons in quantity and to £6,516 in value as against 556 tons valued at £5,285 in 1932.

The average declared value of sisal fibre and sisal tow per ton was £12 11s. 9d. in 1933 as compared with £12 2s. 6d. in 1932 and £14 10s. 10d. in 1931.

Hides and Skins.—Exports show an increase in value, comparative figures being, 1932 £151,432 and 1933 £181,687. Exporters' declarations show that hides and skins to the value of £22,346 originated in Uganda in 1933.

Gold.—Gold exports increased from 14,913 troy oz., valued at £64,845 in 1932 to 15,914 troy oz. valued at £69,452.

Sodium Carbonate.—Exports show an increase of 5,988 tons in quantity and £24,221 in value as compared with 1932.

Wheat.—Domestic exports decreased from 1,727 cwt. valued at £525 in 1932 to 118 cwt. valued at £50 in 1933.

Sugar.—Exports of sugar increased to 226,443 cwt. (£195,537) from 56,617 cwt. (£62,629), the principal source of supply being Uganda, and the principal countries of destination Tanganyika Territory and the United Kingdom.

Tea.—Exports of tea have risen from 6,369 cwt. (£29,829) in 1932 to 17,731 cwt. (£78,022) in 1933; of this 13,149 cwt. were consigned to the United Kingdom.

Inter-Territorial Trade.

In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1933, the value of local produce sent from Kenya to Uganda amounted to £117,303 as compared with £140,160 in 1932, and £146,166 in 1931, the principal commodities involved being soap, wheat meal and flour, maize meal and flour, animals (living) for food, beer, tea, timber, and coconut oil. The value of Kenya produce exported to Tanganyika Territory amounted to £113,487 as compared with £99,710 in 1932.

Under the Customs Agreement of 1927 the free interchange of imported goods between Kenya, Uganda, and Tanganyika Territory is allowed, the value of imported merchandise transferred from Kenya-Uganda to Tanganyika Territory during 1932 amounting to £499,810 (including specie valued at £123,045) and the total Customs duty collected by the Kenya and Uganda Customs Administration and transferred to Tanganyika Territory under this Agreement reached a figure of £94,611. Traffic in imported goods in the reverse direction was valued at £86,647 (including specie to the value of

£54,450) the Customs duty involved being £7,177. Tanganyika Territory produce passing through Kenya for shipment at Mombasa amounted in value to £525,355.

Air Traffic.

Considerable use of the Customs aerodromes established at Mombasa, Nairobi, Kisumu, and Entebbe was made by aircraft on foreign service during the year and comparative figures are as follows :—

Year.	*Landed.*			*Shipped.*		
	Number of craft arrived.	*Number of Passengers.*	*Value of cargo.*	*Number of craft departed.*	*Number of Passengers.*	*Value of cargo.*
			£			£
1932 ...	434	441	6,321	436	449	72,152
1933 ...	477	500	18,692*	460	491	109,572

* Bullion transhipped £11,681.

Outward cargo during 1932 and 1933 included bullion valued at £64,815 and £89,981 respectively.

Excise and Beer Duties.

The co-ordination and allocation of Excise duties between Kenya, Uganda, and Tanganyika Territory is covered by the Excise Agreements Ordinance, 1931, and the rates of duty imposed during the year were as follows :—

	Shs.
Sugar	1·00 per cwt.
Tea	0·10 per lb.
Cigarettes	0·75 per lb.
Manufactured tobacco ...	0·50 per lb.
Beer	40·00 per standard barrel of 36 gallons.

Operations during the year were as under :—

(*a*) *Sugar.*—Ten sets of premises were licensed during the year (six in Kenya and four in Uganda). Deliveries from factories amounted to 22,877 tons of which 7,781 tons were manufactured in Kenya and 15,096 tons in Uganda. The total sum brought to account during the year in respect of the Excise duty on sugar was £14,867.

(*b*) *Tea.*—Fifteen sets of premises were licensed during the year (eight in Kenya and seven in Uganda). Deliveries from factories amounted to 3,277,692 lb., of which 3,212,084 lb. were manufactured in Kenya and 65,608 lb. in Uganda. The Excise duty on tea brought to account in the year under review was £6,856.

(*c*) *Cigarettes and Tobacco.*—Ten sets of premises were licensed during the year (three in Kenya and seven in Uganda). Deliveries from factories amounted to 187,332 lb. cigarettes all of which were manufactured in Uganda, and 76,161 lb. other manufactured tobacco of which 461 lb. were manufactured in Kenya. The amount of Excise duty brought to account under this heading was £9,134.

(*d*) *Beer.*—One brewery situated in Kenya was licensed under the Beer Ordinance, 1933; the revenue accruing from the local manufacture of beer during the past three years being as follows:—

	£
1931	2,596
1932	5,214
1933	6,275

Allocations under the Excise Agreements Ordinance were as follows:—

	Country of Consumption.			
Articles.	*Kenya.*	*Uganda.*	*Tanganyika Territory.*	*Total.*
Sugar:	£	£	£	£
Kenya produce	4,530	1	135	4,666
Uganda produce	3,368	3,936	2,897	10,201
Tanganyika Territory produce transferred.	29	...	...	29
Total	£7,927	3,937	3,032	14,896
Tea:				
Kenya produce	3,873	1,518	1,274	6,665
Uganda produce	17	172	2	191
Tanganyika Territory produce transferred.	4	...	...	4
Total	£3,894	1,690	1,276	6,860
Tobacco and Cigarettes:				
Kenya produce	13	...	...	13
Uganda produce	648	6,323	2,150	9,121
Tanganyika Territory produce transferred.	913	5,331	...	6,244
Total	£1,574	11,654	2,150	15,378
Beer:				
Kenya produce	5,239	507	529	6,275
Tanganyika Territory produce transferred.	12	...	...	12
Total	5,251	507	529	6,287
Grand Total	£18,646	17,788	6,987	43,421

NOTE.—For more detailed particulars in regard to imports, exports, sources of supply, countries of destination, etc., reference is invited to the Annual Trade Report of Kenya and Uganda or to the Annual Blue Book of the Colony

Ivory.

Two sales by public auction of Kenya and Uganda Government ivory were undertaken by the Department during the year, the prices realized being satisfactory in comparison with world market rates which were depressed. The total weight of ivory sold was 78,802 lb. (Kenya 31,919 lb., Uganda 46,883 lb.) and the total amount realized was £19,413 (Kenya £7,340, Uganda £12,073).

VIII.—WAGES AND COST OF LIVING.

The wages of " domestic servants " approximate to the following averages :—

	Range. *Sh. per month.*	*Normal Wage.* *Sh. per month.*
House and Personal Boys ...	15 to 50	35 and 20
Cooks	30 ,, 70	35 ,, 40
Dhobies	20 ,, 45	30
Kitchen Boys	10 ,, 20	15
Garden Boys	8 ,, 20	16
Seychellois and Arab Nurses ...	50 ,, 100	70
Native Nurses	30 ,, 60	40
Visiting Sweepers	3 ,, 5	3

Comparison with the corresponding figures for 1932 shows that there have been further reductions at the upper end of the range.

The absence of later data precludes the inclusion in this Report of figures of the rates of wages of labourers in the various classes of employment more recent than those included in the Report for the year 1932, which were as follows :—

Government Employ.	*Monthly wage including value of rations.* Sh.
Railway	20 to 45
Defence	38 ,, 50
Other Government Departments ...	26 ,, 95
Municipalities	23 ,, 45
Agriculture	13 ,, 43
Other Employment.	
Mines	6 ,, 20
Timber industry	
Firewood	
Building trade, etc.	

The general downward tendency in the wage level, due to the prolonged financial depression, has continued during 1933 and it has been estimated that the average wage level for that year was as much as from 15 to 30 per cent. below the corresponding level in 1931. Labourers enjoying comparatively higher rates of wages have suffered a greater percentage reduction than those with smaller wages. A labourer's working day averages eight hours.

There has been no improvement in the scales of remuneration of Europeans and Indians engaged in commerce, nor in the rates of wages of Indian carpenters, stone masons, and similar skilled artisans.

Cost of Living.

Cost of living figures and a determination of the price-level of commodities have been obtained by the Statistical Department since 1927, and an analysis of all available data has been extended backwards to 1924.

The following table shows the index numbers for the period 1924–1933 :—

Year.			*All articles.*	*Locally produced articles.*	*Imported articles.*
1924	...	...	100	100	100
1925	...	...	101	109	98
1926	...	...	99	112	95
1927	...	...	95	109	91
1928	...	...	96	114	90
1929	...	...	95	111	90
1930	...	...	92	104	88
1931	...	...	87	97	83
1932	...	...	84	93	82
1933	...	...	82	87	80

The impression that has arisen that prices have fallen to the pre-war level is erroneous. The prices of 51 articles, excluding vegetables, petrol, rents, and servants, are still 45 to 55 per cent. above the pre-war level. If petrol, transport, vegetables, etc., are included the general price-level affecting the cost of living at the end of 1933 must be about 58 per cent. above the pre-war level.

In regard to the cost of living of native labourers, in the great majority of cases the labourer is provided with rations which consist mainly of maize meal and meat, salt, etc., by the employer. The majority of labourers draw their staple food in kind, and not in cash, and are therefore not affected by fluctuations in price. The staple food-stuff is maize meal and the average consumption is 2 lb. per day costing approximately Sh. 3 *per mensem* and additional rations Sh. 2 *per mensem*. In short, a native labourer receives his board and lodging free plus two or three times its value in cash.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

European Education.

Government secondary education is provided at two schools, the Prince of Wales School at Kabete for boys, and the Girls' Secondary School in Nairobi for girls. Altogether there were 230 pupils in the Government secondary schools. Including these two schools, there were at the end of the year 1,113 pupils in 14 Government institutions. Of these 424 were boarders and 689 day scholars, and 644 were boys and 469 girls. There were 15 private schools with a total roll of 526 pupils. Four of these schools rank as secondary schools, though a large number of the pupils in them are in the primary stage only. Two preparatory schools for boys (total roll 107) prepare pupils for entrance to public schools overseas.

Indian and Goan Education.

There are two large Government secondary schools for Indians, one in Nairobi and the other in Mombasa. The organisation makes it necessary to include a large number of primary pupils in both these schools. Altogether the roll of these two institutions is 1,271. The total roll in the Government Indian schools is 2,536 of whom 2,312 are boys and 224 are girls. There are boarding facilities at one school only, the Senior Secondary School, Nairobi, which has 35 boarders. After taking the Preliminary Cambridge examination in the primary schools, pupils may proceed to one of the two secondary schools where they sit for the Junior Cambridge and, later, the London Matriculation examinations.

During the year under review, 51 schools in various parts of the country were in receipt of a grant-in-aid ; in these schools there were 2,831 pupils. One school only was of secondary status. In nine unaided schools there was a total roll of 467.

Altogether in non-Government Indian schools there were 3,298 pupils of whom 1,353 were boys and 1,945 girls.

Arab Education.

Arab schools exist at Shimo la Tewa (where secondary education is concentrated), and at Malindi and Mombasa. There are two out-schools connected with the Ali bin Salim school, Malindi, and there is a small night school at Lamu. There were 501 on the roll of the six Arab schools, all of them being boys.

In 1933, for the first time, pupils took the Cambridge Examinations. Of six candidates for the Junior three passed and of eleven candidates in the Preliminary six passed.

African Education.

The Local Native Councils continue to show great interest in educational development and in 1933 contributed the sum of £6,610 towards the maintenance of Government African schools, and £8,350 in capital expenditure.

Secondary education remains under control of the Missions, the Alliance High School at Kikuyu catering for pupils from schools of the Protestant Alliance of Missions, and the Catholic Training School at Kabaa for pupils from Catholic schools. These two schools have a total roll of 407 but of the 301 pupils at Kabaa 210 are at the Primary stage.

There were 44 Government African schools with a total roll of 3,530 at the end of the year. The Jeanes School at Kabete continues to train visiting teachers, agricultural, and health workers ; co-operation is maintained with the Agricultural and Medical Departments with regard to the training of these agricultural and health workers. The number of technical apprentices at the Native Industrial Training Depot had to be reduced to meet changed conditions.

During the year the sum of £34,534 was expended on grants-in-aid from central funds. This sum together with the sum of £4,803 contributed by Local Native Councils assisted 247 African schools which had a total roll of 26,872 pupils. In addition there were 1,230 schools with a roll of 64,175 pupils which were not in receipt of any financial assistance.

Administration.

The post of Chief Inspector of Schools remained in abeyance, and at the close of the year the staff consisted of the Director, the Supervisor of Technical Education, and five Inspectors of Schools. At least one inspector at a time was absent from the Colony on leave for the whole of the year. Inspectors were stationed at the Coast, Nairobi, Kikuyu, and Nyanza.

The four Advisory Councils for European, Indian, Arab, and African Education respectively and the various School Committees and African School Area Committees met regularly and rendered valuable service in advising the Director during the year. The work of the African Advisory Committee included the drafting of new grant-in-aid rules to become operative in 1935.

Examination Results.

The following tables show the number of candidates who entered and passed overseas secondary examinations during the period 1929 to 1933 :—

Cambridge Junior.

Welfare Institutions.

The Lady Northey Home for European children is maintained by public subscription and fees collected. The Lady Grigg Welfare Institutions for Indians and Africans continue their good work.

---

* A pass with the necessary credits gives London Matriculation Exemption.

The League of Mercy, the British Legion and the Salvation Army carry out valuable services on behalf of the needy, especially children. As usual the Seaside Holiday Camp for European Children was held in Mombasa during the August vacation. A considerable number of children from the Highlands were assisted to enable them to enjoy a holiday at sea level. Funds to assist such cases are raised by voluntary contributions.

X.—COMMUNICATIONS AND TRANSPORT.

Posts and Telegraphs.

The scheme of unification of the administrative control of the Post and Telegraph Services of Kenya and Uganda with those of Tanganyika Territory agreed upon in 1932 came into operation on 1st January, 1933. In practical effect this scheme is an extension to Tanganyika Territory of the amalgamated arrangement which had already existed between Kenya and Uganda. The new arrangement was smoothly effected and its practical working during the year revealed no unforeseen difficulties.

The Trans-African Air Mail Service, which is operated by Imperial Airways Limited, was maintained with commendable regularity, The service is a weekly one. Under a "summer" time-table. introduced on 7th May, the time taken between Kenya and England was reduced from seven to six days. The "winter" time-table, under which the time taken is seven days, was re-introduced on 7th October, 1933. The establishment of an immediate connexion at Cairo between the African Service and the Company's Indian Service enabled the time taken for air mails from Kenya to India to be reduced from twelve to six days.

The local Feeder Air Service, operated between Nairobi, Mombasa, Zanzibar, Tanga and Dar-es-Salaam, in connexion with the main Imperial Airways service, was efficiently maintained by the contractors, Messrs. Wilsons Airways Limited. The service is of great benefit and advantage to the Coast area.

Air mail correspondence posted in Kenya amounted to 401,752 letter packets, weighing 10,789 lb. Air correspondence received amounted to 307,970 letter packets, weighing 8,755 lb. Of the Colony's total overseas letter mail correspondence approximately 21·3 per cent. was carried by air.

The air parcel service is still restricted to certain countries. During the year 2,208 air parcels were posted in the Colony and 1,470 received.

The facilities for sending money-orders by air from the Colony to Great Britain, Northern Ireland, and the Irish Free State, provided in 1932, were introduced in the reverse direction from the 1st August, 1933.

Overseas mail services by surface transport were fairly regular throughout the year. Sixty-six mails were despatched to Great

Britain and 59 received therefrom, the average time in transit each way between Mombasa and London being approximately 19 days.

Internal mail services extend to all parts of the Colony. The policy of replacing mail runners by motor services has been followed, wherever practicable.

The estimated total number of letters, postcards, newspapers and other packets dealt with in the Colony during the year was 12,992,962, representing a fall in volume of 4·98 per cent.

The total number of parcels dealt with increased from 126,041 to 129,774 as compared with the previous year. Of the latter number, 7,906, having a value of £20,719, were cash-on-delivery parcels.

Inland money-orders totalled 12,290, with a value of £38,857, as compared with 13,289 and £44,622 respectively in 1932. Foreign orders numbered 15,644, with a value of £95,009, as compared with 16,051 and £106,975.

British postal-order transactions increased from 79,280 to 83,265 in number and from £44,983 to £47,072 in value as compared with 1932.

Telegraphs and Telephones.

The total number of telegrams handled was 349,609, of which 245,044 represents internal traffic. Of the 104,565 external telegrams, traffic to and from Great Britain numbered 41,098 of which 31,788 were dealt with by Kenya Radio service.

A notable event of the year was the linking up of the capitals of Kenya and Tanganyika by telephone. The service was formally opened on 25th May, 1933, with a conversation between the Colonial Secretary of Kenya and the Acting Governor of Tanganyika. It is now possible to speak with ease and clearness from Nairobi to Mombasa, Tanga and Dar-es-Salaam in the Coast area.

Trunk telephone facilities were extended to Naivasha and Gilgil.

Despite the prevailing depression, there was an increase during 1933 in the number of telephones in use.

The principal public exchanges and the number of subscribers at each are as follows :—

Nairobi	799
Mombasa	308
Nakuru	54
Eldoret	51

The internal telephone and telegraph system consists of 2,702 miles of pole route and a wire mileage of 15,927. Most administrative centres are connected by telegraph.

Communication in the Northern Frontier and Turkana areas is maintained by a wireless system consisting of nine small stations (500 watts) which are maintained and operated by military units and handle civil as well as military telegrams.

Telegraph communication overseas is maintained by Imperial and International Communications Limited (now Cables and Wireless Limited), through a wireless station at Nairobi and a cable from Mombasa. This Company also operates the Coast wireless station at Mombasa, at which a 24-hour service is given. From 1st January, 1933, the Kenya Radio service was extended to Tanganyika. A Government land line service is also available to South Africa.

A local broadcasting service is provided by Imperial and International Communications Limited under agreement and without cost to the Colony. The station transmits on 350 metres and 49·5 metres simultaneously. Reception on the former wave is excellent within its effective range, while the short wave gives satisfactory results in most parts of the Colony. The programme consists mainly of reproduction of gramophone records, British Official Wireless Press, local news, market and weather reports, and occasional relays of items from the programme of the British Broadcasting Corporation's Empire Station. The number of listeners' licences increased from 635 to 794 during 1933.

Roads.

The expenditure recorded during the year on the maintenance and improvement of the public road system, exclusive of roads maintained by local authorities, amounted to £62,775.

The policy of improving earth roads by the application, as funds permitted, of laterite or soft stone was continued, rendering a greater improvement in communications during wet weather. Approximately 240 miles were treated in this manner.

The capital expenditure on road works amounted to £6,080 approximately half of which was incurred in the gold fields area around Kakamega, and the balance on approaches to the Nyali bridge, the Tana River ferry, and the Nairobi-Namanga road.

Harbours.

The total tonnages (import and export) handled at Kilindini Harbour and Mombasa Old Port during the years 1933 and 1932 are given below. These figures do not include oil imports discharged through the Magadi Soda Company's pipe-lines, nor soda exported from that Company's pier. Coal imports are shown separately.

COAL IMPORTS.

1933.	1932.
82,805 tons.	55,166 tons.

IMPORTS AND EXPORTS OTHER THAN COAL.

Year.	*Imports B/L tons.*	*Exports B/L tons.*	*Total B/L tons.*
1933	250,665	451,123	101,788
1932	233,674	324,344	558,018

The total trade of the Port of Mombasa including Kilindini Harbour and the Old Port for the year 1933 as compared with 1932 is summarized in the following statement :—

	1932.	1933.
Number of steamships ...	515	599
Net tonnage of steamers ...	1,684,696	1,820,709
Imports—B/L tons	289,684	336,766
Exports ,, ...	351,447	472,603
Passengers landed :—		
European	5,391	5,491
Non-European	10,209	10,423
Passengers embarked :—		
European	5,356	5,511
Non-European	12,332	11,593

Shipping.

The registered tonnage (inwards and outwards) at all Kenya seaports during the year as compared with 1932 was as follows :—

	1932. *Registered Tonnage*	1933. *Registered Tonnage*
Vanga	6,773	6,710
Funzi	10,077	14,327
Mombasa	3,410,273	3,702,510
Kilifi	6,238	5,182
Malindi	21,098	18,832
Lamu	27,785	67,199
Kipini	2,280	3,076

Railways.

The carriage of public goods provided a revenue of £1,821,279 and the tonnage of the traffic amounted to 766,363 tons, as compared with £1,564,182 and 723,453 tons in 1932.

Passenger Traffic.—Revenue from passenger traffic showed a decrease on 1932 figures. In 1933, 512,999 passengers contributed a revenue of £159,050, while in 1932, 558,492 passengers contributed a revenue of £169,159. There was an all-round decrease in the number of passengers, as the following figures show :—

Passengers carried.

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1933	7,741	27,996	477,262	512,999
1932	8,366	31,426	518,700	558,492

The traffic on Lakes Victoria, Kioga, and Albert, and on the River Nile, on which Administration services are maintained, is shown in the following table :—

	1932.	1933.
Earnings	£92,000	£101,000
Total expenditure	£64,250	£60,927
Tonnage carried	71,611 tons	90,809 tons

Fuel Consumption.—The following figures show the consumption of coal, wood, and oil fuel on the railway during 1933 as compared with 1932.

	1932.		*1933.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Coal	56,790	68,536	62,558	71,663
Oil	85	292	673	1,706
Wood	132,656	47,315	130,759	46,436

On the lake steamers the figures were :—

	1932.		*1933.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Oil	2,776	7,634	3,339	8,463
Wood	8,150	4,315	6,706	3,588

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1933 are shown in the following table :—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	2,088,162	338,022	2,426,184
Ordinary working expenditure	990,054	131,091	1,121,145
Surplus of receipts over ordinary working expenditure.	1,098,108	206,931	1,305,039

The expenditure on capital account at the end of 1933 amounted to £22,418,140. Interest-bearing capital provided £13,968,980 of this sum, the balance being contributed by :—

	£
Parliamentary grants, 1896 and 1902 ...	5,686,437
Accrued interest on 1924 Loan	421,662
Contributions from revenue :—	
Direct (formerly called expenditure extra-ordinary)	649,803
Through Betterment Funds (capitalized)...	1,593,754
Through Marine Insurance Fund (capitalized)	97,504
	£8,449,160

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony:—

The National Bank of India, Limited, with Branches at Mombasa, Nairobi, Nakuru, Kisumu, and Eldoret; the Standard Bank of South Africa, Limited, with Branches at Mombasa, Nairobi, Eldoret, Kitale and Nakuru, During 1931 a Land and Agricultural Bank under the control of Government was formed, with a capital of £240,000 which was increased by £260,000 in 1933. The Bank makes advances to farmers over periods varying from 10 to 30 years on first mortgage security. At 31st December, 1933, the Bank had made advances totalling £294,806.

Currency.

The standard coin is the East African shilling with subsidiary coinage of the following denominations :—

50 cents (silver) ;
10 cents, 5 cents and 1 cent (nickel).

A note issue is maintained and notes of the following denominations are in circulation :—Shs. 10,000, 1,000, 200, 100, 20, 10, 5.

In addition to the above a considerable amount of old rupee and florin currency, both coin and notes, has been in circulation in the Colony, but on the 1st January, 1932, this currency ceased to be legal tender.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

The standard weights and measures of the Colony are identical with those in use in Great Britain, namely the Imperial pound, yard, and gallon. Although the Kenya Weights and Measures Ordinance is applicable to the whole Colony and Protectorate, annual verifications and periodical inspections are in practice confined to the towns and larger trading centres. A total of 20,178 weights, measures, and instruments were stamped, adjusted or rejected, from which was derived revenue amounting to £357. A further total of 2,109 weights, measures, and instruments were examined during the course of visits of inspection resulting in prosecution on 58 charges relative to the use, or possession, of false or unstamped weights, measures, or instruments. In addition, 42 prosecutions were instituted by the district Police.

XII.—PUBLIC WORKS.

The total expenditure incurred by the Public Works Department on services administered by it amounted to £274,392, and of this sum £216,572 was on account of revenue services provided for under Public Works Heads, £14,721 from various extra-departmental sources, and £45,099 from loan. The revenue collected by the Department amounted to £56,470.

The total expenditure on capital works amounted to £48,591 in direct charges, and of this amount £14,902 was obtained from revenue and £33,689 from loan (exclusive of over-head charges).

The revenue expenditure was distributed as follows :—Buildings £5,586 ; Water and Drainage £1,303 ; Roads and Bridges £6,080 ; Miscellaneous Works £1,933. Loan expenditure was :—Buildings £18,986 ; Water and Drainage £13,447 ; Communications £1,256.

The Mombasa Water Works, which was again the principal capital work in progress, was successfully finished by the completion of the two service mains from Changamwe to Makupa and the distribution system on the island. The expenditure during the year amounted to £13,447 from loan and £307 from renewals fund.

The artificial stone facing for the new Law Courts, Nairobi, was completed by contract during the year, and tenders were called for erection and completion of the building.

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya, Uganda, Nyasaland and Zanzibar Protectorates, and the Tanganyika Territory. The Judges of the Court of Appeal are the Judges and the Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland, and Tanganyika, and His Britannic Majesty's Court for Zanzibar. During 1933 the Court held four ordinary sessions and five special sessions. The total number of appeals filed was 198, of which 59 were from Kenya.

Throughout the year the Courts operating in the Colony were as follows :—

The Supreme Court sitting at Nairobi, Mombasa, and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged ;

the Courts of the Resident Magistrates at Nairobi (2), Mombasa, Nakuru, Kisumu, and Eldoret, presided over by legally qualified officers or by officers seconded from the Administration ;

the Courts of the 1st, 2nd, and 3rd Class, presided over by Provincial Commissioners, District Commissioners, and District Officers ; and

the Courts conducted by Liwalis, Cadis, and Mudirs.

The Northern Frontier and Turkana Provinces have been created special districts within the meaning of sections 14 and 15 of the Criminal Procedure Code and the Provincial Commissioners of these Provinces are the Officers specially authorized under the latter section. The District Commissioners in the Northern Frontier Province have been given the powers of First Class Magistrates.

Courts.

The number of criminal cases committed for trial to the Supreme Court aggregated 165, involving 234 charges against 219 individuals.

These figures compared with 171 cases and 236 charges during 1932. Of the total 253 charges actually tried during 1933, 247 were against males and 6 against females. Convictions numbered 146, acquittals 75, and discharges 32. Europeans were convicted on 7, Asiatics on 11, and natives on 128 charges. Of the punishments imposed, two convicts were fined, 86 sentenced to peremptory imprisonment, 9 to whipping with fine or imprisonment or detention camp or both, one to whipping, four were bound over or otherwise disposed of, 39 were sentenced to death, and four detained during the Governor's pleasure.

The number of Supreme Court civil cases filed during the year was 473, a decrease of 112 on the number for 1932. Probate and administration causes numbered 174 compared with 173 opened in 1932, and 68 bankruptcy petitions were filed compared with 72 for the previous year. In addition, 3 trust causes were opened and 24 divorce causes were filed. There were 48 civil and criminal appeals from Subordinate Courts, 259 criminal revisions, and 821 confirmation cases.

During the year a total of 48,726 charges were brought in Subordinate Courts throughout the Colony, a decrease of 2,751 on 1932. These charges were disposed of as follows:—

Convictions	44,353
Acquittals	1,354
Discharges	3,019
Total charges ...	48,726

This includes 783 charges brought against juvenile offenders, involving 715 convictions and 54 discharges.

Details of the sentences imposed are as follows:—

Fines	11,464
Detention camp in default of payment of fine or surety	13,4[illegible]
Imprisonment in default of fine or surety	2,01[illegible]
Fine and detention camp	205
Detention camp	2,604
Fine and peremptory imprisonment	1,008
Peremptory imprisonment	3,905
Whipping with fine, or imprisonment, or both ...	44
Whipping	236
Whipping with fine, or detention camp, or both ...	17
Bound over; cautioned; repatriated	4,865
Other punishments; tax or compensation or wages paid; bail estreated	4,516
Detained pending Governor's orders	5
Committed to prison for failure to find security ...	Nil
Total convictions	44,353

Police.

The Kenya police is composed of African and a small percentage of Asiatic personnel under the command of European officers and non-commissioned officers. The Force is distributed mainly at police stations throughout the settled and urban areas of the Colony and Protectorate. The work of each police station is controlled by a European or Asiatic non-commissioned officer and the stations are grouped under the direction of a commissioned officer. Police detachments are stationed in the Northern Frontier District. African police are stationed in a few of the native reserves and Turkana where they operate under the direct control of officers of the Administration, but the enforcement of law and order in most of the reserves is the responsibility of the local tribal police. The personnel of the Force was further decreased during 1933 on the grounds of economy.

Cognizable offences under the Penal Code reported to the police in settled and urban areas in 1933 totalled 4,892. Of that number 4,601 were true cases, a decrease of 769 true cases on the total for 1932. Accused persons in 3,265 cases were brought for trial before the Lower or Supreme Courts. The total stated value of property stolen was Shs. 302,291/–, of which Shs. 123,144/– or 42 per cent. was recovered.

A small patrol of police continue to be employed to maintain order on the boundaries of the Kisii-Lumbwa native reserves. Patrols were also in operation for several months on the boundary of the Suk native reserve and in the settled area of Laikipia.

Detachments were maintained in the gold mining areas at Kakamega, Gori River, and Logorien.

Prisons.

The 67 penal establishments under the administration of the Commissioner of Prisons are composed of three first-class prisons for the accommodation of long-term prisoners (sentenced to three years or over), four second-class prisons for medium-term prisoners (sentenced to between six months and three years) and 22 third-class prisons at district headquarters (for those sentenced to less than six months imprisonment). There are also 38 detention camps for the accommodation of natives who have not previously undergone more than one term of imprisonment, and who are sentenced to detention for minor offences, usually imposed in default of payment of fine. No sentence of detention may exceed six months.

The total number of persons committed to prisons and detention camps during 1933 was 34,544, representing an increase of 10 per cent. over the number committed during 1932. Of this total 7,292 were sentenced to imprisonment, 19,305 were sentenced to detention, 326 were civil debtors, 227 were lunatics, and 7,394 were admitted on remand and subsequently not sentenced to imprisonment. Of the total of 7,292 persons committed to serve sentences of imprisonment, 12 were Europeans, 171 Goans, Indians, Arabs and Somalis, and 7,109 were Africans. Female and juvenile convicted prisoners numbered 243 and 268 respectively, a rise in the former and a drop in the latter as compared with 1932. The general health of prisoners was not so good as in 1932, the sick percentage having risen from 3·5 to 3·9 per cent. The total of 41 deaths during the year was 8 higher than the total for 1932.

Five juveniles served short terms of imprisonment and these were all confined in class I and II prisons where there are European officers in charge. Juveniles are segregated from adult prisoners whilst undergoing sentence. A further 15 juveniles were sentenced to terms of from 3 to 5 years in a reformatory and were transferred to Kabete, whilst 248 underwent sentences of caning only. Out of the total 43 had been previously convicted.

Release on licence is granted to certain offenders on completion of two-thirds of their sentence of not less than three years. During 1933, 80 convicts were released on licence, as compared with 67 in 1932.

The technical training of convicts, which is carried on in the three class I prisons of the Colony, and consists of tailoring, carpentry, sisal mat, string, and rope making, coir and grass mat making, continues to make satisfactory progress. All uniforms for the prison staffs and all convict clothing are made in the prison workshops, while large orders for uniforms for other Government departments are obtained annually. The output from the tailors and carpenters shops is increasing. During 1933, £3,402 was expended on raw materials for prison industries. The amount paid into the Treasury as revenue derived from prison industries was £6,850, Of this sum £504 was obtained from hire of convict labour.

At 18 of the 29 prisons the cultivation of foodstuffs for prisoners food is undertaken. During 1933, approximately £889 worth of foodstuffs was grown for this purpose, the principal crops being maize (101½ tons), beans (13½ tons), and potatoes (40½ tons). Drought seriously affected the output from prison farms.

Since the inception in 1931 of the system of periodical review by the Governor of all sentences, including commuted death sentences, of ten years and over, the cases of 36 convicts have been submitted for review. Of these, during 1933, seven convicts were promised accelerated release subject to continued good behaviour, while nine cases were deferred for reconsideration at a later date.

From 1929 to the beginning of 1932 the prison population showed a gradual rise; during 1933 the rise became much more marked, and was chiefly due to the financial depression. A consequence of this rise has been pressure on the available accommodation.

Steps are being taken to ease the situation in this regard by the establishment of a system of prison camps at places where the inmates can be employed on major works which are being undertaken by the Government or by the Railway Administration.

XIV.—LEGISLATION.

Sixty-six Ordinances were passed during the year 1933. A summary of the more important enactments is given below.

No. 2. *The Trading in Unwrought Precious Metals Ordinance,* 1933.—The purpose of this Ordinance is to control dealing in gold and other precious metals.

No. 4. *The Land and Agricultural* (*Amendment*) *Ordinance,* 1933.—This Ordinance amends the Land and Agricultural Bank Ordinance 1930, and (*a*) provides that the Land Bank Board may be appointed and act as agents for Government in the administration of any advances to farmers and others ; (*b*) empowers the Board to pay out of the funds of the Bank reasonable travelling expenses incurred by a member of the Board when engaged on the business of the Bank ; and, (*c*) facilitates the work of the Land Bank should foreclosure at any time become necessary.

No. 5. *The Agricultural Advances* (*Amendment*) *Ordinance,* 1933.—This Ordinance abolishes the existing Agricultural Advances Board and substitutes therefor the Land Bank Board together with such other persons as the Governor may nominate ; the object of this addition is to give the Land Bank Board the assistance of those who have long been identified with the work of the Agricultural Advances Board.

No. 8. *The Dangerous Petroleum Tax* (*Amendment*) *Ordinance,* 1933.—By Ordinance No. 57 of 1930 Government granted to Imperial Airways Limited exemption from payment of the Dangerous Petroleum Tax in respect of petroleum used in connexion with such portions of their service as lie outside the boundaries of Kenya. This Ordinance extends a similar concession to any company

No. 11. *The Marriage* (*Amendment*) *Ordinance,* 1933.—The object of this Ordinance is to enable a minister of one denomination to marry persons in a licensed place of worship of another denomination with the consent of the authorities of such denomination.

No. 12. *The Penal Code* (*Amendment*) *Ordinance,* 1933.—This Ordinance is designed to make it quite clear that no sentence of corporal punishment may be imposed in default of payment of a fine on young males on conviction for an offence for which a sentence of imprisonment may be imposed.

No. 14. *The Employment of Women, Young Persons and Children Ordinance,* 1933.—This Ordinance gives effect to certain Conventions relating to the employment of women, young persons and children.

No. 15. *The Juveniles Offenders Ordinance,* 1933.—This Ordinance arose out of the recommendation of a Committee appointed by the Secretary of State to consider what special arrangements were in force in Dependencies under the control of the Colonial Office in connexion with the trial and punishment of young offenders.

No. 16. *The Currency Loan Ordinance,* 1933.—This Ordinance is intended to safeguard the stability of the East African currency in terms of sterling by ensuring that the East African Currency Board will, if occasion arises, be able to provide funds for meeting further redemptions of currency.

No. 17. *The Age of Majority Ordinance*, 1933.—This Ordinance repealed the Indian Majority Act as applied to Kenya and declared that the minority of Europeans shall cease and determine within Kenya at the age of 21 years, and that every European of or arriving at that age shall be of the age of majority as fully, freely and effectually to all intents and purposes in the law, as he may or might have been by the law of England. The provisions in the Ordinance relating to the age of majority for non-natives other than Europeans are practically the same as those contained in the Indian Act which previously applied to Kenya. The Ordinance does not apply to natives.

No. 18. *The Stock and Produce Theft* (*Levy of Fines*) *Ordinance*, 1933.—This Ordinance provides for the recovery of fines imposed on natives, Somalis or Swahilis for the theft of stock or produce by levy on the property of the offender or his family sub-tribe or tribe and makes persons liable in certain cases to account for the possession of stock or produce.

No. 21. *The Expulsion from Proclaimed Areas Ordinance*, 1933.—The Ordinance provides that for every proclaimed area the Governor shall appoint a Board, which shall consist of the Provincial Commissioner of the Province in which the area is situated and such other persons unconnected with the public service as the Governor may appoint. The Boards are given power to order a person, whose presence after due consideration is deemed to be undesirable, to remove himself from a proclaimed area and to remain out of such area so long as such order remains in force.

No. 22. *The Mining in Proclaimed Areas Ordinance*, 1933.—The purpose of this Ordinance is to provide additional revenue in the light of the increased expenditure that will be incurred in connexion with the development of the mineral resources of Kenya. The Ordinance provides that no exclusive prospecting licence shall be granted over land within a proclaimed area unless the applicant has paid, in addition to the registration fee and conveyancing fee under the Mining Ordinance, a fee based on a sliding scale according to the size of the prospecting area. Fees for alluvial prospecting licences in proclaimed areas are also provided for.

No. 23. *The Adoption of Children Ordinance*, 1933.—This Ordinance follows closely the provisions of the Adoption of Children Act, 1926, of the Imperial Parliament.

No. 25. *The Specific Loan Ordinance*, 1933.—This Ordinance made provision for raising a loan of £300,000 for the purposes set out in the Schedule to the Ordinance.

No. 26. *The Partnership Ordinance*, 1933.—This Ordinance, which is based on the English Act of 1890, declares the law of partnership in Kenya.

No. 27. *The Limited Partnerships Ordinance,* 1933.—This Ordinance which is based on the English Act of 1907, establishes limited partnerships.

No. 28. *The Companies Ordinance,* 1933.—This Ordinance brings the law in the Colony into line with the English law on the subject.

No. 39. *The Stamp (Amendment) Ordinance,* 1933.—This Ordinance introduced a graduated scale of stamp duties on bills of exchange other than sight bills, and imposes a stamp duty at the rate of one-half per cent. on the registration of a new company or on an increase in the authorized share capital of a company already registered.

No. 40. *The Non-Native Poll Tax Ordinance,* 1933.—This Ordinance made provision for the payment of a non-native poll tax at a rate graduated according to the taxpayer's income.

No. 41. *The Licensing Ordinance,* 1933.—The Ordinance provides for the licensing of certain trades, professions and occupations within the Colony and fixes the licence fee payable.

No. 47. *The Civil Procedure (Amendment) (No.* 2) *Ordinance,* 1933.—This Ordinance abolishes the principle of *pro rata* distribution of assets among the decree holders, and substitutes therefor the English practice by which assets are distributed amongst such decree holders in accordance with the priority of the lodging of their applications.

No. 52. *The Registration of Titles (Amendment) Ordinance,* 1933.—This Ordinance makes it clear that fixtures which have been placed on land charged under the Registration of Titles Ordinance after the date of the charge are included in the chargees' security.

No. 53. *The Bills of Exchange (Amendment) Ordinance,* 1933.—Following the English Act of 1932, this Ordinance applies certain sections of the Bills of Exchange Ordinance, 1927, which relate to crossed cheques, to banker's drafts.

No. 56. *The Legislative Council (Amendment) Ordinance,* 1933.—This Ordinance gives effect to the recommendations of the Select Committee of the Legislative Council appointed to report on the revision of the electoral boundaries.

Nos. 57 *and* 58. *The Registration of Designs Ordinance,* 1933, *and the Registration of Patents Ordinance,* 1933.—These two Ordinances bring the legislation of Kenya as to registration of Patents and Designs into conformity with the most recent legislation on the subject.

No. 60. *The Architects and Quantity Surveyors Ordinance,* 1933.—The object of this Ordinance is to provide for the registration within the Colony of architects and quantity surveyors.

No. 61. *The Mining Ordinance,* 1933.—The object of this Ordinance is to amend, re-arrange in more logical sequence, and consolidate the laws relating to mining, and to bring all mining activities under one law.

No. 65. *The European Officers Pensions (Amendment) Ordinance,* 1933.—This Ordinance raises the normal age of retirement of European officers from fifty to fifty-five years after 31st December, 1933.

Factory Legislation, Compensation for Accidents, etc.

The Steam Boilers, Prime Movers and Machinery Ordinance (Cap. 66 Revised Edition, 1926) provides for the proper maintenance and periodic inspection of machinery. Section 85 of the Mining Ordinance, 1933 (No. 61 of 1933) provides for the holding of an enquiry in the case of an accident occurring in connexion with mining or prospecting operations involving either loss of life or serious injury to any person.

Section 118 of the Public Health Ordinance (Cap. 124 Revised Edition, 1926) provides that any factory or trade premises not kept in a cleanly state and free from offensive smell or so overcrowded or badly lighted or ventilated as to be injurious or dangerous to health shall be dealt with as a nuisance.

There is at present no general Workmen's Compensation law in Kenya but section 86(1) of the Mining Ordinance, 1933 provides for the compensation of natives employed, in case of accident.

Under section 29 of the Employment of Natives Ordinance (Cap. 139 Revised Edition, 1926) every employer is required to provide his servants with medicine and medical attendance, and under section 69, Government Medical Officers are given wide powers of inspection including the inspection of premises, food, drugs, etc.

XV.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

STATEMENT OF REVENUE AND EXPENDITURE FOR FIVE YEARS ENDED 31ST DECEMBER, 1933.

Year.	*Revenue.*	*Expenditure.*

Customs Tariff.

The Tariffs on certain goods were, in June, 1933, adjusted on an alternative specific or *ad valorem* basis in order to secure a duty approximately equal to the contribution to revenue exacted from similar goods before depreciated currencies, low costs of production and other incidental factors stimulated importations at abnormally low prices.

New Taxation Measures.

A Bill to impose a tax on incomes was introduced into the Legislative Council in March, but was opposed by a considerable proportion of the community, and certain alternative revenue proposals were submitted to Government. Ultimately, it was decided that a trial should be given to certain alternative taxes, and the following new taxation measures were accordingly passed by the Legislative Council in August :—

> (1) *The Non-Native Poll Tax Ordinance, No.* 40 *of* 1933, making provision for the levy of a non-native poll tax at a rate graduated according to the taxpayer's income. The rate of tax charged rises from Sh.30, where the taxable income does not exceed £100 to Sh.40 for taxable incomes exceeding £100 but not exceeding £200 ; thence by regular increases of Sh.20 per £100 until the tax on an income exceeding £600 but not exceeding £700 is Sh.180 ; thence increasing by Sh.40 per £100 until the tax on an income exceeding £1,400 but not exceeding £1,500 is Sh.500. Thereafter it increases by Sh.500 per £500 for incomes up to £4,000 per annum and by Sh.1,000 per £1,000 for incomes up to £10,000 per annum, incomes over which figure bear tax at the rate of Sh.10,000 per annum.
>
> This Ordinance, which continues in force until the end of 1934, is estimated to produce a revenue of £66,000 in a full year as against an estimated revenue of about £35,000 under the old Non-Native Poll Tax Ordinance, which levied tax at a flat rate of Sh.30 per head.
>
> The additional revenue resulting from this measure may therefore be assessed at approximately £31,000 per annum in a full year.
>
> (2) *The Licensing Ordinance* (*No.* 41 *of* 1933), which provides for the licensing of certain trades, professions and occupations within the Colony. In so far as trade licences are concerned the classifications follow generally those which have been in force in Tanganyika Territory for some years, but the list is extended to include insurance companies, oil companies, electric power and light distribution, temperance hotels and lodging houses, manufacturers, assayers, exchange bankers, commission agents, manufacturers' agents, turf commission agents and turf accountants, and a licence at a fee of Sh.300 per annum is laid down for the practice of a profession. This measure was estimated by the Alternative Revenue Proposals Committee to bring in additional revenue amounting to about £31,000 per annum. In practice, however, the yield has proved disappointing. The total revenue derived from Trade and Profession Licences in 1933 amounted to £26,349 against an estimated revenue under the old Traders' Licensing Ordinance of £19,400. In view of the fact that the Ordinance did not come into operation until the 6th September, half only of the annual fees prescribed by the new Ordinance were payable in respect of 1933, but it will be seen that against an estimated additional revenue of about £15,500 for 1933, the actual yield was in the neighbourhood of £7,000 only.

(3) *The Tax on Imported Packages Ordinance* (*No.* 38 *of* 1933), imposing a tax of twenty-five cents on every package imported into the Colony. This Ordinance came into operation on the 1st of December, 1933, and revenue totalling £678 was received during the month.

(4) *The Stamp* (*Amendment*) *Ordinance* (*No.* 39 *of* 1933), under which a graduated scale of stamp duty varying with the period is imposed on Bills of Exchange and Promissory Notes, and a tax of Sh.10 is levied on every £100 or part of £100 of nominal share capital on the registration of a company and on the registration of any increase of share capital made after the first registration of the company. The yield in 1933 from these two amendments is estimated in the former case at £200 and in the latter at nearly £400.

Native Hut and Poll Tax.

Rate.—The rates of hut and poll tax imposed by Proclamation under Section 6 of Chapter 51 of the revised edition of the Laws of Kenya (The Native Hut and Poll Tax Ordinance) are as follows :—

Masai	Sh. 20/00 per Hut or Poll.
Other Tribes	Sh. 12/00 per Hut or Poll.

Section 3 of the Northern Frontier Poll Tax Ordinance (No. 53 of 1930) empowers the Governor to order that the poll tax prescribed under Section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier Province. The Governor has power to reduce the amount of the tax payable by the natives of any specified area, and in certain districts temporary reductions have been made.

Method of Assessment.—A uniform tax at the prescribed rate is paid on each hut (dwelling house) owned by the taxpayer.

A poll tax at the prescribed rate is payable by all able-bodied male natives of the apparent age of 16 years or over who do not pay the hut tax.

Hut and poll tax is collected by District Officers. The taxpayer is given a receipt in the form of a hut or poll tax ticket for each tax paid. At the same time the payment is noted in the register of taxpayers.

Yield.—The yield of native hut and poll tax in 1933 amounted to £557,791.

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by meridian line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,730 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is the zone time 2½ hours fast on Greenwich. Physiographically Kenya consists of : (1) a region poorly watered comprising some three-fifths of the total area of the Colony ; (2) a

LIBRARY OF CONGRESS

DIVISION OF DOCUMENTS

plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Nakuru, Naivasha, and others; (4) a portion of the basin of the Victoria Nyanza which is 3,726 feet above sea-level. The Nzoia, Yala, Kuja, and Amala Rivers flow into Lake Victoria, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya and from the Aberdares there flow numerous tributaries of the Tana River which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and is capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 58° F.—65° F. in the highland areas.

The rainfall is generally well distributed and ranges from about 10 inches per annum in the arid northern areas to 86 inches per annum in the vicinity of Lake Victoria. The average rainfall in the main agricultural and pastoral areas ranges from 3 to 40 inches. The heaviest rainfall occurs from March to June and from October to December.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498, Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829, Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848, Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw the Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887, Seyyid Bargash, the Sultan of Zanzibar, granted a concession on the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889, a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha, and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892, the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895, a British Protectorate was declared over the Company's territory between the coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902, the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903, there were nearly 100 European settlers in or near Nairobi.

In 1905, the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, and Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transferred to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the Great War.

Nominated unofficial members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923, this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony ; the coastal belt remains a Protectorate. In 1925, the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council and in 1925 the office of the High Commissioner for Transport was established. The High Commissioner is the Governor of Kenya*, and in that capacity he is advised by a Railway Council, consisting of official and unofficial representatives of Kenya and Uganda.

II.—GOVERNMENT.

His Excellency Brigadier-General Sir Joseph Aloysius Byrne, G.C.M.G., K.B.E., C.B., administered the Government throughout the year.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council of eight *ex-officio* members, and such other official and unofficial members as may be appointed.

During 1934, four unofficial members were so appointed, two being European elected members of the Legislative Council, one an Indian elected member, and one a nominated unofficial member representing native interests.

The Colonial Secretary is the Chief Executive Officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners who are responsible for their execution. The Colony is divided into four Provinces, each in the charge of a Provincial Commissioner, and three extra-Provincial Districts. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Officers. The Legislative Council consists of the Governor as President, eleven *ex officio* members, not more than nine nominated official members, eleven European elected members, not more than five Indian elected members, one Arab elected member, and two nominated unofficial members to represent the interests of the African community. If one of the nominated official members is not specifically appointed to represent the interests of the Arab community, an additional unofficial member is nominated to represent such interests. The Governor has the right to veto any measure passed by the Legislative Council. Certain minor powers are vested in the District and Municipal Authorities in settled areas and in the Local Native Councils in the native areas.

Local Government.

Settled areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the more important townships. In the rural settled areas they had the advice of District Committees and a measure

of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru, and Eldoret, with Municipal Boards, while District Councils were established in the settled portions of the Districts of Nairobi, Kyambu, Fort Hall, Naivasha, Nakuru, Kisumu-Londiani, Uasin-Gishu, and Trans-Nzoia. At the same time a Local Government Inspector was appointed to deal with local government administration under a Commissioner for Local Government, an office which was combined with that of Commissioner of Lands, and until the end of 1933 formed part of the Secretariat organization.

---

* By an Order in Council made on the 13th of August, 1935, the High Commissionership is vested in the Governors of Kenya and Uganda, jointly.

As the result of legislation introduced in 1933 Municipal Boards now elect their own Chairman, with the exception of Mombasa where the District Commissioner is still statutorily Chairman of the Board. Attention was directed to the possibility of further economies both in the expenditure of local authorities and in the contributions made by the Government to their revenues. The total gross revenue of the four municipalities amounted in 1934 to £198,152 (subject to audit) of which £134,082 accrued to the Nairobi municipality. Of this total revenue the Government contributed in grants approximately 20 per cent., the balance being raised from assessment rates, licence fees and charges for services rendered. Municipal Authorities may levy assessment rates on capital values up to a maximum of 2 per cent. on site values. In 1934, a rate of $1\frac{1}{4}$ per cent. on site values was levied in Nairobi and yielded £26,762 from ratepayers. In Mombasa a small improvements rate was imposed in addition to the site value rate. Nakuru and Eldoret have as yet imposed no assessment rates, but rely on municipal licence fees and charges supplemented by consolidated grants from Government amounting to £2,300 in each case in 1934.

Nairobi, Nakuru and Eldoret control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town planning schemes are in progress under the Town Planning and Development Ordinance, 1931. The execution of the Mombasa town planning scheme was continued under a sanctioned loan of £250,000, of which £189,000 has so far been raised. The Municipal Board took over the liability for this loan from Government in 1931.

In the rural areas, the six District Councils confine their executive functions to roads, the funds for which are derived at present solely from Government grants. These grants amounted to £32,186 in 1933 and 1934, as compared with £34,598 in 1932, £43,418 in 1931, and £53,098 in 1930. The Councils have improved their district roads in a satisfactory manner. Various causes have contributed to the postponement by Councils of the imposition of local rates, and in so far as Councils remain financially dependent on Government grants and deal only with roads, they represent only a modified and incomplete form of local government. In 1934, the Trans-Nzoia District Council again imposed a hospital-rate in the nature of a poll tax on adult male Europeans resident in the District, for the purpose of maintaining the Kitale Hospital which the Council acquired during 1932, and a similar rate is also levied in the Uasin-Gishu District for the Eldoret Hospital, which is maintained jointly by the District Council and the Eldoret Municipal Board.

In other rural settled areas and townships, District Committees, Road Boards, and Township Committees continued to do useful work.

Native areas.—The Local Native Councils in Kenya are a deliberate creation under the Native Authority (Amendment) Ordinance, 1924. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance, and regulation of food and water-supplies, forests, roads, bridges, culverts, public health, the use of land, education, markets and market dues, agriculture, and live stock, etc. The District Commissioners are the Presidents of the Councils and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. At the present time in the majority of Councils the greater portion of members are illiterate. The funds, which are controlled by the Councils, are derived from two main sources: (*a*) from the proceeds of local native rates which they are empowered to impose on the inhabitants of the areas over which they have control; (*b*) from the proceeds of the rents of land, forest royalties, etc., levied within those areas. The number of Councils remained at 22 throughout the year.

The provision of educational facilities continues to occupy the foremost place amongst the various services rendered by Local Native Councils during 1934.

Details of revenue and expenditure are shown in the following comparative table :—

Comparative Table of Revenue and Expenditure of Local Native Councils in 1934.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926, and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table :—

	1911.	*1921.*	*1926.*	*1931.*
European, males	2,022	5,800	7,199	9,404
„ females	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
„ females	—	11,640	14,841	20,388
Total males	—	30,142	33,498	46,151
„ females	—	15,491	20,171	27,796

The percentage increase in each section of the population during the last two decades is :—

	European.	*Asiatic.*
1911–1921	204	203
1921–1931	74	59

The proportions in which the various races entered into the total of the non-native population in Kenya at each census year will be seen from the following summary :—

Racial proportions of the total non-native population.

	1911.		*1921.*		*1926.*		*1931.*	
	Number.	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*

Asiatics.

	1921.	*1926.*	*1931.*
Agriculture	498	755	640
Industry	3,679	4,924	6,446
Commerce	6,086	7,769	14,338
Government and municipal	3,390	3,181	2,972
Professional	50	181	264
Personal or domestic	1,241	961	1,452
Retired, married women, and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these eight divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows :—

	European.		*Asiatic.*	
	1926.	*1931.*	*1926.*	*1931.*
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children		43		

A recent investigation into the question of length of residence in Kenya has enabled the following table to be drawn up. The question is an important one in reference to problems of settlement :-

Years of residence.	*Europeans.*	*Asiatics.*
1–5	7,207	20,847
6–10	3,402	7,610
11–15	1,820	4,536
16–20	1,805	3,459
21–25	772	1,565
26–30	272	1,150
31–35	80	639
36–40	9	372
41–45	4	151
46–50	1	147
51–55	—	39
56–60	—	75
61–65	—	24
66–70	—	27
71–75	—	11
76–80	—	9
81–85	—	—
86–90	—	4
91–95	—	2

The following table shows the approximate number of each race during 1933 and 1934 :—

	Census population.	*Estimated population.*	
	6th March, 1931.	*31st December, 1933.*	*31st December, 1934.*
Europeans ...	16,812	17,332	17,501
Indians	39,644	33,735	34,955
Goans	3,979	3,246	3,316
Arabs	12,166	11,932	12,131
Others	1,346	1,390	1,401
Total	73,947	67,635	69,304

Note.—No reliable returns of births and deaths are available. The estimates in the above table are based on an assumed natural increase of 6 per cent. per annum for Europeans and 10 per cent. per annum for Asiatics, and on the annual excess of migration via Mombasa.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and are related to the number of male adult taxpayers in the various districts. They are, in consequence, subject to a comparatively wide margin of error. The estimated native population in 1934 was 3,024,975 as compared with an estimate in 1927 of 2,793,963, which represents an increase over that period of approximately 8 per cent. No reliable figures of births, deaths, and infantile mortality are obtainable.

The geographical distribution of the native population is as follows :—

Province.	1934.
Central Province	1,212,567
Nyanza	1,138,749
Rift Valley	229,301
Coast	258,597
Masai District	45,805
Northern Frontier District ...	66,462
Turkana	73,494
Total	3,024,975

IV.—HEALTH.

General Administration and Organization.

In Kenya, as elsewhere, the ultimate responsibility for the safeguarding and promotion of the public health rests with the Central Government. In every area of the Colony, however, there is a "Local Authority" which to a greater or less degree has, under the general supervision of the State, responsibility in health matters. In Nairobi and Mombasa the greater part of the health staff is now employed by the Local Authority. In the other towns, in the European settled areas and in the native reserves the authority is the District Commissioner and the health staff is employed by Government. Where in the smaller towns there is a Municipal Board, the Board is in effect, though not in law, the Local Health Authority as its opinion is always sought by the Executive Authority. In the native reserves every endeavour is made to interest the Local Native Councils in health matters and these endeavours are meeting with some success. In consonance with Government policy the Director of Medical Services is responsible for providing and distributing both medical relief and health staff to the extent allowed in the sanctioned Estimates, and he acts in consultation with both the Commissioner for Local Government and the Chief Native Commissioner.

Sanitary Work and Administration.

In Nairobi, Mombasa, Nakuru, and Eldoret, sanitary work and administration is almost entirely a function of the local representative authorities and on the whole has been effectively carried out. No major improvements regarding sewage disposal, scavenging, refuse disposal, drainage or water supplies were undertaken during the year in either urban or rural areas of the Colony.

In the native reserves, despite the prevailing depression, fair progress has been maintained in the housing and pit latrine campaign. Some advance can also be recorded in connexion with the protection of local water supplies, the improvements of sanitation at trading centres, reclamation of swamps, etc.

Medical Relief.

In three towns medical relief for Europeans is still provided in Government hospitals, but non-Government hospitals and private nursing homes are now established in a number of the larger centres and are being increasingly used by the European population.

In the native reserves, although medical relief is provided by or through the agency of Missionary Societies, medical services are for the most part provided directly by the State. The greater part of the provision made under the Medical Estimates is expended on this service.

The demand for medical relief continues steadily to increase and in 1934 the total number of new cases treated again exceeded that of the previous year, the totals being :—

1934	1,227,862	new cases.
1933	1,112,864	,, ,,

This has been accomplished despite a further decrease in expenditure.

The demand for surgical relief also continues to increase. During the year in native hospitals alone over five thousand operations were carried out under general anaesthesia.

Special Clinics.

Special clinics for maternity and child welfare work, and for the treatment of venereal disease, have been established at a number of centres. Increasing use is being made of the facilities provided.

Health of Employed Labourers.

Labour conditions on estates, on the railway, and in townships have remained much the same as in the preceding two years, as employers of labour have had no funds at their disposal for major improvements. No serious outbreak of disease occurred and on the whole the health of labourers was satisfactory.

Vital Statistics and the Public Health.

The position with regard to the registration of births and deaths remains unsatisfactory. It has not been possible to provide for the registration and notification of births and deaths among Africans and, therefore, no mortality rates can be determined for that race.

The death-rates per thousand of the population for Nairobi, so far as it has been possible to estimate them, are as follows :—

Crude death-rate, all races	18·51	per thousand.
Recorded death-rate, all races ...	14·86	,,
,, ,, Europeans ...	8·51	,,
,, ,, Asian ...	15·19	,,
,, ,, African ...	15·95	,,

No reliable figures are available for Mombasa or other towns, or in respect of the African population in the native reserves as a whole.

Propaganda.

Large numbers of health pamphlets in English and Kiswahili were issued during the year.

V.—HOUSING.

European housing in the towns of Kenya is on the whole excellent, and in the rural areas it is slowly but steadily improving. Asian housing in almost every town still leaves much to be desired, but a marked improvement in the housing of this section of the community has taken place during the past few years. As regards African housing, no major schemes were adopted in the urban areas during the year. In the native reserves, however, many improved houses were erected, and the movement for better housing is growing, partly as a result of propaganda on the part of the Medical Department and other Departments and bodies engaged in social and educational work. Many of these houses are surprisingly good and with a return of prosperity further progress in this direction may be confidently expected.

VI.—PRODUCTION.

Mineral.

Prospecting and mining continued on an increasing scale in the Nyanza and Masai Provinces during 1934. Several of the larger companies which are now well advanced in their development programme will soon be in full production, and have applied for 21 year leases.

According to returns received, approximately £446,512 was spent by the mining industry during the year. No. 2 area was opened to prospecting on the 17th of May and encouraging reports have led to a large incursion of prospectors and considerable activity. This area which lies between Kakamega Goldfields and Lake Victoria Nyanza extends to over 1,000 square miles.

A certain amount of attention has been given to a reported mineralized belt in the Coast Province, a portion of which has been closed, for the present, to general prospecting.

The following table illustrates the extent of mining activities.

Class of Right or Title.	*Square miles.*	*Approximate Percentage of Total.*
Claims	100·00 app.	3·2
Exclusive Prospecting Licences	3,018·26	96·55
Leases (applied for and may be granted)	8·329	0·25

At present the development of lode, or reef, prospecting and mining is considerably in excess of alluvial although there is increasing activity on the Yala River. Approximately 1,645·8 square miles of Areas No. 3 and No. 4 of the Kitson Report of 1933 remain unallocated and closed to general prospecting.

The mineral production in 1933 and 1934 was :—

	1933.		*1934.*			
	Quantity.	*Value.*	*Quantity.*	*Value.*		
		£		£	s.	d.
Gold ...	10,531 fine oz.	67,665	12,110·183 fine oz.	83,616	18	9
Silver ...	1,613 ,,	113	1,969·08 ,,	192	14	4
Lime ...	750 tons	750	800 tons	800	0	0
Marble ...	250 ,,	2,500	500 ,,	5,000	0	0

Agriculture and Live Stock.

Of the main products of the Colony, sisal, tea, wheat, and essential oils are grown exclusively by Europeans. Coffee was formerly grown exclusively by Europeans, but Africans are now being permitted to grow it in small experimental blocks under licence and strict supervision in certain defined areas. Maize, sugar-cane, wattle, numerous kinds of beans, potatoes, and fruit are produced by Europeans, Indians, and Africans. Cotton, sorghums, millets, miscellaneous root crops, and other crops are grown almost exclusively by Africans in their reserves.

Prices for primary products remained at a low level during the year under review and producers continued operations under considerable difficulties.

No crop census of European production was taken in respect of the 1934–1935 season, but the following table gives a comparison between the crop years 1933–34 and 1932–33 :—

Crop.	*1933–1934.*		*1932–1933.*	
	Acreage.	*Yield.*	*Acreage.*	*Yield.*
Coffee	102,238	235,009 cwt.	100,387	30[illegible],998 cwt.
Maize	112,949	746,893 bags	164,018	1,139,616 bags
Wheat	35,001	145,581 bags	30,114	63,498 bags
Barley	4,435	22,824 bags	3,025	15,845 bags
Sisal	141,495	20,127 tons	139,834	17,369 tons
Tea	12,471	3,063,687 lb.	12,034	2,421,056 lb.
Sugar	12,704	112,980 cwt.	12,088	106,320 cwt.
Pyrethrum	401	—	Unknown	—

A large proportion of the produce grown by Europeans is exported, while African produce is mainly consumed in the Colony.

The following table shows the animal products sold by Europeans during the census years 1928–1929 to 1933–1934 :—

	Milk (whole). gal.	*Cream. gal.*	*Butterfat. lb.*	*Butter. lb.*	*Cheese. lb.*	*Ghee. lb.*	*Wool. lb.*
1933–34	939,434	85,678	754,808	307,349	140,635	35,708	931,330
1932–33	1,138,743	73,389	923,042	350,505	155,525	47,110	721,542
1931–32	1,018,868	77,063	675,910	285,320	111,582	96,471	813,662
1930–31	1,101,704	145,796	614,790	312,694	131,168	114,527	654,846
*1929–30	1,027,375	287,657	(*a*)	371,675	108,875	116,117	893,258
*1928–29	791,452	212,914	(*a*)	290,905	145,609	65,215	939,612

ORGANIZATION OF PRODUCTION.

With regard to European production, the cultivation of cereals, pulses, essential oil crops, etc., and the production of animal products is chiefly in the hands of individual farmers. The actual manufacture of butter is largely undertaken by co-operative creameries. Coffee is produced partly by companies but mainly by individual planters. The production of sisal, requiring as it does a large capital outlay, is conducted mainly by companies.

In respect of African agriculture, production is almost entirely in the hands of peasant families who, in the main, cultivate sufficient crops to supply their food requirements, together with a surplus which they sell in order to obtain money for their other needs.

INDIAN AGRICULTURE.

Indian agriculture is limited to the Kibos-Miwani area in the Nyanza Province and to small scattered areas in the Central and Coast Provinces. In the Nyanza Province it is estimated that approximately 4,884 acres are under sugar-cane and 1,681 acres are planted with maize. In the Coast Province some 3,800 acres are held by Indians, this area being devoted almost exclusively to coconuts.

NATIVE AGRICULTURE.

Considerable progress in agricultural development has been achieved during recent years through improvement, by breeding, selection, and importations, in the quality and variety of crops grown, through improved cultural methods, and by means of organized marketing. The benefits from the trials of new and better crops conducted in former years are now becoming apparent. The prevention of soil erosion in the reserves continued to receive attention and the successful reclamation of many swamps in the Central Province has aroused the keen interest of the natives.

---

* In respect of the period 1st August to 31st July.

(*a*) Included in "Cream."

Improvement of crops largely depends upon ample supplies of seed of high yielding quality and in the past this was provided from public funds. Local Native Councils have now provided land and funds for seed farms in most agricultural districts. These farms have proved their value and will be extended as circumstances permit. Local Native Councils also vote funds for the payment of a certain number of African Agricultural Instructors.

Native agricultural schools have been established near Nairobi, mainly for the Kikuyu and Ukamba Provinces, and at Bukura for the Nyanza and Rift Valley Provinces. At these schools improved methods of crop and animal husbandry are taught. Particular attention is devoted to mixed farming in small-holdings due regard being paid to a proper rotation of crops designed to maintain soil fertility. The pupils are also taught to make proper use on the land of the live stock kept in the farmyard near the house on the small-holding. Instruction is also given in the prevention of soil erosion.

Five veterinary training centres are now in full operation and a sixth is being commenced. The various branches of the management of cattle and treatment of disease are taught and, because quarantine stations are centred on these schools, facilities are given for instruction in the control of disease. Under supervision, pupils carry out inoculation of cattle and other veterinary work.

An important branch of work in native reserves is the organized marketing of native produce with the object of raising both prices and the standard of quality. The system consists of marketing produce through a commission agent. Local Native Councils erect suitable stores as collection centres adjacent to the railway stations. At present organized marketing is limited to wattle bark in the Central Province, cotton in the Nyanza Province, and cotton and cashew nuts in the Coast Province. Legislation to extend the system is under consideration.

Propaganda for the better preparation of hides and skins continues. The premium offered for shade-dried as compared with sun-dried hides is now sufficient to induce natives to undertake the extra work involved in the preparation of shade-dryed hides.

The presence of disease necessitates the strict administration of quarantine regulations prohibiting the movement of cattle from native reserves, except through authorized quarantine stations, but sufficient movement is permitted to supply market requirements.

Manufactures.

Beer and stout.—The manufacture of these beverages is in the hands of a company, and the number of standard gallons produced in 1934 amounted to 112,813.

Soap is manufactured by companies mainly situated on the coast, and exports of local manufacture during the year amounted to 12,810 cwt. valued at £7,928.

Aluminium hollow-ware.—The progress of local manufacture is reflected in the following figures :—

	Imports.		*Exports of Local Manufacture.*	
	Tons.	£	*Tons.*	£
1930	89	14,470	3	444
1931	12	2,322	18	2,935
1932	2	957	21	4,771
1933	3	827	34	6,951
1934	2	667	66	12,602

VII.—COMMERCE.

General.

Because Kenya and Uganda are one administrative unit for the purposes of Customs, an accurate estimate of the balance of trade of the territories individually is impracticable. On the one hand, Kenya is largely a distributing centre and, on the other, the overseas trade of Uganda passes, in the main, through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £592,023 was transported through Kenya and shipped at Mombasa during the year, and goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1934 were valued at £619,283. The combined value of trade imports and total exports (i.e., exports of domestic produce and re-exports) of Kenya and Uganda for the year 1934 amounted to £12,929,562 as compared with £11,993,318 in 1933, and £10,533,567 in 1932, the total volume of trade of all classes, including importations on Government account, transit and transhipment traffic, being valued at £13,483,079 as against £12,471,539 in 1933 and £10,959,941 in 1932. The value of total imports during the year was £5,708,025 as against £4,898,722 in 1933, an increase of £809,303 or 16·52 per cent. Exports of the domestic produce of the territories were valued at £5,683,637, as compared with £5,711,609 in 1933. Of this total, goods to the value of £1,909,871 originated in Kenya, the domestic exports of Uganda calculated in terms of the f.o.b. value at the port of final shipment from the two territories being valued at £3,773,766. Bonded stocks on hand at 31st December, 1934, amounted to £171,429 or £30,199 less than the value of goods remaining on hand in bonded warehouses at the end of the previous year.

So far as the export trade in Kenya produce is concerned, a decrease in value of £337,128 or 15 per cent. as compared with exports during the previous year is recorded. Coffee exports decreased by 70,213 cwt. in quantity and £339,438 in value, maize by 691,591 cwt. in quantity and £107,945 in value, sugar by 9,479 cwt. in quantity and £9,274 in value, and sodium carbonate by 12,219 cwt. valued at £54,349. There were, however, encouraging increases in quantity and value for the following commodities, viz., tea 4,653 cwt., £35,395 ; sisal fibre 4,166 tons, £61,503 ; hides and skins 8,918 cwt., £36,447 ; wattle bark 42,496 cwt., £5,044 ; wattle extract 20,925 cwt., £8,561 ; cotton 1,088 centals, £4,899.

While the foregoing figures reflect a measure of trade recovery throughout the combined territories, the continuation during the year of unfavourable climatic conditions, resulting in a further diminution of domestic exports, tended to retard the return of more stable conditions in Kenya. Some improvement was, however, experienced in production for the local market, as indicated, for example, by the Colony's reduced requirements of imported wheat, which was valued at £1,977 as compared with £52,786 in 1933 ; by an increase of about £6,000 or 4·6 per cent. in the consumption of locally grown tea ; and by an increase of £30,000 in the value of local products transferred to Uganda. The expansion in entrepôt business and activity in the gold fields were principally responsible for the stimulus to general trading reflected by the increase of imports and by the improvement of Customs revenue collections.

Net collections of Customs revenue amounted to £979,092 as compared with £874,055 accruing in 1933.

Of this sum £611,572 was allocated to Kenya and £367,520 to Uganda.

Imports.

The following statement gives particulars of the countries from which imports have originated during the last three years, the main articles of importation from the countries enumerated being shown in each case :—

Country.	*Percentage of Import Trade.*			*Main Items.*
	1932.	*1933.*	*1934.*	
United Kingdom	39·29	38·28	37·66	Ale, beer, stout, etc., biscuits, confectionery, provisions, gin, whisky, cigarettes, cement, iron and steel and manufactures thereof, aluminium, tin and manufactures thereof, tools, cutlery, hardware, etc., electrical goods and apparatus, machinery, cotton piece-goods, woollen and artificial silk goods, wearing apparel, chemicals, drugs, paints, soap, oils, stationery, etc., bicycles, motor-cars, lorries and parts, tyres, polishes, books, brushes, explosives, guns and rifles, cosmetics, toys, etc.
India ...	7·19	6·50	5·37	Rice, wheat flour, cotton piece-goods, jute bags and sacks.
Union of South Africa.	1·93	2·44	1·56	Coal.
Canada ...	1·57	1·90	1·43	Motor-cars, lorries, and parts and tyres.

Country.	*Percentage of Import Trade.*			*Main Items.*
	1932.	*1933.*	*1934.*	
Tanganyika Mandated Territory.	12·26	13·14	14·59	Rice, ghee, tobacco and cigarettes, copra, coffee, cotton, and hides and skins.
Other British Possessions.	1·16	1·16	0·32	Fruit, provisions, etc.
Total British Empire.	63·40	63·42	60·93	
Germany ...	2·61	3·13	3·48	Beer, tools, machinery, cotton blankets, stationery, etc., cycle parts, lamps.
Belgo-Luxemburg Economic Union.	1·60	1·85	1·68	Corrugated iron, machinery, cotton blankets.
France ...	1·61	1·24	1·10	Brandy, wines, cotton blankets, tyres.
Italy ...	1·24	1·13	1·08	Wines, cotton and woollen blankets, apparel, cotton and woollen piece-goods.
Netherlands ...	3·97	3·43	1·39	Tobacco, beer, cotton piece-goods and blankets.
Japan	10·99	12·92	15·00	Cotton and silk piece-goods, tyres, cement, wearing apparel, boots and shoes.
Persia ...	2·52	2·97	4·14	Fuel oil, petrol and kerosene.
United States of America.	5·28	4·34	6·11	Motor vehicles, oil, petrol, kerosene, tyres.
Dutch East Indies.	3·35	1·83	1·77	Fuel oil, petrol and kerosene.
Other Foreign Countries.	3·43	3·74	3·32	Milk, matches, piece-goods, etc.
Total Foreign Countries.	36·60	36·58	39·07	

Cotton Textiles.—During 1934 the value of cotton textiles imported was £797,854 or 13·98 per cent. of all goods imported. Transfers to Uganda were valued at £409,139.

The average value per yard of imported cotton textiles was 3·0d. as compared with 3·0d. in 1933 and 3·4d. in 1932; cotton blankets showing a value per blanket of 1s. 3·7d. as against 1s. 2·9d. in 1933 and 1s. 4·6d. in 1932.

Importations from Japan show an increase in value as compared with importations from all other sources amounting in 1934 to 64 per cent. of the total textile trade as compared with 51 per cent. in 1933 and 43 per cent. in 1932. The share of the United Kingdom in this trade has slightly declined in value and the increase in importations from Japan has been mainly at the expense of other foreign countries with the exception of Germany. If calculations are made on a yardage basis, however, the dominant position of Japan in this trade is accentuated.

Czechoslovakia, Holland, and Germany provided the bulk of imported cotton blankets, grey sheeting (americani) being supplied mainly by Japan.

Artificial and Natural Silk Textiles.—Imports of artificial silk goods were valued at £76,347 and natural silk goods at £28,454 of which totals Japan supplied £68,785 and £20,991 respectively. The total linear yardage was 3,861,679 in the case of artificial silk and 566,936 in the case of silk, and of these totals 3,660,639 and 404,655 respectively originated in Japan. Imports of artificial silk from the United Kingdom were valued at £3,129 and imports of natural silk at £495.

Vehicles and Tyres.—The details of the principal imports for the year 1934 are as follows :—

(a) *Vehicles* :

Country of Origin.		*Bicycles.*	*Motor-cars.*	*Motor-car parts.*	*Motor lorries.*
United Kingdom ...	No.	3,442	329	—	170
	Value (£)	13,293	46,187	17,100	42,931
Canada	No.	—	203	—	326
	Value (£)	—	26,493	4,016	33,725
Japan	No.	1,804	—	—	—
	Value (£)	2,376	—	284	—
United States of America	No.	1	426	—	531
	Value (£)	3	51,821	22,549	60,154
Other countries ...	No.	3	12	—	5
	Value (£)	16	1,400	3,110	736
Total	No.	5,250	970	—	1,032
	Value (£)	15,688	125,901	47,059	137,546

(b) *Tyres.*

		Car covers.	*Bicycle covers.*	*Lorry covers.*
United Kingdom ...	No.	5,660	59,232	1,776
	Value (£)	9,178	7,517	7,237
Canada	No.	2,027	—	658
	Value (£)	2,913	—	2,633
Japan	No.	1,486	65,824	1,523
	Value (£)	2,303	3,529	3,819
United States of America	No.	3,634	—	1,524
	Value (£)	4,744	—	5,911
Other countries ...	No.	814	32,387	567
	Value (£)	3,014	5,996	5,320
Total	No.	13,621	157,443	6,048
	Value (£)	22,152	17,042	24,920

Building Materials.—Decreases are recorded in importations of building materials during the year under review. Cement imports decreased to 15,390 tons valued at £35,208, of which the United Kingdom supplied 10,828 tons valued at £28,710 and Japan 4,508 tons valued at £6,395.

Cement clinker imported was 4,468 tons valued at £6,172, as compared with 4,995 tons valued at £6,994 in 1933, the country of origin being the United Kingdom.

Galvanized iron imports were 4,531 tons valued at £62,104, Belgium supplying 3,369 tons and the United Kingdom 1,062 tons valued at £45,441 and £15,363 respectively.

Re-Exports, Transit and Transhipment Trade.

The value of goods re-exported during 1934 amounted to £1,821,505 or 33·58 per cent. of the total value of trade imports, as compared with £1,595,687 or 34·05 per cent. in 1933. Transit and transhipment traffic reached the values of £72,723 and £197,189 respectively, as against £68,805 and £196,716 in 1933.

Exports.

General.—The domestic exports of Kenya and Uganda are mainly agricultural, the principal exceptions being carbonate of soda procured at Lake Magadi in Kenya and tin ore mined in Uganda, and were valued at £5,683,637, as compared with £5,711,609 in 1933, a decrease of ·48 per cent.

The following table indicates the overseas distribution of the principal articles of export during the year under review :—

(A) KENYA DOMESTIC EXPORTS.

Principal Countries of Destination (Values to nearest £1000).

	United Kingdom.	*India.*	*Union of South Africa.*	*Zanzibar.*	*Canada.*	*Australia.*	*Tanganyika Mandated Territory.*	*Germany.*	*Belgo-Luxemburg Economic Union.*	*France.*	*Italy.*	*Netherlands.*	*Japan.*	*Egypt.*	*United States of America.*	*Italian Somaliland.*	*Mozambique.*	*Other Countries.*	*Total.*	*Percentage of Kenya Domestic Exports.*

The main articles of export were :—

(a) *Cotton.*

The quantity and value of cotton exported during the last three years were as follows :—

		1932.	*1933.*	*1934.*
Kenya produce ...	Centals	4,516	10,660	11,748
	Value (£)	8,589	23,584	28,483
Uganda ,, ...	Centals	829,303	1,179,315	1,142,568
	Value (£)	1,584,172	2,682,210	2,927,796

The declared value per cental of 100 lb. in 1934 was £2 11s. 3d. as compared with £2 5s. 6d. in 1933 and £1 18s. 3d. in 1932.

(b) *Cotton seed.*

Details of exports in respect of the past three years are shown below :—

		1932.	*1933.*	*1934.*
Kenya produce ...	Tons	170	103	291
	Value (£)	533	309	694
Uganda ,, ...	Tons	56,311	81,274	35,689
	Value (£)	168,366	262,539	85,947

The value per ton was £2 8s. 2d. in 1934, as against £3 4s. 7d. in 1933 and £2 19s. 10d. in 1932.

(c) *Coffee.*

Exports of this commodity during 1934 were :—

		Hulled.	*Parchment.*	*Unhulled (Cherry).*
Kenya produce ...	Cwt.	177,459	—	9,300
	Value (£)	485,521	—	6,238
Uganda ,, ...	Cwt.	153,556	602	140
	Value (£)	292,205	1,004	104
Total	Cwt.	331,015	602	9,440
	Value (£)	777,726	1,004	6,342

Quantities and values of the exports for the years 1932-34 are as follows :—

		1932.	*1933.*	*1934.*
Kenya produce ...	Cwt.	275,916	256,972	186,759
	Value (£)	1,213,715	831,197	491,759
Uganda ,, ...	Cwt.	87,077	100,444	154,298
	Value (£)	223,162	210,638	293,313

Comparative declared values per cwt. are as shown, viz. :—

	1932.			*1933.*			*1934.*		
	£	s.	d.	£	s.	d.	£	s.	d.
Hulled	3	19	11	2	19	7	2	7	0
Parchment	1	19	11	2	0	9	1	13	4
Unhulled (cherry)		18	1		14	5		13	5

(d) *Maize.*

Quantities and values in respect of maize exports were as follows during the last three years :—

			1932.	*1933.*	*1934.*
Kenya produce	...	Cwt.	514,917	1,131,549	439,958
		Value (£)	117,677	212,699	104,754
Uganda ,,	...	Cwt.	1,439	1,620	55
		Value (£)	294	287	14

(e) *Sisal.*

Exports of both fibre and tow, which originate in Kenya, again recorded an increase during the year under review. The figures for the three years 1932–34 are :—

		1932.		*1933.*		*1934.*	
		Tons.	£	*Tons.*	£	*Tons.*	£
Fibre	...	14,829	181,289	19,140	243,352	23,168	303,890
Tow	...	556	5,285	710	6,516	848	7,481

(f) *Hides and Skins.*

Details in respect of exports during the past three years are as follows :—

		1932.	*1933.*	*1934.*
		Kenya Produce.		
Hides, dry and dry-salted.	Cwt.	53,506	91,733	100,651
	Value (£)	87,067	132,103	168,550*
Skins, sheep and goat	No.	524,329	960,610	979,585
	Value (£)	16,167	20,496	26,089
Skins, other animals...	No.	5,814	7,417	6,476
	Value (£)	13,890	6,725	1,276
		Uganda Produce.		
Hides, dry and dry-salted	Cwt.	1,522	13,325	16,036
	Value (£)	27,682	20,196	27,295*
Skins, sheep and goat	No.	173,094	79,700	83,399
	Value (£)	6,588	2,150	1,937
Skins, other animals...	No.	415	74	268
	Value (£)	38	17	67

* Classification of Hides sub-divided in 1934 into the following groups :—

			(a) *Sun-dried.*	(b) *Shade-dried.*
Kenya produce	...	Cwt.	80,618	20,033
		Value (£)	125,428	43,122
Uganda ,,	...	Cwt.	13,432	2,604
		Value (£)	22,705	4,590

Inter-Territorial Trade.

In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1934, the value of local produce sent from Kenya to Uganda amounted to £151,648 as compared with £121,291 in 1933, and £144,979 in 1932, the principal commodities involved being soap, wheat meal and flour, maize meal and flour, beer, tea, timber, and coconut oil. The value of Kenya produce exported to Tanganyika Territory amounted to £169,461 as compared with £113,487 in 1933.

Under the Customs Agreement of 1927 the free interchange of imported goods between Kenya, Uganda, and Tanganyika Territory is allowed, the value of imported merchandise transferred from Kenya-Uganda to Tanganyika Territory during 1934 amounting to £589,543 (including specie valued at £139,047) and the total Customs duty collected by the Kenya and Uganda Customs Administration and transferred to Tanganyika Territory under this Agreement reached a figure of £115,326. Traffic in imported goods in the reverse direction was valued at £119,681 (including specie to the value of £68,450) the Customs duty involved being £16,064. Tanganyika Territory produce passing through Kenya for shipment at Mombasa amounted in value to £597,023.

Air Traffic.

Considerable use of the Customs aerodromes established at Mombasa, Nairobi, Kisumu, and Entebbe was made by aircraft on foreign service during the year and comparative figures are as follows :—

Year.	*Landed.*			*Shipped.*		
	Number of craft arrived.	*Number of passengers.*	*Value of cargo.*	*Number of craft departed.*	*Number of passengers.*	*Value of cargo.*
			£			£
1932 ...	434	441	6,321	436	449	72,152
1933 ...	477	500	18,692*	460	491	109,572
1934 ...	572	577	21.480*	541	517	172.942

* Bullion transhipped £11,681 and £12,819 respectively.

Outward cargo included bullion valued at £64,815, £89,981 and £158,867 respectively.

Excise and Beer Duties.

The co-ordination and allocation of Excise duties between Kenya, Uganda, and Tanganyika Territory is covered by the Excise Agreements Ordinance, 1931, and the rates of duty imposed during the year were as follows :—

	Shs.	*Cts.*
Sugar	1	00 per cwt.
Tea		10 per lb.
Cigarettes		75 ,,
Manufactured tobacco ...		50 ,,
Beer	40	00 per standard barrel of 36 gallons.

The following statement gives particulars of the allocation of Excise duties during the year under review, according to territories of production and consumption :—

	Country of Consumption.			
	Kenya.	*Uganda.*	*Tanganyika Territory.*	*Total.*
	£	£	£	£
Sugar:				
Kenya produce	4,537	79	416	5,032
Uganda	3,349	4,140	2,618	10,107
Tanganyika Territory produce transferred.	25	1	—	26
Total	7,911	4,220	3,034	15,165

Uganda	27	331	1	359
Tanganyika Territory produce transferred.	8	—	—	8
Total	4,656	2,041	1,676	8,373
Tobacco and Cigarettes:				
Kenya produce	4	—	—	4
Uganda	586	7,602	2,395	10,583
Tanganyika Territory produce transferred.	1,588	11,576	22	13,186
Total	2,178	19,178	2,417	23,773
Beer:				
Kenya produce	5,136	662	328	6,126
Tanganyika Territory produce transferred.	22	—	—	22
Total	5,158	662	328	6,148
Grand Total	£19,903	£26,101	£7,455	£53,459

Ivory.

Two sales by public auction of Kenya and Uganda Government ivory were undertaken by the Department during the year. The total weight of ivory sold was 72,410 lb. (Kenya 31,546 lb., Uganda 40,864 lb.) and the total amount realized was £21,175 (Kenya £9,637, Uganda £11,538).

VIII.—WAGES AND COST OF LIVING.

Wages.

An analysis recently made of the records of 500 registered domestic servants shows that the prevailing wage-rates are approximately as follows :—

	Range. *Sh. per month.*	*Average.* *Sh. per month.*
Cooks	20 to 80	28/50
House boys	15 ,, 50	18
Dhobies	20 ,, 50	25
Kitchen boys	8 ,, 25	14
Garden boys	8 ,, 25	14
Nurses	20 ,, 60	34
Chauffeurs	25 ,, 100	30

These are inclusive figures, rations being provided by the servants. The rates of wages paid to unskilled labourers varies from Shs.6 to Shs.14 per month, plus rations. The rate varies according to the class of work performed, e.g., underground workers in a mine would receive higher wages than those who work on the surface. These rates are considerably less than those which prevailed in 1929. Since Kenya first began to feel the force of the world depression in 1930, there has been a general downward tendency, which has continued during 1934. This downward tendency has also manifested itself in the wages of Europeans and Indians engaged in commerce, and in the remuneration of skilled labour generally.

Cost of Living.

Figures relating to the cost of living were collated by the Statistical Department annually from 1927 until 1933. At the end of the latter year, however, owing to the necessity for economy, the Department, as previously constituted, was abolished. Consequently index numbers showing the general trend of the commodity price-levels for 1934 are not available. The following table shows the approximate retail cost in Nairobi in December, 1934, of a number of the more common commodities :—

		Shs.	*Cts.*
Bread	per lb.		35
Flour, 1st grade (imported)	,,		35
Flour, 1st ,, (local)	,,		30
Flour, 2nd ,, ,, ...	,,		17
Tea (imported)	,,	3	65
Tea 1st grade (local)	,,	2	00
Tea 2nd ,, ,, ...	,,	1	85
Tea 3rd ,, ,, ...	,,	1	70
Sugar, white, 1st grade (local)	,,		40
Sugar, white, 2nd ,, ,, ...	,,		25
Jam (imported)	,,	1	50
Jam (local)...	,,	1	40
Dried fruit	,,	1	60

Butter (local creamery)	per lb.	1	50
Butter (farm)	,,	1	50
Cheese, 1st grade (local)	,,	1	25

		Shs.	*Cts.*
Eggs (Native)	per doz.		60
Eggs (European)	,,	2	00
Milk, fresh	per pint		25
Beef (average price)	per lb.		76
Pork (average price)	,,	1	00
Mutton (average price)	,,		68
Sea fish	,,	1	00
Lake fish (approx. 1 lb. each)	,,		70
Bacon (average price)	,,	1	50
Mean index number (January, 1927 = 1,000)		906	

The cost of accommodation, including food, in European boarding-houses varies from £7 per month upwards.

As regards the cost of living for natives, the staple foodstuff is maize meal and the average consumption thereof approximately 2 lb. per day, the total cost being approximately Shs.3 *per mensem.* Other foodstuffs, including meat, beans, etc., also form part of the native diet, and the amount consumed by one native may be valued at roughly Shs.2 *per mensem.* As rations for labourers are provided by employers in kind, the natives themselves are not affected by fluctuations in the price. This does not apply to natives living in native reserves. Normally, these produce sufficient food for themselves and their families, but, during times of famine, foodstuffs have to be purchased.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

European Education.

Government secondary education is provided at two schools, the Prince of Wales School at Kabete for boys and the Girls' Secondary School in Nairobi. There were 212 pupils in these two secondary schools and the total number of pupils receiving education in all Government schools, numbering 14, was 1,156 at the end of the year. Of these, 451 were boarders and 705 day scholars, and 683 were boys and 473 girls. There were 17 private schools with a total of 671 pupils. Four of these rank as secondary schools, though many pupils in them are in the primary stage only. Two preparatory schools for boys (total roll 97) prepare pupils for entrance to public schools overseas.

Indian and Goan Education.

There are two large Government secondary schools for Indian boys, one in Nairobi and the other in Mombasa. The organization makes it necessary to include a large number of primary pupils in both these schools. Altogether the roll of these two institutions is 1,184. The total roll in the remaining Government Indian schools is 1,785 of whom 1,286 are boys and 499 are girls. There are boarding facilities at one school only, the Secondary School, Nairobi, which has

41 boarders. After taking the Preliminary Cambridge examination, pupils may proceed to the Junior Cambridge and, later, the London Matriculation examinations.

During the year under review, 45 schools in various parts of the country were in receipt of a grant-in-aid ; in these schools there were 3,296 pupils. One school only was of secondary status. In eight unaided schools there was a total roll of 350.

Altogether in non-Government Indian schools there were 3,646 pupils of whom 1,462 were boys and 2,184 girls.

Arab Education.

Arab schools exist at Shimo la Tewa (where secondary education is concentrated), at Malindi and at Mombasa. There are two out-schools connected with the Ali bin Salim School, Malindi, and there is a small night school at Lamu. There were 532 on the roll of the six Arab schools, of whom six were girls.

In the Cambridge examinations, of five candidates for the Junior three passed, and of 13 candidates for the Preliminary six passed.

African Education.

The Local Native Councils continue to show great interest in educational development and contributed the sum of £5,209 towards the maintenance of Government African schools, and £9,069 in capital expenditure.

Secondary education remains under the control of the Missions, the Alliance High School at Kikuyu catering for pupils from schools of the Protestant Alliance of Missions, and the Catholic Training School at Kabaa for pupils from Catholic schools. These two schools have a total roll of 220.

There were 11 central Government African schools with a total roll of 1,492, 33 village schools with 2,364, and two agricultural schools with 115. The Jeanes School at Kabete continues to train visiting teachers, agricultural and health workers ; co-operation is maintained with the Agricultural and Medical Departments with regard to the Training of these agricultural and health workers. The roll was 38 men and 28 women. The number of technical apprentices at the Native Industrial Training Depot was 357.

During the year the sum of £35,557 was expended on grants-in-aid from central funds. This sum together with the sum of £4,173 contributed by Local Native Councils assisted 291 African schools which had a total roll of 34,270 pupils. In addition there were 1,083 schools with a roll of 65,548 pupils which were not in receipt of any financial assistance.

Administration.

The post of Chief Inspector of Schools remained in abeyance, and at the close of the year the staff consisted of the Director, the Supervisor of Technical Education, and five Inspectors of Schools. Inspectors were stationed at the Coast, Nairobi, Kikuyu, and Nyanza.

The four Advisory Councils for European, Indian, Arab, and African Education respectively and the various School Committees met and rendered valuable service in advising the Director. The work of the African Advisory Council included the final drafting of the new grant-in-aid rules to become operative in 1935, the District Education Boards Ordinance, and the revision of syllabuses.

* A pass with the necessary credits gives London Matriculation exemption.

Welfare Institutions.

The Lady Northey Home for European children is maintained by public subscription and fees collected. The Lady Grigg Welfare Institutions for Indians and Africans continue their good work. The League of Mercy, the British Legion and the Salvation Army carry out valuable services on behalf of the needy, especially children. As usual the Seaside Holiday Camp for European Children was held in Mombasa during the August vacation. A considerable number of children from the Highlands were assisted to enable them to enjoy a holiday at sea level. Funds to assist such cases are raised by voluntary contributions.

X.—COMMUNICATIONS AND TRANSPORT.

Posts and Telegraphs.

The scheme under which the Postal and Telegraph Services of Kenya and Uganda were amalgamated with those of Tanganyika in 1933, continued to work smoothly and satisfactorily. The two years during which the amalgamation has now been in operation have established conclusively that it has been a success, both financially and in every other respect.

The Trans-African weekly air mail service, which is operated by Imperial Airways Limited, was maintained with creditable regularity. Towards the end of the year the Company had completed arrangements for a duplication of the service early in January and this has since been effected. The extension England—India—Malaya air service to Australia has reduced the transit time for air mails from Kenya to Australia to 12 days.

The Nairobi—Mombasa—Tanga—Zanzibar—Dar es salaam internal air service, which operates as a feeder of the main Imperial Airways service, was very efficiently maintained by the contractors, Messrs. Wilson Airways Limited.

The number and weight of air mail letter packets posted in Kenya amounted to 488,072 and 12,200 lb. respectively. Inward air correspondence amounted to 409,578 items, weighing 11,700 lb. Approximately 25·5 per cent. of the Colony's total overseas letter mail correspondence was conveyed by air.

The air parcel service is still restricted to Great Britain and certain Empire countries on the southern section of the route. During the year 3,621 air parcels were posted in the Colony and 2,429 received.

The air mail money order service, hitherto limited to Great Britain, was extended to India as from the 1st October. During the year, 715 air mail money orders of a total value of £5,123 were issued. The number and value of air mail orders paid was 90 and £787 respectively.

The various overseas surface transport mail services were fairly regular during the year. Sixty-three mails were despatched to, and fifty-one mails received from, Great Britain, the average time in transit between Mombasa and London being approximately 19 days.

Internal mail services extend to all parts of the Colony. The policy of replacing native runners by mechanical transport is being steadily pursued.

The estimated total number of letters, postcards, newspapers and other packets dealt with during the year was 12,749,392. Although correspondence posted in the Colony showed an increase, there was a falling off in correspondence received from abroad.

The number of parcels handled inclusive of air mail and cash-on-delivery parcels increased from 129,774 to 134,975 as compared with 1933. The number of cash-on-delivery parcels dealt with was 8,758 having a value of £23,718.

Money orders issued during the year numbered 22,784 to a value of £113,261. Those paid numbered 15,863 and amounted to £67,799. There was a small decline in the volume of this class of business.

British postal orders issued and paid during the year amounted to 92,316 in number and £52,168 in value. These figures are an improvement on the previous year.

Telegraphs and Telephones.

The number of inland telegrams dealt with was 274,533, an increase of 12 per cent. on the previous year. External telegrams numbered 106,455. Telegrams to and from Great Britain numbered 43,887. Of this traffic, 34,924 were transmitted via Kenya Radio.

The telephone trunk system was satisfactorily maintained, but there was no noteworthy extension of this service. The number of trunk calls made during the year was 109,863, an increase of 11 per cent. over 1933.

A general increase took place in the number of telephones in use, and at the end of the year the number of subscribers at the principal public exchanges was as follows: Nairobi, 832; Mombasa, 314; Nakuru, 56; Eldoret, 60.

The internal telephone and telegraph system consists of 2,732 miles of pole route and a wire mileage of 15,853. Most administrative centres are connected by telegraph.

Communication in the Northern Frontier and Turkana areas is maintained by a wireless system consisting of nine small stations (500 watts) which are maintained and operated by military units and handle civil as well as military telegrams.

Telegraph communication overseas is maintained by Cable and Wireless Limited, by means of a wireless station at Nairobi working direct with England, and a cable from Mombasa. The Company also controls the coast wireless station at Mombasa at which a 24 hours' service is maintained. Communications with South Africa are available by a Government land-line.

A broadcasting station at Nairobi is also maintained and operated by Cable and Wireless Limited, and provides a local service under an agreement and without cost to the Colony. The station transmits on wave lengths of 350 metres and 49·5 metres simultaneously. Reception on the medium wave is satisfactory within its effective range, but the quality of reception on the short wave varies in different parts of the Colony. The programmes consist mainly of reproduction of gramophone records, British Official Wireless Press, local news, market and weather reports, and occasional relays of items of interest from the programmes of the British Broadcasting Corporation's Empire station. The number of licensed listeners at the end of the year was 1,152, representing a substantial increase on the previous year.

Roads.

The expenditure recorded during the year on the maintenance and improvement of the public road system, exclusive of roads maintained by local authorities, amounted to £56,125, a reduction of £6,650 on the expenditure in 1933.

The capital expenditure on road works amounted to £2,637 from revenue and £790 from loan.

Harbours.

The total tonnages (import and export) handled at Kilindini Harbour during the years 1933 and 1934 are given below. These figures do not include oil imports discharged through the Magadi Soda Company's pipe-lines, nor soda exported from that Company's pier. Coal imports are shown separately.

COAL IMPORTS.

1933.	1934.
82,805 tons.	53,815 tons.

IMPORTS AND EXPORTS OTHER THAN COAL.

Year.	*Imports B/L tons.*	*Exports B/L tons.*	*Total B/L tons.*
1933	250,665	451,123	701,788
1934	274,677	390,467	665,144

The total trade of the Port of Mombasa including Kilindini Harbour and the Old Port for the year 1934 as compared with 1933 is summarized in the following statement :—

	1933.	1934.
Number of steamships ...	599	584
Net tonnage of steamers ...	1,820,709	1,902,356
Imports—B/L tons	336,776	335,645
Exports ,, ...	472,603	386,913
Passengers landed :—		
European	5,497	5,977
Non-European	10,423	12,739
Passengers embarked :—		
European	5,511	6,083
Non-European	11,593	10,161

Shipping.

The registered tonnage (inwards and outwards) at all Kenya seaports during the year as compared with 1933 was as follows :—

	1933.	1934.
Vanga	6,710	8,635
Funzi	14,327	8,525
Mombasa	3,702,510	3,871,465
Kilifi	5,182	6,917
Malindi	18,832	15,699
Lamu	67,199	38,454
Kapini	3,076	3,385

Railways.

The carriage of public goods provided a revenue of £1.958,672 and the tonnage of the traffic amounted to 728,706 tons, as compared with £1,821,279 and 766,363 tons in 1933.

Passenger Traffic.—Revenue from passenger traffic showed an increase on 1933 figures. In 1934, 484,138 passengers contributed a revenue of £161,541, while in 1933, 512,999 passengers contributed a revenue of £159,050. The following table indicates the numbers of passengers travelling in the various classes as compared with 1933:—

Passengers carried.

	1st Class.	*2nd Class.*	*3rd Class.*	*Total.*
1933	7,741	27,996	477,262	512,999
1934	7,739	27,002	449,397	484,138

The traffic on Lakes Victoria, Kioga, and Albert, and on the River Nile, on which Administration services are maintained, is shown in the following table:—

	1933.	1934.
Earnings...	£101,000	£114,000
Working expenditure	£60,927	£60,245
Tonnage carried	90,809	92,116

Fuel Consumption.—The following figures show the consumption of coal, wood, and oil fuel on the railway during 1934 as compared with 1933.

	1933.		*1934.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Coal	62,558	71,633	61,422	66,811
Oil	673	1.706	658	1,639
Wood	130,759	46,436	114,773	37,597

On the lake steamers the figures were:—

	1933.		*1934.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Oil	3,339	8,463	2,945	7,586
Wood	6,706	3,588	7,197	3,370

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1934 are shown in the following table:—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	2,227,285	332,755	2,560,040
Ordinary working expenditure	994,287	132,156	1,126,443
Surplus of receipts over ordinary working expenditure.	1,232,998	200,599	1,433,597

The expenditure on capital account at the end of 1934 amounted to £22,422,119. Interest-bearing capital provided £13,983,009 of this sum, the balance being contributed by :—

	£
Parliamentary grants, 1896 and 1902	5,686,437
Accrued interest on 1924 Loan	421,662
Contributions from revenue :—	
Direct (formerly called expenditure extra-ordinary)	649,803
Through Betterment Funds (capitalized)...	1,581,078
Through Marine Insurance Fund (capitalized)	100,130
	£8,439,110

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony:—

The National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, and Eldoret ;

The Standard Bank of South Africa, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, Eldoret, Kitale, Nyeri, Kakamega, and an agency at Nanyuki ;

Barclays Bank (Dominion, Colonial and Overseas) with branches at Nairobi, Mombasa, Nakuru, Eldoret, Kitale, and Kakamega.

In 1931, a Land and Agricultural Bank under the control of Government was formed with a capital of £240,000 which was increased to £500,000 in 1933. The Bank makes advances to farmers, repayable over periods up to 30 years on first mortgage security, charging interest at the rate of 6½ per cent. per annum. Up to 31st December, 1934, the Bank had made 390 advances totalling £472,415, of which £27,920 had been repaid at that date. Under an amending Ordinance passed in 1934, provision was made for short term loans and up to 31st December, 1934, twelve such advances totalling £2,340 had been issued.

Currency.

The standard coin is the East African shilling with subsidiary coinage of the following denominations :—

50 cents (silver) ;
10 cents, 5 cents and 1 cent (bronze).

A note issue is maintained and notes of the following denominations are in circulation :—Sh. 10,000, 1,000, 200, 100, 20, 10 and 5.

In addition to the above a considerable amount of old rupee and florin currency, both coin and notes, has been in circulation in the Colony, but on the 1st of January, 1932, this currency ceased to be legal tender.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

The standard weights and measures of the Colony are identical with those in use in Great Britain, namely the Imperial pound, yard, and gallon. Although the Kenya Weights and Measures Ordinance is applicable to the whole Colony and Protectorate, annual verifications and periodical inspections are in practice confined to the towns and larger trading centres. A total of 7,129 weights, measures, and instruments were stamped, rejected or adjusted, from which was derived revenue amounting to £112. A further total of 827 weights, measures, and instruments were examined during the course of visits of inspection resulting in prosecutions in certain cases.

XII.—PUBLIC WORKS.

The total expenditure incurred by the Public Works Department on services administered by it amounted to £285,375, and of this sum £205,418 was on account of revenue services provided for under Public Works Heads, £11,671 from various extra-departmental sources, and £68,286 from loan. The revenue collected by the Department amounted to £57,123.

The total expenditure on capital works amounted to £71,956 in direct charges, and of this amount £10,592 was obtained from revenue and £61,363 from loan (exclusive of over-head charges).

Revenue expenditure was distributed as follows :—

	£
Buildings	3,625
Water and Drainage	915
Roads and Bridges	2,637
Miscellaneous Works	3,415

Loan expenditure was :—

	£
Buildings	60,340
Water and Drainage	233
Communications	790

The principal capital work in course of construction was the New Law Courts at Nairobi. Payments during the year amounted to £56,710, and the building was approaching completion at the end of the year.

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya, Uganda, Nyasaland and Zanzibar Protectorates, and the Tanganyika Territory. The Judges of the Court of Appeal are the Judges and the Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland, and Tanganyika, and His Britannic Majesty's Court for Zanzibar. During 1934 the Court held three ordinary sessions and four special sessions. The total number of appeals filed was 217, of which 80 were from Kenya.

Throughout the year the Courts operating in the Colony were as follows:—

(1) The Supreme Court sitting at Nairobi, Mombasa, and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged;

(2) the Courts of the Resident Magistrates at Nairobi (two), Mombasa, Nakuru, Kisumu, and Eldoret, presided over by legally qualified officers or by officers seconded from the Administration;

(3) the Courts of the First, Second and Third Class, presided over by Provincial Commissioners, District Commissioners, and District Officers; and

(4) the Courts conducted by Liwalis, Cadis, and Mudirs.

The Northern Frontier and Turkana Districts have been created special districts within the meaning of sections 14 and 15 of the Criminal Procedure Code and the Officers-in-Charge of these districts are the Officers specially authorized under the latter section. The District Commissioners in the Northern Frontier District have been given the powers of First Class Magistrates.

Courts.

The number of criminal cases committed for trial to the Supreme Court aggregated 181, involving 300 charges against 276 individuals. These figures compared with 165 cases and 234 charges during 1933. Of the total 255 charges actually tried during 1934, 245 were against males and ten against females. Convictions numbered 187, acquittals 46, and discharges 22. Europeans were convicted on two, Asiatics on 19, and natives on 166 charges. Of the punishments imposed, two convicts were fined, 99 sentenced to peremptory imprisonment, one to fine and imprisonment, one to imprisonment in default of payment of fine or surety, nine to whipping with fine or imprisonment or detention camp or both, four were bound over or otherwise disposed of, 47 were sentenced to death, and six detained during the Governor's pleasure, 15 were sentenced to imprisonment for life and three sentenced to detention camp.

The number of Supreme Court civil cases filed during the year was 418, a decrease of 55 on the number for 1933. Probate and Administration causes numbered 150 compared with 174 opened in 1933, and 44 Bankruptcy petitions were filed compared with 68 for the previous year. In addition five Trust causes were opened and 12 Divorce causes were filed.

There were 128 civil and criminal appeals from Subordinate Courts, 311 criminal revisions and 873 confirmation cases.

During the year, 55,301 charges were brought in Subordinate Courts, an increase of 6,575 on the figures for 1933. These charges were disposed of as follows: convictions, 50,465; acquittals, 1,580; discharges, 3,256. This includes 969 charges brought against juvenile offenders, involving 897 convictions and 72 discharges.

Details of the sentences imposed are as follows:—

Fines	12,773
Detention camp in default of payment of fine or surety	14,106
Imprisonment in default of fine or surety	3,143
Fine and detention camp	307
Detention camp	3,556
Fine and peremptory imprisonment	885
Peremptory imprisonment	4,731
Whipping with fine, or imprisonment, or both ...	62
Whipping	338
Whipping with fine, or detention camp, or both ...	13
Bound over; cautioned; repatriated	6,165
Other punishments; tax or compensation or wages paid; bail estreated	4,383
Detained pending Governor's orders	3
Committed to prison for failure to find security ...	Nil
Total convictions	50,465

Police.

The Kenya Police is composed of African and a small percentage of Asiatic personnel under the command of European officers and non-commissioned officers. The Force is distributed mainly at police stations throughout the settled and urban areas of the Colony and Protectorate. The work of each police station is controlled by a European or Asiatic non-commissioned officer and the stations are grouped under the direction of a commissioned officer. Police detachments are stationed in the Northern Frontier District. African police are stationed in a few of the native reserves and Turkana where they operate under the direct control of officers of the Administration, but the enforcement of law and order in most of the reserves is the responsibility of the local tribal police. The personnel of the Force was increased during the year by one chief inspector for duty in the Finger Print Bureau, and three assistant inspectors, second grade, for duty at the goldfields in Central Kavirondo, Kakamega town, and patrol duty in the Nekuru area.

Cognizable offences under the Penal Code reported to the police in settled and urban areas in 1934 totalled 5,476. Of that number 5,281 were true cases, an increase of 680 true cases on the total for 1933. Accused persons in 3,659 cases were brought for trial before the Lower or Supreme Courts. The total stated value of property stolen was Shs. 279,267/-, of which Shs. 97,941/- or 35 per cent. was recovered.

A small patrol of police continue to be employed to maintain order on the boundaries of the Kisii-Lumbwa native reserves. By reason of the lawlessness of the Samburu tribe it became necessary in June to establish a police post of 20 African subordinate officers in the Samburu District. In October it was found necessary to augment further this post temporarily by ten African police.

Detachments were maintained in the gold mining areas at Kakamega, Gori River, and Lolgorien and at Yala.

Prisons.

The 70 penal establishments under the administration of the Commissioner of Prisons are composed of three first-class prisons for the accommodation of long-term prisoners (sentenced to three years or over), four second-class prisons for medium-term prisoners (sentenced to between six months and three years) and 21 third-class prisons at district headquarters (for those sentenced to less than six months imprisonment). There are also 42 detention camps for the accommodation of natives who have not previously undergone more than one term of imprisonment, and who are sentenced to detention for minor offences, usually imposed in default of payment of fine. No sentence of detention may exceed six months.

The total number of persons committed to prisons and detention camps during 1934 was 40,852, representing an increase of 18 per cent. over the number committed during 1933. The increase in the last four years has been nearly 100 per cent. Of the above total, 8,748 were sentenced to imprisonment, 22,201 were sentenced to detention, 115 were civil debtors, 247 were lunatics, and 9,541 were admitted on remand and subsequently not sentenced to imprisonment. Of the total of 8,748 persons committed to serve sentences of imprisonment, 18 were Europeans, 187 were Goans, Indians, Arabs and Somalis, and 8,543 were Africans. Female and juvenile convicted prisoners numbered 317 and 316 respectively.

The general health of prisoners was good; the percentage of prisoners on the sick list dropped from 3·9 in 1933 to 3·3 per cent. in 1934, which is the lowest figure recorded since 1927. The total of 95 deaths during the year was 54 higher than the total for 1933. Pneumonia alone accounted for 48 deaths.

Eighteen juveniles served terms of imprisonment and these were all confined in class I and II prisons where there are European officers in charge. Juveniles were segregated from adult prisoners whilst undergoing sentence. A further seven juveniles were sentenced to terms in a reformatory and were transferred to Kabete, whilst 291 underwent sentences of caning only. Out of the total 34 had been previously convicted.

Release on licence is granted to certain offenders on completion of two-thirds of their sentences of not less than three years. During 1934, 129 convicts were released on licence, as compared with 80 in 1933.

The technical training of convicts, which is carried on in the three class I prisons of the Colony, and consists of tailoring, carpentry, and the making of sisal mats, string, rope and coir and grass mats has progressed considerably. All uniforms for the prisons staffs and all convict clothing are made in the prison workshops, while orders for uniforms for other Government departments are obtained annually. The output from the tailoring and carpentry shops is increasing. During 1934, £3,988 was expended on raw materials for prison industries. The amount paid into the Treasury as revenue derived from prison industries was £7,406. Of this sum £635 was obtained from the hire of convict labour.

During 1934, £889 worth of foodstuffs was grown in prison farms, the principal crops being maize (157 tons), beans (14 tons) and potatoes (31 tons). Drought seriously affected the output from prison farms.

In order to reduce the overcrowding of some of the established prisons, two prison camps were established in 1934—one for 120 convicts for road work under the supervision of the Public Works Department and one for 250 convicts for quarrying and ballast breaking for the Kenya and Uganda Railways and Harbours Administration. The establishment of these camps served the dual purpose of easing overcrowding and of providing productive hard labour for African convicts.

The system of periodical review by the Governor of all sentences, including commuted death sentences, of seven years and over was continued in 1934. During the year the cases of 23 convicts were submitted for review. Of these three convicts were promised accelerated release subject to continued good behaviour, four were recommended for release on licence, and the cases of eleven convicts were deferred for reconsideration at a later date.

In October, 1934, by the provisions of the new Juveniles Ordinance, based on the English Children and Young Persons Act, 1933, class II and III approved schools were established at Kabete in place of the existing Kabete reformatory. The administration of these approved schools came under the Commissioner of Prisons assisted by a Board known as the Approved Schools Board. The training in these approved schools is directed mainly to agriculture, animal husbandry and gardening, together with a sound manual training. A housemaster from one of His Majesty's Borstal Institutions in England has taken over charge of the approved schools and it is hoped that by the introduction of a modified Borstal system, adapted to the requirements of the African youth, it will be possible to effect, as time goes on, the reclamation of the majority of boys sent to the schools from a life of crime.

The total number of committals to the schools during 1934 was 35, and the daily average of inmates 105. The total number of discharges during the year was 81, of whom one died in hospital, one was transferred to prison, and 79 completed their sentences.

XIV.—LEGISLATION.

Sixty-five Ordinances were passed during the year 1934. A summary of the more important enactments is given below.

No. 11. *The Sisal Industry Ordinance*, 1934, imposes a levy on the export of sisal fibre, the amount of such levy being paid into a fund together with a grant-in-aid from the Government on a pound for pound basis. The fund is administered by a Committee and is generally devoted to the improvement of the sisal industry.

No. 12. *The Native Exemption Ordinance*, 1934, repeals and replaces the Native Exemption Ordinance (Chapter 128 of the Revised Edition of the Laws of Kenya). The Ordinance provides for the exemption of certain categories of natives from the operation of specific laws.

No. 13. *The Special Districts (Administration) Ordinance*, 1934, which is based on the Frontier Crimes Regulations, 1901, of India (Regulation No. III of 1901), provides for the better administration of Provinces which, from their geographical position or the primitive stage of the development of the inhabitants, require special legislation.

No. 18. *The Post Office Ordinance*, 1934, is modelled on the Post Office Ordinance of the Colony of Nigeria (Ordinance No. 31 of 1928), and replaces the Indian Post Office Act, 1898, hitherto in force in the Colony.

No. 19. *The Diamond Industry Protection Ordinance*, 1934, which is modelled on the existing legislation in Tanganyika Territory (Chapter 103), is designed to control the possession, purchase and sale of uncut diamonds, and generally to provide for the protection of the diamond industry.

No. 21. *The Limitation Ordinance*, 1934, replaces the Indian Limitation Act of 1877 and substitutes therefor the English law of limitation. A few of the provisions of the Indian Act have, however, been retained.

No. 22. The Juveniles Ordinance, 1934, repeals and replaces the Reformatory Schools Ordinance (Chapter 39 of the Revised Edition of the Laws of Kenya) and the Juvenile Offenders Ordinance No. 15 of 1933. It is based on the Children and Young Persons Act of 1933, and provides for the trial and punishment of juvenile offenders.

No. 27. The European Civil Service Provident Fund Ordinance, 1934, establishes a Provident Fund for members of the recently inaugurated Local European Civil Service of the Colony, and provides for contributions to the Fund to be made by members of the said Service and by Government.

No. 35. The Agricultural Mortgagors' Relief Ordinance, 1934.—An Agricultural Mortgages Committee was appointed in 1933 to consider whether, in the then circumstances of the agricultural community, any special legislative measures were necessary to protect its interests and afford it reasonable security of tenure. The Ordinance, which follows similar legislation in force in British Columbia, New Zealand and Queensland, is founded on the Committee's report.

No. 36. The Native Lands Trust (Amendment) Ordinance, 1934.—This legislation is a temporary measure pending the enactment of a comprehensive Ordinance arising out of the recommendations of the Kenya Land Commission, 1933.

No. 38. The District Education Boards Ordinance, 1934, makes provision of the establishment of District Education Boards composed in part of representatives of Local Native Councils, school managers and Government officials.

No. 40. The Native Hut and Poll Tax Ordinance, 1934, consolidates in one comprehensive Ordinance the previous legislation regarding the collection of hut and poll tax from natives, together with the rules detailing the procedure for such collection. The Ordinance widens the scope for the exemption of deserving persons who are unable to pay, but provides for the payment of tax by women hut owners who are financially able to do so.

No. 45. The Telegraphic Press Messages Ordinance, 1934, which is based on the Palestine Telegraphic Press Messages Ordinance, 1932, confers temporary exclusive rights in respect of telegraphic press messages.

No. 46. The Tea Ordinance, 1934, restricts the production of tea in the Colony, and gives effect to the International Restriction Scheme which embraces all the large and most of the smaller tea-producing countries of the world.

No. 53. The Preservation of Objects of Archaeological and Palaeontological Interest Ordinance, 1934, repeals and replaces the Ancient Monuments Preservation Ordinance, 1927, as amended by the Ancient Monuments Preservation (Amendment) Ordinance,

1932. It consolidates, amplifies and improves the law relating to the protection, preservation and treatment of archaeological and palaeontological sites and objects, in which the Colony has proved to be exceptionally rich.

No. 54. The Coffee Industry Ordinance, 1934, consolidates the law relating to the advancement and control of the coffee industry in the Colony. It re-enacts the provisions of the Coffee Industry Ordinance, 1932, but embodies certain amendments, the most important of which is the inclusion of provision for the compulsory registration of distinguishing marks used by persons to identify coffee grown by them when such coffee is marked.

No. 55. The Interpretation (Definition of "Native") Ordinance, 1934, amends and defines in more precise terms the definition of the expression "Native."

No. 61. The Non-Native Poll Tax Ordinance, 1934, which is based on the Non-Native Poll Tax Ordinance, 1933, makes provision for the levy during 1935 of a non-native poll tax at a rate graduated according to the tax-payer's income.

No. 62. The Liquor Ordinance, 1934, provides for the control of the sale of liquor, and gives effect to the recommendations of the Liquor Licensing Committee appointed in 1933. It re-enacts the provisions of the existing law and embodies the amendments proposed by the Committee.

No. 63. The Licensing Ordinance, 1934, which repeals the Licensing Ordinance, 1933, makes provision for the licensing of certain professions, businesses, arts, callings and industries within the Colony, and fixes the licence fees payable therefor.

No. 64. The Asian Civil Service Provident Fund Ordinance, 1934, establishes a Provident Fund for members of the Local Asian Civil Service of the Colony and provides for contributions to the Fund to be made by members of the Service and by Government.

XV.—PUBLIC FINANCE AND TAXATION.

Tobacco	2,178
	£76,918

Customs Tariff.

In October, 1934, legislation was enacted effecting tariff adjustments on an alternative specific or *ad valorem* basis on certain textile goods and on bicycles, and extending the scope of certain tariff exemptions with particular reference to mineral mixtures for stock feeding, trailers used as attachments to motor and steam road and farm tractors, and batching oil and ingredients thereof for use in manufacture of rope, twine and sacking.

New Taxation Measures.

The following taxation measures passed by the Legislative Council in August, 1933, remained in force throughout the year :—

(1) *The Non-Native Poll Tax Ordinance*, making provision for the levy of a non-native poll tax at a rate graduated according to the taxpayer's income, was estimated to produce a revenue of £66,000 in 1934 as against an estimated revenue of about £35,000 under the old Non-Native Poll Tax Ordinance, which levied tax at a flat rate of Sh.30 per head. Actual receipts in 1934 totalled £68,307. The additional revenue resulting from this measure may therefore be assessed at approximately £33,307 in 1934.

(2) *The Licensing Ordinance*, 1933, which provides for the licensing of certain trades, professions, and occupations within the Colony, was estimated to bring in additional revenue amounting to about £31,000 per annum, but actual receipts in 1934 totalled £33,113 only as compared with an estimated revenue under the old Traders Licensing Ordinance of £19,400. The additional revenue resulting from this measure in 1934 may therefore be assessed at approximately £13,713.

A Committee was appointed in September, 1934, to examine the provisions of the Ordinance in the light of experience gained. Following the report of the Committee, the Licensing Ordinance, 1933, was repealed and a new *Licensing Ordinance* (*No. 63 of* 1934) was passed which came into operation on the 1st January, 1935.

(3) *The Tax on Imported Packages Ordinance* was in force throughout the year and brought in revenue amounting to £8,259 in 1934. This tax took the form of a charge of 25 cents on each package imported into the Colony, and legislation similar to that introduced in Kenya was introduced in Uganda and Tanganyika. The tax was found to be vexatious in practice and the neighbouring territories refused to continue it after the end of 1934. The Kenya Government had no alternative but to follow suit, as retention of this tax applied to Kenya alone would do permanent harm to the Colony's entrepôt trade.

(4) The amendments to the *Stamp Ordinance* produced additional revenue estimated at £6,882 in the case of the tax of Sh.10 levied on every £100 or part of £100 of nominal share capital, on the registration of a company and on the registration of any increase of share capital made after the first registration of the company ; and estimated at £750 in the case of the graduated scale of stamp duty, varying with the period, imposed on Bills of Sale and Promissory Notes.

The yield of additional revenue attributable to these taxation measures in 1934 may therefore be expressed approximately as follows:—

	£
Non-Native Poll Tax	33,307
Trade and Professional Licences ...	13,713
Package Tax	8,259
Amendments to Stamp Ordinance	7,632
Total	£62,911

Native Hut and Poll Tax.

Rate.—The rates of hut and poll tax imposed under Chapter 51 of the Revised Edition of the Laws of Kenya (The Native Hut and Poll Tax Ordinance) are as follows:—

	Per Hut or Poll. Shs.
Turkana District	6
Kamasia District	6
Meru District	8
Kitui District	9
Northern Frontier District and Samburu	10
Masai District	14
Other Districts	12
Duruma	nil.

Section 3 of the Northern Frontier Poll Tax Ordinance (No. 53 of 1930) empowers the Governor to order that the poll tax prescribed under Section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier District. The Governor has power to reduce the amount of the tax payable by the natives of any specified area, and in certain districts temporary reductions have been made.

Method of Assessment.—A uniform tax at the prescribed rate is paid on each hut (dwelling house) owned by the taxpayer.

A poll tax at the prescribed rate is payable by all able-bodied male natives of the apparent age of 16 years or over who do not pay the hut tax.

Hut and poll tax is collected by District Officers. The taxpayer is given a receipt in the form of a hut or poll tax ticket for each tax paid. At the same time the payment is noted in the register of taxpayers.

Yield.—The yield of native hut and poll tax in 1934 amounted to £514,480.

APPENDIX.

	MAP.	

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by meridian line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,730 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is the zone time 2¾ hours fast on Greenwich. Physiographically Kenya consists of : (1) a region poorly watered comprising some three-fifths of the total area of the Colony ; (2) a plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Nakuru, Naivasha, and others; (4) a portion of the basin of the Victoria Nyanza which is 3,726 feet above sea-level. The Nzoia, Yala, Kuja, and Amala Rivers flow into Lake Victoria, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya and from the Aberdares there flow numerous tributaries of the Tana River which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and is capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 58° F.—65° F. in the highland areas.

The rainfall is generally well distributed and ranges from about 10 inches per annum in the arid northern areas to 86 inches per annum in the vicinity of Lake Victoria. The average rainfall in the main agricultural and pastoral areas ranges from 3 to 40 inches. The heaviest rainfall occurs from March to June and from October to December.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498, Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829, Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848, Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw the Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887, Seyyid Bargash, the Sultan of Zanzibar, granted a concession on the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889, a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha, and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892, the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895, a British Protectorate was declared over the Company's territory between the coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902, the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903, there were nearly 100 European settlers in or near Nairobi.

In 1905, the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, and Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transferred to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the Great War.

Nominated unofficial members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923, this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony ; the coastal belt remains a Protectorate. In 1925, the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council, and in 1925, when under the Kenya and Uganda (Transport) Order in Council the name of the Railway was changed to the Kenya and Uganda Railway, the office of the High Commissioner for Transport was established. This office, by an Order in Council made on the 13th August, 1935, is now vested in the Governors of Kenya and Uganda jointly, and in that capacity they are advised by a Railway Council consisting of official and unofficial representatives of Kenya and Uganda.

II.—GOVERNMENT.

His Excellency Brigadier-General Sir Joseph Aloysius Byrne, G.C.M.G., K.B.E., C.B., proceeded on sick leave on 20th March and returned to duty on 4th September. During his absence the Government was administered by the Colonial Secretary, A. de V. Wade, Esq., C.M.G., O.B.E.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council of eight *ex-officio* members, and such other official and unofficial members as may be appointed. During 1935, four unofficial members so held office, three being Europeans, of whom one more particularly represented native interests, and the fourth an Indian.

The Legislative Council consists of the Governor as President, eleven *ex officio* members, not more than nine nominated official members, eleven European elected members, not more than five Indian elected members, one Arab elected member, and two nominated unofficial members to represent the interests of the African community. If one of the nominated official members is not specifically appointed to represent the interests of the Arab community, an additional unofficial member is nominated to represent such interests. The Governor has the right to veto any measure passed by the Legislative Council.

The Colonial Secretary is the Chief Executive Officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners who are responsible for their execution. The Colony is divided into four Provinces, each in the charge of a Provincial Commissioner, and three extra-Provincial Districts. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Commissioners.

Local Government.

Settled areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the more important townships. In the rural settled areas they had the advice of District Committees and a measure of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru and Eldoret, with Municipal Boards, while District Councils were established in the settled portions of the Districts of Nairobi Kiambu, Fort Hall, Naivasha, Nakuru, Kisumu-Londiani, Uasin Gishu, and Trans-Nzoia. At the same time a Commissioner for

Local Government was appointed to deal with local government administration. This office was combined with that of Commissioner of Lands, under the title of Commissioner for Local Government, Lands and Settlement.

As the result of legislation introduced in 1933 Municipal Boards now elect their own Chairman, with the exception of Mombasa where the District Commissioner is still statutorily Chairman of the Board.

The total gross revenue of the four municipalities amounted in 1935 to £196,011 (subject to audit) of which £132,354 accrued to the Nairobi municipality. Of this total revenue the Government contributed in grants approximately 20 per cent., the balance being raised from assessment rates, licence fees and charges for services rendered. Municipal Authorities may levy assessment rates on capital values up to a maximum of 2 per cent. on site values. In 1935, a rate of $1\frac{1}{4}$ per cent. on site values was levied in Nairobi and yielded £23,635 from ratepayers. In Mombasa a small improvements rate was imposed in addition to the site value rate. Nakuru and Eldoret have as yet imposed no assessment rates, but rely on municipal licence fees and charges supplemented by consolidated grants from Government amounting to £1,800 and £1,976 respectively in 1935.

Nairobi, Nakuru, and Eldoret control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town planning schemes are in progress under the Town Planning and Development Ordinance, 1931. The execution of the Mombasa town planning scheme was continued under a sanctioned loan of £250,000, of which £189,000 has so far been raised. The Municipal Board took over the liability for this loan from Government in 1931.

In the rural areas, the six District Councils confine their executive functions to roads, the funds for which are derived at present solely from Government grants. These grants amounted to £31,070 in 1935, as compared with £32,186 in 1933 and 1934, £34,598 in 1932, £43,418 in 1931, and £53,098 in 1930. The Councils have improved their district roads in a satisfactory manner. Various causes have contributed to the postponement by Councils of the imposition of local rates, and, in so far as Councils remain financially dependent on Government grants and deal only with roads, they represent only a modified and incomplete form of local government. In 1935, the Trans-Nzoia District Council again imposed a hospital rate in the nature of a poll tax on adult male Europeans resident in the district, for the purpose of maintaining the Kitale Hospital which the Council acquired during 1932, and a similar rate is also levied in the Uasin Gishu District for the Eldoret Hospital, which is maintained jointly by the District Council and the Eldoret Municipal Council.

In other rural settled areas and townships, District Committees, Road Boards, and Township Committees continued to do useful work.

Native areas.—The Local Native Councils in Kenya are a deliberate creation under the Native Authority Ordinance, Chapter 129 of the Laws of Kenya. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance, and regulation of food and water-supplies, forests, roads, bridges, culverts, public health, the use of land, education, markets and market dues, agriculture and live stock, etc. The District Commissioners are the Presidents of the Councils and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. At the present time in the majority of Councils the greater portion of members are illiterate. The funds, which are controlled by the Councils, are derived from two main sources : (*a*) from the proceeds of local native rates which they are empowered to impose on the inhabitants of the areas over which they have control ; (*b*) from the proceeds of the rents of land, forest royalties, etc., levied within those areas. The number of Councils was reduced during the year from 22 to 20.

The provision of educational and agricultural facilities occupied the foremost place amongst the various services rendered by Local Native Councils during 1935.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926, and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table :—

	1911.	*1921.*	*1926.*	*1931.*
European, males	2,022	5,800	7,199	9,404
,, **females**	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
,, **females**	—	11,640	14,841	20,388
Total males	—	30,142	33,498	46,151
,, **females**	—	15,491	20,171	27,796

The percentage increase in each section of the population during the last two decades is :—

	European.	*Asiatic.*
1911–1921	204	203
1921–1931	74	59

The proportions in which the various races entered into the total of the non-native population in Kenya at each census year will be seen from the following summary :—

	1911.		*1921.*		*1926.*		*1931.*	
	Number.	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*	*Number.*	*Per cent.*
European ...	3,175	13·1	9,651	21·1	12,529	23·3	16,812	22·7
Indian ...	10,651	44·1	22,822	50·0	26,759	49·9	39,644	53·6
Goan ...	1,136	4·7	2,431	5·3	2,565	4·8	3,979	5·4
Arab ...	9,100	37·7	10,102	22·1	10,557	19·7	12,166	16·5
Others ...	99	0·4	627	1·5	1,259	2·3	1,346	1·8
Totals ...	24,161	100·0	45,633	100·0	53,669	100·0	73,947	100·0

The ratio of females to males at each census for the two main racial sections of the community is :—

	Europeans. (*females to* 100 *males*).	*Asiatics.* (*females to* 100 *males*).
1911 ...	57	—
1921 ...	66	48
1926 ...	74	56
1931 ...	79	55

The age distribution in ten-yearly groups will be seen from the two following tables :—

Europeans.

Age.	*1921.*	*1926.*	*1931.*
0– 9	1,604	2,253	2,872
10–19	850	1,303	1,583
20–29	2,160	2,439	3,403
30–39	2,694	3,220	4,010
40–49	1,535	2,024	2,640
50–59	583	868	1,293
60 and over	225	422	1,011

Asiatics.

	1921.	*1926.*	*1931.*
0– 9	7,865	9,895	14,505
10–19	5,501	7,037	9,835
20–29	9,731	9,478	13,273
30–39	6,886	7,469	9,497
40–49	3,360	3,784	5,073
50–59	1,498	1,767	2,024
60 and over	1,141	1,710	2,928

The occupations classified under seven main heads are as follow :—

Europeans.

	1921.	*1926.*	*1931.*
Agriculture	1,893	2,199	2,522
Industry	559	607	991
Commerce	937	1,290	2,168
Government and municipal	1,082	1,294	1,735
Professional	441	706	1,124
Personal or domestic	182	310	343
Retired, married women, and children	1,350	1,830	2,215

Asiatics.

	1921.	*1926.*	*1931.*
Agriculture	498	755	640
Industry	3,679	4,924	6,446
Commerce	6,086	7,769	14,338
Government and municipal	3,390	3,181	2,972
Professional	50	181	264
Personal or domestic	1,241	961	1,452
Retired, married women, and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows :—

	European.		*Asiatic.*	
	1926. *Per cent.*	*1931.* *Per cent.*	*1926.* *Per cent.*	*1931.* *Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal ...	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children ...		43		

The following table shows the approximate number of each race in 1935. The census population in 1931 is included in the first column for purposes of comparison.

	Census population. 6th March, 1931.	*Estimated population. 31st December, 1935.*
Europeans ...	16,812	17,997
Indians	39,644	36,461
Goans	3,979	3,437
Arabs	12,166	12,599
Others	1,346	1,436
Total	73,947	71,930

Note.—No reliable returns of births and deaths are available. The estimates in the above table are based on an assumed natural increase of 6 per cent. per annum for Europeans and 10 per cent. per annum for Asiatics, and on the annual excess of migration via Mombasa.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and are related to the number of male adult taxpayers in the various districts. They are, in consequence, subject to a comparatively wide margin of error, which it is, however, considered has been reduced in 1935 by the introduction of a standard method of estimating child population. The estimated native population in 1935 was 3,012,421, as compared with an estimate in 1927 of 2,793,963, which represents an increase over that period of approximately 8 per cent. No reliable figures of births, deaths, and infantile mortality are obtainable.

The geographical distribution of the estimated native population is as follows :—

Province.	*1935.*
Central Province	1,193,958
Nyanza Province	1,137,898
Rift Valley Province	224,429
Coast Province	267,825
Masai District	37,708
Northern Frontier District	72,948
Turkana District	77,655
Total	3,012,421

IV.—HEALTH.

General Administration and Organization.

In Kenya, as elsewhere, the ultimate responsibility for the safeguarding and promotion of the public health rests with the Central Government. In every area of the Colony, however, there is a " Local Authority " which to a greater or less degree has, under the general supervision of the State, responsibility in health matters. In Nairobi and Mombasa the greater part of the health staff is now employed by the Local Authority. During 1935, tentative arrangements were made under which it is hoped that in 1936 yet another urban Local Authority, namely, the Municipal Board of Eldoret, will become responsible for the employment of its own medical officer of health and its own sanitary inspector. In the other towns, in the European settled areas and in the native reserves the authority is the District Commissioner and the health staff is employed by Government. Where in the smaller towns there is a Municipal Board, the Board is in effect, though not in law, the Local Health Authority as its opinion is always sought by the Executive Authority. In the native reserves every endeavour is made to interest the Local Native Councils in health matters and these endeavours are meeting with considerable success. In consonance with Government policy the Director of Medical Services is responsible for providing and distributing both medical relief and health staff to the extent allowed in the sanctioned Estimates, and he acts in consultation with both the Commissioner for Local Government and the Chief Native Commissioner.

Sanitary Work and Administration.

In Nairobi, Mombasa, Nakuru, and Eldoret, sanitary work and administration is almost entirely a function of the local representative authorities and on the whole has been effectively carried out ; there is, however, an urgent need for the extension and improvement of the anti-malarial service in Nairobi. No major improvements regarding sewage disposal, scavenging, refuse disposal, drainage or water supplies were undertaken during the year in either urban or rural areas of the Colony.

In the native reserves, fair progress has been maintained in the housing and pit latrine campaigns. Some advance can also be recorded in connexion with the protection of local water supplies, the improvements of sanitation at trading centres, reclamation of swamps, etc.

Medical Relief.

In three towns medical relief for Europeans is still provided in Government hospitals, but non-Government hospitals and private nursing homes are now established in a number of the larger centres and are being increasingly used by the European population.

In the native reserves, although some measure of medical relief is provided by or through the agency of Missionary Societies, medical services are for the most part provided directly by the State. The greater part of the provision made under the Medical Estimates is expended on this service.

The demand for medical relief continues steadily to increase and the total number of new cases treated in 1935 again exceeded a million. The demand for surgical and maternity relief also continues to increase.

Special Clinics.

Special clinics for maternity and child welfare work, and for the treatment of venereal disease, have been established at a number of centres. Increasing use is being made of the facilities provided.

Health of Employed Labourers.

Labour conditions on estates, on the railway, and in townships show little change, since, owing to the trade depression, employers of labour have had no funds at their disposal for major improvements. No serious outbreak of disease occurred and on the whole the health of labourers was satisfactory.

Vital Statistics and the Public Health.

The position with regard to the registration of births and deaths remains unchanged. It has not been possible to provide for the registration and notification of births and deaths among Africans and, therefore, no mortality rates can be determined for that race.

Comparative death-rates per thousand of the population during the years 1934 and 1935 for Nairobi, so far as it has been possible to estimate them, are as follows:—

	1934.	*1935.*	
Crude death-rate, all races ...	18·51	19·78	per thousand.
Recorded death-rate, all races	14·86	13·90	,, ,,
,, ,, Europeans	8·51	6·14	,, ,,
,, ,, Asiatics	15·19	12·24	,, ,,
,, ,, African	15·95	16·47	,, ,,

No reliable figures are available for Mombasa or other towns, or in respect of the African population in the native reserves as a whole.

The general health of the population of the Colony and Protectorate during 1935 was, so far as can be judged from the reports of District Medical Officers, but little different from previous years. Considerable anxiety was caused throughout the year by the continued occurrence of sporadic cases of cerebro-spinal-meningitis, many of which were of a severe type. Fortunately, however, no major epidemic outbreak occurred. There was some fear also in the early months of the year that malaria might assume an epidemic form, but except in Nairobi and part of the Masai country there was eventually no very unusual increase. The incidence of plague was very low, only 139 cases coming to notice, while of smallpox only fifteen cases were reported.

Propaganda.

Large numbers of health pamphlets in English and Kiswahili were issued during the year.

V.—HOUSING.

During the past few years there has been a very considerable drop in the price of building stone, which is now largely quarried by semi-skilled native labour, and also in the general level of wages. This has been reflected in the great increase of houses built and under construction both by Europeans and Asiatics.

In the towns such as Mombasa, Nairobi, Kisumu and Nakuru, these new houses are of a type which approximates to that found in England. Many are double-storied and have available for use a supply of electricity and running water at economical rates.

In the rural areas a certain number of stone houses of modern design have been constructed, but for the most part wood and iron bungalows predominate, and in a number of cases dwellings are thatched cottages with mud walls and floors of beaten earth.

In the settled areas and the reserves the policy of replacing existing out-of-date Government quarters with either stone or concrete bungalows continues to be carried out; in consequence of the financial depression, however, the completion of the programme must be long delayed.

Native housing still leaves much to be desired. In the towns and mining areas, and in the case of some of the larger plantations, comprehensive housing schemes for labour are in existence; elsewhere little progress has been made. Except in the pastoral areas, where the constant search for water and grazing renders the construction of permanent homes an impossibility, the native continues to occupy small round huts built of mud and rubble, roofed mushroom fashion with reed grass or plantain leaves. Propaganda is carried on by the Administrative, Medical and other interested branches of the Service, but the effects of this propaganda must necessarily be slow owing to the ignorance and the lack of ready cash throughout the native areas of the country. It has, however, not been without avail, and here and there well constructed houses of brick, burnt or sun-dried, or of stone, have been erected by the more enlightened natives.

VI.—PRODUCTION.

Land.

The administration of land is combined in one department with that of Local Government, Survey and Registration of Titles, under the general control of the Commissioner for Local Government, Lands and Settlement. District offices are established in Nairobi, Nakuru, Mombasa, Kisumu and Kericho for local administration and the collection of revenue.

The total area of alienated land in the Colony is 10,294 square miles (including 72 square miles in native reserves), with only some 1,581 square miles still available for alienation. Since 1915, grants of land for agricultural purposes have been for terms of 999 years. About half the alienated land in the Colony is, however, held under the Crown Lands Ordinance, 1902, which provided for leases of 99 years only. Land grants are usually sold by auction and bear rentals of 20 cents per acre revisible in 1945 and every 30 years thereafter.

Township plots are sold by auction for terms not exceeding 99 years. The total revenue from land sales and rents amounted, during 1935, to £69,015 (rents of land, £56,890; land sales, farms £9,247, township plots £2,878). Farm grants comprising an aggregate of 27,424 acres (including an area of 4,861 acres the subject of exchanges) were sold during the year.

Native reserves were proclaimed in 1926, and at present cover 48,345 square miles. The Kenya Land Commission, which submitted its report in 1934, made recommendations for additions to native reserves. When these proposals have been carried out the total area of native reserves will be approximately 51,221 square miles.

In addition there are 119,801 square miles comprising the Northern Frontier District, Turkana, and an extension from Uganda which are occupied by natives.

Agriculture and Live Stock.

Of the main products of the Colony, sisal, tea, wheat, pyrethrum, and essential oils are grown exclusively by Europeans. Coffee was formerly grown exclusively by Europeans, but Africans are now being encouraged to grow it in small experimental blocks under licence and strict supervision in certain defined areas. Maize, sugar-cane, wattle, numerous kinds of beans, potatoes, and fruit are produced by Europeans, Indians, and Africans. Cotton, sorghums, millets, miscellaneous root crops, and other crops are grown almost exclusively by Africans in their reserves.

Prices of some primary products registered an appreciable advance during the year, though this improvement was not felt in the coffee and maize industries which preponderate in Kenya.

No agricultural census was taken in 1935. The following statistics indicate the position in the more important sections of the industry as compared with 1934:—

		1935.	*1934.*
*Coffee			
(Production estimate, European farms only)		234,445 cwt.	235,009 cwt.
*Maize	..	969,485 bags.	746,893 bags.
*Wheat	„	180,205 „	145,581 „
Sisal fibre	(Exports)	32,136 tons.	24,016 tons.
Tea	(Receipts into stockroom)	6,301,371 lb.	3,607,768 lb.
Sugar	„	12,629 tons.	8,409 tons.
*Cotton	(Exports)	8,774 bales.	6,750 bales.
Wattle bark	„	223,138 cwt.	258,177 cwt.
Wattle extract	„	101,888 „	49,734 „
Hides	„	80,684 „	100,651 „
Butter	„	16,287 „	11,330 „

* Crop season, 1934–35 and 1933–34.

The following table shows the animal products sold by Europeans during the census years 1930–1931 to 1933–1934:—

	Milk (whole). *gal.*	*Cream.* *gal.*	*Butterfat.* *lb.*	*Butter.* *lb.*	*Cheese.* *lb.*	*Ghee.* *lb.*	*Wool.* *lb.*
1933–34	939,434	85,678	754,808	307,349	140,635	35,708	931,330
1932–33	1,138,743	73,389	923,042	350,505	155,525	47,110	721,542
1931–32	1,018,868	77,063	675,910	285,320	111,582	96,471	813,662
1930–31	1,101,704	145,796	614,790	312,694	131,168	114,527	654,846

ORGANIZATION OF PRODUCTION.

With regard to European production, the cultivation of cereals, pulses, essential oil crops, etc., and the production of animal products is chiefly in the hands of individual farmers. The actual manufacture of butter is largely undertaken by co-operative creameries. Coffee is produced partly by companies but mainly by individual planters. The production of sisal, tea and sugar is conducted mainly by companies.

In respect of African agriculture, production is almost entirely in the hands of peasant families who, in the main, cultivate sufficient crops to supply their food requirements, together with a surplus which they sell in order to obtain money for their other needs.

INDIAN AGRICULTURE.

Indian agriculture is limited to the Kibos-Miwani area in the Nyanza Province and to small scattered areas in the Central and Coast Provinces. No recent figures are available as to areas and production, but the total is small.

NATIVE AGRICULTURE.

Considerable progress in agricultural development has been achieved during recent years through improvement, by breeding, selection, and importations, in the quality and variety of crops grown, through improved cultural methods, and by means of better marketing methods. The benefits from the trials of new and better crops conducted in former years are now becoming apparent. The prevention of soil erosion in the reserves continued to receive attention and the successful reclamation of many swamps in the Central Province has aroused the keen interest of the natives.

Improvement of crops largely depends upon ample supplies of seed of high yielding quality and in the past this was provided from public funds. Local Native Councils have now provided land and funds for seed farms in most agricultural districts. These farms have proved their value and will be extended as circumstances permit. Local Native Councils also vote funds for the payment of a certain number of African Agricultural Instructors.

Native agricultural schools have been established near Nairobi, mainly for the Kikuyu and Ukamba Provinces, and at Bukura for the Nyanza and Rift Valley Provinces. At these schools improved methods of crop and animal husbandry are taught. Particular attention is devoted to mixed farming in small-holdings, due regard being paid to a proper rotation of crops designed to maintain soil fertility. The pupils are also taught to make proper use on the land of the live stock kept in the farmyards. Instruction is also given in the prevention of soil erosion.

Five veterinary training centres are now in full operation and a sixth is being commenced. The various branches of the management of cattle and treatment of disease are taught and, because quarantine stations are centred on these schools, facilities are given for instruction in the control of disease. Under supervision, pupils carry out inoculation of cattle and other veterinary work.

An important branch of work in native reserves is the improvement of the methods of marketing of native produce with the main object of securing fair market value for produce not consumed domestically. Inspection services now cover beans, maize, potatoes, and wattle bark, over the whole of the Central Province ; and beans, ground nuts, and maize in Nyanza. It is hoped that a means will shortly be found of restricting marketing by the native producer to gazetted buying centres. At a number of large trading centres stores have been erected by Local Native Councils, at which produce is collected for sale in bulk. Legislation has now been passed to provide for the issue of exclusive buying licences for a limited period in cases where such action is necessary in order to encourage the introduction of a new industry or process.

Propaganda for the better preparation of hides and skins continues. The premium offered for shade-dried as compared with sun-dried hides is now sufficient to induce natives to undertake the extra work involved in the preparation of shade-dried hides.

The presence of disease necessitates the strict administration of quarantine regulations prohibiting the movement of cattle from native reserves, except through authorized quarantine stations, but sufficient movement is permitted to supply market requirements.

Mineral.

Considerable progress was made in the Nyanza and Masai Provinces in mining development and production, but prospecting operations showed some signs of being less extensive than during the previous year, due mainly to the political unrest created by the Italo-Abyssinian dispute having an adverse effect on the supply of funds for any large exploration ventures.

The year under review might be said to have been one of consolidation of gains, and those who had made discoveries generally found it necessary to employ all their resources on the large programmes of development instituted to bring such discoveries to fruition. Relations between various races working on and in the vicinity of mines continued to be harmonious and most satisfactory.

A grant of money was received on very favourable terms from the Colonial Development Fund for the improvement of road communications, mainly in the mining areas, and the assistance thus afforded will greatly enhance the attractiveness of the Kenya mining areas as the consequential saving on transport costs becomes manifest.

In addition to prospecting and mining activities in the Nyanza and Masai Provinces, considerable interest was shown in the possibilities of other parts of Kenya, which in many instances remained unexplored. An Exclusive Prospecting Licence covering an asbestos find in the Central Province was granted, and the known mineralized areas near the seaboard of the Indian Ocean have been the subject of several inquiries.

Towards the latter part of the year a geological survey of a portion of Area No. 2 in the Nyanza Province was inaugurated, and was being rapidly proceeded with when the year closed.

It has been computed that some 7,000 labourers found employment on mine surface works, and nearly 5,000 labourers were employed underground.

Provisional statistics from the Commissioner of Mines reflect a total expenditure on mining in Kenya exceeding £860,000 for the year, compared with an amount of £446,512 for the previous year (1934). This is a gratifying increase of nearly 100 per cent. The increased production, exceeding £160,000 in value, also reflects an increase of nearly 100 per cent. on the previous year, and the general outlook is considered most promising.

The following table illustrates the extent of mining activities :—

Class of Right or Title.	*Sq. miles*	*Approximate percentage of total.*
Claims	81	5·68
Exclusive Prospective Licences	1,345·36	94·31
Leases (applied for and may be granted)	·17	·01

The mineral production in 1934 and 1935 was :

	1934		*1935*	
	Quantity.	*Value £*	*Quantity.*	*Value £*
Gold	12,110 fine oz.	83,617	23,009 fine oz.	162,904
Silver	1,969 ,, ,,	193	3,743 ,, ,,	475
Lime	800 tons	800	2,280 tons	3,600
Marble	500 ,,	5,000	30 ,,	134

Manufactures.

Beer and stout.—The manufacture of these beverages is in the hands of a company, and the number of standard gallons produced in 1935 amounted to 128,063.

Soap is manufactured by companies mainly situated on the coast, and exports of local manufacture during the year amounted to 12,919 cwt. valued at £11,588.

Aluminium hollow-ware.—The progress of local manufacture is reflected in the following figures :—

	Imports.		*Exports of Local Manufacture.*	
	Tons.	£	*Tons.*	£
1930	89	14,470	3	444
1931	12	2,322	18	2,935
1932	2	957	21	4,771
1933	3	827	34	6,951
1934	2	667	66	12,602
1935	5	1,058	81	13,460

VII.—COMMERCE.

General.

Because Kenya and Uganda are one administrative unit for the purposes of Customs, an accurate estimate of the balance of trade of the territories individually is impracticable. On the one hand, Kenya is largely a distributing centre and, on the other, the overseas trade of Uganda passes, in the main, through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory amounting in value to £721,192 was transported through Kenya and shipped at Mombasa during the year, and goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1935 were valued at £743,997. The combined value of trade imports and total exports (i.e., exports of domestic produce and re-exports) of Kenya and Uganda for the year 1935 amounted to £14,946,123 as compared with £12,929,562 in 1934 and £11,993,318 in 1933, the total volume of trade of all classes, including importations on Government account, transit and transhipment traffic, being valued at £15,814,079 as against £13,483,079 in 1934 and £12,471,539 in 1933. The value of total imports during the year was £6,641,345 as against £5,708,025 in 1934, an increase of £933,320 or 16·35 per cent. Exports of the domestic produce of the territories were valued at £6,608,836, as compared with £5,683,637 in 1934. Of this total, goods to the value of £2,978,307 originated in Kenya, the domestic exports of Uganda calculated in terms of the f.o.b. value at the port of final shipment from the two territories being valued at £3,630,529. Bonded stocks on hand at 31st December, 1935, amounted to £243,416 or £71,987 more than the value of goods remaining on hand in bonded warehouses at the end of the previous year.

So far as the export trade in Kenya produce is concerned, an increase in value of £1,068,436 or 56 per cent. as compared with exports during the previous year is recorded. Coffee exports increased by 171,313 cwt. in quantity and £438,037 in value, maize by 758,647 cwt. in quantity and £80,211 in value, sugar by 11,188 cwt. in quantity and decreased by £5,494 in value, sodium carbonate increased by 7,891 cwt. in quantity and £35,335 in value, sisal increased by 8,694 tons in quantity and £120,487 in value, tea increased by 22,993 cwt. and £104,985, cotton by 16,671 centals and £47,843, and gold bullion by 12,797 troy oz. in quantity and £95,575 in value. Decreases were recorded in hides, ivory, and cedar slats.

The import and export trade of Kenya as evidenced by the statistical returns and customs revenue receipts during the year 1935 reflects some expansion in the measure of recovery instanced by the figures of the preceding year and movement of Kenya produce to Uganda and Tanganyika Territory have been maintained, as also has the local market for the consumption of locally produced commodities.

The entrepôt trade of Mombasa has increased to the benefit of port revenues and the carrying trade generally, and gold mining has further strengthened its entry into the internal and external economic life of the territory.

Net collections of customs revenue amounted to £1,088,089, as compared with £979,092 in 1934. Of this sum, £690,331 was allocated to Kenya and £397,758 to Uganda.

Imports.

The following statement gives particulars of the countries from which imports have originated during the last three years, the main articles of importation from the countries enumerated being shown in each case :—

Country.	*Percentage of Import Trade.*			*Main Items.*
	1933.	*1934.*	*1935.*	
United Kingdom	38·28	37·66	37·00	Ale, beer, stout, etc., biscuits, confectionery, provisions, gin, whisky, cigarettes, cement, iron and steel and manufactures thereof, aluminium, tin and manufactures thereof, tools, cutlery, hardware, etc., electrical goods and apparatus, machinery, cotton piece-goods, woollen and artificial silk goods, wearing apparel, chemicals, drugs, paints, soap, oils, stationery, etc., bicycles, motor-cars, lorries and parts, tyres, polishes, books, brushes, explosives, guns and rifles, cosmetics, toys, etc.
India ...	6·50	5·37	5·59	Rice, wheat flour, cotton piece-goods, jute bags and sacks.

Country.	*Percentage of Import Trade.*			*Main Items.*
	1933.	*1934.*	*1935.*	
Union of South Africa.	2·44	1·56	1·64	Coal.
Canada ...	1·90	1·43	1·65	Motor-cars, lorries, and parts and tyres.
Tanganyika Mandated Territory.	13·14	14·59	12·54	Rice, ghee, tobacco and cigarettes, copra, coffee, cotton, and hides and skins.
Other British Possessions.	1·16	0·32	0·58	Fruit, provisions, etc.
Total British Empire.	63·42	60·93	59·00	
Germany ...	3·13	3·48	4·44	Beer, tools, machinery, cotton blankets, stationery, etc., cycle parts, lamps.
Belgo-Luxemburg Economic Union.	1·85	1·68	1·95	Corrugated iron, machinery, cotton blankets.
France ...	1·24	1·10	1·06	Brandy, wines, cotton blankets, tyres.
Italy ...	1·13	1·08	0·53	Wines, cotton and woollen blankets, apparel, cotton and woollen piece-goods.
Netherlands ...	3·43	1·39	0·91	Tobacco, beer, cotton piece-goods and blankets.
Japan	12·92	15·00	15·17	Cotton and silk piece-goods, tyres, cement, wearing apparel, boots and shoes.
Persia ...	2·97	4·14	4·33	Fuel oil, petrol and kerosene.
United States of America.	4·34	6·11	7·64	Motor vehicles, oil, petrol, kerosene, and tyres.
Dutch East Indies.	1·83	1·77	1·42	Fuel oil, petrol and kerosene.
Other Foreign Countries.	3·74	3·32	3·55	Milk, matches, piece-goods, etc.
Total Foreign Countries.	36·58	39·07	41·00	

Cotton Textiles.—During 1935 the value of cotton textiles imported was £877,279 or 13·21 per cent. of all goods imported. Transfers to Uganda were valued at £381,205.

The average value per yard of imported cotton textiles was 3d. for each of the years 1933, 1934 and 1935; cotton blankets showing a value per blanket of 1s. 2·6d. in 1935 as against 1s. 3·7d. in 1934 and 1s. 2·9d. in 1933.

Importations from Japan show an increase in value as compared with importations from all other sources amounting in 1935 to 70 per cent. of the total textile trade as compared with 64 per cent. in 1934 and 51 per cent. in 1933. The share of the United Kingdom in this trade has slightly increased in value and the increase in importations from Japan has been mainly at the expense of all other foreign countries with the exception of Germany. If calculations are made on a yardage basis, however, the dominant position of Japan in this trade is accentuated.

Czechoslovakia, Holland, and Germany provided the bulk of imported cotton blankets, grey sheeting (americani) being supplied mainly by Japan.

Artificial and Natural Silk Textiles.—Imports of artificial silk goods were valued at £65,029 and natural silk goods at £46,072 of which totals Japan supplied £57,647 and £38,589 respectively. The total linear yardage was 3,144,102 in the case of artificial silk and 1,152,608 in the case of silk, and of these totals 2,979,048 and 1,030,358 respectively originated in Japan. Imports of artificial silk from the United Kingdom were valued at £4,222 and imports of natural silk at £360.

Vehicles and Tyres.—The details of the principal imports for the year 1935 are as follows :—

(a) *Vehicles* :

Country of Origin.		*Bicycles.*	*Motor-cars.*	*Motor-car parts.*	*Motor lorries.*
United Kingdom ...	No.	5,889	479	—	148
	Value (£)	22,734	64,920	16,022	25,302
Canada	No.	—	235	—	351
	Value (£)	—	32,192	7,261	38,881
Japan	No.	2,347	—	—	—
	Value (£)	3,071	—	905	—
United States of America	No.	1	508	—	617
	Value (£)	3	64,771	33,163	74,840
Other countries ...	No.	12	17	—	65
	Value (£)	63	1,924	4,033	19,079
Total	No.	8,249	1,239	—	1,181
	Value (£)	25,871	163,807	61,384	158,102

(b) *Tyres.*

		Car covers.	*Bicycle covers.*	*Lorry covers.*
United Kingdom ...	No.	7,552	81,035	2,426
	Value (£)	13,864	7,979	11,960
Canada	No.	4,916	—	1,774
	Value (£)	5,702	—	7,000
Japan	No.	282	24,236	320
	Value (£)	305	1,240	966
United States of America	No.	2,704	—	1,023
	Value (£)	5,117	—	4,239
Other countries ...	No.	839	22,580	315
	Value (£)	2,772	4,556	8.109
Total	No.	16,293	127,851	6,458
	Value (£)	27,760	13,775	32,214

Building Materials.—Increases are recorded in importations of building materials during the year under review. Cement imports increased to 19,821 tons valued at £41,453, of which the United Kingdom supplied 14,185 tons valued at £32,875 and Japan 4,940 tons valued at £6,715.

Cement clinker imported was 4,974 tons valued at £6,685, as compared with 4,468 tons valued at £6,172 in 1934, the country of origin being the United Kingdom.

Galvanized iron imports were 5,754 tons valued at £78,283, Belgium supplying 5,015 tons and the United Kingdom 707 tons valued at £67,116 and £10,654 respectively.

Re-Exports, Transit and Transhipment Trade.

The value of goods re-exported during 1935 amounted to £2,807,630 or 31·4 per cent. of the total value of trade imports, as compared with £1,821,505 or 33·6 per cent. in 1934. Transit and transhipment traffic reached the values of £71,300 and £404,968 respectively, as against £72,723 and £197,189 in 1934.

Exports.

The domestic exports of Kenya and Uganda are mainly agricultural, the principal exceptions being carbonate of soda procured at Lake Magadi in Kenya and tin ore mined in Uganda, and gold bullion mined in both territories, and were valued at £6,608,836, as compared with £5,683,637 in 1934, an increase of 16·3 per cent.

The following table indicates the overseas distribution of the principal articles of export during the year under review :—

(A) KENYA DOMESTIC EXPORTS.

* Figures for 1933 cover both sun-dried and shade-dried.

Inter-Territorial Trade.

In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1935, the value of local produce sent from Kenya to Uganda amounted to £167,356, as compared with £151,648 in 1934, and £121,291 in 1933, the principal commodities involved being soap, wheat meal and flour, maize meal and flour, beer, tea, timber, coconut oil and aluminium hollow-ware. The value of Kenya produce exported to Tanganyika Territory amounted to £167,745, as compared with £169,461 in 1934.

Under the Customs Agreement of 1927 the free interchange of imported goods between Kenya, Uganda, and Tanganyika Territory is allowed, the value of imported merchandise transferred from Kenya-Uganda to Tanganyika Territory during 1935 amounting to £707,705 (including specie valued at £102,155) and the total Customs duty collected by the Kenya and Uganda Customs Administration and transferred to Tanganyika Territory under this Agreement reached a figure of £141,456. Traffic in imported goods in the reverse direction was valued at £80,660 (including specie to the value of £25,125) the Customs duty involved being £11,478. Tanganyika Territory produce passing through Kenya for shipment at Mombasa amounted in value to £721,192.

Air Traffic.

Considerable use of the Customs aerodromes established at Mombasa, Nairobi, Kisumu, and Entebbe was made by aircraft on foreign service during the year and comparative figures are as follows :—

Year.	*Landed.*				*Shipped.*			
	Number of craft.	*Number of passengers.*	*Value of cargo.*	*Included bullion value.*	*Number of craft.*	*Number of passengers.*	*Value of cargo.*	*Included bullion value.*
			£	£			£	£
1933	477	500	18,692	11,681	460	491	109,572	89,981
1934	572	577	21.480	12,819	541	517	172.942	158,867
1935	969	956	20,720	1,479	899	791	262.211	250,904

Excise and Beer Duties.

The co-ordination and allocation of Excise duties between Kenya, Uganda, and Tanganyika Territory is covered by the Excise Duties Agreements Ordinance, 1931, and the Excise Duties Ordinance, 1935. The rates of duty imposed during the year were as follows :—

	Shs.	*Cts.*		
Sugar	1	00	per cwt.	
Tea		10	per lb.	
Cigarettes		75	per lb. from	1/1/35
	1	25	,, ,,	27/6/35
Manufactured tobacco ...		50	,, ,,	1/1/35
	1	25	,, ,,	27/6/35
Beer	40	00	per standard barrel of 36 gallons.	

The following statement gives particulars of the allocation of Excise duties during the year under review, according to territories of production and consumption :—

	Country of Consumption.			
	Kenya.	*Uganda.*	*Tanganyika Territory.*	*Total.*
Sugar:	£	£	£	£

Total	5,464	964	363	6,791
Grand Total	£24,831	£38,678	£10,901	£74,410

Ivory.

Two sales by public auction of Kenya and Uganda Government ivory were undertaken by the Customs department during the year. The total weight of ivory sold was 72,274 lb. (Kenya 22,773 lb., Uganda 49,501 lb.) and the total amount realized was £22,487 (Kenya £7,110, Uganda £15,377).

VIII.—WAGES AND COST OF LIVING.

Wages.

An analysis recently made of the records of 500 registered domestic servants shows that the prevailing wage-rates are approximately as follows:—

	Range. *Shs. per month.*	*Average.* *Shs. per month.*
Cooks	20 to 80	28/50
House boys	15 " 50	18
Dhobies	20 " 50	25
Kitchen boys	8 " 25	14
Garden boys	8 " 25	14
Nurses	20 " 60	34
Chauffeurs	25 " 100	30

The above figures refer to estimated ruling rates in 1934. There are no data available for 1935, but there is no reason to believe that wages have declined. It is safe to assume that they have become more or less stabilised at the 1934 rates. The figures are inclusive, rations being provided by the servants. The rates of wages paid to unskilled labourers varies from Shs.6 to Shs.14 per month, plus rations. The rate varies according to the class of work performed, e.g., underground workers in a mine would receive higher wages than those who work on the surface. These rates are considerably less than those which prevailed in 1929. Since Kenya first began to feel the force of the world depression in 1930, there has been a general downward tendency, which has also manifested itself in the wages of Europeans and Indians engaged in commerce, and in the remuneration of skilled labour generally.

Cost of Living.

Figures relating to the cost of living were collated by the Statistical Department annually from 1927 until 1933. At the end of the latter year, however, owing to the necessity for economy, the Department, as previously constituted, was abolished. Consequently index numbers showing the general trend of the commodity price-levels since then are not available.

The following table shows the approximate retail cost in Nairobi in December, 1935, of a number of the more common commodities :—

		Shs.	*Cts.*
Bread	per lb.		35
Flour, 1st grade (imported)	,,		32
Flour, 1st ,, (local)	,,		25
Flour, 2nd ,,	,,		21
Tea (imported)	,,	3	53
Tea 1st grade (local)	,,	1	89
Tea 2nd ,, ,,	,,	1	58
Tea 3rd ,, ,,	,,	1	40
Sugar, white, 1st grade (local)	,,		14
Sugar, white, 2nd ,, ,,	,,		12
Jam (imported)	,,	1	50

Butter (farm)	,,	1	20
Cheese, 1st grade (local)	,,	1	14
Eggs (Native)	per doz.		60
Eggs (European)	,,	1	43
Milk, fresh	per pint		22
Beef (average price)	per lb.		96
Pork (average price)	,,		96
Mutton (average price)	,,		92
Sea fish	,,		78
Lake fish (approx. 1 lb. each)	,,		51
Bacon (average price)	,,	1	48

Mean index number (January, 1927 = 1,000) 737*

---

* Owing to a typographical error the index number for December, 1934, was shown as 906. This should have read 783.

The minimum cost of accommodation, including food, in European boarding-houses is £7 per month.

As regards the cost of living for natives, the staple foodstuff is maize meal and the average consumption thereof approximately 2 lb. per day, the total cost being approximately Shs.3 *per mensem*. Other foodstuffs, including meat, beans, etc., also form part of the native diet, and the amount consumed by one native may be valued at roughly Shs.2 *per mensem*. As rations for labourers are provided by employers in kind, the natives themselves are not affected by fluctuations in the price. This does not apply to natives living in native reserves. Normally, these produce sufficient food for themselves and their families, but, during times of famine, foodstuffs have to be purchased.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

European Education.

Government secondary education is provided at two schools, the Prince of Wales School at Kabete for boys and the Girls Secondary School in Nairobi. There were 238 pupils in these two secondary schools, and the total number of pupils receiving education in all Government schools, which are fourteen in number, was 1,121 at the end of the year. Of these, 442 were boarders and 679 day scholars, and 690 were boys and 431 girls. There were eighteen private schools with a total of 709 pupils. Three of these rank as secondary schools, though many pupils in them are in the primary stage only. Two preparatory schools for boys (total roll 97) prepare pupils for entrance to public schools overseas.

Indian and Goan Education.

There are two large Government secondary schools for Indian boys, one in Nairobi and the other in Mombasa. The organization makes it necessary to include a large number of primary pupils in both these schools. Altogether the roll of these two institutions is 1,221. The total roll in the remaining Government Indian schools is 1,952 of whom 1,425 are boys and 527 are girls. There are boarding facilities at one school only, the Secondary School, Nairobi, which has 26 boarders. After taking the Preliminary Cambridge examination, pupils may proceed to the Junior Cambridge and, later, the London Matriculation examinations.

During the year under review, 48 schools in various parts of the country were in receipt of a grant-in-aid ; in these schools there were 3,454 pupils. One school only was of secondary status. In fourteen unaided schools there was a total roll of 665.

Altogether in non-Government Indian schools there were 4,119 pupils, of whom 1,799 were boys and 2,320 girls.

Arab Education.

Arab schools exist at Shimo la Tewa (where secondary education is concentrated), at Malindi and at Mombasa. There are two out-schools connected with the Ali bin Salim School, Malindi, and there is a small night school at Lamu. There were 489 pupils, of whom six were girls, on the roll of the Arab schools.

Of four candidates who entered for the Junior Cambridge examination one passed, and of ten candidates who entered for the Preliminary examination five passed.

African Education.

The Local Native Councils continue to show great interest in educational development and contributed the sum of £5,830 towards the maintenance of Government African schools, and £3,311 in capital expenditure.

Secondary education remains under the control of the Missions, the Alliance High School at Kikuyu catering for pupils from schools of the Protestant Alliance of Missions, and the Catholic Training School at Kabaa for pupils from Catholic schools. These two schools have a total roll of 201.

There were thirteen central Government African schools with a total roll of 1,682, 36 village schools with 2,408, and two agricultural schools with 105. The Jeanes School at Kabete continues to train visiting teachers, and lower primary teachers, The roll was 54 men and 37 women. The number of technical apprentices at the Native Industrial Training Depot was 277.

During the year the sum of £37,268 was expended on grants-in-aid from central funds. This sum together with the sum of £4,932 contributed by Local Native Councils assisted 304 African schools which had a total roll of 35,937 pupils. In addition there were 1,113 schools with a roll of 56,448 pupils which were not in receipt of any financial assistance.

Administration.

At the close of the year the staff consisted of the Director, the Chief Inspector of Schools the Supervisor of Technical Education, and five Inspectors of Schools. Inspectors were stationed at the Coast, Nairobi, Kikuyu, and Nyanza.

The Advisory Councils for European, Indian and African Education, respectively, and the various School Committees for European and Indian Schools, met and rendered valuable service in advising the Director. Seven District Education Boards were inaugurated in the more densely populated districts for the supervision of African elementary schools. The boards consist of Government officials, missionaries of the district concerned and African representatives of the Local Native Councils.

* A pass with the necessary credits gives London Matriculation exemption.

Welfare Institutions.

The Lady Northey Home for European children is maintained by public subscription and fees collected. The Lady Grigg Welfare Institutions for Indians and Africans continue their good work. The League of Mercy, the British Legion and the Salvation Army carry out valuable services on behalf of the needy, especially children. As usual the Seaside Holiday Camp for European Children was held in Mombasa during the August vacation. A considerable number of children from the Highlands were assisted to enable them to enjoy a holiday at sea level. Funds to assist such causes are raised by voluntary contributions.

X.—COMMUNICATIONS AND TRANSPORT.

Posts.

The scheme under which the Postal and Telegraph Services of Kenya and Uganda were amalgamated with those of Tanganyika in 1933 continued to work smoothly and satisfactorily. The three years during which the amalgamation has now been in operation have established conclusively that it has been a success, both financially and in every other respect. Post Office operations in Kenya resulted in an excess of cash revenue over recurrent expenditure of £64,872, an increase of £11,009 over 1934.

A new pictorial issue of postage and revenue stamps, common to the three territories, was placed on sale on 1st May. The introduction of a "common" stamp has proved a decided convenience not only to the department, but also to the public.

In common with the rest of the Empire, Kenya, Uganda and Tanganyika placed on sale four denominations of special stamps designed to commemorate King George V's Silver Jubilee.

During 1935, business continued to show an upward trend, and this has been reflected in practically all branches of the Post Office service.

The air mail service, operated by Imperial Airways, was duplicated and was maintained with creditable regularity during the first nine months of the year but, owing to climatic and other reasons, there were some delays during the last quarter.

The Nairobi-Mombasa-Tanga-Zanzibar-Dar es Salaam internal air service, conducted as a feeder to the main Imperial Airways' service, was very efficiently maintained by the contractors, Messrs. Wilson Airways, Limited.

The air mail postage rate to United Kingdom, India and certain other countries was reduced to 50 cents per half ounce. The number and weight of the air mail letter packets posted in Kenya amounted to 635,700 and 15,700 lb. respectively. Inward air mail correspondence amounted to 523,600 items weighing 14,900 lb. Approximately 31 per cent. of the Colony's total overseas letter mail correspondence was conveyed by air.

The air parcel service is restricted to Great Britain and Empire countries in Southern Africa. During the year 5,498 air parcels were posted in the Colony and 3,668 received.

The air mail money order service is confined to Great Britain and India. During the year 2,269 air mail money orders, having a total value of £19,365, were issued. This was a very substantial increase on the previous year. The number and value of air mail orders paid was 125 and £1,042 respectively.

The various overseas surface transport mail services were fairly regular during the year. There were 70 mails despatched to, and 55 mails received from, Great Britain, the average time in transit between Mombasa and London being approximately eighteen days.

Internal mail services extend to all parts of the Colony. The replacement of African runners by mechanical transport is almost completed.

The estimated total number of letters, postcards, newspapers and other packets dealt with during the year was 13,366,000. This increase of 5 per cent. over 1934 occurred in spite of a slight reduction in correspondence posted in the Colony.

The number of parcels handled, inclusive of air mail and cash-on-delivery parcels, was 142,000, an increase of 5 per cent. compared with 1934. The number of cash-on delivery parcels dealt with was 8,935, having a value of £25,406. The inter-State parcel rate between Tanganyika and Kenya-Uganda was abolished and replaced by a uniform inland rate.

Money orders issued during the year numbered 23,679 and had a value of £127,076. Those paid numbered 16,246 and amounted to £73,591.

British Postal Orders, including the Jubilee Orders, issued and paid during the year amounted to 104,496 in number and £56,739 in value, an increase of 12,180 and £4,571, respectively, over 1934.

Telegraphs and Telephones.

The number of inland telegrams transmitted was 284,000, an increase of 4 per cent. on the previous year. External telegrams numbered 121,000. Telegrams to and from Great Britain numbered 50,000. Of this external traffic 40,000 were transmitted via Kenya Radio. A special Jubilee Letter Telegram service was offered to the public for Jubilee week.

The telephone trunk system was satisfactorily maintained. The Uasin Gishu and Trans Nzoia areas were connected to the main trunk system through Nakuru. The number of trunk calls made during the year increased by 11 per cent. over the previous year to 121,000.

A general increase took place in the number of telephones in use, and at the end of the year the number of subscribers at the principal public exchanges was as follows: Nairobi, 879; Mombasa, 350; Nakuru, 61; Eldoret, 61.

The internal telephone and telegraph system comprises 2,783 miles of pole route and a wire mileage of 16,214. Most administrative centres are connected by telegraph.

Communication in the Northern Frontier and Turkana areas is maintained by a wireless system consisting of ten small stations (500 watts), which are maintained and operated by military units and handle both military and civil telegrams.

Telegraph communication overseas is maintained by Cable and Wireless, Limited, by means of a submarine cable from Mombasa, and a wireless station at Nairobi working direct with England. The Company also operates the Coast wireless station at Mombasa, at which a 24 hours' service is maintained. Communications with South Africa are also available by a Government land-line.

A broadcasting station at Nairobi is maintained and operated by Cable and Wireless, Limited, and provides a local service under an agreement and without direct cost to the Colony. The station transmits on wavelengths of 350 metres and 49·5 metres simultaneously. Reception on the medium wave is satisfactory within its effective range, but the quality of reception on the short wave varies in different parts of the Colony. The programmes consist of reproduction of gramophone records, British Official Wireless Press, local news, market and weather reports, and occasional relays of items of interest from the programmes of the British Broadcasting Corporation's Empire station. The number of licensed listeners at the end of the year was 1,568, representing an increase of 416 on the previous year.

On the initiative of the Union of South Africa, a Postal and Telecommunication Conference of all countries, British and foreign, was held in Southern Africa, at Pretoria. The department was represented.

Roads.

Despite several years of financial depression, the roads throughout the Colony and Protectorate, and in particular in the main centres, have been maintained at a very fair standard, and in many cases greatly improved. All the main traffic routes, with the exception of such portions as pass through the towns of Nairobi and Mombasa, where the majority of the thoroughfares are now macadamized, are built up of laterite. The surfaces are excellent during the greater part of the year except during the heavy rains, when the soft foundation of the roads tends to collapse into ruts. This temporary damage, however, is very quickly repaired, and it can safely be said that main routes such as Nairobi-Nakuru-Kisumu and Nairobi-Fort Hall-Nyeri-Meru are never impassable.

In the main towns and throughout the greater portion of the settled areas of the Colony the responsible authorities are the various statutory Local Government bodies: the remaining routes in the Colony are under the direct control of the Public Works Department, whose recurrent expenditure on this object amounted to £56,293 in 1935, an increase of £168 on the expenditure in 1934, with capital expenditure of £5,386 from revenue and £2,828 from loan funds.

Harbours.

The total tonnages (import and export) handled at Kilindini Harbour during the years 1934 and 1935 are given below. These figures do not include oil imports discharged through the Magadi Soda Company's pipe-lines, nor soda exported from that Company's pier. Coal imports are shown separately.

COAL IMPORTS.

1934.	*1935.*
53,815 tons.	92,146 tons.

IMPORTS AND EXPORTS OTHER THAN COAL.

Year.	*Imports B/L tons.*	*Exports B/L tons.*	*Total B/L tons.*
1934	274,677	390,467	665,144
1935	355,697	482,797	838,494

The total trade of the Port of Mombasa including Kilindini Harbour and the Old Port for the year 1935, as compared with 1934, is summarized in the following statement :—

	1934.	1935.
Number of steamships ...	584	663
Net tonnage of steamers ...	1,902,356	2,090,134
Imports—B/L tons	335,645	446,856
Exports ,, ...	386,913	511,565
Passengers landed :		
European	5,977	6,221
Non-European	12,739	13,586
Passengers embarked :		
European	6,083	6,265
Non-European	10,161	11,518

Shipping.

The registered tonnage (inwards and outwards) at all Kenya seaports during the year as compared with 1934 was as follows :—

	1934.	1935.
Vanga	8,635	8,297
Funzi	8,525	6,435
Mombasa	3,871,465	4,226,808
Kilifi	6,917	6,864
Malindi	15,699	14,193
Lamu	38,454	53,990
Kipini	3,385	3,639

Railways.

The carriage of public goods provided a revenue of £2,120,315 and the tonnage of the traffic amounted to 849,795 tons, as compared with £1,958,672 and 728,706 tons in 1934.

Passenger Traffic.—Revenue from passenger traffic showed a decrease on 1934 figures. In 1935, 481,501 passengers contributed a revenue of £158,289, while in 1934, 484,138 passengers contributed a revenue of £161,541. The following table indicates the numbers of passengers travelling in the various classes as compared with 1934 :—

Passengers carried.

	1st Class.	2nd Class.	3rd Class.	Total.
1934	7,739	27,002	449,397	484,138
1935	7,555	27,768	446,178	481,501

The traffic on Lakes Victoria, Kioga, and Albert, and on the River Nile, on which Administration services are maintained, is shown in the following table :—

	1934.	1935.
Earnings...	£119,057	£135,534
Working expenditure	£60,245	£64,896
Tonnage carried	92,116	106,066

Fuel Consumption.—The following figures show the consumption of coal, wood, and oil fuel on the railway during 1935 as compared with 1934.

	1934.		*1935.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Coal	61,422	66,811	71,156	77,920
Oil	658	1,639	543	1,630
Wood	114,773	37,597	125,021	40,658

On the lake steamers the figures were :—

	1934.		*1935.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Oil	2,945	7,586	3,289	8,746
Wood	7,197	3,370	7,702	3,311

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1935 are shown in the following table :—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	2,384,923	408,922	2,793,845
Ordinary working expenditure	1,088,185	155,646	1,243,831
Surplus of receipts over ordinary working expenditure.	1,296,738	253,276	1,550,014

Aviation.

Civil aviation made considerable progress during the year. Customs aerodromes exist at Kisumu, Nairobi, and Mombasa, while the Government has established twelve other landing grounds for regular use. The Government, in addition, maintains a further twenty emergency landing grounds, some of which may in due course, as improvements and enlargements are made, be approved for regular use. Licenses were granted in respect of seven other landing grounds maintained by municipal or private enterprise for regular use by the flying public, while a number of unlicensed private landing grounds exist in the Colony.

Kenya is served by the air service between Great Britain and South Africa, operated by Imperial Airways (East Africa), Limited, which calls at Kisumu and Nairobi. A coastal air mail feeder service, linking Dar es Salaam, Zanzibar and Mombasa with Nairobi and the Empire Service, is operated by a local company—Wilson Airways, Limited. Scheduled mail and passenger-carrying services to mining and other areas are operated by local companies, which in addition undertake an increasing amount of taxi flying.

The value of cargo landed and shipped in 1935 by aircraft at Customs aerodromes was £282,931.

Of the 28 civil aircraft registered in the Colony, thirteen are owned by commercial companies, while the number of privately-owned machines increased. During the year 39 pilots' licences were issued; ten of the holders of these were trained *ab initio* by the Aero Club of East Africa.

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony:—

The National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru, and Kisumu;

The Standard Bank of South Africa, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, Eldoret, Kitale, Nyeri, Kakamega, and an agency at Nanyuki;

Barclays Bank (Dominion, Colonial and Overseas) with branches at Nairobi, Mombasa, Nakuru, Eldoret, Kitale, and Kakamega.

Since 1910, the inculcation of thrift has been fostered by the Post Office Savings Bank. This bank is making a growing appeal to Africans, of whom 5,550 are now depositors. Nearly two-thirds of the increase in the number of depositors during the year was African. The sum of £221,720 is now on deposit to the credit of 15,850 persons.

In 1931, a Land and Agricultural Bank under the control of Government was formed with a capital of £240,000 which was increased to £500,000 in 1933. The bank makes advances to farmers, repayable over periods up to 30 years on first mortgage security, charging interest at the rate of 6½ per cent. per annum. Up to 31st December, 1935, the Bank had made 428 advances totalling £513,595. Under an amending Ordinance passed in 1934, provision was made for short term loans, and up to 31st December, 1935, 32 such advances totalling £7,170 had been issued.

Currency.

The standard coin is the East African shilling (silver) with subsidiary coinage of the following denominations:—50 cents (silver) and 10 cents, 5 cents and 1 cent (bronze). A note issue is maintained and notes of the following denominations are in circulation:—Shs. 10,000, 1,000, 200, 100, 20, 10 and 5.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

The standard weights and measures of the Colony are identical with those in use in Great Britain, namely, the Imperial pound, yard, and gallon.

A total of 20,547 weights, measures and instruments were stamped, rejected or adjusted during the year under review, from which was derived revenue amounting to £345. A further total of 1,594 weights, measures and instruments were examined during the course of visits of inspection resulting in prosecutions in certain cases. The standards of accuracy required by the legislation of the Colony are similar to those required in Great Britain.

XII.—PUBLIC WORKS.

The total expenditure incurred by the Public Works Department on services administered by it amounted to £265,435, and of this sum £210,663 was on account of revenue services provided for under Public Works Heads, £22,450 from various extra-departmental sources, and £32,322 from loan. The revenue collected by the Department amounted to £61,162.

The total expenditure on capital works amounted to £50,306 in direct charges, and of this amount £17,984 was obtained from revenue and £32,322 from loan (exclusive of overhead charges).

The revenue expenditure was distributed as follows :—

	£
Buildings	6,886
Water and Drainage	1,530
Roads and Bridges	5,386
Miscellaneous Works	4,182

The loan expenditure was :—

	£
Buildings	29,494
Communications	2,828

The new Law Courts at Nairobi, which had been under construction during 1934, were completed in May, the total cost being £136,600.

XIII.—JUSTICE, POLICE, AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya; the Uganda, Nyasaland and Zanzibar Protectorates; Tanganyika Mandated Territory; and from His Britannic Majesty's Court for Ethiopia. The Judges of the Court of Appeal are the Judges and the Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland, and Tanganyika, and His Britannic Majesty's Court for Zanzibar. During the year the Court held four ordinary sessions and three special sessions. The total number of appeals filed was 179, of which 36 were from Kenya.

The Courts operating in the Colony are as follows :—

(1) The Supreme Court sitting at Nairobi, Mombasa, and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged.

(2) The Courts of the Resident Magistrates at Nairobi (two), Mombasa, Nakuru, Kisumu, and Eldoret, presided over by legally qualified officers or by officers seconded from the Administration.

(3) The Courts of the First, Second and Third Class, presided over by Provincial Commissioners, District Commissioners, and District Officers.

(4) The Courts conducted by Liwalis, Cadis, and Mudirs.

The Northern Frontier and Turkana Districts have been created ecial districts within the meaning of sections 14 and 15 of the iminal Procedure Code and the Officers-in-Charge of these districts e the Officers specially authorized under the latter section. The istrict Commissioners in the Northern Frontier District have been ven the powers of First Class Magistrates.

Courts.

The number of criminal cases committed for trial to the Supreme ourt aggregated 174, involving 299 charges against 253 individuals. hese figures compare with 181 cases and 300 charges during 1934.

Of the total 317 charges actually tried during 1935, 315 were ainst males and two against females. There were 144 convictions, acquittals and 76 discharges. The convictions were against one uropean, four Asiatics and 139 natives, and the punishments nposed were :—

Peremptory imprisonment	98
Imprisonment in default of payment of fine or surety ...	1
Whipping with fine or imprisonment or both	12
Bound over or otherwise disposed of	3
Sentenced to death	15
Detained during Governor's pleasure	4
Detention camp	8
To pay compensation	1
Repatriated or committed to House of Detention ...	2

The number of civil cases filed in the Supreme Court during the ar was 378, a decrease of 40 on the number for 1934. Probate d Administration causes numbered 172 as compared with 150 opened 1934, and 42 Bankruptcy petitions were filed as compared with for the previous year. In addition two Trust causes were ened and thirteen Divorce causes were filed.

There were 124 civil and criminal appeals from Subordinate urts, 864 criminal revision cases and 567 confirmation cases.

During the year, 51,030 charges were brought in Subordinate Courts, a decrease of 4,271 on the figures for 1934. These charges were disposed of as follows: convictions, 46,613; acquittals, 1,482; discharges, 2,935. This includes 706 charges brought against juvenile offenders, involving 643 convictions and 63 discharges.

Details of the sentences imposed are as follows:—

Fines	12,359
Detention camp in default of payment of fine or surety	12,951
Imprisonment in default of fine or surety	1,362
Fine and detention camp	205
Detention camp	3,914
Fine and peremptory imprisonment	391
Peremptory imprisonment	3,862
Whipping with fine, or imprisonment, or both ...	36
Whipping	252
Whipping with fine, or detention camp, or both ...	1
Bound over; cautioned; repatriated	6,711
Other punishments; tax or compensation or wages paid; bail estreated	4,567
Detained pending Governor's orders	2
Committed to prison for failure to find security ...	Nil
Total convictions	46,613

Police.

The Kenya Police.—This is composed of African and a small percentage of Asiatic personnel under the command of European officers and surbordinate police officers. The Force is distributed mainly at police stations throughout the settled and urban areas of the Colony and Protectorate. The work of each police station is controlled by a European or Asiatic subordinate police officer and the stations are grouped under the direction of a superior police officer. Police detachments are stationed in the Northern Frontier District. African police are stationed in a few of the native reserves and Turkana where they operate under the direct control of officers of the Administration, but the enforcement of law and order in most of the reserves is the responsibility of the local tribal police. The personnel of the Force was increased temporarily during the year by one Assistant Superintendent of Police and 57 African ranks for duty in the Northern Frontier District in connexion with the Italo-Abyssinian situation.

Cognizable offences under the Penal Code reported to the police in settled and urban areas in 1935 totalled 4,510. Of that number 4,351 were true cases, a decrease of 930 true cases on the total for 1934. Accused persons in 3,120 cases were brought for trial before the Subordinate Courts or the Supreme Court. The total stated value of property stolen was Shs. 306,475 of which Shs. 178,796 or 58 per cent. was recovered.

A small patrol of police continue to be employed to maintain order on the boundaries of the Kisii-Lumbwa native reserves. The police post of twenty African subordinate officers maintained in the Samburu District by reason of the lawlessness of the Samburu Tribe was increased temporarily by five African subordinate police officers.

Detachments were maintained in the gold mining areas at Kakamega, Gori River, and Lolgorien and at Bondo.

Tribal Police.—In the year 1927 the units of the Kenya Police Force stationed in native reserves were greatly reduced, in consequence of a decision by Government to inaugurate a system of village police, to be known as Tribal Police, and incorporate in that force the body of men previously known as Tribal Retainers. This class of subordinate native official was originally instituted to assist the Administration by the provision of messengers in the reserves, and through the supervision of communal services, and had proved its usefulness in the past.

By the Tribal Police Ordinance, 1929, powers were given to the Tribal Police enabling them to make arrests, guard prisoners, and generally act as a Police Force in the native reserves and support the official headmen in maintaining law and order in these areas.

The total strength of the Force in the native reserves now numbers 829 non-commissioned officers and men. In the more progressive reserves the force has achieved a high standard of discipline and efficiency, and from some reserves a small unit is lent to the Kenya Police to assist in the detection of crime in the settled areas.

Prisons.

The penal establishments under the administration of the Commissioner of Prisons are composed of three first-class prisons for the accommodation of long-term prisoners (sentenced to three years or over), five second-class prisons for medium-term prisoners (sentenced to between six months and three years) and twenty third-class prisons at district headquarters (for those sentenced to less than six months imprisonment). There are also 46 detention camps for the accommodation of natives who have not previously undergone more than one term of imprisonment, and who are sentenced to detention for minor offences, usually imposed in default of payment of fine. No sentence of detention may exceed six months.

The total number of persons committed to prisons and detention camps during 1935 was 35,935, representing a decrease of 12 per cent. from the previous year. Of the above total, 6,325 were sentenced to imprisonment, 21,562 were sentenced to detention, 109 were civil debtors, 235 were lunatics, and 7,704 were admitted on remand and subsequently not sentenced to imprisonment. Of the total of 6,325 persons committed to serve sentences of imprisonment, four were Europeans, 150 were Goans, Indians, Arabs and Somalis, and 6,171 were Africans. Female and juvenile convicted prisoners numbered 203 and 229 respectively.

The general health of prisoners was good; the percentage of prisoners on the sick list being 4·4. The total of 60 deaths during the year was 35 lower than the total for 1934. Pneumonia alone accounted for 29 deaths.

Twenty-two juveniles served terms of imprisonment and these were all confined in Class I and II prisons where there are European officers in charge. Juveniles were segregated from adult prisoners whilst undergoing sentence. A further 201 underwent sentences of caning only. Out of the total, 33 had been previously convicted.

Release on licence is granted to certain offenders on completion of two-thirds of their sentences of not less than three years. During 1935, 126 convicts were released on licence, as compared with 129 in 1934.

The technical training of convicts, which is carried on in the three Class I prisons of the Colony, and consists of tailoring, carpentry, smithing and the manufacture of sisal string, rope and mats, and coir and grass mats and baskets, has made considerable progress. Uniforms for Government departments are made in the prison workshops, while orders for items of uniform for the King's African Rifles and the Kenya Police are obtained annually. The output from prison workshops shows a steady increase. During 1935, £5,807 was expended on raw materials for prison industries. The amount paid into the Treasury as revenue derived from prison industries was £9,593. Of this sum £388 was obtained from the hire of convict labour.

Prison farms showed a marked increase in areas under cultivation with consequent increased yield, viz., maize, $208\frac{1}{2}$ tons; beans, $23\frac{1}{2}$ tons; potatoes, $48\frac{3}{4}$ tons, of an estimated value of £1,129, including £194 from other produce.

The fall in the daily average number of prisoners to be accommodated enabled one of the prison camps, established in 1934 to ease overcrowding, to be closed. The camp for 250 convicts established for quarrying and ballast breaking for the Kenya and Uganda Railways and Harbours continued in being, and provided valuable and productive hard labour for these convicts throughout the year.

The system of periodical review by the Governor of all sentences, including commuted death sentences, of seven years and over was continued in 1935. During the year the cases of 29 convicts were submitted for review. Of these one convict was granted accelerated release, eleven were recommended for release on licence, and the cases of six were deferred for reconsideration at a later date.

The training in the Class II and III Approved Schools established at Kabete in October, 1934, in place of the Kabete Reformatory, continues to be directed mainly to agriculture, animal husbandry and gardening, together with a sound manual training. The total number of commitals to the schools during 1935 was 64, and the daily average of inmates 87. The total number of discharges during the year was 43.

XIV.—LEGISLATION.

Forty-seven Ordinances were passed during the year 1935. A summary of the more important enactments is given below.

No. 2.—The Customs Tariff (Amendment) Ordinance, 1935, effects tariff adjustments on an alternative specific or *ad valorem* basis on cigarettes and manufactured tobacco.

No. 23.—The Sale of Pyrethrum Ordinance, 1935, regulates the cultivation and sale of pyrethrum cinerarifolium and provides for the registration of pyrethrum growers, and for the appointment of agencies for the purchase and resale of pyrethrum.

No. 11.—The Expulsion from Proclaimed Areas Ordinance, 1935, re-enacts the provisions of the Expulsion Proclaimed Areas Ordinance 1933, which expired on the 18th May, 1935. The Ordinance makes provision for the expulsion from certain areas of the Colony of persons whose presence therein is deemed to be undesirable.

No. 24.—The Penal Code (Amendment) Ordinance, 1935, makes certain amendments to the Penal Code, which experience has shown to be desirable. The Ordinance embodies in the Penal Code the provisions of the Infanticide Act, 1922 (England), and also the provisions of the Sentence of Death (Expectant Mothers) Act, 1931 (England). These provisions have been modified to suit local conditions.

No. 25.—The Coir Fibre Industry Ordinance, 1935, prohibits the preparation of coir or the manufacture of coir products in a factory unless such factory is licensed. The Governor-in-Council may, in his discretion, refuse to issue a licence to any person on the ground that a sufficient number of licences has already been granted, or on any ground which may appear to him to be sufficient. It is considered that the provisions of the Ordinance will enable a measure of protection to be given to persons who are prepared to devote their capital and enterprise to the preparation of coir, and the production of coir products, and thus foster the development of the coconut industry in the Colony.

No. 26.—The Legislative Council Ordinance, 1935, repeals and replaces the Legislative Council Ordinance (Chapter 24 of the Revised Edition) and all rules made thereunder. The Ordinance provides for the nomination and election of members to the Legislative Council of the Colony and Protectorate of Kenya.

No. 28.—The Marketing of Native Produce Ordinance, 1935, controls and regulates the marketing of native produce. The

Ordinance is designed to advance and improve the cultivation of produce grown or produced by natives, and to promote the organized marketing of such produce.

The Ordinance empowers the Governor to declare any district, or part of a district, to be a "declared area" within which the purchase and sale of native produce may be controlled and regulated. In such areas the purchase of specified classes of native produce may be restricted to holders of licences issued by the District Commissioner. Subject to the approval of the Legislative Council, the Governor-in-Council may, where he is satisfied that the production of any particular kind of specified native produce in any declared area is susceptible of development, or would be stimulated and advanced under technical direction and management or other special control, grant exclusive trading licences for the purchase of such particular kind of specified native produce. Licences and exclusive trading licences are to be issued subject to such conditions as may be necessary, including the power to determine and specify the minimum prices to be paid for specified native produce, and to require that purchases of such produce must be paid for in cash.

No. 34.—The Girl Guides Ordinance, 1935, is designed to protect the Girl Guides Association (which is incorporated by Royal Charter) by prohibiting the formation of girl guides organizations otherwise than under the authority of the Girl Guides Association, and by prohibiting the wearing by unauthorized persons of the uniform, badges, etc., prescribed for Girl Guides, and by controlling the sale of badges, etc.

No. 35.—The Boy Scouts Ordinance, 1935, is designed to protect the Boy Scouts Association (which is incorporated by Royal Charter) and is in similar terms to the Girl Guides Ordinance.

No. 40.—The Excise Duties Ordinance, 1935, repeals and replaces the Excise Duties Ordinance, 1931, and all amendments thereof, and in addition provides for the stricter measures of control over the issue of licences and the operations of licensees.

No. 44.—The Non-Native Poll Tax (Amendment) Ordinance, 1935, makes provision for the continuance of the Non-Native Poll Tax Ordinance, 1934, during the year 1936.

XV.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

STATEMENT OF REVENUE AND EXPENDITURE FOR FIVE YEARS ENDED 31ST DECEMBER, 1935.

Year.	*Revenue.* £	*Expenditure.* £
1931	3,066,930	3,216,089

	£74.919

Customs Tariff.

In June 1935, legislation was enacted effecting tariff adjustments on an alternative specific or *ad valorem* basis on cigarettes and manufactured tobacco.

Native Hut and Poll Tax.

Rate.—The rate of hut and poll tax imposed under the Native Hut and Poll Tax Ordinance, 1934, was prescribed at Shs. 12 in

1935, except for the members of the following tribes residing in the areas named, who paid at the rates shown below :—

Tribe.	*District.*	*Rate.* Shs.
Meru and Tahraka ...	Meru	8
Emberre	Emberre Location, Embu	8
Kamba	Kitui	9

Galla Pokomo, Boni, Nyika, Shambara...	Tana River	10
Galla, Boni, Sanye, Kore, Shambara ...	Lamu	10
Turkana	Turkana	6
West Suk	,, ...	8

Section 3 of the Northern Frontier Poll Tax Ordinance, 1930, empowers the Governor to order that the poll tax prescribed under Section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier District. The Governor has power to reduce the amount of the tax payable by the natives of any specified area, and in certain districts temporary reductions have been made.

Method of Assessment.—A uniform tax at the prescribed rate is paid on each hut (dwelling house) owned or occupied by the taxpayer.

A poll tax at the prescribed rate is payable by all able-bodied male natives of the apparent age of 16 years or over who are not liable to pay the hut tax.

Hut and poll tax is collected mainly by District Officers, assisted in the more advanced areas by the Chiefs. The taxpayer is given a receipt in the form of a hut or poll tax ticket for each tax paid. At the same time the payment is noted in the register of taxpayers.

Yield.—The yield of native hut and poll tax in 1935 amounted to £502,302.

THE BOARD OF TRADE JOURNAL

For over fifty years the Board of Trade Journal has been the source of official information on all aspects of British and world trade. To-day when commercial and trade regulations and tariffs have increased throughout the world in number and complexity, there is greater need than ever before for the reliable guide which the Board of Trade Journal provides in the search for markets overseas.

The Journal gives a faithful index of the economic position at home as revealed in statistics of imports and exports, of production, and of retail trade, and shipping, and in wholesale and retail prices.

The Board of Trade Journal is needed by manufacturers, importers, exporters, bankers, shipping companies, insurance companies, and by all engaged in commerce and industry.

I.—GEOGRAPHY, CLIMATE AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by meridian line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,730 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is a standard time 2¾ hours fast on Greenwich. The same standard time has been adopted in Uganda, Tanganyika Territory and Zanzibar. Physiographically Kenya consists of: (1) a region poorly watered

comprising some three-fifths of the total area of the Colony; (2) a plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Nakuru, Naivasha and others; (4) a portion of the basin of the Victoria Nyanza which is 3,726 feet above sea-level. The Nzoia, Yala, Kuja, and Amala Rivers flow into Lake Victoria, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya and from the Aberdares there flow numerous tributaries of the Tana River which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and is capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 58° F.-65° F. in the highland areas.

The rainfall is generally well distributed and ranges from about 10 inches per annum in the arid northern areas to 86 inches per annum in the vicinity of Lake Victoria. The average rainfall in the main agricultural and pastoral areas ranges from 3 to 40 inches. The heaviest rainfall occurs from March to June and from October to December.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498, Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829, Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848 Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw the Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887, Seyyid Bargash, the Sultan of Zanzibar, granted a concession on the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889, a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892, the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895, a British Protectorate was declared over the Company's territory between the coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902, the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903, there were nearly 100 European settlers in or near Nairobi.

In 1905, the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, and Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transferred to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the Great War.

Nominated unofficial members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923, this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony; the coastal belt remains a Protectorate. On the 15th July, 1924, the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council, and in 1925, when under the Kenya and Uganda (Transport) Order in Council the name of the Railway was changed to the Kenya and Uganda Railway, the office of the High Commissioner for Transport was established. This office, by an Order in Council made on the 13th August, 1935, is now vested in the Governors of Kenya and Uganda jointly, and in that capacity they are advised by a Railway Council consisting of official and unofficial representatives of Kenya and Uganda.

II.—GOVERNMENT.

His Excellency, Brigadier-General Sir Joseph Aloysius Byrne, G.C.M.G., K.B.E., C.B., left the Colony on the termination of his term of office on the 22nd December. From then until the end of the year the Government was administered by the Colonial Secretary, A. de V. Wade, Esq., C.M.G., O.B.E.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council of eight *ex-officio* members, and such other official and unofficial members as may be appointed. During 1936, two unofficial members so held office, of whom one was an European and more particularly represented native interests, and the second was an Indian.

The Legislative Council consists of the Governor as President, eleven *ex-officio* members, not more than nine nominated official members, eleven European elected members, not more than five Indian elected members, one Arab elected member, and two nominated unofficial members to represent the interests of the African community. In addition, in accordance with Article XV of the Instructions passed under the Royal Sign Manual and Signet dated the 29th March, 1934, by virtue of which Legislative Council is constituted, since no nominated official member has been specifically appointed to represent the interests of the Arab community, an additional unofficial member has been nominated for such a purpose. The Governor has the right to veto any measure passed by the Legislative Council.

The Colonial Secretary is the Chief Executive Officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners who are responsible for their execution. The Colony is divided into four Provinces, each in the charge of a Provincial Commissioner, and three extra-Provincial Districts. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Commissioners.

Local Government.

Settled areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the more important townships. In the rural settled areas they had the advice of District Committees and a measure of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru and Eldoret, with Municipal Boards, while District Councils were established in the settled portions of the Districts of Nairobi, Kiambu, Fort Hall, Naivasha, Nakuru, Kisumu-Londiani, Uasin Gishu and Trans-Nzoia. At the same time a Commissioner for Local Government was appointed to deal with local government administration. This office was combined with that of Commissioner of Lands, under the title of Commissioner for Local Government, Lands and Settlement.

As the result of legislation introduced in 1933 Municipal Boards now elect their own Chairman, with the exception of Mombasa where the District Commissioner is still statutorily Chairman of the Board.

The total gross revenue of the four municipalities amounted in 1936 to £199,013 (subject to audit), of which £135,279 accrued to the Nairobi Municipality. Of this total revenue the Government contributed in grants approximately 22 per cent.; the balance being raised from assessment rates, licence fees and charges for services rendered. Municipal Authorities may levy assessment rates on capital values up to a maximum of 2 per cent. on site values. In 1936, a rate of 1¼ per cent. on site values was levied in Nairobi and yielded £24,385 from ratepayers. In Mombasa a small improvements rate was imposed in addition to the site value rate, while for the first time a rate on site values was imposed in Eldoret. Nakuru has as yet imposed no assessment rates, but relies on municipal licence fees and charges supplemented by a consolidated grant from Government amounting to £1,800 in 1936.

Nairobi, Nakuru and Eldoret control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town planning schemes are in progress under the Town Planning and Development Ordinance, 1931. The execution of the Mombasa town planning scheme was continued under a sanctioned loan of £250,000, of which £189,000 has so far been raised. The Municipal Board took over the liability for this loan from Government in 1931.

In the rural areas, the six District Councils confine their executive functions to roads, the funds for which are derived at present solely from Government grants. These grants amounted to £30,718 in 1936, as compared with £31,070 in 1935, £32,186 in 1933 and 1934, £34,598 in 1932, £43,418 in 1931 and £53,098 in 1930. The Councils have improved their district roads in a satisfactory manner. Various causes have contributed to the postponement by Councils of the imposition of local rates, and, in so far as Councils remain financially dependent on Government grants and deal only with roads, they represent only a modified and incomplete form of local government. In 1936, the Trans-Nzoia District Council again imposed a hospital rate in the nature of a poll tax on adult male Europeans resident in the district, for the purpose of maintaining the Kitale Hospital which the Council acquired during 1932, and a similar rate is also levied in the Uasin Gishu District for the Eldoret Hospital, which is maintained jointly by the District Council and the Eldoret Municipal Council.

In other rural settled areas and townships, District Committees, Road Boards and Township Committees continued to do useful work.

Native areas.—The Local Native Councils in Kenya are a deliberate creation under the Native Authority Ordinance, Chapter 129 of the Laws of Kenya. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance, and regulation of food and water-supplies, forests, roads, bridges, culverts, public health, the use of land, education, markets and market dues, agriculture and livestock, etc. The District Commissioners are the Presidents of the Councils and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. At the present time in the majority of Councils the greater portion of members are illiterate. The funds, which are controlled by the Councils, are derived from two main sources: (*a*) from the proceeds of local native rates which they are empowered, subject to sanction by the Governor-in-Council, to impose on the inhabitants of the areas over which they have control; (*b*) from the proceeds of the rents of land, forest royalties, etc., levied within those areas. The number of Councils was increased during the year from 20 to 21.

The provision of educational and agricultural facilities occupied the foremost place amongst the various services rendered by Local Native Councils during 1936.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926 and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table:—

	1911.	1921.	1926.	1931.
European, males	2,022	5,800	7,199	9,404
,, females ...	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
,, females ...	—	11,640	14,841	20,388
Total males	—	30,142	33,498	46,151
,, females	—	15,491	20,171	27,796

The percentage increase in each section of the population during the last two decades is:—

	European.	*Asiatic.*
1911-1921	204	203
1921-1931	74	59

The proportions in which the various races entered into the total of the non-native population in Kenya at each census year will be seen from the following summary:—

	1911.		*1921.*		*1926.*		*1931.*	
	Number.	*Per cent.*	*Number.*	*Per cent.*	*Number*	*Per cent.*	*Number.*	*Per cent.*
European	3,175	13·1	9,651	21·1	12,529	23·3	16,812	22·7
Indian ...	10,651	44·1	22,822	50·0	26,759	49·9	39,644	53·6
Goan ...	1,136	4·7	2,431	5·3	2,565	4·8	3,979	5·4
Arab ...	9,100	37·7	10,102	22·1	10,557	19·7	12,166	16·5
Others ...	99	0·4	627	1·5	1,259	2·3	1,346	1·8
Totals ...	24,161	100·0	45,633	100·0	53,669	100·0	73,947	100·0

The ratio of females to males at each census for the two main racial sections of the community is:—

	Europeans. (females to 100 males).	*Asiatics. (females to 100 males).*
1911	57	—
1921	66	48
1926	74	56
1931	79	55

The age distribution in ten-yearly groups will be seen from the two following tables:—

Europeans.

Age.	1921.	1926.	1931.
0-9	1,604	2,253	2,872
10-19	850	1,303	1,583
20-29	2,160	2,439	3,403
30-39	2,694	3,220	4,010
40-49	1,535	2,024	2,640
50-59	583	868	1,293
60 and over	225	422	1,011

Asiatics.

Age.	1921.	1926.	1931.
0-9	7,865	9,895	14,505
10-19	5,501	7,037	9,835
20-29	9,731	9,478	13,273
30-39	6,886	7,469	9,497
40-49	3,360	3,784	5,073
50-59	1,498	1,767	2,024
60 and over	1,141	1,710	2,928

The occupations classified under seven main heads are as follow:—

Europeans.

	1921.	1926.	1931.
Agriculture	1,893	2,199	2,522
Industry	559	607	991
Commerce	937	1,290	2,168
Government and municipal	1,082	1,294	1,735
Professional	441	706	1,124
Personal or domestic	182	310	343
Retired, married women and children	1,350	1,830	2,215

Asiatics.

	1921.	1926.	1931.
Agriculture	498	755	640
Industry	3,679	4,924	6,446
Commerce	6,086	7,769	14,338
Government and municipal	3,390	3,181	2,972
Professional	50	181	264
Personal or domestic	1,241	961	1,452
Retired, married women and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows:—

	European.		*Asiatic.*	
	1926. *Per cent.*	1931. *Per cent.*	1926. *Per cent.*	1931 *Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children		43		

The following table shows the approximate number of each race in 1936. The census population in 1931 is included in the first column for purposes of comparison.

	Census population. 6th March, 1931.	*Estimated population. 31st December,* 1936.
Europeans	16,812	18,269
Indians	39,644	38,325
Goans	3,979	3,510
Arabs	12,166	12,855
Others	1,346	1,587
Total	73,947	74,546

Note.—No reliable returns of births and deaths are available. The estimates in the above table are based on an assumed natural increase of 6 per cent. per annum for Europeans and 10 per cent. per annum for Asiatics, and on the annual excess of migration via Mombasa.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and are related to the number of male adult taxpayers in the various districts. They are, in consequence, subject to a comparatively wide margin of error. The estimated native population in 1936 was 3,186,976, as compared with an estimate in 1927 of 2,793,963, which represents an increase over that period of approximately 14 per cent. No reliable figures of births, deaths, and infantile mortality are obtainable.

The geographical distribution of the estimated native population is as follows:—

Province.	1936.
Central Province	1,301,168
Nyanza Province	1,166,629
Rift Valley Province	236,840
Coast Province	273,408
Masai District	52,333
Northern Frontier District	78,901
Turkana District	77,697
Total	3,186,976

IV.—HEALTH.

General Administration and Organization.

In Kenya, as elsewhere, the ultimate responsibility for the safeguarding and promotion of the public health rests with the Central Government. In every area of the Colony, however, a "Local Authority" exists, which to a greater or less extent has, under the general supervision of the State, responsibility in health matters. In Nairobi and Mombasa the greater part of the Health staff is now employed by the Local Authority. During 1936 another Local Authority, the Municipal Board of Eldoret, assumed responsibility for the employment of its own Medical Officer of Health, and other Sanitary staff. In the other towns, in the European settled areas and in the Native Reserves the authority is vested in the District Commissioner and the Health staff is employed by Government. Where in the smaller towns there is a Municipal Board, the Board is in effect, though not in law, the Local Health Authority, as its opinion is always sought by the Executive Authority. In the Native Reserves every endeavour is made to interest the Local Native Councils in health matters, and these endeavours continue to meet with considerable success. In concurrence with Government policy the Director of Medical Services is responsible for providing and distributing both medical relief and health staff, and he acts in close conjunction with both the Commissioner for Local Government and the Chief Native Commissioner.

Sanitary Work and Administration.

In Nairobi, Mombasa, Nakuru and Eldoret, the sanitary work and administration is almost entirely a function of the local representative authorities, and on the whole has been effectively carried out. Tentative arrangements were made during 1936 for the extension and improvement of the anti-malaria service in Nairobi. In Kisumu anti-malaria works of major importance were begun, and an Entomological Survey, having as its object the same end, was instituted at Mombasa.

The initial steps have been taken for the provision of a new and adequate water supply for Nairobi, and the preliminary arrangements for a drainage scheme and sewage disposal works have been concluded.

Medical Relief.

In three towns medical relief for Europeans is still provided in Government hospitals, but non-Government hospitals and private nursing homes are now established in a number of the larger centres and are being increasingly used by the European population.

In the native reserves, although some measure of medical relief is provided by or through the agency of missionary societies, medical services are for the most part provided directly by the State. The greater part of the provision made under the Medical Estimates is expended on this service.

The demand for medical relief continues steadily to increase and the total number of new cases treated in 1936 again exceeded a million. The demand for surgical and maternity relief also continues to increase.

Special Clinics.

Special clinics for maternity and child welfare work, and for the treatment of venereal disease, have been established at a number of centres. Increasing use is being made of the facilities provided.

Health of Employed Labourers.

Labour conditions on estates, on the railway, and in townships show little change, since, owing to the trade depression, employers of labour have had no funds at their disposal for major improvements. No serious outbreak of disease occurred and apart from sporadic cases of cerebro-spinal meningitis the health of labourers was satisfactory on the whole.

Vital Statistics and the Public Health.

The position with regard to the registration of births and deaths remains unchanged. It has not been possible to provide for the registration and notification of births and deaths among Africans and, therefore, no mortality rates can be determined for that race.

Comparative death-rates per thousand of the population during the years 1935 and 1936 for Nairobi, so far as it has been possible to estimate them, are as follows:—

	1935.	1936.
	Per thousand.	
Crude death-rate, all races	19·78	23·29
Recorded death-rate, all races	13·90	15·92
Recorded death-rate, Europeans	6·14	8·92
Recorded death-rate, Asiatics	12·24	16·18
Recorded death-rate, African	16·47	17·39

No reliable figures are available for Mombasa or other towns, or in respect of the African population in the native reserves as a whole.

So far as the reports of District Medical Officers show, the general health of the population of the Colony differs but little from that of previous years. Sporadic cases of cerebro-spinal meningitis continued to occur throughout the year, but the incidence of the disease was lower than in 1935. A number of the cases, however, particularly during the early part of 1936, were of a severe type. No major epidemic outbreak occurred. 32,882 cases of malaria were reported, as compared with 34,322 cases in 1935. 239 cases of plague came to notice, the bulk of the cases occurring in the Keruguya and Fort Hall medical areas of the Central Province. One case of small-pox was reported.

Propaganda.

In addition to a "Health Exhibit" which was staged at the Nakuru Agricultural Show, many exhibits of a less extensive nature were shown at schools and villages throughout the Colony. Large numbers of health pamphlets were distributed during the year.

V.—HOUSING.

Non-Native.

The year 1936 saw what seems certain to be the lowest point in building costs for many years, and during the latter part of the year prices commenced to rise. In consequence, a fair quantity of housing work is in progress. In most areas of the Colony local stone, of a reasonably soft volcanic freestone with a grey or varying colouration, is easily and cheaply obtained, and makes a very satisfactory walling material. In places where this stone is not readily available, bricks, of varying quality, are burnt. In other neighbourhoods timber is plentiful and is used for walling, cedar being popular on account of its resistance to the ravages of white ants. Locally made cement is available for concrete and mortar. For roofing increasing use is being made of local pantiles, having a pleasing colour and texture and which are produced cheaply, but at present only in small quantities.

The public supply of electric power is becoming available in more and more areas of the Colony, though as yet principally in and around the various towns. As a result of these facilities, houses of excellent design are common, largely resembling English homes and fitted with all the usual modern conveniences.

In the rural areas, also, the majority of the new houses are being erected in stone, but as yet there is little evidence of the existing wood and iron, and mud and wattle bungalows being replaced to any great extent by soundly constructed dwellings in permanent materials.

Native.

With one or two notable exceptions, only a minor degree of improvement has taken place in the condition of native housing whether on estates, or in the mining areas, but incessant propaganda has awakened the interest of employers in this matter and many have sought advice regarding the housing of their labour, and have been provided with plans and technical assistance.

Good general progress is taking place in most of the native areas throughout the country. The more enlightened natives are accepting the advice and assistance of Government officers, and the increase in the number of well-constructed mud and wattle, sun-dried, burnt-brick and stone buildings is becoming progressively more noticeable. The provision of improved food stores and water supplies, etc., advances *pari passu* with the general trend of improvement in housing conditions.

VI.—PRODUCTION.

Land.

The administration of land is combined in one department with that of Local Government, Survey and Registration of Titles, under the general control of the Commissioner for Local Government, Lands and Settlement. District Offices are established in Nairobi, Nakuru, Mombasa, Kisumu and Kericho for local administration and the collection of revenue.

The total area of alienated land in the Colony is 10,708 square miles (including 70 square miles in native reserves and 281 square miles of Coast Freehold), with only some 1,465 square miles still available for alienation. Since 1915, grants of land for agricultural purposes have been for terms of 999 years. About half the alienated land in the Colony is, however, held under the Crown Lands Ordinance, 1902, which provided for leases of 99 years only. Land grants are usually sold by auction and bear rentals of 20 cents per acre revisible in 1945 and every 30 years thereafter.

Township plots are sold by auction for terms not exceeding 99 years. The total revenue from land sales and rents amounted, during 1936, to £70,342 (rents of land, £55,294; land sales, farms £10,090; township plots £4,958). Farm grants, comprising an agregate of 101,091 acres (including an area of 10,492 acres the subject of exchanges), were sold during the year.

Native reserves were proclaimed in 1926, and at present cover 48,345 square miles. The Kenya Land Commission, which submitted its report in 1934, made recommendations for additions to native reserves. When these proposals have been carried out the total area of native reserves will be approximately 51,221 square miles.

In addition there are 119,801 square miles comprising the Northern Frontier District, Turkana and an extension from Uganda, which are occupied by natives.

Agriculture and Livestock.

Of the main products of the Colony, sisal, tea, wheat, pyrethrum and essential oils are grown exclusively by Europeans. Coffee was formerly grown exclusively by Europeans, but Africans are now being encouraged to grow it in small experimental blocks under licence and strict supervision in certain defined areas. Maize, sugar-cane, wattle, numerous kinds of beans, potatoes, and fruit are produced by Europeans, Indians and Africans. Cotton, sorghums, millets, miscellaneous root crops, and other crops are grown almost exclusively by Africans in their reserves.

Prices of almost all the agricultural products produced in the Colony advanced sharply during 1930. The only notable exception was sisal fibre, which remained at about the level to which it rose in 1935.

No agricultural census was taken in 1935 and that for 1936 is not yet completed. The position in regard to some sections is shown in the table of exports on pages 27-29 of this report. Exports of butter increased from 16,287 cwt. in 1935 to 24,983 cwt. in 1936; raw coffee from 357,859 cwt. to 408,239 cwt.; raw cotton from 28,419 centals to 58,152 centals; maize from 1,198,605 cwt. to 1,452,380 cwt.; potatoes from 96,675 cwt. to 103,347 cwt.; sisal from 32,136 tons to 34,746 tons; skins from 1,190,251 to 1,794,060; refined sugar from 83,923 cwt. to 125,656 cwt.; tea from 45,108 cwt. to 67,099 cwt.; wattle bark from 223,138 cwt. to 240,914 cwt.; wattle extract from 101,888 cwt. to 110,272 cwt.; and wool from 12,626 cwt. to 13,026 cwt. On the other hand, hides decreased from 80,684 cwt. to 52,462 cwt., the decrease amounting to 26,023 cwt. in sun-dried and 2,199 cwt. in shade-dried hides.

ORGANIZATION OF PRODUCTION.

With regard to European production, the cultivation of cereals, pulses, essential oil crops, etc., and the production of animal products, is chiefly in the hands of individual farmers. The actual manufacture of butter is undertaken mainly by co-operative creameries. Coffee is produced partly by companies, but mainly by individual planters. The production of sisal, tea and sugar is conducted mainly by companies.

In respect of African agriculture, production is almost entirely in the hands of peasant families who, in the main, cultivate sufficient crops to supply their food requirements, together with a surplus which they sell in order to obtain money for their other needs.

INDIAN AGRICULTURE.

Indian agriculture is limited to the Kibos-Miwani area of the Nyanza Province and to small scattered areas in the Central and Coast Provinces. No recent figures are available as to areas and production, but the total is small.

NATIVE AGRICULTURE.

Considerable progress in agricultural development has been achieved during recent years through improvement, by breeding, selection and importations, in the quality and variety of crops grown, through improved cultural methods, and by means of produce inspection services and organized marketing. The prevention of soil erosion in the reserves continued to receive attention and the successful reclamation of many swamps in the Central Province has aroused the keen interest of the natives.

Improvement of crops largely depends upon ample supplies of seed of high yielding quality and in the past this was provided from public funds. Local Native Councils have now provided land and funds for seed farms in most agricultural districts. These farms have proved their value and will be extended as circumstances permit. Local Native Councils also vote funds for the payment of a certain number of African agricultural instructors.

Native agricultural schools have been established near Nairobi, mainly for the Central Province, and at Bukura for the Nyanza and Rift Valley Provinces. At these schools improved methods of crop and animal husbandry are taught. Particular attention is devoted to mixed farming in small-holdings, due regard being paid to a proper rotation of crops designed to maintain soil fertility. The pupils are also taught to make proper use on the land of the live stock kept in the farm yards. Instruction is also given in the prevention of soil erosion.

Five veterinary training centres are now in full operation and a sixth is being commenced. The various branches of management of cattle and treatment of disease are taught and, because quarantine stations are centred on these schools, facilities are given for instruction in the control of disease. Under supervision, pupils carry out inoculation of cattle and other veterinary work.

An important branch of work in native reserves is the improvement of the methods of marketing of native produce. Inspection services now cover beans, maize, potatoes and wattle bark, over the whole of the Central Province; and beans, groundnuts, gram, sesame and maize in Nyanza. Marketing is being restricted to gazetted buying centres and to trading centres. At a number of large trading centres stores have been erected by Local Native Councils, at which export produce is collected for sale in bulk at export parity prices. Legislation has been passed to provide for the issue of exclusive buying licences for a limited period in cases where such action is necessary in order to encourage the introduction of a new industry or process.

Propaganda for the better preparation of hides and skins continues. The premium offered for shade-dried, as compared with sun-dried hides, is now sufficient to induce natives to undertake the extra work involved in the preparation of shade-dried hides.

The presence of disease at present necessitates the strict administration of quarantine regulations prohibiting the movement of cattle from native reserves, except through authorized quarantine stations, but sufficient movement is permitted to supply market requirements.

Minerals.

Gold continues to be by far the most important mineral exploited in Kenya, and the output for 1936 is valued at £269,947. This is roughly 65 per cent. greater than the corresponding figure for 1935.

Towards the end of the year the increasing rate of production brought the value of gold exported monthly up to approximately £30,000. At this rate gold is fourth in value among the exports of the Colony and it may confidently be expected to improve its position by more than one place in the near future.

Gold mining is still confined to the Nyanza Province and a small adjacent area in the Masai Reserve. During the year, expenditure on exploration diminished and a large number of claims pegged somewhat wildly during the earlier stages in the history of the field have been abandoned.

Sound progress, however, has been made in underground development work. Two properties have reached levels between 500 and 600 feet in depth, and in these, as in many shallower mines, good values in primary ore have been obtained.

The mining industry provided employment for approximately 400 Europeans, 200 Asians and 11,000 natives during the year, and the consequent circulation of money has naturally been of great benefit to the mining districts. Advices from the Commissioner of Mines show that the following sums have been spent by the industry:—

	£
Prospecting	102,494
Development	356,954
Mining and Milling	164,963

(Approximate figures only.)

Considerable interest has been shown in two areas outside the goldfields. In the Coastal Province, several applications for Exclusive Prospecting Licences have been received, and the granting of one has been approved, while another is pending. The minerals in this case are chiefly sulphides of lead, zinc and silver. The other area is some 140 miles inland from the coast near the Kenya and Uganda Railways and Harbours main line. Copper discoveries have been made and applications for Exclusive Prospecting Licences have been received.

A Chamber of Mines for East Africa is being formed, and appears to be receiving the support of the most important mining concerns.

During the year two geological survey reports were published in respect of North and Central Kavirondo.

Manufactures.

Beer and Stout.—The manufacture of these beverages is in the hands of a company, and the number of standard gallons produced in 1936 amounted to 131,675.

Soap is manufactured by companies mainly situated on the coast, and exports of local manufacture during the year amounted to 10,264 cwt. valued at £8,429.

Aluminium hollow-ware.—The progress of local manufacture is reflected in the following figures:—

	Imports.		*Exports of Local Manufacture.*	
	Tons.	£	*Tons.*	£
1930	89	14,470	3	444
1931	12	2,322	18	2,935
1932	2	957	21	4,771
1933	3	827	34	6,951
1934	2	667	66	12,602
1935	5	1,058	81	13,460
1936	3	1,081	118	19,339

In addition to the above, local industries include the manufacture of cement, bricks and pantiles, and boots and shoes. A new tannery has recently been opened at Nakuru. Fruit and vegetable canning is an expanding industry. Proposals are well advanced for the production of sisal bags at a factory near Nairobi, and for the production of meat extract by Liebig's (Kenya) Limited.

VII.—COMMERCE.

General.

Because Kenya and Uganda are one administrative unit for the purposes of Customs, an accurate estimate of the balance of trade of the territories individually is impracticable. On the one hand, Kenya is largely a distributing centre and, on the other, the overseas trade of Uganda passes, in the main, through Mombasa, the principal port of Kenya. In addition, produce originating in Tanganyika Territory, amounting in value to £668,191 was transported through Kenya and shipped at Mombasa during the year, and goods imported into Kenya and subsequently transferred to Tanganyika Territory in 1936 were valued at £932,553. The combined value of trade imports and total exports (i.e., exports of domestic produce and re-exports) of Kenya and Uganda for the year 1936 amounted to £17,491,130, as compared with £15,129,461 in 1935 and £12,823,087 in 1934. In this connexion, it will be noted that the figures for 1935 and 1934 do not tally with those given in the report for 1935, the reason for this being that the figures which appeared in the previous report were exclusively of Government imports, whereas those given above are in terms of all imports other than specie and present the complete picture. The total volume of trade of all classes, including importations on Government account, transit and transhipment traffic, were valued at £18,335,626, as against £15,814,079 in 1935 and £13,483,079 in 1934. The value of total imports during the year was £7,377,279, as against £6,641,345 in 1935, an increase of £735,934, or 11·1 per cent. Exports of domestic produce of the territories were valued at £8,354,774, as compared with £6,608,836 in 1935. Of this total, goods to the value of £3,888,321 originated in Kenya, the domestic exports of Uganda calculated in terms of the f.o.b. value at the port of final shipment from the two territories being valued at £4,466,453. Bonded stocks on hand at 31st December, 1936, amounted to £218,925 or £24,491 less than the value of goods remaining on hand in bonded warehouses at the end of the previous year.

So far as the export trade in Kenya produce is concerned, an increase in value of £910,014, or 31 per cent., as compared with exports during the previous year is recorded. Coffee exports increased by 50,503 cwt. in quantity and £37,731 in value; maize by 253,775 cwt. and £48,406; sugar by 41,733 cwt. and £22,677; sodium carbonate by 7,826 tons and £35,152; sisal by 2,610 tons and £267,347; tea by 21,991 cwt. and £118,643; cotton by 29,733 centals and £73,463; and gold bullion by 19,243 troy oz. and £113,799. Decreases were recorded in hides, ivory and wheat flour.

The improvement in trade statistics reflected in the report for the year 1935 has been maintained to such an extent that the trade figures for 1936 can justifiably be accepted as evidence of the emergence of the territories from the period of depression and the achievement of a satisfactory standard of agricultural development and resultant commercial activity.

Imports.

The following statement gives particulars of the countries from which total imports requirements have originated during the last three years, the main articles of importation from the countries enumerated being shown in each case:—

Country.	*Percentage of Import Trade.*			*Main Items.*
	1934. *Per cent.*	1935. *Per cent.*	1936. *Per cent.*	
United Kingdom	37·66	37·00	38·38	Ale, beer, stout, etc ; biscuits ; confectionery ; provisions ; gin ; whisky ; cigarettes ; cement ; iron and steel and manufactures thereof ; aluminium ; tin and manufactures thereof ; tools ; cutlery ; hardware, etc. ; electrical goods and apparatus ; machinery ; cotton piece goods ; woollen and artificial silk goods ; wearing apparel ; chemicals ; drugs ; paints ; soap ; oils ; stationery, etc. ; bicycles ; motor cars ; lorries and parts ; tyres ; polishes ; books ; brushes ; explosives ; guns and rifles ; cosmetics ; toys, etc.
India	5·37	5·59	5·18	Rice ; wheat flour ; cotton piece goods ; jute bags and sacks.
Union of South Africa.	1·56	1·64	1·63	Fruit ; coal ; chemicals.
Canada	1·43	1·65	1·63	Motor cars ; lorries and parts and tyres.
Tanganyika Mandated Territory.	14·59	12·54	9·82	Rice ; ghee ; tobacco and cigarettes ; coffee ; cotton ; hides and skins and seeds and nuts.
Other British Possessions.	0·32	0·58	0·57	Fruit ; provisions, etc.
TOTAL BRITISH EMPIRE.	60·93	59·00	57·21	

Country.	*Percentage of Import Trade.* 1934. *Per cent.*	1935. *Per cent.*	1936. *Per cent.*	*Main Items.*
Germany ...	3·48	4·44	6·27	Beer ; tools ; machinery ; cotton blankets ; stationery, etc. ; cycle parts ; lorries and lamps.
Belgo-Luxemburg Economic Union.	1·68	1·95	2·57	Corrugated iron ; machinery ; cotton blankets.
France	1·10	1·06	0·84	Brandy ; wines ; tyres.
Italy	1·08	0·53	0·19	Wines ; woollen blankets and piece goods ; apparel.
Netherlands ...	1·39	0·91	0·69	Tobacco ; beer ; cotton piece goods and blankets.
Japan	15·00	15·17	15·15	Cotton and silk piece goods ; tyres ; cement ; wearing apparel ; boots and shoes.
Persia	4·14	4·33	3·20	Fuel oil ; petrol and kerosene.
United States of America.	6·11	7·64	8·16	Motor vehicles; oil , petrol kerosene ; tyres and machinery.
Dutch East Indies.	1·77	1·42	2·27	Fuel oil ; petrol and kerosene.
Other Foreign Countries.	3·32	3·55	3·45	Milk ; matches ; piece goods etc.
TOTAL FOREIGN COUNTRIES.	39·07	41·00	42·79	

Cotton Textiles.—During 1936 the value of cotton textiles imported was £959,236 or 13 per cent. of all goods imported. Transfers to Uganda were valued at £405,002.

The average value per yard of imported cotton textiles was 3d. for each of the years 1934, 1935 and 1936; cotton blankets showing a value per blanket of 1s. 3d. in 1936 as against 1s. 2·6d. in 1935 and 1s. 3·7d. in 1934.

Japan's share of this trade, as in 1935, represents 70 per cent. of the total value as compared with 64 per cent. in 1934. The United Kingdom share shows a reduction to 12 per cent. in comparison with the 1935 and 1934 figures of 16 per cent. and 18 per cent. respectively. Assessed on a yardage basis, importations from Japan convert at 91·27 per cent. of the trade.

Germany, Belgium, Japan, Czechoslovakia and Holland provide the bulk of imported cotton blankets, grey sheeting being almost exclusively supplied by Japan.

Artificial and Natural Silk Textiles.—Imports of artificial silk piece-goods were valued at £84,882 and natural silk goods at £49,905, of which totals Japan supplied £78,734 and £42,674 respectively. The total linear yardage was 4,220,855 in the case of artificial silk and 1,286,871 in the case of natural silk, and of these totals 4,098,138 and 1,179,632 respectively originated in Japan. Imports of artificial silk from the United Kingdom were valued at £3,009 and imports of natural silk at £383.

Machinery.—Importations under this group at a value of £64,947 in excess of 1935 give a clear indication of agricultural and industrial expansion.

Details in respect of the year under review are as follows:—

Article.	*United Kingdom.*		*Germany.*		*Canada.*		*United States of America.*		*Other Countries.*		*Total.*

It will be noted that the United Kingdom portion of this trade remains satisfactory.

Building Materials.—Increases are recorded in importations of building materials during the year under review. Cement imports increased to 29,654 tons valued at £60,863 of which the United Kingdom supplied 21,426 tons valued at £49,688 and Japan 7,835 tons valued at £10,224.

Cement clinker imported was 10,204 tons valued at £15,329 as compared with 4,974 tons valued at £6,685 in 1935, the country of origin being the United Kingdom.

Galvanized iron imports were 8,638 tons valued at £107,012, Belgium supplying 6,939 tons and the United Kingdom 1,096 tons, valued at £83,819 and £15,916 respectively.

Re-exports, Transit and Transhipment Trade.

The value of goods re-exported during 1936 amounted to £2,191,124, or 30 per cent. of the total value of imports, as compared with £2,807,630 or 31·4 per cent. in 1935. Transit and transhipment traffic was valued at £48,890 and £363,559 respectively, as against £71,300 and £404,968 in 1935.

Exports.

The domestic exports of Kenya and Uganda are mainly agricultural, the principal exceptions being carbonate of soda procured at Lake Magadi in Kenya and tin ore mined in Uganda, and gold bullion mined in both territories, and were valued at £8,354,774, as compared with £6,608,836 in 1935, an increase of 26 per cent.

The following table indicates the overseas distribution of the principal articles of export during the year under review:—

Inter-Territorial Trade.

In addition to the foreign trade of Uganda, virtually the whole of which passes via Kenya either in transit to or from Mombasa or through the intermediary markets of Kenya, a considerable trans-frontier traffic in local produce exists. During 1936, the value of local produce sent from Kenya to Uganda amounted to £213,108, as compared with £167,356 in 1935 and £151,648 in 1934, the principal commodities involved being soap, wheat meal and flour, maize meal and flour, beer, tea, coconut oil and aluminium hollow-ware. The value of Kenya produce exported to Tanganyika Territory amounted to £196,769, as compared with £167,745 in 1935.

Under the Customs Agreement of 1927 the free interchange of imported goods between Kenya, Uganda and Tanganyika Territory is allowed, the value of imported merchandise transferred from Kenya-Uganda to Tanganyika Territory during 1936 amounting to £932,553 (including specie valued at £236,045) and the total Customs duty collected by the Kenya and Uganda Customs Administration and transferred to Tanganyika Territory under this Agreement reached a figure of £153,131. Traffic in imported goods in the reverse direction was valued at £206,082 (including specie to the value of £143,410) the Customs duty involved being £14,551. Tanganyika Territory produce passing through Kenya for shipment at Mombasa amounted in value to £668,191.

Air Traffic.

Considerably increased use of the Customs aerodromes established at Mombasa, Nairobi, Kisumu and Entebbe was made by aircraft on foreign service during the year and comparative figures are as follows:—

Year.	*Landed.*				*Shipped.*			
	No. of craft.	*No. of passengers.*	*Value of cargo.*	*Included bullion value.*	*No. of craft.*	*No. of passengers.*	*Value of cargo.*	*Included bullion value.*
			£	£			£	£
1933	477	500	18,692	11,681	460	491	109,572	89,981
1934	577	572	21,480	12,819	517	541	172,942	158,867
1935	969	956	20,720	1,479	899	791	262,211	250,904
1936	1,104	1,080	75,807	63,283	1,001	775	490,944	483,539

Excise and Beer Duties.

The co-ordination and allocation of Excise duties between Kenya, Uganda and Tanganyika Territory is covered by the

Excise Duties Agreements Ordinance, 1931, and the Excise Duties Ordinance, 1935. The rates of duty imposed during the year were as follows:—

	Shs.	*Cts.*
Sugar	1	00 per cwt.
Tea	0	10 per lb.
Cigarettes	1	25 ,,
Manufactured tobacco ...	1	25 ,,
Beer	40	00 per standard barrel of 36 gallons.

Ivory.

Two sales by public auction of Kenya and Uganda Government ivory were undertaken by the Customs Department during the year. The total weight of ivory sold was 66,075 lb. (Kenya 20,731 lb., Uganda 45,340 lb.) and the total amount realized was £20,444 (Kenya £6,772, Uganda £13,672).

VIII.—WAGES AND COST OF LIVING.

Wages.

An analysis made of the records of 500 registered domestic servants shows that the prevailing wage-rates are approximately as follows:—

	Range. *Shs. per month.*	*Average.* *Shs. per month.*
Cooks	20 to 80	28/50
House boys	15 to 50	18
Dhobies	20 to 50	25
Kitchen boys	8 to 25	14
Garden boys	8 to 25	14
Nurses	20 to 60	34
Chauffeurs	25 to 100	30

The above figures refer to estimated ruling rates in 1934. There are no data available for 1936, but there is no reason to believe that wages have declined. Further and more definite figures will be available when an analysis of the Special Labour Return for October, 1936, has been completed. The figures are inclusive, rations being provided by the servants. The rates of wages paid to unskilled labourers varies from Shs.6 to Shs.14 per month, plus rations. The rate varies according to the class of work performed, e.g., underground workers in a mine would receive higher wages than those who work on the surface. These rates are considerably less than those which prevailed in 1929. Since Kenya first began to feel the force of the world depression in 1930, there has been a general downward tendency, which has also manifested itself in the wages of Europeans and Indians engaged in commerce, and in the remuneration of skilled labour generally.

Cost of Living.

Figures relating to the cost of living were collated by the Statistical Department annually from 1927 until 1933. At the end of the latter year, however, owing to the necessity for economy, the Department, as previously constituted, was abolished. Consequently index numbers showing the general trend of the commodity price-levels since then are not available.

The following table shows the approximate retail cost in Nairobi in December, 1936, of a number of the more common commodities:—

		Shs.	*C.s.*
Bread ...	per lb.		35
Flour, 1st grade (imported)..	,,		33
Flour, 1st ,, (local)	,,		22
Tea (imported)	,,	3	53
Tea, 1st grade (local)	,,	1	90
Tea, 2nd ,, ,,	,,	1	60
Tea, 3rd ,, ,,	,,	1	40
Sugar, white (local) ...	,,		12
Jam (imported)	,,	1	37
Jam (local) ...	,,	1	35
Dried fruit ...	,,	1	70
Coffee, ground, loose, 1st grade (local)	,,	1	45
Coffee, ,, ,, 2nd ,, ,,	,,		95
Condensed milk (imported)...	per 14 oz. tin		80
Butter (local creamery)	per lb.	1	60
Butter (farm)...	,,	1	40
Cheese, 1st grade (local)	,,	1	15
Eggs (native)...	per doz.		60
Eggs (European)	,,	1	43
Milk, fresh ...	per pint		30
Beef (average price)	per lb.		96
Pork (average price)...	,,		96
Mutton (average price)	,,		92
Sea fish	,,		78
Lake fish (approx. 1 lb. each)	,,		51
Bacon (average price)	,,	1	55

The minimum cost of accommodation, including food, in European boarding houses is £6 10s. per month.

As regards the cost of living for natives, the staple foodstuff is maize meal and the average consumption thereof approximately 2 lb. per day, the total cost being approximately Shs.3 per mensem. Other foodstuffs, including meat, beans, &c., also form part of the native diet, and the amount consumed by one native may be valued at roughly Shs.2 per mensem. As rations for labourers are provided by employers in kind, the natives themselves are not affected by fluctuations in the price. This does not apply to natives living in native reserves. Normally, these produce sufficient food for themselves and their families, but, during times of famine, foodstuffs have to be purchased.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

The Education Department, in addition to its Administration section, comprises the following four sections:—

European Education,
Indian and Goan Education,
Arab Education, and
African Education.

(i) The Administration, which controls all Government schools, carries out all school inspections and conducts external examinations held in the Colony, consists of the Director of Education, the Chief Inspector of Schools and four Inspectors of Schools, together with the Head Office staff. The Inspectors of Schools are stationed in Nairobi, Mombasa and near Kisumu.

(ii) European education is carried out in the Government schools by 60 European Education Officers and 13 Matrons.

(iii) In the Government Indian schools there are two European principals employed in the secondary schools and 110 Indian Education Officers.

(iv) The Arab schools at the Coast are staffed by four European Education Officers and 26 Arab and Swahili teachers.

(v) In the Government African Schools and training institutions there are 28 European Education Officers, 13 European Technical Instructors and 135 African teachers and instructors.

The cost of the various sections in 1936 was as follows:—

	£
Administration	11,244
European Education	46,529
Indian and Goan Education	37,341
Arab Education	5,194
African Education	70,154
Extraordinary	50
Total	170,512

Included in this expenditure were grants-in-aid to private schools amounting to £47,350. Revenue amounted to £25,879, reducing the total net expenditure on education to £144,633.

Twenty Local Native Councils made grants to Government and mission schools on account of African education amounting to £13,658 and they received a total fee revenue from the Government Schools of £690.

Organization.

Four Advisory Councils for European, Indian, Arab and African Education respectively, appointed under the Education Ordinance, 1931, advise on matters of policy and of major importance, and every Government European and Indian school has its own school committee. In African Education nine District Education Boards have now been established under the District Education Boards Ordinance, 1934, in the more densely populated districts. In this manner valuable assistance in framing and giving effect to educational policy is secured from Administrative and other Government officials and also from members of the public of all races.

European Education.

The average number of pupils at school in 1936 was:—

	No. of schools.	*Boys.*	*Girls.*	*Total pupils.*
Government Primary schools ...	10	431	429	860
Government Secondary schools ...	2	134	120	254
Private schools	22	307	424	731
Total	34	872	973	1,845

Of the above pupils, 960 were boarders, 495 in Government schools and 465 in private schools.

The two Government secondary schools are the Prince of Wales School, Kabete, for boys and the Girls Secondary School, Nairobi. Of the Government primary schools those at Nairobi, Nakuru, Eldoret and Kitale have boarding sections for both boys and girls.

Three of the private schools are large day and boarding schools taking girls up to School Certificate standard; three are schools preparing young boys for entrance to home public schools or to the Prince of Wales School and many of the remaining private schools specialize in catering for the needs of small children.

Indian and Goan Education.

The number of Indian pupils at school in 1936 was as follows:—

	No. of schools.	*Boys.*	*Girls.*	*Total pupils.*
Government	13	2,805	589	3,394
Aided	51	1,188	2,128	3,316
Unaided	9	438	79	517
Total	73	4,431	2,796	7,227

Of these, two Government schools and one aided school are of secondary standard, taking the Cambridge Junior and School Certificate examinations.

There are two aided Goan schools in Nairobi and Mombasa respectively. The total attendance in 1936 was 273 (138 boys and 135 girls). One aided Catholic school in Nairobi and a second in Mombasa also admit Asian children. The combined rolls at these schools amounted to 357 pupils (159 boys and 198 girls).

Arab Education.

Five schools are classified as Government Arab schools, namely, the Coast Secondary School at Shimo la Tewa, which has reached the stage of the Cambridge Junior Examination, the Arab School, Mombasa, the Ali bin Salim School, Malindi, a village school at Mambrui and a night school at Lamu. The average number of pupils at these schools was 493 (473 boys and 20 girls). In addition there are numerous private Koran schools at the Coast, the pupils of which are not at present included in educational statistics.

African Education.

The following was the number of pupils in attendance at Government schools and institutions in 1936:—

	No. of schools.	*Boys and men.*	*Girls and women.*	*Total pupils.*
Jeanes School	1	49	36	85
Native Industrial Training Depot	1	335	—	335
Primary schools	11	1,305	—	1,305
Village schools	38	2,717	78	2,795
Total	51	4,406	114	4,520

All pupils in the Government primary schools were boarders with the exception of 137 in one school.

Sixteen missionary societies conducted schools as shown in the table below:—

	No. of schools.	*Boys.*	*Girls.*	*Total pupils.*
Elementary schools	1,397	62,467	30,912	93,379
Primary schools	40	1,895	192	2,087
Secondary schools	2	176	—	176
Total	1,439	64,538	31,104	95,642

The two secondary schools are the Alliance High School, Kikuyu and the Catholic High School, Kabaa, both of which prepare pupils for the entrance examination to Makerere College, Uganda.

Thirty-five of the schools included in the above figures were girls' boarding schools with a total average roll of 1,331 boarders.

Examinations.

The following pupils from Kenya schools passed external examinations in 1936:—

Cambridge Junior.

	Europeans.		*Goans and Indians.*		*Arabs.*	
Year.	*Entered.*	*Passed.*	*Entered.*	*Passed.*	*Entered.*	*Passed.*
1929	51	23	38	20	—	—

1936	1	—	79	13	—	—

* A pass with the necessary credits gives London Matriculation exemption.

Two Kenya African students passed the School Certificate Examination at Makerere College.

Welfare Institutions.

The Lady Northey Home for European children is maintained by public subscription and fees collected. A scheme is under consideration for utilizing and extending the training facilities so as to enable local probationers to work for a certificate.

The Lady Grigg Welfare Institutions for Indians and Africans continue to function successfully. Valuable service of a charitable and social nature is carried out by such bodies as the League of Mercy, the British Legion, the Salvation Army and the East Africa Women's League.

A seaside holiday camp for European children is held annually at Mombasa and is financed by voluntary contributions.

X.—COMMUNICATIONS AND TRANSPORT.

Posts.

The Posts and Telegraphs Department of the combined territories of Kenya, Uganda and Tanganyika provides telegraphic and telephonic communications by land line, cable and wireless and mail services, internal, overseas and air for the extensive areas which fall within the East African Postal Administration.

Financial.

The financial operations of the Department have again been satisfactory, the excess of cash revenue over recurrent expenditure in respect of Kenya being £64,849. The cash revenue amounted to £198,877 and the recurrent expenditure to £134,028.

Mail Matter.

The volume of mail matter dealt with in Kenya amounted to 13,531,600 articles (letters, postcards, book and sample packets, circulars, etc.), as compared with 13,366,000 in 1935, and includes air mail postings. Details of the latter class of business for the past two years are as follows:—

	Number of letters and postcards.
1935	1,159,300
1936	1,251,800

The increase is almost entirely in respect of air mail letters despatched to places in the British Empire.

Operation of Mail Services.

Internal Surface.—Throughout the year, these services were carried out in an efficient manner, delays being negligible. A new motor mail service between Kisumu and Kitale was operated from the 16th November.

Overseas, Ocean.—Mail services by this means of transmission were maintained efficiently. The number of mail despatches remained the same as for 1935, viz., 70, and the number received amounted to 56. The average time in transit between Mombasa and London was one day longer than in 1935, being 19 days.

Air Mails.—With the exception of certain unavoidable delays due to adverse climatic conditions during the last three months of the year, the Trans-African air mail service was operated with satisfactory regularity by Imperial Airways, Ltd. Additional services to other countries in Africa, east and west of Khartoum, became available during the year through the same company and the Ala Littoria Company (Italian).

Messrs. Wilson Airways, Ltd., maintained a regular coastal feeder service between Nairobi-Mombasa-Tanga-Zanzibar and Dar-es-Salaam and also a service in the Victoria Nyanza area—Lolgorien-Kisumu-Musoma-Mwanza and Geita, to and from Nairobi.

Subsidiary services—Air.—The air mail service is used not only for the transport of correspondence but in addition for parcels and money orders. During the year 5,915 parcels were posted in the Colony for internal, Empire or South African destinations and 3,993 were received. The air mail money order service was extended to South Africa on the 1st January, 1936, the existing services with Great Britain and India being continued as hitherto. The total volume of business substantially increased compared with 1935. The figures for 1936 were as follows:—

Number of Orders issued	3,954, value £31,783
Number of Orders paid	195, value £1,530

Parcels.

The number of parcels of all types handled, ordinary, cash on delivery and air mail, was 151,242, an increase of 6 per cent. compared with the previous year's total. The number of cash on delivery parcels handled was 9,425.

Money Orders.

This service, which is conducted through the medium of the surface and air post and also by telegraph, showed increases in number and value of orders issued and paid compared with 1935, the comparative position being:—

	Issued.		*Paid.*	
	No.	*Value.*	*No.*	*Value.*
		£		£
1936	26,471	144,099	17,188	78,967
1935	23,679	127,076	16,246	73,592

Postal Orders.

In this class of business, a slight increase was also reflected. The figures are as follows:—

	Issued.		*Paid.*	
	No.	*Value.*	*No.*	*Value.*
		£		£
1936	76,127	43,618	29,[illegible]08	15,083
1935	75,408	42,985	29,088	13,754

Telegraphs and Telephones.

Traffic.—Inland telegrams transmitted showed a substantial increase over the figures for the previous year, 315,900 being handled as compared with 284,000, in 1935, an increase of 11 per cent. External telegrams numbered 124,300 and telegrams to and from Great Britain numbered 51,100, of which 41,100 were transmitted by the Kenya Radio. Inland Greetings telegrams containing standard texts were introduced, at a reduced rate of 50 cents per telegram, as from the 15th October.

Telephones.—The number of trunk calls made during 1936 was 122,460 as compared with 121,000 in the previous year.

Engineering Section.

Telephones.—Work was begun on three new trunk services, viz.:—

Nakuru—Kisumu.
Kisumu—Kisii.
Kisumu—Kakamega.

The following short trunk circuits from the Nairobi Exchange were built and brought into service during the year:—

Nairobi—Kabete.
Nairobi—Kiambu.
Nairobi—Ngong.

The radio telephone service to Great Britain from all telephone exchanges connected to the main trunk system in Kenya was inaugurated during the year and later extended to the continent of Europe. The service represents the successful outcome of considerable preparatory work by Cable and Wireless, Ltd.

There has been a steady demand for telephones during the year. The number in use at the end of 1936 was:—

Direct Exchange connections	1,913
Internal Extensions	1,020
External Extensions	342
Private Wires	61

Telegraphs.—The internal routes in Kenya were subjected to considerable overhauling, and on certain sections wooden poles were replaced by iron.

The main cable between Mombasa and the main land at Likoni was again repaired by replacing a faulty section with a completely new length of cable.

Overseas telegraph communication is carried out by Cable and Wireless, Ltd., by means of a submarine cable from Mombasa and the wireless station at Nairobi working direct with England. At Mombasa a 24 hours' service is operated by the company from the Coast wireless station.

Land-line communication with South Africa is also available.

The pole route mileage in the Colony, carrying telephone and telegraph wires, is 2,767 miles and the length of wire is 16,724 miles.

Broadcasting.

The local broadcasting service, operated from the capital, Nairobi, by Cable and Wireless, Ltd., under licence and without cost to the Colony, maintained regular daily lunch time and evening programmes. The station transmits on wavelengths of 350 metres and 49·5 metres simultaneously.

Satisfactory results were also obtained by listeners to many programmes broadcast from overseas.

The number of current licences at the end of the year was 1,917 and the total fees collected on behalf of the operating company amounted to £3,325. Of this sum the Department retained £278. The corresponding figures for 1935 were 1,568, £2,784 and £252. There were 68 dealers' licences, as compared with 53 in the previous year.

Roads.

Although it became evident that the depression of the past few years was giving place to a brighter outlook there was no expansion possible in the programme of work for 1936. All roads were, however, maintained in very fair condition, and as is usual, a fair amount of improvement was effected in certain areas. In certain cases the provision of extra funds was necessitated to make good the damage caused by the abnormal rainfall which occurred in the early months of the year. In other cases roads were temporarily closed under the Roads Protection Ordinance.

The policy of maintaining main roads through the agency District Councils was extended during the year in three more districts. There are now four District Councils undertaking maintenance of main roads, and negotiations were in progress at the end of the year for the main roads out of Nairobi to be similarly dealt with.

As it is evident that the use of only locally obtainable materials for the hard-surfacing of roads must give way to the use of other more durable materials, further experiments on asphaltic strip construction were made during the year. It is obvious that with such a large mileage of roads the cheapest feasible means of obtaining a durable running surface must be found.

Funds for the construction of roads in mining areas were obtained from the Colonial Development Fund, and construction on five of these roads was in progress at the end of the year.

The various statutory Local Government bodies are responsible for roads in the main towns and in the greater portion of the settled areas. The remaining roads are under direct control of the Public Works Department, whose recurrent expenditure on this item amounted to £56,828, an increase of £535 on the expenditure in 1935, with capital expenditure of £4,951 from revenue, £1,219 from loan funds and £32,895 from Colonial Development Fund.

Harbours.

The total tonnage (import and export) handled at Kilindini Harbour during the years 1935 and 1936 are given below. These figures do not include oil imports discharged through the Magadi Soda Company's pipe-line, nor soda exported from that Company's pier. Coal imports are shown separately.

COAL IMPORTS.

1935.	1936.
92,146 tons.	91,641 tons.

IMPORTS AND EXPORTS OTHER THAN COAL.

Year.	Imports. B/L tons.	Exports. B/L tons.	Total. B/L tons.
1935	355,697	482,797	838,494
1936	404,896	592,487	997,383

The total trade of the Port of Mombasa including Kilindini Harbour and the Old Port for the year 1936, as compared with 1935, is summarized in the following statement:—

	1935.	1936.
Number of steamships	663	701
Net tonnage of steamers	2,090,134	2,192,588
Imports—B/L tons	446,856	486,603
Exports	511,565	603,857
Passengers landed:—		
European	6,221	6,704
Non-European	13,586	15,247
Passengers embarked:—		
European	6,265	6,770
Non-European	11,518	12,831

Shipping.

The registered tonnage (inwards and outwards) at all Kenya seaports during the year, as compared with 1935, was as follows:—

	1935.	1936.
Vanga	8,297	7,383
Funzi	6,435	8,559
Mombasa	4,226,808	4,454,912
Kilifi	6,864	5,053
Malindi	14,193	22,710
Lamu	53,990	65,732
Kipini	3,639	3,925

Railways.

The carriage of public goods provided a revenue of £2,244,245 and the tonnage of the traffic amounted to 960,507 tons, as compared with £2,120,315 and 849,795 tons in 1935.

Passenger Traffic.—Revenue from passenger traffic showed an increase on 1935 figures. In 1936, 521,297 passenger journeys contributed a revenue of £170,227, while in 1935, 487,419 passenger journeys contributed a revenue of £158,962. The following table indicates the number of passenger journeys in the various classes, as compared with 1935:—

Passenger journeys.

Year.	*1st Class.*	*2nd Class.*	*3rd Class.*	*Season Tickets.*	*Total.*
1935 ...	7,555	27,768	446,178	5,918	487,419
1936 ...	8,144	30,139	475,794	7,220	521,297

The traffic on Lakes Victoria, Kioga and Albert, and on the River Nile, on which Administration services are maintained, is shown in the following table:—

	1935.	1936.
Earnings	£135,534	£143,677
Working expenditure	£64,896	£65,513
Tonnage carried	106,066	134,468

Fuel Consumption.—The following figures show the consumption of coal, wood and oil fuel on the railway during 1936, as compared with 1935:—

	1935.		1936.	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Coal	71,156	77,920	85,564	92,284
Oil	543	1,630	503	1,672
Wood	125,021	40,658	132,003	42,039

On the lake steamers the figures were:—

	1935.		1936.	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Oil	3,289	8,746	3,623	9,534
Wood	7,702	3,311	8,470	3,574

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1936 are shown in the following table:—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	2,527,158	459,433	2,986,591
Ordinary working expenditure ...	1,142,276	179,387	1,321,663
Surplus of receipts over ordinary working expenditure	1,384,882	280,046	1,664,928

Aviation.

Civil Aviation continued to progress during the year. Customs aerodromes exist at Kisumu, Nairobi and Mombasa, and twelve landing grounds are established for regular use. In addition, nineteen emergency landing grounds are maintained at various points, some of which are fit for use by all types of aircraft. There are seven licensed landing grounds maintained by municipal or private enterprise for regular use by the flying public, and approximately ten unlicensed privately owned landing grounds also exist.

Kenya is served by a twice-weekly air service between Great Britain and South Africa, operated by Imperial Airways (East Africa) Limited, which calls at Kisumu and Nairobi. A coastal air mail feeder service, linking Dar-es-Salaam, Zanzibar and Mombasa with Nairobi and the Empire Service, is operated by a local company, Wilson Airways, Limited. Scheduled mail and passenger-carrying services to mining and other areas are operated by local companies, which in addition undertake an increasing amount of taxi flying.

The value of cargo landed and shipped in 1936 by aircraft at Customs aerodromes was £566,751, including bullion.

Of the thirty civil aircraft registered in the Colony, twenty-one are owned by commercial companies. During the year twenty-one pilots' " A " licences were issued, eleven of the holders of which were trained " *ab initio* " under a subsidy scheme operated by the Aero Club of East Africa with some financial assistance from Government. Nineteen pilots' " A " licences were renewed during the year, eight of which were held by persons trained under the subsidy scheme.

On the 31st December, 1936, the following licences were current:—

Pilots " A " licences	43
Pilots " B " licences	13
Ground Engineers licences	9
Aerodrome licences	7
Certificates of Registration	30
Certificates of Airworthiness	30

XI.—BANKING, CURRENCY AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony:—

The National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru and Kisumu;

The Standard Bank of South Africa, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, Eldoret, Kitale, Nyeri, Kakamega and an agency at Nanyuki;

Barclays Bank (Dominion, Colonial and Overseas) with branches at Nairobi, Mombasa, Nakuru, Eldoret, Kitale and Kakamega.

Since 1910, the inculcation of thrift has been fostered by the Post Office Savings Bank. This bank is making a growing appeal to Africans, of whom 7,886 are now depositors. The increase in the number of African depositors during the year represented 60 per cent. of the increase in the total number of all classes of depositors. The sum of £422,611 is now on deposit to the credit of 19,723 persons.

In 1931, a Land and Agricultural Bank was inaugurated in terms of the Land Bank Ordinance, 1930, with a capital of £240,000. This capital was increased to £500,000 in 1933 and in 1936 a further £250,000 was provided, of which latter a sum of £100,000 was earmarked for administration under the Farmers' Assistance Ordinance, 1936, the Land Bank acting as agents for the Government in carrying out the decisions of the Farmers' Conciliation Board appointed under that Ordinance. The Land Bank makes advances to farmers for specified purposes repayable over periods up to thirty years, on first mortgage security, charging interest at the rate of 6½ per cent. per annum. Up to 31st December, 1936, the Bank had made 516 advances, aggregating £631,260. Under an amending Ordinance passed in 1934, provision was made for short-term loans and up to 31st December, 1936, 64 such advances aggregating £13,825, had been issued.

Currency.

The standard coin is the East African shilling (silver), with subsidiary coinage of the following denominations:—50 cents (silver) and 10 cents, 5 cents and 1 cent (bronze). A note issue is maintained and notes of the following denominations are in circulation:—Shs.10,000, 1,000, 200, 100, 20, 10 and 5.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

Weights and Measures legislation has application to the whole Colony and Protectorate, but in practice the staff now available confines technical supervision to the larger business centres. Any extension of such activities would necessitate an appreciable increase in the net cost of the services.

The pound, yard and gallon, identical with those used in Great Britain, are the standard weights and measures of the Colony, while the degrees of accuracy prescribed by enactment are similar to those required in the United Kingdom.

Weights, measures and instruments totalling 17364, were stamped, rejected or adjusted during the year. In addition, approximately 7,000 weights, measures and instruments were examined during visits of inspection. Prosecutions for infringements of the provisions of the Weights and Measures Ordinance were instituted in a number of instances, while revenue collected in fees for stamping and adjusting amounted to £400.

In order to provide for the introduction of a half-bushel measure of volume in Native Reserves, all Administrative and Agricultural Officers, with the exception of those stationed in the Coast Province, were appointed deputy inspectors under the Weights and Measures Ordinance, and distribution throughout the Reserves of measures verified and stamped under their supervision is being effected.

XII.—PUBLIC WORKS.

The total expenditure incurred by the Public Works Department on services administered by it amounted to £300,418. Of this sum £216,022 was on account of revenue services provided for under Public Works Heads; £67,293 from various extra-departmental sources and £17,103 from loan.

The revenue collected by the Department amounted to £70,356.

The total expenditure on capital works undertaken by the Department amounted to £97,101 in direct charges, and of this amount £29,576 was obtained from revenue, £50,422 from the Colonial Development Fund, Royal Air Force and Military Extraordinary votes, and £17,103 from loan (inclusive of overhead charges).

The revenue expenditure was distributed as follows:—

	£
Buildings	10,569
Water and drainage	6,415
Roads and bridges	4,951
Miscellaneous works	7,641
	£29,576

The expenditure on Colonial Development Fund, Royal Air Force and Military Extraordinary was:—

	£
Colonial Development Fund:	
Roads in mining areas	32,895
Perkerra Irrigation Scheme	382
Royal Air Force:	
Buildings, Nairobi Aerodrome	5,034
Military Extraordinary:	
Coast Defences, Mombasa	11,274
Parliamentary Grant:	
Athi River low-level bridge	837
	£50,422

The loan expenditure was:—

	£
Buildings	15,884
Communications	1,219
	£17,103

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya; the Uganda, Nyasaland and Zanzibar Protectorates; Tanganyika Mandated Territory; and from His Britannic Majesty's Court for Ethiopia. The Judges of the Court of Appeal are the Judges and the Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland and Tanganyika, and His Britannic Majesty's Court for Zanzibar. During the year the Court held four ordinary sessions and one special session. The total number of appeals filed was 219, of which 56 were from Kenya.

The Courts operating in the Colony are as follows:—

(1) The Supreme Court sitting at Nairobi, Mombasa, and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged.

(2) The Courts of the Resident Magistrates at Nairobi (two), Mombasa, Nakuru, Kisumu and Eldoret, presided over by legally qualified officers or by officers seconded from the Administration.

(3) The Courts of the First, Second and Third Class, presided over by Provincial Commissioners, District Commissioners and District Officers.

(4) The Courts conducted by Liwalis, Cadis and Mudirs.

The Northern Frontier and Turkana Districts have been created special districts within the meaning of sections 14 and 15 of the Criminal Procedure Code and the Officers-in-Charge of these Districts are the Officers specially authorized under the latter section. The District Commissioners in the Northern Frontier District have been given the powers of First Class Magistrates.

Courts.

The number of criminal cases committed for trial to the Supreme Court aggregated 164, involving 227 charges against 209 individuals. These figures compare with 174 cases and 299 charges during 1935.

Of the total of 218 charges actually tried during 1936, 209 were against males and nine against females. There were 129 convictions, 42 acquittals and 47 discharges. The convictions were against four Europeans, two Asiatics and 123 natives, and the punishments imposed were:—

Fined	1
Peremptory imprisonment	59
Whipping, with fine or imprisonment, or both	16
Whipping	4
Bound over or otherwise disposed of	4
Sentenced to death	35
Detained during Governor's pleasure	3
Detention camp	1
Repatriated or committed to House of Detention	6

The number of civil cases filed in the Supreme Court during the year was 314, a decrease of 64 on the number for 1935. Probate and Administration causes numbered 183, as compared with 172 opened in 1935, and 45 Bankruptcy petitions were filed, as compared with 42 for the previous year. In addition two Trust causes were opened and 35 Divorce causes were filed.

There were 173 civil and criminal appeals from Subordinate Courts, 86 criminal revision cases and 707 confirmation cases.

During the year, 54,606 charges were brought in Subordinate Courts, an increase of 3,576 on the figures for 1935. These charges were disposed of as follows:—

Convictions	50,072
Acquittals	1,820
Discharges	2,714

This includes 574 charges brought against juvenile offenders, involving 536 convictions and 38 discharges.

Details of the sentences imposed are as follows:—

Fines	15,522
Detention camp in default of payment of fine or surety	15,190
Imprisonment in default of fine or surety	1,906
Fine and detention camp	138
Detention camp	2,722
Fine and peremptory imprisonment	554
Peremptory imprisonment	3,520
Whipping, with fine or imprisonment, or both	50
Whipping	213
Whipping, with fine or detention camp, or both ...	10
Bound over; cautioned; repatriated	6,007
Other punishments; tax or compensation or wages paid; bail estreated	4,233
Detained pending Governor's orders	6
Committed to prison for failure to find security	1
Total convictions	50,072

Police.

The Kenya Police.—The Kenya Police, composed of Africans, with a small percentage of Asiatic personnel, under the direction of European officers and subordinate officers, is distributed mainly throughout the settled and urban areas of the Colony and Protectorate.

Units of the Police Force, operating in certain municipal and district areas, are under the control of superior police officers or senior subordinate police officers, while, subsidiary to these units, there are police stations in settled and urban areas in charge of European or Asiatic subordinate officers.

African police are stationed in a few of the native reserves and Turkana, where they operate under the direct control of Administrative Officers, but the enforcement of law and order in most of the reserves is the responsibility of the local tribal police, to whom reference is made below. In addition, detachments of the Kenya Police Force are stationed in the Northern Frontier District; and a temporary increase of one Assistant Superintendent and 57 African ranks, sanctioned in 1935 in view of the additional duties in that district arising from the Italo-Abyssinian situation, was maintained throughout 1936.

Police detachments in the gold mining areas of the Colony at Kakamega, Gori River, Lolgorien and Bondo remained unaltered, and the police patrol, consisting of 18 African ranks established to preserve order on the borders of the Kisii-Lumbwa Native Reserves continued to operate throughout the year.

By reason of a tendency to lawlessness evinced by some of the Samburu tribesmen it was found necessary during the year to augment further the police post in the Samburu Reserve by a special police levy force, consisting of one European Assistant Inspector and 15 African ranks. This levy force was withdrawn at the close of the year.

Cognizable offences under the Penal Code reported to the police in settled and urban areas in 1936 totalled 4,609. Of that number, 4,458 were true cases, an increase of 107 true cases on the total of 1935. In 3,030 cases accused persons were charged with offences before Subordinate Courts or the Supreme Courts. In 2,701 cases convictions were recorded. The total stated value of property stolen was Shs.270,529, of which Shs.95,587, or 35 per cent. was recovered.

Tribal Police.—In the year 1927 the units of the Kenya Police Force stationed in native reserves were greatly reduced, in consequence of a decision by Government to inaugurate a system of village police, to be known as Tribal Police, and incorporate in that force the body of men previously known as Tribal Retainers. This class of subordinate native official was originally instituted to assist the Administration by the provision of messengers in the reserves, and through the supervision of communal services, and had proved its usefulness in the past.

By the Tribal Police Ordinance, 1929, powers were given to the Tribal Police enabling them to make arrests, guard prisoners, and generally act as a Police Force in the native reserves and support the official headmen in maintaining law and order in these areas.

The total strength of the Force in the native reserves now numbers 829 non-commissioned officers and men. In the more progressive reserves the force has achieved a high standard of discipline and efficiency, and from some reserves a small unit is lent to the Kenya Police to assist in the detection of crime in the settled areas.

Prisons.

The penal establishments under the administration of the Commissioner of Prisons comprise the following three divisions:—

(1) The prisons of the Colony and Protectorate, numbering 28;

(2) Detention camps, numbering 52;

(3) Approved schools for juveniles, numbering 2.

Details of committals during the year to the above establishments are as follows:—

Prisons:	
Convicts ...	7,193
Remand prisoners ...	8,644
Civil debtors ...	187
Lunatics ...	265
Total ...	16,289
Detention camps Total ...	23,759
Approved schools Total ...	39
	40,087

The total increase in the number of committals amounted to 4,088, distributed as follows:—

Prisons: an increase of ...	1,916
Detention camps: an increase of ...	2,197
Approved schools: a decrease of ...	25

The nationalities of the 7,193 convicted persons committed to serve sentences of imprisonment were as follows:—

Europeans ...	9
Eurasian ...	1
Seychellois ...	2
Goans ...	6
Indians ...	51
Arabs ...	46
Somalis ...	19
Africans ...	7,059
	7,193

Of the above, females numbered 314 and juveniles 230. Of the latter, one was sentenced to five years, twelve to between one and five years, five to between three and twelve months, ten to three months and less, and 202 underwent sentences of caning only. Out of the total of juvenile offenders, sixteen had been previously convicted.

Seven cases of commuted death sentences came under the review of His Excellency the Governor, in three of which a recommendation that his clemency should be exercised was approved. As a consequence one convict is to be released after eleven years of imprisonment, one is to be released after seven years of imprisonment and the third on account of old age and infirmity was ordered to be released immediately. This latter order was made effective during February, 1937.

Health.—The general health of the prisoners was good, the percentage of prisoners on the sick list being 4·6. Despite the very considerable increase in the number of commitals, the total number of deaths dropped from 60 in 1935 to 58 in 1936. Of these deaths, 38 were caused by pneumonia.

Administration.

Prisons.—The policy of concentrating all but very short-term convicts in the first and second class prisons, staffed by European officers of the Department, has been steadily pursued. As an outcome of this centralization it was possible to make arrangements with the Public Works Department to supply convict labour for work on the Fixed Defences at Mombasa. The convict establishment housed at the Railways and Harbours Quarry Camp near Nairobi was increased from 250 to 350 and that of the Nairobi Prison was kept up to full strength throughout the year by a system of transfers of short-term convicts from outlying stations in the Central Province. The new prison van was operated on this service.

Amongst other improvements brought into effect during the year were:—

(*a*) The special enlistment of African warder clerks and warder artisans;

(*b*) The introduction of convict overseers in the first class prisons of the Colony.

These overseers were personally selected by Superintendents and amongst other privileges were entitled to wear special convict uniform, live apart from the other convicts in a convict overseers mess, and earn 10 cents a day, which was credited to them and would be administered for their benefit on release by the Discharged Prisoners' Aid Committee.

(*c*) The formation of this latter committee.

The output of the Prison Industries was again increased, with a corresponding increase in revenue which for the first time exceeded £10,000. This is largely the outcome of the introduction of more rapid methods of production and more efficient control. The clerical side of the various industries was overhauled and brought up to date. Side by side with this, increased attention was paid to the desirability of obtaining employment for released convicts in the trades which they acquired during their incarceration.

Detention Camps.—During the year a scheme for the reorganization of the African staff was introduced into certain of the larger detention camps, with a view to the exercise of a more effective control over those detained. In consequence it was hoped that detention might be somewhat more of a deterrent and that at the same time the labour available might become more efficient and economic. By the end of the year the reorganization had been completed in nine camps and reports which have been received indicate that the scheme, within the limits of the small staffs at present available, has proved a success.

Approved schools.—The administration of the combined [illegible] and III approved schools at Kabete has progressed satisfactorily and the application of Borstal principles to African juvenile offenders shows promise of good results. The fundamental principle on which the Kenya approved schools are conducted is that " it is impossible to train men for freedom in a condition of captivity ".

In September the purchase by Government of fifty acres at Dagoretti, with excellent buildings, was completed, and the site was gazetted as a class II approved school. After certain alterations have been made this school will be occupied early in 1937. The school at Kabete will then become a class III school only and the two institutions will be run separately, although the closest liaison will be maintained.

The number of inmates on the 31st December was 109. The average age of boys committed was 13·7 years, somewhat lower in fact than in the previous year.

XIV.—LEGISLATION.

Fifty-one Ordinances were passed during the year 1936. A summary of the more important enactments is given below.

No. VII.—The Dangerous Drugs (Amendment) Ordinance, 1936, brings the Dangerous Drugs Ordinance, 1932, into line with international legislation regarding the importation and exportation of Indian hemp, resin obtained from the plant *cannabis sativa,* or any products of which *cannabis sativa* forms the base.

No. VIII.—The British and Colonial Probates (Amendment) Ordinance, 1936, amends the British and Colonial Probates Ordinance so as to provide for the recognition and resealing in Kenya, without any condition as to reciprocity, of probates and letters of administration obtained in any other part of the Empire.

No. IX.—The Specific Loan Ordinance, 1936, makes provision for raising a loan of £625,000 and such further sum as may be necessary to defray the expenses of issue.

No. XI.—The Control of Fugitive Belligerents Ordinance, 1936, establishes an internment camp for the fugitives of belligerent forces entering Kenya from across the frontier.

No. XV.—The Ferries Ordinance, 1936, empowers the Director of Public Works to enter into an agreement with any person for the operation of a ferry-boat service, and to prohibit any person, without the consent of the Director, operating a ferry-boat service within such area or areas as may be prescribed by the Director.

No. XVIII.—The Farmers Assistance Ordinance, 1936, makes provision for a system of short term agricultural relief in the Colony and follows, to a limited extent, the procedure adopted in New Zealand.

No. XIX.—The Foreign Judgments (Reciprocal Enforcement) Ordinance, 1936, provides for the enforcement in the Colony of judgments given in foreign countries which accord reciprocal treatment to judgments given in the Colony, and for facilitating the enforcement in foreign countries of judgments given in the Colony.

No. XXIII.—The Alteration of Time Ordinance, 1936, introduces, with effect from the 1st January, 1937, a standard time of two and three-quarter hours fast on Greenwich mean time. The same standard time has been adopted in Uganda, Tanganyika Territory and Zanzibar.

No. XXIX.—The Savings Bank Ordinance, 1936, replaces the existing legislation on the subject with a Bill drafted by a committee appointed by the Secretary of State to examine the system of savings banks established in the Colonies.

No. XXX.—The Evidence Act (Amendment) Ordinance, 1936, amends the law of evidence consequent upon the decision of the House of Lords in the case of Woolmington versus the Director of Public Prosecutions.

No. XXXI.—The Penal Code (Amendment) Ordinance, 1936 (*a*) repeals the section of the Penal Code which established the presumption that killing is murder; and (*b*) brings the law of the Colony into line with that of the United Kingdom and into conformity with the rules contained in an International Convention for the Suppression of Counterfeit Currency signed at Geneva in 1929.

No. XXXII.—The United Kingdom Designs (Protection) Ordinance, 1936, is based on a model submitted by the Secretary of State and replaces the existing system of registration of designs under which registration in the Colony was dependent upon registration in England.

No. XXXIII.—The Fugitive Offenders (Pursuit) Ordinance, 1936, enables the police of adjoining British territories in hot pursuit of an offender to cross the frontier and arrest the offender within certain areas to be defined by the Governor-in-Council. It is anticipated that the power given by this Ordinance will be particularly useful in regard to cattle thefts near the Kenya-Tanganyika border.

No. XXXV.—The Employment of Women, Young Persons and Children (Amendment) Ordinance, 1936, gives effect to the provisions of a draft convention concerning the employment of women on underground work in mines of all kinds, which was adopted by the International Labour Conference in June, 1935.

No. XXXVII.—The Money Lenders (Amendment) Ordinance, 1936, excludes from the operation of the Money Lenders Ordinance, 1932, all chattels transfers in which the interest provided for is not in excess of 9 per cent. per annum, and mortgages and charges upon immovable property, irrespective of whether or not the transactions referred to are effected with a money lender or not. It further provides that a money lender and a company must take out a licence in respect of every address at which he or it carries on business, and that not more than one partner in a firm of money lenders, consisting of two or more partners, need pay a licence fee in respect of that firm.

No. XXXIX.—The Trading in Unwrought Precious Metals (Amendment) Ordinance, 1936, legalizes the importation of bullion of a fineness exceeding that which is produced by gold mines in the Colony, in order to meet the demand among certain classes of the Indian community for refined gold to be wrought into ornaments—a form both of saving and adornment, with in some cases religious significance.

No. XLIV.—The Mining (Amendment) Ordinance, 1936, increases the period during which mining locations are tenable from five to ten years and reduces the renewal fee. The Wardens Court has been abolished and the Court of the Commissioner substituted therefor. The opportunity has also been taken to make verbal and phraseological amendments in the interests of clarity and in order to bring the Ordinance into closer relationship with actual conditions in the goldfields.

No. XLVI.—The Native Hut and Poll Tax (Amendment) Ordinance, 1936: (*a*) gives effect to the recommendation contained in the report of the special Commissioner, Sir Alan Pim, that natives under the age of eighteen years should not be required to pay Poll Tax; (*b*) makes it clear that, if a native has more wives than huts he must pay a tax in respect of each wife, and if he has more huts than wives, he must pay a tax in respect of each hut; and (*c*) gives to the court power to remit the whole or any portion of the tax due if the defaulter proves that he is without sufficient means to pay.

No. XLIX.—The Education and Poll Taxes (Repeal) Ordinance, 1936, provides for the repeal of the Non-Native Poll Tax Ordinance (Cap. 52 of the Revised Edition of the Laws of Kenya) which was due to revive on the expiry at the end of 1936 of the Non-Native Poll Tax Ordinance, 1934, and also for the repeal of the European and Asiatic Education Tax Ordinance of 1926. This Ordinance anticipates the passing of Ordinance No. L, to which reference is made below, and other legislation to be enacted early in 1937, introducing alternative means of raising revenue.

No. L.—The Non-Native Poll Tax Ordinance, 1936, provides for the payment of an annual poll tax by non-natives, and makes provision for the collection of such tax.

No. LI.—The Traders Licensing Ordinance, 1936, reduces the fees for trading licences to figures more in keeping with those in force before the enactment of the Licensing Ordinance, 1933.

XV.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

STATEMENT OF REVENUE AND EXPENDITURE FOR FIVE YEARS ENDED 31ST DECEMBER, 1936.

Year.	*Revenue.*	*Expenditure.*
	£	£
1932	3,010,214	3,119,723
1933	3,121,497	3,168,035
1934	3,182,939	3,180,795
1935	3,304,026	3,252,784
1936	3,496,389	3,350,381

The above are gross figures. The nett figures are obtained by deducting a sum approximating to 33⅓ per cent. of the expenditure total from both sides. This sum mainly consists of reimbursements from neighbouring territories in respect of joint services, from the Kenya and Uganda Railways and Harbours in respect of loan interest and from other sources on account of services which are not a charge against the local revenues of the Colony. In consequence the annual accounts for 1936 show an actual net local revenue of £2,362,984 and an actual nett local expenditure of £2,216,976.

STATEMENT OF LOAN POSITION OF COLONY AT 31ST DECEMBER, 1936, PUBLIC DEBT AND SINKING FUND.

Public Debt.

Floated.		*Amount of issue.*	*Rate of Interest.*	*Price of Issue.*	*Redeemable.*	*Expenditure at 31st December, 1936.*
		£	*Per cent.*	*per cent.*		£
1921	...	5,000,000	6	95	1946–56	5,000,000

1933	...	305,600	3½	98½	1957–67	275,230
1936	...	375,000	3	100	1956–61	183,741
		£17,580,600				£16,983,000

Sinking Fund.

Sinking Fund contributions of not less than 1 per cent. commence not later than three years from the date of issue.

The rate of contribution established in respect of each loan is 1 per cent.

Contributions to the sinking fund in respect of the 1936 Loan commence in October, 1939.

ALLOCATION OF PUBLIC DEBT AND ANNUAL CHARGES.

Customs Tariff.

There have been no alterations in Customs and Excise Management and Tariff legislation during the year.

Native Hut and Poll Tax.

Rate.—The rate of hut and poll tax imposed under the Native Hut and Poll Tax Ordinance, 1934, was prescribed at Shs.12 in

1936, except for the members of the following tribes residing in the areas named, who paid at the rates shown below:—

Tribe.	*District.*	*Rate. Shs.*
Meru and Tharaka	Meru	8
Emberre	Emberre Location, Embu. District	8
Kamba	Kikumbulio Location, Machakos District	9
Kamba	Kitui	9
Masai	Masai	10
North Kamasia	Baringo	6
South Kamasia	Baringo	6
East Suk	Baringo	10
Njemps	Baringo	10
Elgeyo	Elgeyo-Marakwet	8
Marakwet	Elgeyo-Marakwet	8
Duruma	Digo	6
Digo	Digo	10
Giriama	Bamba, Chakama, Shakahola, Sameta, Koromi, Kesikicha, Mzungu, Adu Giriama, Aduwasanye, Dagamra, Marikaano and Mangea Locations, Kilifi District	8
	Elsewhere in Kilifi District	10
Galla, Pokomo, Boni, Nyika, Shambara.	Tana River	10
Galla, Boni, Sanye, Kore, Shambara.	Lamu	10
Turkana	Turkana	3
West Suk	Turkana	8
Ndigiri, Il Mwesi, Mukogodo	North Nyeri	8

Section 3 of the Northern Frontier Poll Tax Ordinance, 1930, empowers the Governor to order that the poll tax prescribed under section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier District. The Governor has power to reduce the amount of the tax payable by the natives of any specified area, and in certain districts temporary reductions have been made.

Method of Assessment.—A tax at the prescribed rate is payable on each hut (dwelling house) owned or occupied by the taxpayer.

The age of liability for payment of poll tax was raised from 16 to 18 years by the Native Hut and Poll Tax (Amendment) Ordinance, 1936, and the Northern Frontier Province Poll Tax (Amendment) Ordinance, 1936. A poll tax at the prescribed rate is now payable by all able-bodied male natives of the apparent age of 18 years or over who are not liable to pay the hut tax.

Hut and poll tax is collected mainly by District Officers, assisted in the more advanced areas by the Headmen. The taxpayer is given a receipt in the form of a hut or poll tax ticket for each tax paid; at the same time, the payment is noted in the register of taxpayers. During 1936 a system was introduced, designed to assist individuals to accumulate their tax by means of stamps, known as Kodi Stamps. Revenue stamps, similar in size and shape to postage stamps, have been printed. They bear a special design and are of the denomination of Sh.1. These stamps are for sale at all post offices, Administrative offices and certain other centres, and are purchasable in bulk by large employers of labour. At the time of the tax census, natives liable to pay are issued with a tax stamp collection card which is endorsed with the native's name and certain particulars. The design of the card provides separate spaces for affixing twelve stamps, representing a sum equivalent to one hut or poll tax. At any time at which a contributor has completed his total of twelve stamps, or when he is prepared to hand in a sum of money representing the cash difference between the number of stamps already affixed and the amount due on the card, he is entitled to a tax receipt in respect of one hut or poll.

Yield.—The yield of native hut and poll tax in 1936 amounted to £544,897.

APPENDIX.

I.—GEOGRAPHY, CLIMATE AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by meridian line $37\frac{1}{2}°$ East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,730 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is a standard time of $2\frac{3}{4}$ hours fast on Greenwich. The same standard time has been adopted in Uganda, Tanganyika Territory and Zanzibar. Physiographically Kenya consists of: (1) a region poorly watered comprising some three-fifths of the total area of the Colony; (2) a plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Naukuru, Naivasha and others; (4) a portion of the basin of the Victoria Nyanza which is 3,726 feet above sea-level. The Nzoia, Yala, Kuja and Amala Rivers flow into Lake Victoria, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya and from the Aberdares there flow numerous tributaries of the Tana River which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and is capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 58° F.-65° F. in the highland areas.

The rainfall is generally well distributed and ranges from about 10 inches per annum in the arid northern areas to 86 inches per annum in the vicinity of Lake Victoria. The average rainfall in the main agricultural and pastural areas ranges from 3 to 40 inches. The heaviest rainfall occurs from March to June and from October to December.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498 Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829 Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848 Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887 Seyyid Bargash, the Sultan of Zanzibar, granted a concession of the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889 a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892 the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895 a British Protectorate was declared over the Company's territory between the coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902 the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903 there were nearly 100 European settlers in or near Nairobi.

In 1905 the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, and Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transferred to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the Great War.

Nominated unofficial members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923 this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony; the coastal belt remains a Protectorate. On the 15th July, 1924, the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council, and in 1925, when under the Kenya and Uganda (Transport) Order in Council the name of the Railway was changed to the Kenya and Uganda Railway, the office of the High Commissioner for Transport was established. This office, by an Order in Council made on the 13th August, 1935, is now vested in the Governors of Kenya and Uganda jointly, and in that capacity they are advised by a Railway Council consisting of official and unofficial representatives of Kenya and Uganda.

II.—GOVERNMENT.

Up to the 6th April the Government was administered by the Colonial Secretary, Sir Armigel de Vins Wade, C.M.G., O.B.E. From that date until the end of the year it was administered by His Excellency Sir Henry Robert Moore Brooke-Popham, G.C.V.O., K.C.B., C.M.G., D.S.O., A.F.C.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council of eight *ex-officio* members, and such other official and unofficial members as may be appointed. During the greater part of 1937 four unofficial members so held office, of these three were Europeans of whom one more particularly represented native interests, and the fourth was an Indian.

The Legislative Council consists of the Governor as President, eleven *ex-officio* members, not more than nine nominated official members, eleven European elected members, not more than five Indian elected members, one Arab elected member, and two nominated unofficial members to represent the interests of the African community. In addition, in accordance with Clause XV of the Instructions passed under the Royal Sign Manual and Signet dated the 29th March, 1934, by virtue of which Legislative Council is constituted, since no nominated unofficial member has been specifically appointed to represent the interests of the Arab community, an additional unofficial member has been nominated for such a purpose. The Governor has the right to veto any measure passed by the Legislative Council.

The Colonial Secretary is the Chief Executive Officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners, who are responsible for their execution. The Colony is divided into four Provinces, each in the charge of a Provincial Commissioner, and three extra-Provincial Districts. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Commissioners.

Local Government.

Settled areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the more important townships. In the rural settled areas they had the advice of District Committees and a measure

of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru and Eldoret, with Municipal Boards, while District Councils were established in the settled portions of the Districts of Nairobi (including Kiambu and Thika), Naivasha, Nakuru, Kisumu-Londiani, Uasin Gishu and Trans-Nzoia. At the same time a Commissioner for Local Government was appointed to deal with local government administration. This office was combined with that of Commissioner of Lands, under the title of Commissioner for Local Government, Lands and Settlement.

As the result of legislation introduced in 1933 Municipal Boards now elect their own chairman, with the exception of Bombasa where the District Commissioner is still statutorily Chairman of the Board.

The total gross revenue of the four municipalities amounted in 1937 to £198,569, of which £133,163 accrued to the Nairobi Municipality. Of this total revenue the Government contributed in grants approximately 29 per cent. the balance being raised from assessment rates, licence fees and charges for services rendered. Municipal Authorities may levy assessment rates on capital values up to a maximum of 2 per cent. on site values. In 1937 a rate of 1¼ per cent. on unimproved site values was levied in Nairobi and yielded £24,807 from rate payers; in Mombasa a rate of 1 per cent. on unimproved site values and 7/20ths of 1 per cent. on improvements yielded £15,030; and in Eldoret a rate of ⅝th of 1 per cent. on unimproved site values yielded £383. Nakuru has not yet imposed a rate, and continues to rely on municipal fees and charges supplemented by a consolidated grant from Government which amounted in 1937 to £1,800.

Nairobi, Nakuru and Eldoret control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town planning schemes are in progress under the Town Planning and Development Ordinance, 1931. The execution of the Mombasa town planning scheme was continued under a sanctioned loan of £250,000, of which £189,000 has so far been raised. The Municipal Board took over the liability for this loan from Government in 1931.

In the rural areas the executive functions of the six District Councils are mainly confined to roads, the funds for which are derived solely from Government grants. In 1937 these grants amounted to £34,956, to the judicious use of which the good condition of the majority of district roads bears eloquent witness.

Various causes have contributed to the postponement by Councils of the imposition of local rates, and, in so far as Councils remain financially dependent on Government grants and deal only with roads, they represent only a modified and incomplete form of local government. The Trans-Nzoia and Uasin Gishu District Councils do, however, levy a small hospital rate in the nature of a poll tax on adult male Europeans resident in the district for the purpose of maintaining the Kitale Hospital, which the Trans-Nzoia District Council acquired in 1932, and the Eldoret Hospital, which is maintained jointly by the Uasin Gishu District Council and the Eldoret Municipal Board.

In other rural settled areas and townships, District Committees, Road Boards and Township Committees continued to do useful work.

Native areas.—The Local Native Councils in Kenya are a deliberate creation and provision is made for their establishment in the Native Authority Ordinance, 1937, which consolidates earlier legislation on the subject. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance, and regulation of food and water supplies, forests, roads, bridges, culverts, public health, the use of land, education, the establishment and regulation of markets, agriculture and livestock, the regulation of drying and cleaning of hides and skins, the registration of births, deaths and marriages, measures for dealing with soil erosion, the regulation of payment of marriage dowries, minor communal services, etc.

The District Commissioners are the Presidents of the Councils and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. The funds, which are controlled by the Councils are derived from two main sources:—

(*a*) the proceeds of local native rates which they are empowered, subject to sanction by the Governor-in-Council, to impose on the inhabitants of the areas over which they have control; and

(*b*) the proceeds of the rents of land, forest royalties, market dues, etc., levied within those areas.

The number of Councils was increased during the year from 21 to 22.

The provision of educational, agricultural and medical facilities and of communications occupied the foremost place amongst the various services rendered by Local Native Councils during 1937.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926 and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table:—

	1911.	1921.	1926.	1931.
European, males	2,022	5,800	7,199	9,404
,, females ...	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
,, females ...	—	11,640	14,841	20,388
Total, males	—	30,142	33,498	46,151
,, females	—	15,491	20,171	27,796

The percentage of increase in each section of the population during the last two decades is:—

	Europeans.	*Asiatics.*
1911-1921	204	203
1921-1931	74	59

The proportions in which the various races entered into the total of the non-native population of Kenya at each census year will be seen from the following summary:—

	1911.		*1921.*		*1926.*		*1931.*	
	Number.	*Per cent.*	*Number.*	*Per cent.*	*Number*	*Per cent.*	*Number.*	*Per cent.*
European	3,175	13·1	9,651	21·1	12,529	23·3	16,812	22·7
Indian ...	10,651	44·1	22,822	50·0	26,759	49·9	39,644	53·6
Goan ...	1,136	4·7	2,431	5·3	2,565	4·8	3,979	5·4
Arab ...	9,100	37·7	10,102	22·1	10,557	19·7	12,166	16·5
Others ...	99	0·4	627	1·5	1,259	2·3	1,346	1·8
Totals ...	24,161	100·0	45,633	100·0	53,669	100·0	73,947	100·0

The ratio of females to males at each census for the two main racial sections of the community is:—

	Europeans. (females to 100 males).	*Asiatics. (females to 100 males).*
1911	57	—
1921	66	48
1926	74	56
1931	79	55

The age distribution in ten-yearly groups will be seen from the two following tables:—

Europeans.

Age.	1921.	1926.	1931.
0-9	1,604	2,253	2,872
10-19	850	1,303	1,583
20-29	2,160	2,439	3,403
30-39	2,694	3,220	4,010
40-49	1,535	2,024	2,640
50-59	583	868	1,293
60 and over	225	422	1,011

Asiatics.

Age.	1921.	1926.	1931.
0-9	7,865	9,895	14,505
10-19	5,501	7,037	9,835
20-29	9,731	9,478	13,273
30-39	6,886	7,469	9,497
40-49	3,360	3,784	5,073
50-59	1,498	1,767	2,024
60 and over	1,141	1,710	2,928

The occupations classified under seven main heads are as follows:—

Europeans.

	1921.	1926.	1931.
Agriculture	1,893	2,199	2,522
Industry	559	607	991
Commerce	937	1,290	2,168
Government and municipal	1,082	1,294	1,735
Professional	441	706	1,124
Personal or domestic	182	310	343
Retired, married women and children	1,350	1,830	2,215

Asiatics.	1921.	1926.	1931.
Agriculture	498	755	640
Industry	3,679	4,924	6,446
Commerce	6,086	7,769	14,338
Government and municipal	3,390	3,181	2,972
Professional	50	181	264
Personal or domestic	1,141	961	1,452
Retired, married women and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows:—

	European.		*Asiatic.*	
	1926.	1931.	1926.	1931
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal ...	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children ...		43		

The following table shows the approximate number of each race in 1937. The census population in 1931 is included in the first column for purposes of comparison.

	Census population. 6th March, 1931.	*Estimated population. 31st December, 1937.*
Europeans	16,812	19,211
Indians	39,644	42,368
Goans	3,979	3,658
Arabs	12,166	13,660
Others	1,346	1,605
Total	73,947	80,502

Note.—No reliable returns of births and deaths are available. The estimates in the above table are based on an assumed natural increase of 6 per cent. per annum for Europeans and 10 per cent. per annum for Asiatics, and on the annual excess of migration via Mombasa.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and are related to the number of male adult taxpayers in the various districts. They are, in consequence, subject to a comparatively wide margin of error. The estimated native population in 1937 was 3,253,689, as compared with an estimate in 1927 of 2,793,963, which represents an increase over that period of approximately 16 per cent. No reliable figures of births, deaths, and infantile mortality are obtainable.

The geographical distribution of the estimated native population is as follows:—

Province.	1937.
Central Province	1,360,946
Nyanza Province	1,182,996
Rift Valley Province	236,638
Coast Province	275,651
* Masai District	39,507
Northern Frontier District	79,268
Turkana District	78,683
Total	3,253,689

* Owing to a miscalculation an excessive figure (52,333) was shown in 1936. The 1937 figure is the result of a careful count and reflects a reasonable natural increase on that for 1935.

IV.—HEALTH.

General Administration and Organization.

In accordance with generally established practice, the ultimate responsibility for the safeguarding and promotion of the public health in Kenya rests with the Central Government. In the last few years, however, a successful extension of local control has proceded, and a varying degree of responsibility is now vested in a " Local Authority " in every area of the country, under general State supervision.

In Nairobi and Mombasa the greater part of the Health staff is now employed by the Local Authority, and from 1936 the Municipal Board of Eldoret assumed similar responsibility. In the other towns, in the European settled areas and in the Native Reserves, authority is vested in the District Commissioner and the Health staff is employed by Government. Where, in the smaller towns, there is a Municipal Board, the Board is, in effect though not in law, the Local Health Authority, as its opinion is always sought by the Executive Authority.

In the native reserves the endeavours made in recent years to interest the Local Native Councils have met with a considerable response, and the part played by these Councils in local health matters is becoming increasingly prominent.

The Director of Medical Services is responsible for providing and distributing both medical relief and health staff, and he acts in close conjunction with both the Commisioner for Local Government and the Chief Native Commissioner.

Sanitary Work and Administration.

The sanitary work and administration in Nairobi, Mombasa, Nakuru and Eldoret is almost completely a function of the representative local authorities, and in general has been effectively performed.

In Nairobi the anti-malarial service was augmented, and progress was made with construction work for increasing the water supply and extensions of the drainage scheme and sewage disposal works.

Considerable progress has been made with the extensive anti-malarial works in Kisumu, and an Entomoligical survey, part of a similar scheme in Mombasa, was completed during the year.

Medical Relief.

Medical relief for Europeans is provided at Government hospitals in the towns of Nairobi, Mombasa and Kisumu, and in addition full use is made by the European population of the non-Government hospitals and private nursing homes established in some of the larger centres.

In the native reserves medical facilities are mostly provided directly by the State, and the greater part of the provision made under the Medical Estimates is expended on this service. A further measure of medical relief is provided by or through the agency of several missionary societies. There is a continuous demand for an increase in medical treatment, and the total number of cases treated during the year exceeded that for 1936 by over 130,000. Surgical operations show an increase, and the popularity of the maternity services is such that the available accommodation is rapidly becoming inadequate.

Special Clinics.

Special clinics for maternity and child welfare work and for the treatment of venereal disease have been established at a number of native centres. There has been a steady and significant progress in this branch of medical work, and the figures for 1937 show a very great increase over those of previous years.

Health of Employed Labourers.

Some progress has been made in labour conditions, especially on the larger estates, where employers are increasingly providing improved housing, feeding and medical care of labour. Otherwise there has been little change, but the provision of the best possible living conditions is widely realised as an important factor in the relations between employer and labour.

The health of labourers was satisfactory, and there was a decrease in the incidence of major infectious diseases.

Vital Statistics and the Public Health.

The general application of registration of births and deaths is still impossible. Comparative death-rates per thousand of the population during the years 1936 and 1937 for Nairobi, so far as it has been possible to estimate them, are as follows:—

	1936.	1937.
	Per thousand.	
Crude death-rate, all races	23·29	23·01
Recorded death-rate, all races	15·92	16·96
Recorded death-rate, Europeans	8·92	6·99
Recorded death-rate Asiatics	16·18	16·47
Recorded death-rate, African	17·39	18·75

No reliable figures are available for Mombasa or other towns, or in respect of the African population in the native reserves as a whole.

From the information furnished in the reports of District Medical Officers it would appear that there was no marked change in the general health of the population as compared with previous years. The incidence, however, of both cerebro-spinal meningitis and plague decreased, and neither showed a tendency at any time to assume epidemic proportions.

An epidemic wave of malaria affected practically the whole country during and after the rainy season, 43,624 cases being recorded, as against 32,882 in 1936. Many of these were of unusual severity, the cerebral type being not uncommon.

Small-pox, imported into the country by Abyssinian refugees, was confined to the Northern Frontier District. The medical care of these refugees presented a problem which was efficiently dealt with before and after their eventual establishment at Isiolo.

Propaganda.

At the annual show of the Royal Agricultural and Horticultural Society of Kenya, held in Nairobi, a successful health exhibit, which embraced a variety of subjects, was staged. In addition, during the year, much intensive health propaganda was carried on throughout the whole country by the Medical and Inspectorate staff.

V.—HOUSING.

Non-Native.

The rise in building prices due to the increased cost of imported articles and of both skilled and unskilled labour continued. Despite this factor, however, a considerable number of houses were completed or in course of erection during the year.

With the exception of those in the Coast and Lake areas the houses erected are generally of European design. In Mombasa and Nairobi the roof covering is usually of tiles either imported or locally manufactured. In the districts beyond Nairobi owing to the high cost of transport of roofing tiles, galvanized corrugated iron is employed mostly for roof covering, but shingle roofing is sometimes used. The standard of building and finish is remarkably good, taking into consideration the fact that the skilled labour is non-European.

Native.

There has been some advance in housing for employed labour, particularly on larger estates; and there is no doubt that employers are now fully alive to the importance of this subject and a good deal of minor improvement is taking place. Much propaganda is produced dealing with this subject, and advice and assistance is freely given to employers.

In the general housing campaign which has been carried out in the native reserves, marked progress has been noticeable, and increasing practical interest is being shown in the provision of well-constructed houses, especially by more prosperous and enlightened natives. The housing campaign embraces such factors as the improvement of water supplies, food storage, markets, etc., in all of which directions work is proceeding very satisfactorily.

VI.—NATURAL RESOURCES.

Land.

The administration of land is combined in one department with that of Local Government, Survey and Registration of Titles, under the general control of the Commissioner for Local Government, Lands and Settlement. District Offices are established in Nairobi, Nakuru, Mombasa, Kisumu and Kericho for local administration and the collection of revenue.

The total area of alienated land in the Colony is 10,918 square miles (including 86 square miles in native reserves and 276 square miles of Coast freehold), with only some 1,466 square miles still available for alienation. Since 1915 grants of land for agricultural purposes have been for terms of 999 years. Nearly half the alienated land in the Colony is, however, held under the Crown Lands Ordinance, 1902, which provided for leases of only 99 years. Many grants of land, particularly in the vicinity of Nairobi, were made on freehold title under this Ordinance. Apart from the ex-Soldier Settlement Scheme of 1919 land grants during the period 1912 to the end of 1936 were usually sold by auction. Leases under the Crown Lands Ordinance, 1915, carry rentals of 20 cents per acre, revisable in 1945 and every 30 years thereafter. For some time, in view of the diminishing amount of land available, the unsuitability of public auction as a method of alienating land had been recognized. During 1937 the method of disposing of Crown Land farms by way of direct grant to approved applicants was introduced.

Township plots are sold by auction for terms not exceeding 99 years. The total revenue from land sales and rents amounted, during 1937, to £81,349 (rents of land, £57,980; land sales, farms £11,811; and township plots £11,558). Farm grants comprising an aggregate of 151,621 acres (including an area of 741 acres the subject of exchanges) were sold during the year.

Native reserves were proclaimed in 1926, and at present cover 48,345 square miles. The Kenya Land Commission, which submitted its report in 1934, made recommendations for additions to native reserves. When these proposals have been carried out the total area of native reserves will be approximately 51,221 square miles.

In addition there are 119,797 square miles comprising the Northern Frontier District, Turkana and an extension from Uganda, which are occupied by natives.

Agriculture.

Of the main products of the Colony, sisal, tea, wheat, pyrethrum and essential oils are grown exclusively by Europeans. Coffee was formerly grown exclusively by Europeans, but Africans are now being encouraged to grow it in small experimental blocks under licence and strict supervision in certain defined areas. Maize, sugar-cane, wattle, various kinds of beans, potatoes, and fruit are produced by Europeans, Indians and Africans. Cotton, sorghums, millets and miscellaneous root crops are grown almost exclusively by Africans in their reserves.

EUROPEAN AGRICULTURE.

With regard to European production, the cultivation of cereals, pulses and pyrethrum and the production of animal products, is chiefly in the hands of individual farmers. Coffee is produced partly by companies but mainly by individual planters. The production of sisal, tea and sugar is conducted mainly by companies.

Much European-grown produce is marketed through co-operative marketing societies. Cereals are marketed mainly through the Kenya Farmers' Association. The marketing of pyrethrum is in the hands of the Pyrethrum Growers' Association, which employs the Kenya Farmers' Association as agents, and a similar arrangement is being made in regard to passion fruit juice, which is now being produced on a commercial scale. Coffee is marketed by individuals through the ordinary commercial channels, though there is in existence one co-operative society which undertakes marketing.

The latest statistical information relating to agricultural production by Europeans is that contained in the Agricultural Census Report, 1936. At the date of the census there were 4,580,029 acres in occupation by 1,807 Europeans, of which area 502,497 acres were under cultivation. The chief crops, with the area and production of each in 1935-6, are given below:—

	Area.	*Production.*	
Maize ...	117,848	1,011,863	Bags of 200 lb.
Wheat ...	52,135	152,964	,,
Coffee ...	101,234	386,827	Cwt. (clean coffee).
Tea	11,654	6,777,154	Lb.
Sisal	128,565	32,185	Long tons.
Pyrethrum ...	3,794	8,933	Cwt.
Sugar cane ...	11,568	258,453	Cwt. (crystallized sugar).

The greater part of the maize, coffee, tea, sisal and pyrethrum is exported from the Colony; most of the wheat and sugar is consumed locally. The local market for maize and for tea is important.

INDIAN AGRICULTURE.

Indian agriculture is limited to the Kibos-Miwani area of the Nyanza Province and to small scattered areas in the Central and Coast Provinces. No recent figures are available as to areas and production, but the total is small.

NATIVE AGRICULTURE.

In respect of African agriculture, production is almost entirely in the hands of peasant families who, in the main, cultivate sufficient crops to supply their food requirements, together with a surplus which they sell in order to obtain money for their other needs.

Considerable progress in agricultural development has been achieved during recent years through improvement, by breeding, selection and importations, in the quality and variety of crops grown, through improved cultural methods, and by means of produce inspection services and organized marketing. The prevention of soil erosion in the reserves continued to receive attention and the successful reclamation of many swamps in the Central Province has aroused the keen interest of the natives.

Improvement of crops largely depends upon ample supplies of seed of high yielding quality and in the past this was provided from public funds. Local Native Councils have now provided land and funds for seed farms in most agricultural districts. These farms have proved their value and will be extended as circumstances permit. Local Native Councils also vote funds for the payment of a certain number of African agricultural instructors.

Native agricultural schools have been established near Nairobi, mainly for the Central Province, and at Bukura for the Nyanza and Rift Valley Provinces. At these schools improved methods of crop and animal husbandry are taught. Particular attention is devoted to mixed farming in small holdings, due regard being paid to a proper rotation of crops designed to maintain soil fertility. The pupils are also taught to make proper use on the land of the livestock kept in the farmyards. Instruction is also given in the prevention of soil erosion.

An important branch of work in native reserves is the improvement of the methods of marketing native produce. Inspection services now cover beans, maize, potatoes and wattle bark, over the whole of the Central Province; and beans, groundnuts, gram, sesame and maize in Nyanza. Marketing is being restricted to gazetted buying centres and to trading centres. At a number of large trading centres stores have been erected by Local Native Councils, at which export produce is collected for sale in bulk at export parity prices. Legislation is in existence to provide for the issue of exclusive buying licences for a limited period in cases where such action is necessary in order to encourage the introduction of a new industry or process.

Livestock.

EUROPEAN AREAS.

The census of 1936 showed that there were 267,361 cattle, 241,615 pure-bred and grade sheep, and 16,514 native sheep in the possession of Europeans, while 150,246 cattle and 248,558 sheep and goats were kept by native squatters on European-owned land. Dairy produce is the main interest in the cattle raising districts and much attention is given to the improvement of the herds by the importation of pure-bred stock and by milk recording. During 1937, 124 pure-bred cattle were imported. Most dairy farmers deliver their milk or cream to the Kenya Co-operative Creamery Ltd. which processes and markets butter and cheese locally and abroad. The Creamery has at present five factories in operation. A large quantity of the milk which is produced is sold as such in the towns. Most of the cheese and ghee is sold in Kenya while the greater part of the butter is exported. A co-operative society is in operation dealing with cattle, sheep and pigs for slaughter.

Livestock produce sold during the year ending 28th February, 1936, included the following:—

Milk	995,329 gal.
Butterfat	1,676,023 lb.
Butter	274,654 ,,
Cheese	153,132 ,,
Ghee	57,958 ,,
Wool	1,132,453 ,,

In certain districts, such as Laikipia and the Rift Valley, the raising of woolled sheep is an important industry, the value of wool exported in 1937 exceeding £53,000.

NATIVE AREAS.

Progress is being made in the hides and skins and dairy industries.

Propaganda for the better preparation of hides and skins continues and encouragement is given by the premium offered for shade-dried as compared with sun-dried hides. The value of hides and skines exported from Kenya during 1937 was over £300,000.

In some reserves the dairy industry has reached considerable proportions, while in others it is only beginning. Surplus milk is brought to the field dairies, which are nearly all owned by individual natives or by the Local Native Councils, and is there separated, the skim milk returned to the owner, and the cream converted into ghee. Supervision and control is exercised by the Veterinary staff of the reserve. Production in the Nyanza Province alone for 1937 reached a total value of over £40,000.

There are five Veterinary Training Centres in native reserves. The pupils are given instruction in the treatment of animal disease, the various branches of cattle management, and the preparation of ghee, hides and skins. As inoculations are carried out in the districts, the pupils, under supervision, are given practical instruction in the immunisation of cattle. The necessity of taking steps to preserve soil fertility and to prevent soil erosion is also impressed on the pupils.

The need for strict administration of quarantine regulations, controlling the movement of stock from native reserves, does not interfere unduly with the requirements of normal trade.

A factory for the manufacture of beef products has been erected by Messrs. Liebigs, and by providing a permanent outlet, should be of assistance in measures designed to control overstocking and to utilize surplus cattle.

Fisheries.

The fisheries of the Colony are of three kinds; the sea fisheries on the Coast, the fresh water fisheries of Victoria Nyanza and trout fishing in the highland streams. Other fresh water fisheries could be developed on Lakes Rudolf and Baringo.

A preliminary survey of the sea fisheries of the Colony was made by Dr. C. Von Bonde in 1928. An abundant supply of edible fish of at least fifty varieties is available but the industry has yet to be developed. Fishing, mainly with hand lines, is done by native fishermen who sell most of their catches to Arab middlemen for distribution, often after sun-drying, to the local and up-country markets. The only organization is that of one company which possesses its own motor craft, refrigerating plant and sales facilities. The only considerable export of fish consists of the revictualling of ships. No accurate figures are available of the quantity or value of fish caught.

As a result of a survey of the fresh water fisheries of Victoria Nyanza by Mr. Michael Graham of the Ministry of Agriculture and Fisheries in 1927-8, fishing on the Lake is governed by regulations concerning the mesh of nets used and the registration of boats and fishermen. To enforce these regulations and control the fisheries a Fisheries Patrol is maintained on the Lake. Fishing in which nets are used is done by native fishermen, who now own the majority of the boats in use, the remainder of which are owned by Indians. The market for European consumption locally and elsewhere in the Colony is mainly in the hands of Indian middlemen, but there is a large native market locally for both fresh and dried fish which is supplied direct by native fishermen. The local value of fish, almost all of which were of the species *tilapia esculenta*, caught in 1937 was approximately £66,000 of which just over half was accounted for by the catches of native-owned boats. Two hundred and eighty-four tons of fish to the value of approximately £8,000 were exported by rail from Kisumu to other parts of the Colony.

Trout fishing is confined to the highland streams whose temperature is sufficiently low to enable the fish to breed plentifully. Eighty-seven rivers and streams in the Colony are stocked with brown or rainbow trout and there are over 900 miles of fishing water. Trout fishing is a sporting amenity of the Colony and the sale of trout is prohibited by law. Revenue from trout fishing licences in 1937 amounted to £1,004.

Forest Resources.

The total area of permanent Forest Reserves is 5,347 square miles. In addition it is estimated that there are in the Colony a further 800 square miles of high forest on Crown and Native lands which will in due course be demarcated for permanent preservation. During the year 116 square miles were added to the forest reserves and agreement was reached regarding the demarcation of a further 64 square miles of native-owned forests.

The above-mentioned areas include practically all the existing forests of the Colony with the exception of about 100 square miles on private lands and the scrub and thorn forests of the arid country. The proclaimed forest reserves constitute about 2·4 per cent. of the total area of the Colony but they form about 7 per cent. of the non-arid habitable portion in which they occur.

The forest reserves comprise Crown forests 4,976 square miles and Native forests 371 square miles.

On account of shortage of Survey Staff little progress was made in further demarcation but the local forest officers managed to complete four blocks of about 30 square miles in the Marakwet hills and four small blocks totalling six square miles in the Digo native reserve on the coast.

It is estimated that in the forest reserves there are approximately 1,380 square miles of merchantable forest. There are other areas of good timber at present inaccessible which may become exploitable in the future, but for the most part the remaining forests are of poor quality though valuable from the point of view of climate and water conservation.

About 680 square miles (not all merchantable) are the subject of sawmilling licences. Replanting by the department has followed sawmilling operations fairly closely, and as growth in plantations is remarkably rapid it can be said that these will be supplying all the Colony's timber needs long before the exhaustion of the virgin forests is in sight.

There are no statistics available of the total timber output or consumption in the Colony but probably not more than 10 per cent. of the total is cut outside forest reserves. In the forest reserves the department sold 961,217 cubic feet of timber in the log, the comparable figure for the previous year being 847,887 cubic feet. The increase was due to improved internal trade conditions as the result of the recovery in the export markets for agricultural produce. It is estimated that the resulting output of sawn timber would be about 75 per cent. of these figures.

The proportions of the various kinds of timber cut were approximately as follows:—

Softwoods.	*Per cent.*
Podocarpus	58
Cedar	16
Cypress (plantation)	2
	76
Hardwoods.	
Kenya olive	6
Camphor	2
Muna	2
Other hardwoods	6
	16

All production is done by private enterprise on licence from the Forest Department. There are twenty sawmills working in the forest reserves, independently owned by individuals or private companies but for marketing purposes they are practically all combined in the East Africa Timber Co-operative Society, Ltd. Cutting rights are normally sold by tender and are granted over areas of about 2,000 acres for periods of ten years.

Royalties are paid on the logs which are measured by the department in the forest after felling. Single trees are occasionally sold to farmers and others for their own use or to native pitsawyers where planting areas are being cleared.

Nearly all timber is consumed locally. There is as yet little export overseas except for cedar pencil slats but there is some export to Uganda and Tanganyika. Exports amounted to 18 per cent. of the total production (allowing for conversion to round timber) and were made up as under:—

Cedar pencil slats	48,880 cubic ft., value	£18,250
Other timber	73,935 ,, ,, ,,	£11,602

Timber production is mainly in the hands of European-owned sawmills but there are a number of small Indian-owned mills. There are no native-owned sawmills but natives are showing increasing enterprise in endeavouring to build up timber businesses by pitsawing.

Minerals.

Approximately 200,000 square miles of the colony's territory await mineral and geological survey.

The total area of the known goldfields in Western Kenya is estimated at 8,000 square miles, of which mining locations cover approximately 31 square miles, exclusive prospecting licences 1,524 square miles and leases 1·2 square miles.

Outside the goldfields an area of 204 square miles was under mineral exploration by means of locations or exclusive prospecting licences.

During 1937 areas in the goldfields amounting to 653 square miles were geologically surveyed and mapped in detail.

Gold was again the most important mineral exploited in Kenya. Production for 1937 is valued at a sum exceeding £400,000 as compared with £270,000 for 1936, an increase of approximately 43 per cent., a highly satisfactory rate of progress. Gold, despite keen competition from other products, maintained its place as fourth in value among the exports of the Colony. The bulk of the production was from reef or lode gold, alluvial production being responsible for less than 6 per cent. of the year's total.

An average of 53 mills were operating as compared with 40 for the preceding year.

Development in depth continued normally. Two mines have reached levels between 600 and 700 feet in depth, while promising discoveries made by diamond drilling proved extensions of values at approximately 1,300 feet in vertical depth. No reason is seen to doubt that mineralization extends well below the weathering zone.

A feature of the year has been the discovery of several extremely rich surface finds giving immediate returns to the discoverers.

The tendency to consolidate discoveries by pegging locations to cover the more promising areas previously held under exclusive prospecting licence has been well maintained.

Prices asked for properties were more reasonable, working costs were reduced and more effective methods of treatment employed.

During the year the mining industry provided employment for approximately 250 Europeans, 150 Asians and 10,000 Africans.

Other minerals such as asbestos, mica, corundum, sapphire, vermiculite, magnesite, beryl and quartz of optical quality continue to be investigated, while sodium carbonate of the export value of £187,000 was exported during the year. Deposits of diatomite estimated at several million tons await exploration.

Oil exploration licences granted to well known interests were cancelled by mutual consent. At the close of the year, however, an application for a licence to cover exploration of an area of 3,308 square miles was under consideration.

The East African Chamber of Mines came into being in February, 1937. It has already shown considerable activity in obtaining better conditions for mining generally, and has proved its value in providing a unified and responsible body, which Government can consult on matters concerning the mining industry.

Manufacturers.

Beer and stout.—The manufacture of these beverages is in the hands of a company, and the number of standard gallons produced in 1937 amounted to 131,733.

Sugar.—There are six licensed factories. The production in 1937 was 15,965 tons.

Tea.—Fourteen factories were licensed—the production of prepared tea during the year was 10,809,046 lb.

Soap.—This is manufactured by companies mainly situated on the Coast, and exports of local manufacture during the year amounted to 5,760 cwt. valued at £5,920.

Aluminium hollow-ware.—The progress of local manufacture is reflected in the following figures:—

	Imports.		*Exports of Local Manufacture.*	
	Tons.	£	*Tons.*	£
1930	89	14,470	3	444
1931	12	2,322	18	2,935
1932	2	957	21	4,771
1933	3	827	34	6,951
1934	2	667	66	12,602
1935	5	1,058	81	13,460
1936	3	1,081	118	19,339
1937	4	1,310	143	24,031

VII.—COMMERCE.

General.

Kenya and Uganda are one administrative unit for the purposes of Customs and for this reason an accurate estimate of the balance of trade of the territories individually is impracticable. On the one hand, Kenya is largely a distributing centre and, on the other, the overseas trade of Uganda passes, in the main, through Mombasa, the principal port of Kenya.

The principal imports of Kenya and Uganda during 1937 consisted of cotton piece goods, motor vehicles and oils, machinery and building materials—the principal exports were cotton, coffee, sisal, tea, carbonate of soda, and gold bullion.

The year 1937 may be regarded as a year of progress for both Kenya and Uganda, and the satisfactory state of trade which existed during the year can be gauged by the record attained in respect of domestic exports and the fact that trade imports were the highest since 1929.

(1) COMPARATIVE STATEMENT OF TOTAL IMPORTS, DOMESTIC EXPORTS AND RE-EXPORTS FOR KENYA AND UGANDA, 1933-1937.

	1933. £	1934. £	1935. £	1936. £	1937. £
Imports	4,898,722	5,708,025	6,641,345	7,377,279	10,832,573
Domestic exports	5,711,609	5,683,637	6,608,836	8,354,774	9,656,791
Re-exports ...	1,595,687	1,821,505	2,087,630	2,191,124	2,495,948

Inter-Territorial Trade.

In addition to the external trade referred to in the foregoing paragraphs, the interchange of imported and locally produced goods was as follows:—

Kenya to Uganda.

	1935.	1936.	1937.
	£	£	£
Imported goods... ...	1,704,567	1,956,410	2,827,645
Local produce	167,356	213,108	278,368

Uganda to Kenya.

	£	£	£
Imported goods... ...	26,513	30,752	40,652

Kenya and Uganda to Tanganyika Territory.

	1935.	1936.	1937.
	£	£	£
*Imported goods	743,997	932,553	1,121,546
Local produce	276,321	275,430	353,241

* Including specie value £102,165, £236,045 and £257,173 respectively.

Tanganyika Territory to Kenya and Uganda.

	£	£	£
*Imported goods	80 660	206 082	826,212
Local produce	833,067	724,500	942,515

* Including specie value £25,125 £143,410 and £728,519 respectively.

Excise and Beer Duties.

The co-ordination and allocation of Excise Duties between Kenya, Uganda and Tanganyika Territory is covered by the Excise Duties Agreements Ordinance, 1931, and the Excise Duties Ordinance, 1935. The rates of duty imposed during the year were as follows:—

	Shs.	*Cts.*	
Sugar	1	00	per cwt.
Tea	0	10	per lb.
Cigarettes	1	25	,,
Manufactured tobacco	1	25	,,
Beer	40	00	per standard barrel of 36 gallons.

Ivory.

Two sales by public auction of Kenya and Uganda Government ivory were undertaken by the Customs Department during the year. The total weight of ivory sold was 59,098 lb. (Kenya 14,180 lb., Uganda 44,918 lb.) and the total amount realized was £22,105 (Kenya £5,597, Uganda £16,508).

VIII.—LABOUR.

Numbers Employed.

The average number of adult natives in employment each month in 1937 was 183,000. The highest number in any one month being 186,661 in December, a record figure for the Colony. It is not possible to state exactly the number of natives employed monthly in the various industries but the following is an approximate estimate, which includes juveniles, of those engaged in some of the more important ones:—

Sisal	27,500
Railway	16,500
Tea	12,000
Pyrethrum	10,000
Mines	7,500
Sugar	5,000

The coffee and maize growers are by far the biggest employers of agricultural workers but as their requirements fluctuate to such a great extent, according to whether their crops are good, fair or poor, it is impossible to give anything approaching an accurate estimate of the numbers of workers employed by them.

Supply and Demand.

The increased demand for labour which occurred in 1936 was more than maintained in 1937. The supply during the first nine months of the year fell somewhat below demand but the position then improved. At no time, however, was there an acute shortage of labour in the Colony except in two comparatively small districts, in which the main crop was coffee, where employers, owing to their having been particularly badly hit by the years of depression and more recently by disease in their plantations, were unable to offer such atractive terms of employment as were obtainable elsewhere. By the end of the year when a record number of natives were in employment, the labour position had improved to such an extent that it was generally satisfactory.

Recruiting.

As a result of the insistent demand for labour throughout the year recruiting activities were greater than in 1936. The bulk of these were carried out by private recruiters, i.e., European, Asian and Native employees of estates. Almost all the labour so obtained was not on written contracts of service but engaged on verbal undertakings to work from three to six 30-day tickets, and although such contracts are not enforceable in law beyond a period of 42 days, i.e., the maximum time allowed to complete a ticket, they were in the majority of cases observed. On the other hand, all labour recruited by professional recruiters was indentured on written contracts of service, usually for six 30-day tickets; but in spite of the increased activities of these agents the number of natives so indentured was approximately the same as in 1936, i.e., about 9,000, most of whom worked in the Central (Nairobi) and Coast (Mombasa) Provinces.

Applications to recruit Kenya labour were received from employers in Tanganyika and Uganda, but in view of the labour situation in the Colony the policy of 1936 was maintained and permission was refused.

Conclusion.

Whilst labour was not plentiful during the first nine months of 1937, no acute shortage occurred and by the end of the year the position was satisfactory. It was noteworthy that employers who were well-known to take a personal interest in their employees and to feed and house them well obtained labour with ease.

IX.—WAGES AND COST OF LIVING.

Wages.

An analysis of all natives in employment on the 31st October, 1936, was compiled during the first half of the year, and for all purposes the comprehensive tabulations then obtained held good at the end of the year, as there was no indication that native wages had appreciated to any extent.

There are indications, however, which point to the labour supply not being equal to the demand, and, in consequence, that fact, coupled with a freer flow of money, may cause native wages to rise in the near future.

The following schedule reflects the average wages earned by men employed in the various callings enumerated. Where previous tabulation existed for the same occupations, comparative figures have been furnished:—

SCHEDULE.

Average rates of wages (including value of rations) paid to natives employed by all races of employers in October, 1936, as compared with November, 1930.

Domestic Servants.		
Occupation.	*Oct., 1936.*	*Nov., 1930.*
	Shs.	*Shs.*
House boys	20/—	27/—
Personal servants ...	26/50	
Cooks	27/—	35/—
Kitchen boys	15/—	13/50
Waiters	24/—	34/50
Dhobies	24/—	31/—
Syces	13/—	15/50

Miscellaneous Workers.

Occupation.	*Oct., 1936.*	*Nov., 1930.*
Not specified	25/—	46/—

Cost of Living.

NON-NATIVE.

The minimum cost of accommodation, including food, in European boarding houses is £6 10s. per month.

NATIVE.

The staple foodstuff of the native is maize meal, the average consumption being approximately 2 lb. per day, at a total cost of approximately sh.3 per mensem. Other foodstuffs including meat, beans, etc., also form part of the native diet, and the amount consumed by one native may be valued at roughly sh.3

per mensem. As rations for labourers are provided by employers in kind, the natives themselves are not affected by fluctuations in the price. This does not apply to natives living in the native reserves who, however, normally produce sufficient food for themselves and their families, though during times of famine, foodstuffs have to be purchased.

Detailed figures relating to the cost of living were collated by the Statistical Department annually from 1927 to 1933. At the end of the latter year, however, owing to the necessity for economy, the department, as previously constituted, was abolished. Consequently index numbers showing the general trend of the commodity price-levels since then are not available.

The following are the approximate retail prices of some of the more common commodities in Nairobi in December, 1937:—

Section 1.—Groceries.

Commodity.	*Cents of a shilling.*	*Sales unit.*
Bread, white (European bakery) ...	35	1 lb.
Flour, superfine	29	1 ,,
Jam, plum	88	1 ,,
Oatmeal	161	3 lb.
Rice, Mwanza	23	1 lb.
Sugar, best	16	1 ,,
Beer	120	bottle
Coffee, best quality ground ...	133	1 lb.
Tea, best quality	199	1 ,,
Soap, blue mottled...	26	1½ ,,
Soda, washing—Magadi	16	1 ,,

Section 2.—Dairy Produce.

Commodity	Cents	Unit
Butter, creamery	143	1 lb.
Butter, best farm	138	1 ,,
Cheese, local cheddar	118	1 ,,
Eggs, European farm—new laid ...	149	doz.
Bacon, average	172	1 lb.
Milk, fresh—Grade "A"	25	pint

Section 3.—Meat and Fish.

Commodity	Cents	Unit
Beef grade—average	90	1 lb.
Mutton grade—leg	90	1 ,,
Pork grade—leg	113	1 ,,
Lard	110	1 ,,
Suet	82	1 ,,
Fish, Kisumu—lake	60	1 ,,
Fish, Mombasa—sea	90	1 ,,

Note.—The price quoted for fresh milk is that charged when delivered to the customer in sealed bottles.

X.—EDUCATION AND WELFARE INSTITUTIONS.

The Education Department, in addition to its administration section, comprises the following four sections:—

European Education,
Indian and Goan Education,
Arab Education, and
African Education.

(*i*) The administration, which controls all Government schools carries out all school inspections and conducts external examinations held in the Colony, consists of the Director of Education, the Chief Inspector of Schools and four Inspectors of Schools, together with the Head Office staff. The Inspectors of Schools are stationed in Nairobi, Mombasa and near Kisumu.

(*ii*) European education is carried out in the Government schools by 63 European Education Officers and 15 Matrons.

(*iii*) In the Government Indian schools there are two European Principals employed in the secondary schools and 119 Indian Education Officers.

(*iv*) The Arab schools at the Coast are staffed by four European Education Officers and 26 Arab and Swahili teachers.

(*v*) In the Government African schools and training institutions there are 28 European Education Officers, 13 European Technical Instructors and 135 African teachers and instructors.

The cost of the various sections in 1937 was as follows:—

	£
Administration	11,395
European Education	49,255
Indian and Goan Education	39,140
Arab Education	5,251
African Education	77,193
Extraordinary	2,081
Total	184,315

Included in this expenditure were grants-in-aid to private schools amounting to £50,043. Revenue amounted to £26,337, reducing the total net expenditure on Education to £157,978.

Twenty Local Native Councils made grants to Government and mission schools on account of African education amounting to £15,724 and they received a total fee revenue from the Government schools of £686.

Organization.

Four Advisory Councils for European, Indian, Arab, and African Education respectively, appointed under the Education Ordinance, 1931, advise on matters of policy and of major importance, and every Government European and Indian school has its own school committee.

In African Education nine District Education Boards have now been established under the District Education Boards Ordinance, 1934, in the more densely populated districts. In this manner valuable assistance in framing and giving effect to educational policy is secured from Administrative and other Government officials and also from members of the public of all races.

European Education.

The average number of pupils at school in 1937 was:—

	No. of schools.	*Boys.*	*Girls.*	*Total pupils.*
Government Primary schools	9	523	289	812
Government Secondary schools	2	148	137	285
Private schools	21	353	534	887
Total	32	1,024	960	1,984

Of the above pupils 1,073 were boarders, 556 in Government schools and 517 in private schools.

The two Government Secondary schools are the Prince of Wales' School, Kabete, for boys, and the Girls' Secondary School, Nairobi. Of the Government primary schools those at Nairobi, Nakuru, Eldoret and Kitale have boarding sections for both boys and girls.

Three of the private schools are large day and boarding schools taking girls up to School Certificate standard; three are schools preparing young boys for entrance to home public schools or to the Prince of Wales' School and many of the remaining private schools specialize in catering for the needs of small children.

Indian and Goan Education.

The number of Indian pupils at school in 1937 was as follows:—

	No.of schools.	*Boys.*	*Girls.*	*Total pupils.*
Government	13	3,034	667	3,701
Aided	51	1,348	2,243	3,591
Unaided	9	287	42	329
Total	73	4,669	2,952	7,621

Of these two Government schools and one aided school are of secondary standard, taking the Cambridge Junior and School Certificate examinations.

There are two aided Goan schools in Nairobi and Mombasa respectively. The total attendance in 1937 was 308 (160 boys and 148 girls). One aided Catholic school in Nairobi and a second in Mombasa also admit Asian children. The combined rolls at these schools amounted to 455 pupils (202 boys and 253 girls).

Arab Education.

Five schools are classified as Government Arab schools, namely, the Coast Secondary School at Shimo la Tewa, which has reached the stage of the Cambridge Junior Examination, the Arab School, Mombasa, the Ali bin Salim School, Malindi, a village school at Mambrui and a night school at Lamu. The average number of pupils at these schools was 530 (499 boys and 31 girls). In addition there are numerous private Koran schools at the Coast, the pupils of which are not at present included in educational statistics.

African Education.

The following was the number of pupils in attendance at Government schools in institutions in 1937:—

	No. of schools.	*Boys and men.*	*Girls and women.*	*Total pupils.*
Jeanes School	1	58	25	83
Native Industrial Training Depot	1	330	—	330
Primary schools	13	1,193	25	1,218
Village schools	39	3,040	135	3,175
Total	54	4,621	185	4,806

All pupils in the Government primary schools were boarders with the exception of 137 in one school.

Sixteen missionary societies conducted schools as shown in the table below:—

	No. of Schools.	*Boys.*	*Girls.*	*Total pupils.*
Elementary schools	1,367	61,440	29,034	90,474
Primary schools	36	5,745	2,394	8,139
Secondary schools	2	273	—	273
Total	1,405	67,458	31,428	98,886

The two secondary schools are the Alliance High School, Kikuyu, and the Catholic High School, Kabaa, both of which prepare pupils for the entrance examination to Makerere College, Uganda.

Twenty-one of the schools had girls boarding sections with a total average roll of 1,330 boarders.

Examinations.

The following pupils from Kenya schools passed external examinations in 1937:—

	Europeans.		*Goans and Indians.*		*Arabs.*	
Year.	*Entered.*	*Passed.*	*Entered.*	*Passed.*	*Entered.*	*Passed.*

* A pass with the necessary credits gives London Matriculation exemption.

Welfare Institutions.

The Lady Northey Home for European children is maintained by public subscription and fees collected. A scheme is under consideration for utilizing and extending the training facilities so as to enable local probationers to work for a certificate.

A seaside holiday camp for European children is held annually at Mombasa and is financed by voluntary contributions.

The Lady Grigg Welfare Institutions for Indians and Africans continue to function successfully.

Valuable service of a charitable and social nature is carried out by such bodies as the League of Mercy, the British Legion, the Salvation Army and the East African Women's League.

XI.—COMMUNICATIONS AND TRANSPORT.

Posts and Telegraphs Department.

The Posts and Telegraphs Department of the combined territories of Kenya, Uganda and Tanganyika provides telegraphic and telephonic communications by land line, cable and wireless and mail services, internal, overseas and air, for the extensive areas which fall within the East African Postal Administration.

Financial.

The financial operations of the Department have again been satisfactory, the excess of cash revenue over recurrent expenditure in respect of Kenya being £64,463. The cash revenue amounted to £207,368 and the recurrent expenditure to £142,905.

Mail Matter.

The volume of mail matter dealt with in Kenya amounted to 15,391,000 articles (letters, postcards, book and sample packets, circulars, etc.) as compared with 13,531,600 in 1936. These figures include air mail postings.

Operation of Mail Services.

The most outstanding event of the year was the inauguration of the Empire Air Mail Service between Great Britain and countries on the African route. Except for delays due to adverse climatic conditions, the service was satisfactorily maintained.

Internal Services.—These services were efficiently maintained throughout the year.

Overseas, Ocean.—The number of mail despatches to the United Kingdom during the year amounted to 69 and the number received to 59, the average time in transit between Mombasa and London being 18 days.

Parcels.

The number of parcels handled, including cash on delivery, was 159,793, an increase of 6 per cent. compared with 1936. Ten thousand seven hundred and ninety-seven cash on delivery parcels were dealt with having a value of £30,744.

Money Orders.

The volume of Money Order business during the year showed a considerable increase over the previous year, the comparative position being:—

	Issued.		*Paid.*	
	No.	*Value.*	*No.*	*Value.*
		£		£
1936	26,471	144,099	17,188	78,967
1937	29,595	168,480	20,030	95,272

Postal Orders.

Postal Orders issued and paid amounted to 117,822 in number and £62,972 in value, the increase over 1936 being 11,787 and £4,271 respectively.

Telegraphs and Telephones.

Traffic.—The number of inland telegrams transmitted was 381,600, an increase of 21 per cent. over 1936. External telegrams numbered 126,300 of which 47,600 were to or from Great Britain. The inland "greetings" telegram service introduced in October, 1936, proved popular with the public, and 7,000 telegrams of this class were transmitted during the year.

Telephones.—The number of trunk calls made during 1937 was 180,000 as compared with 122,500 in 1936. Local calls totalled 4,305,700, an increase of 672,800 over the previous year's figures.

Engineering Section.

Telephones.—There has been an increased demand for telephone services throughout the Colony during the year. The number of telephones in use at the end of 1937 was:—

Direct Exchange connections ...	2,219
Extensions	1,470
Private Wires	66

The construction of the Kisumu-Kakamega and Nakuru-Kisumu trunk lines begun in 1936 was completed and a new trunk line was erected between Nairobi and Machakos.

Telegraphs.—Reconstruction work over approximately 85 miles of telegraph route was carried out during the year.

Overseas communications operated by Cable and Wireless, Limited, were satisfactorily maintained.

The mileage of pole routes carrying telegraph and telephone lines was increased to 2,822 miles and wire mileage to 17,694 miles.

Broadcasting.

The local broadcasting service operated by Cable and Wireless, Limited, was satisfactorily maintained. The number of current licences at the end of the year was 2,051 and the total fees collected on behalf of the operating Company amounted to £3,584. Of this sum the department retained £291. There were 56 dealers' licences current at the end of the year.

Roads.

All roads were maintained in fair condition although, due to abnormal rains, a considerable amount of storm damage occurred, necessitated the provisions of additional funds.

The heavy rains demonstrated the inability of many of the roads in adverse climatic conditions to cope with the more speedy and heavily loaded transport that now forms the bulk of the traffic. During the course of the year experimental lengths of bitumen strip and carpet construction were laid down in order to test the possibilities of such a form of construction as a substitute for the laterite or soft stone that is at present used, the supply of which is every year becoming more costly owing to the necessity of going further and further from the roads as the supplies close to the roads are exhausted. Owing to the fast-moving traffic, the laterite corrugates badly, involving frequent grading and consequent loss, and in addition a large amount is blown or washed away. The cost of maintaining such roads is high, and it is likely that the maintenance costs of a road on which bitumen carpet has been laid will be less costly.

The whole question of road improvements was referred to a sub-committee of the Central Roads and Traffic Board, but the report had not been completed before the end of the year.

Considerable progress was made on the roads in mining and tea areas, funds for the construction of which were obtained from the Colonial Development Fund.

Roads in the main towns and most of the settled areas are maintained by Local Government bodies, and the remaining roads of the Colony are directly controlled by the Public Works Department.

The Public Works Department expenditure amounted to £65,869 on maintenance and improvement of roads and bridges, an increase of £9,041 on the 1936 expenditure; on capital works £134,527 from Revenue, £20,862 from Loan funds, and £51,032 from Colonial Development Fund.

Harbours.

The total tonnages (imports and exports) handled at Kilindini Harbour during the years 1936 and 1937 are given below. The figures for 1936 do not include oil imports discharged through the Magadi Company's pipe-lines nor soda exported from the then Magadi Company's jetty from which no revenue accrued to the Port Administration. Coal imports are shown separately.

COAL IMPORTS.

1936.	*1937.*
91,641 tons.	148,401 tons.

IMPORTS AND EXPORTS, OTHER THAN COAL.

Year.	*Imports B/L tons.*	*Exports B/L tons.*	*Total B/L tons.*
1936	404,896	592,487	997,383
1937	491,941	608,659	1,100,600

The total trade of the Port of Mombasa including Kilindini Harbour and the Old Port for the year 1937, as compared with 1936, is summarized in the following statement:—

	1936.	*1937.*
Number of steamships	701	738
Net tonnage of steamers	2,192,588	2,253,183
Import —B/L tons	486,603	627,494
Exports	603,857	573,245
Passengers landed :—		
European	6,704	7,642
Non-European	15,247	19,197
Passengers embarked :—		
European	6,770	6,882
Non-European	12,831	13,347

Shipping.

The registered tonnage (inwards and outwards) at all Kenya seaports during the year, as compared with 1936, was as follows:—

	1936.	*1937.*
Vanga	7,383	10,701
Funzi	8,559	9,203
Mombasa	4,454,912	4,589,135
Kilifi	5,053	6,079
Malindi	22,710	19,315
Lamu	65,732	77,562
Kipini	3,925	3,591

Railways.

The carriage of public goods provided a revenue of £2,400,697 and the tonnage of the traffic amounted to 1,008,128 tons, as compared with £2,244,245 and 960,507 tons in 1936.

Passenger Traffic.—Revenue from passenger traffic showed an increase on 1936 figures. In 1937, 771,471 passenger journeys contributed a revenue of £191,413, while in 1936, 521,297 passenger journeys contributed a revenue of £170,227. The following table indicates the number of passenger journeys in the various classes, as compared with 1936:—

Passenger journeys.

Year.	*1st Class.*	*2nd Class.*	*3rd Class.*	*Season Tickets.*	*Total.*
1936 ...	8,144	30,139	475,794	7,220	521,297
1937 ...	8,764	37,688	716,809	8,210	771,471

The traffic on Lakes Victoria, Kioga and Albert, and on the River Nile, on which Administration services are maintained, is shown in the following table:—

	1936.	*1937.*
Earnings	£143,677	£157,243
Working expenditure	£65,513	£69,977
Tonnage carried	134,468	153,293

Fuel Consumption.—The following figures show the consumption of coal, wood and oil fuel on the railway during 1937 as compared with 1936:—

	1936.		*1937.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Coal	85,564	92,284	92,988	1[illegible],934
Oil	503	1,672	605	1,579
Wood	132,003	42,039	172,584	58,736

On the lake steamers the figures were:—

	1936.		*1937.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Oil	3,623	9,534	4,226	10,931
Wood	8,470	3,574	8,875	3,583

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1937 are shown in the following table:—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	2,715,524	513,241	3,228,765
Ordinary working expenditure	1,261,278	199,487	1,460,765
Surplus of receipts over ordinary working expenditure ...	1,454,246	313,754	1,768,000

Aviation.

Civil Aviation continued to progress during the year, Customs aerodromes exist at Kisumu, Nairobi, and Mombasa, and twelve landing grounds are established for regular use. In addition, nineteen emergency landing grounds are maintained at various points, some of which are fit for use by all types of aircraft. There are seven licensed landing grounds maintained by municipal or private enterprise for regular use by the flying public, and approximately ten unlicensed privately owned landing grounds also exist.

Kenya is served by a thrice-weekly air service between Great British and Kisumu, and a twice-weekly air-service between South African (Durban) and Kisumu, both operated by Imperial Airways (Africa) Limited, which calls at Kisumu and Nairobi. An air mail feeder service, linking Kakamega, Kitale, Eldoret, Nakuru, Nyeri, Mombasa, Tanga, Zanzibar and Dar-es-Salaam, with Nairobi and Kisumu and the Empire Service, is operated by a local company, Wilson Airways Limited. This company also operates a twice-weekly shuttle service between Kisumu and Nairobi and a Central African Service once weekly, connecting Kisumu with Nairobi, Moshi, Dodoma, Mbuga, Mpika, Broken Hill, and Kusaka, and a gold fields service connecting Kisumu with Nairobi, Logorien, Musoma, Mwanza and Geita. The company also undertakes an increasing amount of instructional and charter-flying. South African Airways also operates a weekly service between Germiston and Kisumu on the Central African Route.

The value of cargo landed and shipped in 1937 by aircraft at Customs aerodromes was £897,999, including bullion.

Of the thirty civil aircraft registered in the Colony, fourteen are owned by commercial companies. During the year eleven pilots " A " licences were issued, seven of the holders of which were trained " *ab initio* " under a subsidy scheme operated by the Aero Club of East Africa with some financial assistance from Government. Thirty pilots " A " licences were renewed during the year, fourteen of which were held by persons trained under the subsidy scheme.

On the 31st December, 1937, the following licences were current:—

Pilots "A" licences	42
Pilots " B " licences...	14
Ground engineers licences	9
Aerodrome licences	7
Certificates of registration	29
Certificates of airworthiness	23

AIR TRAFFIC.

The following are statistics of air traffic for the year 1937:—

XII.—PUBLIC WORKS.

The total expenditure incurred by the Public Works Department, on services administered by it, amounted to £359,734 of which £256,084 was on account of revenue services provided under Public Works Heads, £82,788 from various extra-departmental sources, and £30,862 from loan.

The revenue collected by the department, mostly arising out of water supplies, amounted to £64,835.

The total expenditure on capital works undertaken by the department amounted to £134,527 in direct charges, of which £43,381 was obtained from revenue, £70,284 from the Colonial Development Fund, a Parliamentary Grant, the Air Ministry and the Military Extraordinary votes, and £20,862 from loan (inclusive of overhead charges).

The revenue expenditure was distributed as follows:—

	£
Buildings	21,560
Water and drainage	4,646
Roads and bridges	2,713
Miscellaneous	14,462
	£43,381

The expenditure on Colonial Development Fund, Parliamentary Grant, Air Ministry and Military Extraordinary was:—

	£
Colonial Development Fund—	
Roads in Mining and Tea Areas, Water Supplies, etc.	51,032
Air Ministry—	
Buildings—Nairobi Aerodrome	9,102
Royal Air Force, Aerodrome, Eastleigh, Nairobi...	6,869
Military Extraordinary—	
Coast Defences, Mombasa	780
Parliamentary Grant—	
Tana Bridge	2,501
	£70,284

Many works were completed or in progress during the year, the most important of which were Boarding Blocks for the Girls Secondary and the Boys Primary Schools at Nairobi, Direction Finding and Wireless Stations at Kisumu and Mombasa for the Empire Air Mail Scheme, European and Asian Housing at Kisumu, Kitui Water Supply, a Suspension Bridge over the Tana River on the Embu-Kitui Road, the Kisumu-Kakamega Road, and the Lumbwa-Kericho Road.

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya; the Uganda, Nyasaland and Zanzibar Protectorates; Tanganyika Mandated Territory; and from His Britannic Majesty's Court of Ethiopia. The Judges of the Court of Appeal are the Judges and the Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland and Tanganyika and His Britannic Majesty's Court of Zanzibar. During the year the Court held four ordinary sessions and two special sessions. The total number of appeals filed was 195 of which 42 were from Kenya.

The Courts operating in the Colony are as follows:—

(1) The Supreme Court sitting at Nairobi, Mombasa and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged.

(2) The Courts of the Resident Magistrates at Nairobi (two), Mombasa, Nakuru, Kisumu and Eldoret, presided over by legally qualified officers or by officers seconded from the Administration.

(3) The Courts of the First, Second and Third Class, presided over by Provincial Commissioners, District Commissioners and District Officers.

(4) The Courts conducted by Liwalis, Cadis and Mudirs.

The Northern Frontier and Turkana Districts have been created special districts within the meaning of sections 14 and 15 of the Criminal Procedure Code and the Officers-in-Charge of these districts are the Officers specially authorized under the latter section. The District Commissioners in the Northern Frontier District have been given the powers of First Class Magistrates.

Courts.

The number of criminal cases committed for trial to the Supreme Court aggregated 180, involving 231 charges against 208 individuals. These figures compare with 164 cases and 227 charges during 1936.

Of the total of 209 charges actually tried during 1937, 203 were against males and six against females. There were 121 convictions, 29 acquittals and 59 discharges. The convictions were against two Europeans, seven Asiatics and 112 Natives and the punishments imposed were:—

Fined	1
Peremptory imprisonment	83
Whipping, with fine or imprisonment or both	6
Sentenced to death	25
Detained during Governor's pleasure	3
Detention Camp	1
Repatriated or committed to House of Detention	2
	121

The number of civil cases filed in the Supreme Court during the year was 288, a decrease of 26 on the number for 1936. Probate and Administration causes numbered 204 as compared with 183 opened in 1936, and 58 Bankruptcy petitions were filed, as compared with 45 for the previous year. In addition four Trust causes were opened and 29 Divorce causes were filed.

There were 172 civil and criminal appeals from Subordinate Courts, 341 criminal revision cases and 855 confirmation cases.

During the year, 55,264 charges were brought in Subordinate Courts, an increase of 658 on the figures for 1936. These charges were disposed of as follows:—

Convictions	50,552
Acquittals	1,882
Discharges	2,830
	55,264

This includes 839 charges brought against juvenile offenders, involving 772 convictions and 67 discharges.

Details of the sentences imposed are as follows:—

Fines	20,464
Detention camp in default of payment of fine or surety	9,804
Imprisonment in default of fine or surety	1,520
Fine and detention camp	176
Detention camp	3,299
Fine and peremptory imprisonment	631
Peremptory imprisonment	3,981
Whipping	303
Whipping, with fine or imprisonment or both	36
Whipping, with fine or detention camp, or both... ...	2
Bound over ; cautioned ; repatriated	8,041
Other punishments ; tax or compensation or wages paid; bail estreated	2,292
Detained pending Governor's orders	2
Committed to prison for failing to find security ...	1
Total convictions ...	50,552

Police.

The Kenya Police.—The Kenya Police, composed of Africans, with a small number of Asiatic personnel, under the direction of European superior and subordinate officers is distributed mainly throughout the settled and urban areas of the Colony.

Units of the Force, operating in municipal and district areas, are under the control of superior police officers or senior subordinate police officers, while, subsidiary to these units, there are police stations in settled and urban areas in charge of European or Asiatic subordinate officers.

African police are stationed in a few of the native reserves of Turkana, where they operate under the direct control of administrative officers, but the enforcement of law and order in most of the native reserves is the responsibility of the local Tribal Police, to whom reference is made below. In addition, detachments of the Kenya Police Force are stationed in the Northern Frontier District, while the temporary increase of one Assistant Superintendent and 57 African ranks, sanctioned in

1935 in view of the additional duties in that district arising from the Italo-Ethiopian situation, was maintained throughout the year. The Force was also increased during 1937 by two Assistant Inspectors and 150 African ranks for duties in connection with the Ethiopian Refugee Camp at Isiolo.

Police detachments in the gold mining areas of the Colony at Kakamega, Gori River, Logorien and Bondo remained unchanged and the police patrol, consisting of 18 African ranks established to preserve order on the borders of the Kisii-Lumbwa native reserves, continued to operate throughout the year.

Cognisable offences under the Penal Code reported to the police in settled and urban areas in 1937 totalled 5,283. Of that number, 5,106 were true cases, an increase of 648 true cases on the total of 1936. In 3,345 cases accused persons were prosecuted for offences before Subordinate Courts or the Supreme Courts. Convictions were recorded in 2,991 cases. The total stated value of property stolen was £17,860, of which £4,610 or 25·8 per cent. was recovered.

Tribal Police.—In the year 1927 the units of the Kenya Police Force stationed in native reserves were greatly reduced, in consequence of a decision by Government to inaugurate a system of village police, to be known as Tribal Police, and incorporate in that force the body of men previously known as Tribal Retainers. This class of subordinate native official was originally instituted to assist the Administration by the provision of messengers in the reserves, and through the supervision of communal services, and had proved its usefulness in the past.

By the Tribal Police Ordinance, 1929, powers were given to the Tribal Police enabling them to make arrests, guard prisoners, and generally act as a Police Force in the native reserves and support the official headmen in maintaining law and order in these areas.

The total strength of the Force in the native reserves now numbers 829 non-commissioned officers and men. In the more progressive reserves the force has achieved a high standard of discipline and efficiency, and from some reserves a small unit is lent to the Kenya Police to assist in the detection of crime in the settled areas.

Prisons Department.

The Penal establishments under the administration of the Commissioner of Prisons comprise the following three divisions:—

(1) 28 Prisons.
(2) 53 Detention camps.
(3) Three Approved schools for juveniles (one of these is non-penal.)

Details of committals to these establishments during 1937 are as follows:—

Prisons :	
On conviction	7,317
On remand...	5,262
Civil debtors	87
Lunatics	275
	12,941
Detention camps, Total	18,714
Approved schools, Total	56
Total committals	31,711

There was a decrease in the total number of committals as compared with 1936, as follows:—

Prisons ; a decrease of	55
Detention camps ; a decrease of	5,045
Approved schools ; an increase of	17

The nationalities of the 7,317 convicted persons committed to serve sentences of imprisonment were as follows:—

Europeans	7
Eurasians	1
Seychellois	3
Goans	6
Indians	59
Arabs	105
Baluchi	6
Somalis	71
Africans	7,059

The number of female and juvenile convicted prisoners increased in 1937 as compared with 1936 from 314 to 587, and 230 to 289, respectively.

Of these, 548 females were sentenced to short terms of imprisonment, not exceeding 3 months, 36 were sentenced to between 3 and 12 months' imprisonment and 3 to more than 12 months' imprisonment.

Of the juveniles, 259 were sentenced to punishments of caning only.

Under the system whereby all sentences of seven years and over are brought up for review at intervals of four years during the currency of the sentences, the case of 38 prisoners were submitted to His Excellency the Governor for consideration and ten of these prisoners were granted accelerated release, conditional upon continued exemplary behaviour.

Health.—The general health of the prisoners was good, the percentage of prisoners on the sick list being 3·9, the lowest figure since 1933. The number of deaths, however, rose to 83, an epidemic of influenza in the early months of the year in

Nairobi Prison caused a marked rise in the number of deaths there. Of the 83 deaths which occurred, 46 prisoners died from pneumonia.

Administration.

Prisons.—A reorganization of the III Class Prisons, numbering twenty, of the Colony was undertaken. By this reorganization all the III Class Prisons, except those at Meru, Eldoret and Lamu, became District Prisons with staffs recruited from the local tribe by the District Commissioner, who is also Superintendent of the Prison. A number of regular prison warders elected to resign and join the staff of the prison situated at the headquarters of their home district.

By this reorganization a saving of £1,600 per annum is being effected in African staff salaries and transport.

The Ngong River Prison Camp established in connection with the quarry and concrete works of the Kenya and Uganda Railways and Harbours Administration was maintained at a daily average population of 350 throughout the year. The work undertaken at this camp provides hard labour for those convicts who are passed as medically fit to undergo it.

The production of prison industries again showed a large increase and the revenue derived from industries alone amounted to £12,805 as compared with £10,790 in 1936 and £9,593 in 1935.

Discharged Prisoners Aid Committees, similar to the committee established in Nairobi in 1936, were introduced at Mombasa and Kisumu in July, 1937. The total number of prisoners interviewed by these three committees prior to discharge, during the year amounted to 518. The Salvation Army has a European representative upon each committee, and its officers were very active in their endeavours to aid prisoners on discharge.

Detention Camps.—The scheme which was introduced in 1936 for seconding prisons non-commissioned officers and warders to detention camps in order to improve the discipline in these camps, to increase the deterrent effect of detention, and to make detainee labour more efficient and productive by better supervision, was extended to further camps during the year.

There is no doubt that considerable improvements have been effected in the camps to which it has been possible to post trained prison staff in this way, and it is hoped in the future to extend the number of camps affected by this scheme.

Approved Schools.—A Class II Approved School (for juvenile offenders up to the age of 16) was established at Dagoretti in September, when 31 inmates of the combined Classes II and III Approved School at Kabete were transferred to the new school.

The number of committals to these schools increased during the year and the daily average population throughout the year increased by 31 as compared with 1936.

The average age of the boys committed during the year was 13·33 years, which is lower than that of the previous years.

A Class I Approved School for juvenile vagrants, or those suffering from ill-treatment or neglect or found in circumstances likely to lead them into a criminal life, was established in January in conjunction with the Salvation Army.

XIV.—LEGISLATION.

Forty-two Ordinances were passed during the year 1937. A summary of the more important enactments is given below.

No. I.—The Distress for Rent Ordinance, 1937, prescribes the law relating to distress in the Colony. The Ordinance is modelled on the law in England and embodies provisions contained in Acts of Parliament from 1689 to 1923.

No. II.—The Native Authority Ordinance, 1937, makes provision in regard to the powers and duties of native official headmen and local native councils and provides for matters incidental thereto. The Ordinance re-enacts most of the provisions of the Native Authority Ordinance (Chapter 129 of the Revised Edition). The principal alteration made is the establishment of a fund into which surplus balances of local native councils may be paid for the purpose of investment by trustees.

No. IV.—The Kenya Regiment (Territorial Force) Ordinance, 1937, provides for the establishment of a regiment to be known as the Kenya Regiment (Territorial Force), the main function of which is to train officers, non-commissioned officers and instructors to take their places as such in the event of external aggression.

No. V.—The Kenya Defence Force Ordinance, 1937, makes provision for the establishment of a force to be known as the Kenya Defence Force, the principal function of which is to provide military training for all European citizens with a view to defending the Colony in the event of internal disturbance.

No. VI.—The Stamp (Amendment) Ordinance, 1937, (*a*) makes an alteration to the Kenya law by following closely the provisions of section 42 of the Finance Act, 1933 (of England); and (*b*) provides for the exemption from stamp duty of instruments used in connection with the Savings Bank.

No. VII.—The State Railway Provident Fund (Amendment) Ordinance, 1937, opens the Kenya and Uganda Railways and Harbours Provident Fund to the pensionable staff of the High Commissioner for Transport.

No. XI.—The Passion Fruit Ordinance, 1937, regulates and controls the passion fruit industry and provides facilities for the preparation for export and the marketing of the products of passion fruit. Provision is made for the appointment of an agency which shall have the sole right to purchase, prepare and export all passion fruit and its products grown in the Colony.

No. XII.—The Income Tax Ordinance, 1937, imposes a tax on incomes and regulates the collection thereof.

No. XIII.—The Trustee (Amendment) Ordinance, 1937, provides that powers of attorney given by trustees and executed in the Colony shall be registered within thirty days after execution and that powers executed out of the Colony shall be registered within thirty days of first arrival in the Colony.

No. XIV.—The Public Trustee's (Amendment) Ordinance, 1937, provides (*a*) for the grant to the Public Trustee of probate or letters of administration instead of an order to administer; (*b*) for the administration of estates of persons dying outside but leaving assets within the Colony; (*c*) for the Public Trustee to deal with individual property owned by natives who die in native reserves; (*d*) that the Public Trustee may be appointed a sole trustee in cases where by law two trustees are required; and (*e*) that the Public Trustee may act as custodian trustee of any trust.

No. XVI.—The Evidence (Banker's Books) Ordinance, 1937, amends the law of evidence with respect to Bankers' Books on the lines of the English Bankers' Books Evidence Act, 1879.

No. XIX.—The Stamp (Amendment No. 2) Ordinance, 1937, (*a*) provides that, in order to assist inter-territorial trade, every bill of exchange, cheque or promissory note drawn or made in Uganda or Tanganyika and accepted and paid or presented for acceptance or payment, or endorsed, transferred or otherwise negotiated in Kenya, and which has previously been duly stamped in Uganda or Tankanyika shall be deemed to be duly stamped in Kenya; and (*b*) gives discretion to the Revenue Authority to charge a discount of five per centum when making refunds for spoiled or misused stamps, subject to a maximum discount of sh.10 in respect of any one instrument.

No. XXII.—The Tea Cess Ordinance, 1937, imposes a cess on tea manufactured in the Colony. The proceeds of such cess will be used to promote the welfare of the tea industry.

No. XXIV.—The Plant Protection Ordinance, 1937, makes better provision for the prevention of the introduction and spread of disease destructive to plants.

No. XXV.—The Mombasa Shop Assistants' Employment Ordinance, 1937, regulates the hours of employment of shop assistants in Mombasa. Special legislation is necessary as the Shop Hours Ordinance, 1925, which has been applied to various centres in the Colony, is unsuitable for application to Mombasa.

No. XXVIII.—The Trade Unions Ordinance, 1937, provides for the registration of trade unions in the Colony.

No. XXX.—The Resident Labourers Ordinance, 1937, makes better provision for regulating the employment of resident labourers on farms.

No. XXXI.—The Shop Hours (Amendment) Ordinance, makes certain amendments to the Principal Ordinance which experience has shown to be desirable. The more important of these amendments is that made by clause 2 which provides, *inter alia,* that, subject to certain exceptions, a shop assistant shall not be required to work for more than nine hours, inclusive of meals, on any one day or for more than fifty hours in any one week or on any weekly half holiday, Sunday or public holiday.

No. XXXV.—The Coffee Industry (Amendment) Ordinance, 1937, (*a*) gives effect to the decision to withdraw trade representation from the Coffee Board; (*b*) provides for the transfer of a coffee plantation licence where a plantation is transferred during the validity of the licence; and (*c*) provides for the registration of all coffee millers.

No. XXXVII.—The King's African Rifles Reserve of Officers (Amendment) Ordinance, 1937, provides that all officers of the Reserve of Officers, irrespective of their experience, shall, when called out for active service, receive the King's African Rifles rates of pay for officers of their rank in the King's African Rifles.

No. XXXVIII.—The Game Ordinance, 1937, consolidates and amends the law relating to Game. Game Birds have been included in the Ordinance instead of being governed by a separate Ordinance as was the case before the enactment of the Ordinance.

No. XXXIX.—The Medical Practitioners and Dentists (Amendment) Ordinance, 1937, (*a*) defines " dentistry " for the purposes of the Principal Ordinance; and (*b*) provides for certain exemptions in respect of practising dentistry.

No. XL.—The Transport Licensing Ordinance, 1937, provides for the co-ordination and control of transport, other than air transport, in the Colony.

No. XLII.—The Mineral Oil Ordinance, 1937, declares specifically that all deposits of mineral oil, save where such mineral oil is expressly dedicated by the Crown in any conveyance, grant, lease or licence or in any certificate issued under the Land Titles Ordinance, has always been, and remains, vested in the Crown.

XV.— BANKING, CURRENCY AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony: —

The National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru and Kisumu;

The Standard Bank of South Africa, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, Eldoret, Kitale, Nyeri, Kakamega and an agency at Nanyuki;

Barclay's Bank (Dominion, Colonial and Overseas) with branches at Nairobi, Mombasa, Nakuru, Eldoret, Kitale and Kakamega.

During the past two years a considerable amount of propaganda work amongst Africans has been undertaken by the Colony's Savings Bank with very satisfactory results. At the close of 1937 there were 10,623 African depositors compared with 7,886 in 1936. The total number of all classes of depositors and the amount to their credit at the close of the year amounted to 24,158 and £509,917 respectively.

In 1931 a Land and Agricultural Bank was inaugurated in terms of the Land Bank Ordinance, 1930, with a capital of £240,000. This capital was increased to £500,000 in 1933 and in 1936 a further £250,000 was provided, of which latter a sum of £100,000 was earmarked for administration under the Farmers' Assistance Ordinance, 1936, the Land Bank acting as agents for the Government in carrying out the decisions of the Farmers' Conciliation Board appointed under that Ordinance. The Land Bank makes advances to farmers for specified purposes repayable over periods up to thirty years, on first mortgage security, charging interest at the rate of 6½ per cent. per annum. Up to 31st December, 1937, the Bank had made 607 long term advances, aggregating £754,450. Under the amending Ordinance of 1934, provision was made for short-term loans and up to 31st December, 1937, 100 such advances, aggregating £23,023, had been issued.

Currency.

The standard coin is the East African shilling (silver), with subsidiary coinage of the following denominations.—50 cents (silver) and 10 cents, 5 cents and 1 cent (bronze). A note issue is maintained and notes of the following denominations are in circulation:—Shs. 10,000, 1,000, 200, 100, 20, 10 and 5.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

Weights and Measures legislation has application to the whole Colony and Protectorate, but in practice the staff now available only permits of supervision in the larger business centres. Any extension of such activities would necessitate an appreciable increase in the cost of the services.

The pound, yard and gallon, identical with those used in the United Kingdom, are the standard weights and measures of the Colony, while the prescribed degrees of accuracy are similar to those required in Great Britain.

Weights, measures and instruments numbering 22,427 were stamped, rejected or adjusted during the year. In addition approximately 6,000 weights, measures and instruments were examined during visits of inspection. Revenue collected for stamping and adjusting amounted to £510. Prosecutions for infringements of the Weights and Measures Ordinance were instituted in a number of cases.

All Administrative and Agricultural officers are deputy inspectors under the Weights and Measures Ordinance in order to permit verification and stamping under their supervision of half-bushel measures of volume which have been introduced in native reserves.

XVI.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

Statement of Revenue and Expenditure for five years ended 31st December, 1937.

Year.	*Revenue.* £	*Expenditure.* £
1933	3,121,497	3,168,035
1934	3,182,939	3,180,795
1935	3,304,026	3,252,784
1936	3,496,389	3,350,381
1937	3,667,393	3,565,976

The above are gross figures. The net figures are obtained by deducting reimbursements from neighbouring territories in respect of joint services from Kenya and Uganda Railways and Harbours in respect of loan interest and from other sources on account of services which are not a charge against the local revenues of the Colony. In consequence the annual accounts for 1937 show an actual net local revenue of £2,492,643, and a net local expenditure of £2,391,226.

STATEMENT OF LOAN POSITION OF COLONY AT 31ST DECEMBER, 1937. PUBLIC DEBT AND SINKING FUND.

Public Debt.

Floated.		*Amount of issue.* £	*Rate of Interest. Per cent.*	*Price of Issue. per cent.*	*Redeemable.*	*Expenditure at 31st December.* £

Section 3 of the Northern Frontier Poll Tax Ordinance, 1930, empowers the Governor to order that the poll tax prescribed under section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier District. The Governor has power to reduce the amount of the tax payable by the natives of any specified area, and in certain districts temporary reductions have been made.

Method of Assessment.—A tax at the prescribed rate is payable on each hut (dwelling house) owned or occupied by the taxpayer.

The age of liability for payment of poll tax was raised from 16 to 18 years by the Native Hut and Poll Tax (Amendment) Ordinance, 1936, and the Northern Frontier Province Poll Tax (Amendment) Ordinance, 1936. A poll tax at the prescribed rate is now payable by all able-bodied male natives of the apparent age of 18 years who are not liable to pay the hut tax.

Hut and Poll Tax is collected mainly by District Officers, assisted in the more advanced areas by Headmen. The taxpayer is given a receipt in the form of a hut and poll tax ticket for each tax paid; at the same time the payment is noted in the register of taxpayers. During 1936 a system was introduced, designed to assist individuals to accumulate their tax by means of stamps known as *Kodi* stamps. Revenue stamps, similar in size and shape to postage stamps, have been printed. They bear a special design and are of the denomination of sh.1. These stamps are for sale at all post offices, administrative offices and certain other centres, and are purchasable in bulk by large employers of labour. At the time of the tax census, natives liable to pay are issued with a tax stamp collection card which is endorsed with the native's name and certain particulars. The design of the card provides separate spaces for affixing twelve stamps, representing a sum equivalent to one hut or poll tax. At any time at which a contributor has completed his total of twelve stamps, or when he is prepared to hand in a sum of money representing the cash difference between the number of stamps already affixed and the amount due on the card, he is entitled to a tax receipt in respect of one hut or poll. Provision was made in the Native Hut and Poll Tax (Amendment) Ordinance, 1937, for the payment of tax by means of these *Kodi* stamps and for the payment of wages partly in *Kodi* stamps if both employer and employee agree to this course.

Yield.—The yield of native hut and poll tax in 1937 amounted to £532,895.

I.—GEOGRAPHY, CLIMATE AND HISTORY.

Geography.

The Colony and Protectorate of Kenya is traversed centrally from east to west by the Equator and from north to south by meridian line 37½° East of Greenwich. It extends from 4° North to 4° South of the Equator and from 34° East longitude to 41° East. The land area is 219,730 square miles and the water area includes the larger portion of Lake Rudolf and the eastern waters of Victoria Nyanza including the Kavirondo Gulf. The official time used is a standard time of 2¾ hours fast on Greenwich. The same standard time has been adopted in Uganda, Tanganyika Territory and Zanzibar. Physiographically Kenya consists of: (1) a region poorly watered comprising some three-fifths of the total area of the Colony;

(2) a plateau raised by volcanic action to a height varying from 3,000 to 9,000 feet; (3) the Great Rift Valley containing Lakes Rudolf, Nakuru, Naivasha and others; (4) a portion of the basin of the Victoria Nyanza which is 3,726 feet above sea-level. The Nzoia, Yala, Kuja and Amala Rivers flow into Lake Victoria, the Turkwell and Kerio into, or towards, Lake Rudolf, while from the southern and eastern slopes of Kenya and from the Aberdares there flow numerous tributaries of the Tana River, which enters the Indian Ocean near Lamu.

Mount Kenya, from which the Colony takes its name, is 17,040 feet in height and is capped by perpetual snow and ice.

Climate.

The range of temperature in various parts of Kenya is very wide, varying from a mean shade temperature of 80° F. on parts of the coast to 55° F-65° F. in the highland areas.

A recent analysis of the rainfall statistics shows that the territory can be divided into three distinct zones in which the seasonal distribution of rainfall differs in a marked degree. The first is the Lake region. This region may be considered to extend about 100 miles from the Lake shore. Rain falls heavily in every month of the year with two comparatively dry periods in January and June. The second is the Plateau region comprising the Laikipia Plateau, Kitale, Eldoret and Equator. Here the rains extend from March to late September with a slight decrease in June.

The third zone is the East of Rift, Northern Frontier and Coastal region. It is only in this region that the so-called " long " and " short " rains are clearly defined with marked dry periods intervening. The long rains extend from March to May and the short rains October to November.

The annual average rainfall varies from 10″ in the Northern Frontier Province to 75″ in the Lake area. The annual average rainfall in the main agricultural and pastoral areas ranges from 20″ to 70″.

History.

It seems probable that the Arabs and Persians traded along the East African coast from the earliest times. In 1498 Vasco da Gama rounded the Cape of Good Hope and sailed up the coast to Mombasa, which was then a flourishing trading city. Between that date and 1729, when they were finally expelled, the Portuguese were in intermittent occupation of Mombasa. British intervention on the east coast began in December, 1823, when H.M.S. *Barracouta* arrived at Mombasa during the course of a survey expedition. At the request of the inhabitants the island was provisionally placed under British protection. The Protectorate was not confirmed by the British Government and it appears to have lapsed after a period of two years. There is no record of its formal termination. In 1829 Seyyid Said attacked Mombasa, and placed there a garrison of 300 Baluchis who were starved into submission by the Mazuri who were, in turn, subdued by Seyyid Said in 1837. A period of great prosperity along the coast ensued. On the death of Seyyid Said in 1856, Seyyid Majid succeeded to Zanzibar and the mainland dominions. He died in 1870, and was succeeded by his brother Seyyid Bargash, during whose reign British influence grew steadily under Sir John Kirk, and the partition of Africa among the European powers took place.

In 1848 Rebman first saw Kilimanjaro, and the following year Krapf first saw the snows of Kenya. Further exploration was directed to the discovery of the sources of the Nile. Speke first saw Victoria Nyanza in 1858, and discovered its outlet at the Ripon Falls in 1863. Later in the same year Samuel Baker discovered the Albert Nyanza, and in 1888 Count Teleki von Szek discovered Lake Rudolf. In 1887 Seyyid Bargash, the Sultan of Zanzibar, granted a concession of the mainland between the Umba and Tana Rivers to the British East African Association which was incorporated under Royal Charter as the Imperial British East Africa Company in the following year. The early activities of the British East Africa Company were concentrated mainly on the coast. In 1889 a considerable caravan was despatched to explore the interior under F. J. Jackson, who established a station at Machakos, and proceeded by way of Kikuyu, Naivasha and Sotik to Mumias. Captain F. D. Lugard later formed a chain of posts connecting Mombasa with Machakos. In 1892 the survey of the Uganda Railway was begun, and three years later the first rails were laid. In 1895 a British Protectorate was declared over the Company's territory between the coast and Naivasha, the country west of Naivasha having been included in the Uganda Protectorate. In 1902 the boundaries of the Protectorate were altered to include what was previously the Eastern Province of Uganda and the conditions under which land could be alienated to colonists were laid down. By 1903 there were nearly 100 European settlers in or near Nairobi.

In 1905 the Protectorate was transferred from the authority of the Foreign Office to that of the Colonial Office. A Governor and Commander-in-Chief, and Executive and Legislative Councils, were appointed under an Order in Council in 1906.

All foreign consular jurisdiction was transfered to the British Court during 1908. During the years preceding the Great War the Protectorate developed steadily and grants-in-aid from the Imperial Exchequer were discontinued in 1913. Considerable numbers of European and native troops were engaged on active service during the Great War.

Nominated unofficial members first sat in Legislative Council in 1907, and in 1919 the principle of elective representation was introduced. In 1923 this principle was extended on the basis of a communal franchise to the Indian and Arab communities. Unofficial members first sat on Executive Council in 1920. By the Kenya Annexation Order in Council, 1920, the territories outside the mainland dominions of the Sultan of Zanzibar were recognized as a Colony; the coastal belt remains a Protectorate. On the 15th July, 1924, the Province of Jubaland was ceded to Italy.

The Uganda Railway was, in 1921, constituted as a separate financial entity under the control of the Central Railway Council, and in 1925, when under the Kenya and Uganda (Transport) Order in Council the name of the Railway was changed to the Kenya and Uganda Railway, the office of the High Commissioners for Transport was established. This office, by an Order in Council made on 13th August, 1935, is now vested in the Governors of Kenya and Uganda jointly, and in that capacity they are advised by a Railway Council consisting of official and unofficial representatives of Kenya and Uganda.

II.—GOVERNMENT.

His Excellency Sir Henry Robert Moore Brooke-Popham, G.C.V.O., K.C.B., C.M.G., D.S.O., A.F.C., administered the Government throughout the year.

The supreme executive power in the Colony is vested in the Governor who is advised by an Executive Council, or four *ex-officio* members, and such other official and unofficial members as may be appointed. During 1938 four unofficial members so held office; of these three were Europeans, of whom one more particularly represented native interests, and the fourth was an Indian.

The Legislative Council consists of the Governor as President, eleven *ex-officio* members not more than nine nominated official members, eleven European elected members, not more than five Indian elected members, one Arab elected member, a nominated unofficial member to represent the interests of the Arab community, and two nominated unofficial members to represent the interests of the African community. The Governor has the right to veto any measure passed by the Legislative Council.

The Chief Secretary is the Chief Executive officer of Government, and through him the Governor's orders are transmitted to the Heads of Departments and Provincial Commissioners, who are responsible for their execution. The Colony is divided into four Provinces, each in charge of a Provincial Commissioner, and three extra-Provincial Districts. Within the Districts which comprise the various Provinces the executive functions of Government are vested in District Commissioners.

Local Government.

Settled Areas.—The present system of local government in the settled areas dates from the year 1928. Previously all urban areas, with the exception of Nairobi, had been administered as townships, the District Officers being advised by Township Committees in the more important townships. In the rural settled areas they had the advice of District Committees and a measure of local control over roads of access was exercised by Local Road Boards. Legislation was enacted in 1928 giving effect generally to the recommendations of the Local Government Commission appointed in 1926 under the chairmanship of the Hon. Mr. Justice Feetham, C.M.G., and the municipality of Nairobi was reconstituted with a Municipal Council in November, 1928. Shortly afterwards municipalities were set up at Mombasa, Nakuru and Eldoret, with Municipal Boards, while District Councils were established in the settled portions of the Districts of Nairobi (including Kiambu and Thika), Naivasha, Nakuru, Kisumu-Londiani, Uasin Gishu and Trans-Nzoia. At the same time a Commissioner for Local Government was appointed to deal with local government administration. This office was combined with that of Commissioner of Lands, under the title of Commissioner for Local Government, Lands and Settlement.

As the result of legislation introduced in 1933 Municipal Boards now elect their own chairman, with the exception of Mombasa where the District Commissioner is still statutorily Chairman of the Board.

The total gross revenue of the four municipalities amounted in 1938 to £212,077, of which £139,594 accrued to the Nairobi Municipality. Of this total revenue the Government contributed in grants approximately 30 per cent., the balance being raised from assessment rates, licence fees and charges for services rendered. Municipal Authorities may levy assessment rates on capital values up to a maximum of 2 per cent. on site values. In 1938 a rate of 1¼ per cent. on unimproved site values was levied in Nairobi and yielded £25,595 from rate payers; in Mombasa a rate of 1 per cent. on unimproved site values and 7/20ths of 1 per cent. on improvements yielded £14,975; and in Eldoret a rate of ⅝ of 1 per cent. on unimproved site values yielded £395. Nakuru has not yet imposed a rate, and continues to rely on municipal fees and charges supplemented by a consolidated grant from Government which amounted in 1938 to £2,300.

Nairobi, Nakuru and Eldoret control their own water-supplies. In Nairobi and Mombasa the public health staff is municipal, and town planning schemes are in progress under the Town Planning and Development Ordinance, 1931. The execution of the Mombasa town planning scheme was continued under a sanctioned loan of £250,000, of which £189,000 has so far been raised. The Municipal Board took over the liability for this loan from Government in 1931.

In the rural areas the executive functions of the six District Councils are mainly confined to roads, the funds for which are derived solely from Government grants. In 1938 the basic road grants amounted to £43,162, to the judicious use of which the good condition of the majority of district roads bears eloquent witness. Various causes have contributed to the postponement by Councils of the imposition of local rates, and, in so far as Councils remain financially dependent on Government grants and deal only with roads, they represent only a modified and incomplete form of local government. The Trans-Nzoia and Uasin Gishu District Councils do, however, levy a small hospital rate in the nature of a poll tax on adult male Europeans resident in the district for the purpose of maintaining the Kitale Hospital, which the Trans-Nzoia District Council acquired in 1932, and the Eldoret Hospital, which is maintained jointly by the Uasin Gishu District Council and the Eldoret Municipal Board.

In other rural settled areas and townships, District Committees, Road Boards and Township Committees continued to do useful work.

Native areas.—The Local Native Councils in Kenya are a deliberate creation and provision is made for their establishment in the Native Authority Ordinance, 1937, which consolidates earlier legislation on the subject. Their powers and functions are defined in that Ordinance and embrace the welfare and good government of the native inhabitants of the areas where they have been established in respect of matters affecting purely local native administration, and particularly the provision, maintenance and regulation of food and water supplies, forests, roads, bridges, culverts, public health, the use of land, education, the establishment and regulation of markets, agriculture and livestock, the regulation of drying and cleaning of hides and skins, the registration of births, deaths and marriages, measures for dealing with soil erosion, the regulation of payment of marriage dowries, minor communal services, etc.

The District Commissioners are the Presidents of the Councils and membership is determined partly by election and partly by nomination, the proportion of members chosen by each of the two methods varying from Council to Council. The funds, which are controlled by the Councils are derived from two main sources:—

(*a*) the proceeds of local native rates which they are empowered, subject to sanction by the Governor-in-Council, to impose on the inhabitants of the areas over which they have control; and

(*b*) the proceeds of the rents of land, forest royalties, market dues, etc., levied within those areas.

Twenty-two Councils have been established.

The provision of educational, agricultural and medical facilities and of communications occupied the foremost place amongst the various services rendered by Local Native Councils during 1938.

III.—POPULATION.

Census enumerations of the non-native population of Kenya were made in 1911, 1921, 1926 and 1931. The numbers of Europeans and Asiatics returned at these census enumerations are shown in the following table:—

	1911.	1921.	1926.	1931.
European, males	2,022	5,800	7,199	9,404
,, females ...	1,153	3,851	5,330	7,408
Asiatics, males	—	24,342	26,299	36,747
,, females ...	—	11,640	14,841	20,388
Total, males	—	30,142	33,498	46,151
,, females	—	15,491	20,171	27,796

The percentage of increase in each section of the population during the last two decades is:—

	Europeans.	*Asiatics.*
1911-1921	204	203
1921-1931	74	59

The proportions in which the various races entered into the total of the non-native population of Kenya at each census year will be seen from the following summary:—

	1911.		*1921.*		*1926.*		*1931.*	
	Number.	*Per cent.*	*Number.*	*Per cent.*	*Number*	*Per cent.*	*Number.*	*Per cent.*
European	3,175	13·1	9,651	21·1	12,529	23·3	16,812	22·7
Indian ...	10,651	44·1	22,822	50·0	26,759	49·9	39,644	53·6
Goan ...	1,136	4·7	2,431	5·3	2,565	4·8	3,979	5·4
Arab ...	9,100	37·7	10,102	22·1	10,557	19·7	12,166	16·5
Others ...	99	0·4	627	1·5	1,259	2·3	1,346	1·8
Totals ...	24,161	100·0	45,633	100·0	53,669	100·0	73,947	100·0

The ratio of females to males at each census for the two main racial sections of the community is:—

	Europeans. (*females to* 100 *males*).	*Asiatics.* (*females to* 100 *males*).
1911	57	—
1921	66	48
1926	74	56
1931	79	55

The age distribution in ten-yearly groups will be seen from the two following tables:—

Europeans.

Age.	1921.	1926.	1931.
0-9	1,604	2,253	2,872
10-19	850	1,303	1,583
20-29	2,160	2,439	3,403
30-39	2,694	3,220	4,010
40-49	1,535	2,024	2,640
50-59	583	868	1,293
60 and over	225	422	1,011

Asiatics.

Age.	1921.	1926.	1931.
0-9	7,865	9,895	14,505
10-19	5,501	7,037	9,835
20-29	9,731	9,478	13,273
30-39	6,886	7,469	9,497
40-49	3,360	3,784	5,073
50-59	1,498	1,767	2,024
60 and over	1,141	1,710	2,928

The occupations classified under seven main heads are as follows:—

Europeans.

	1921.	1926.	1931.
Agriculture	1,893	2,199	2,522
Industry	559	607	991
Commerce	937	1,290	2,168
Government and municipal	1,082	1,294	1,735
Professional	441	706	1,124
Personal or domestic	182	310	343
Retired, married women and children	1,350	1,830	2,215

Asiatics.

	1921.	1926.	1931.
Agriculture	498	755	640
Industry	3,679	4,924	6,446
Commerce	6,086	7,769	14,338
Government and municipal	3,390	3,181	2,972
Professional	50	181	264
Personal or domestic	1,141	961	1,452
Retired, married women and children	9,351	8,720	11,383

The percentage of the whole population in each class employed in each of these divisions, as recorded at the two census enumerations of 1926 and 1931, is as follows:—

	European.		*Asiatic.*	
	1926.	1931.	1926.	1931
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Agricultural	18	15	2	1
Industrial	5	6	12	11
Commercial	10	13	19	25
Government and municipal ...	10	10	8	5
Professional	6	7	1	1
Personal	2	2	2	3
Retired	49	4	56	54
Married women and children ...		43		

The following table shows the approximate number of each race in 1938. The census population in 1931 is included in the first column for purposes of comparison.

	Census population. 6th March, 1931.	*Estimated population. 31st December, 1938.*
Europeans	16,812	20,894
Indians	39,644	44,635
Goans	3,979	3,734
Arabs	12,166	14,077
Others	1,346	1,774
Total	73,947	85,114

Note.—No reliable returns of births and deaths are available. The estimates in the above table are based on an assumed natural increase of 6 per cent. per annum for Europeans and 10 per cent. per annum for Asiatics, and on the annual excess of migration via Mombasa.

Native Population.

No accurate census of the native population has yet been made. The population figures are based on estimates made by the administrative authorities, and are related to the number of male adult taxpayers in the various districts. They are, in consequence, subject to a comparatively wide margin of error. The estimated native population in 1938 was 3,280,774, as compared with an estimate in 1928 of 2,838,022, which represents an increase over that period of approximately 14·5 per cent. No reliable figures of births, deaths, and infantile mortality are obtainable.

The geographical distribution of the estimated native population is as follows:—

Province.	1938.
Central Province	1,348,149
Nyanza Province	1,202,059
Rift Valley Province	261,911
Coast Province	273,686
Masai District	39,623
Northern Frontier District	77,445
Turkana District	77,901
Total	3,280,774

IV.—HEALTH.

General Administration and Organization.

In Kenya, as elsewhere, the ultimate responsibility for the safeguarding and promotion of the Public Health rests with the Central Government. In every area of the Colony, however, a " Local Authority " exists, which to a greater or less extent has, under the general supervision of the State, responsibility in health matters. In Nairobi and Mombasa the greater part of the Health Staff is now employed by the Local Authority. In the other towns, in the European settled areas and in the Native Reserves the Authority is vested in the District Commissioner and the Health Staff is employed by Government. Where in the smaller towns there is a Municipal Board, the Board is in effect, though not in law, the Local Health Authority, as its opinion is always sought by the Executive Authority. In the Native Reserves every endeavour is made to interest the Local Native Councils in health matters, and these endeavours continue to meet with considerable success. In concurrence with Government policy the Director of Medical Services is responsible for providing and distributing both medical relief and health staff to a degree commensurate with the extent of the sanctioned Estimates, and he acts in close conjunction with both the Commissioner for Local Government and the Chief Native Commissioner.

Sanitary Work and Administration.

In Nairobi, Mombasa, Nakuru and Eldoret, the sanitary work and administration is almost entirely a function of the local representative authorities, and on the whole has been effectively carried out.

Considerable progress was made with anti-malarial works at Kisumu, where control measures against Aedes aegypti have reduced its incidence to a low level.

Anti-malarial works, assisted by a grant from the Colonial Development Fund, were commenced at Mombasa.

A new and adequate water supply, delivered through an up-to-date filtration apparatus, was provided for Nairobi; and work on the new sewage disposal works is well advanced.

As far as the reports of district Medical Officers show, the general health of the population of the Colony and Protectorate remains good.

No major epidemic outbreak occurred. 35,551 cases of malaria were reported as compared with 43,624 cases in 1937. Twenty-seven cases of plague were notified, the bulk of the cases occurring in the Keruguya and Fort Hall areas of the Central Province. No case of smallpox was reported.

Medical Relief.

In three towns medical relief for Europeans is still provided in Government hospitals, but non-Government hospitals and private nursing homes are now established in a number of the larger centres and are being increasingly used by the European population.

In the Native Reserves, although some measure of medical relief is provided by or through the agency of Missionary Societies, medical services are for the most part provided directly by the State. The greater part of the provision made under the Medical Estimates is expended on this service.

The increasing demand for medical relief is an indication of the Native's appreciation of, and growing confidence in, European medicine.

There was a very marked increase in the number of maternity cases treated, and in spite of increased provision, existing facilities were insufficient to meet the demand.

With financial assistance from the Local Native Council, it was possible to increase the medical facilities for the Masai, particularly in regard to the treatment of venereal disease. It is hoped to expand the work among this particular tribe during the coming year.

Special Clinics.

Special clinics for maternity and child welfare work, and for the treatment of venereal disease, have been established at a number of centres.

Health of Employed Labourers.

Labour conditions on estates show little change, since, owing to the trade depression, many employers of labour have had no funds at their disposal for major improvements. No serious outbreak of disease occurred and apart from sporadic cases of cerebro-spinal meningitis the health of labourers was satisfactory on the whole.

Vital Statistics and the Public Health.

The position with regard to the registration of births and deaths remains unchanged. It has not been possible to provide for the registration and notification of births and deaths among Africans and, therefore, no mortality rates can be determined for that race.

Comparative death-rates per thousand of the population during the years 1937 and 1938 for Nairobi, so far as it has been possible to estimate them, are as follows:—

	1937.	1938.
	Per thousand.	
Crude death-rate, all races	23·01	19·96
Recorded death-rate, all races	16·96	13·9
Recorded death-rate, Europeans	6·99	5·8
Recorded death-rate Asiatics	16·47	13·9
Recorded death-rate, Africans	18·75	15·3

No reliable figures are available for Mombasa or other towns, or in respect of the African population in the Native Reserves as a whole.

Propaganda.

In addition to a " Health Exhibit " which was staged at the Nakuru Agricultural Show, many exhibits of a less extensive nature were shown at various centres in the Native Reserves. Large numbers of pamphlets dealing with different aspects of health matters were distributed throughout the year, and the " Book of Health " was in steady demand from many sources.

V.—HOUSING.

Non-Native.

The new buildings erected during the year show a marked advance in general design and construction and the great majority of those in Townships are being erected in permanent materials. The use of wood and iron is fast disappearing.

The activities of Government were for the most part restricted to the replacement of quarters that have been condemned either from the structural point of view or on account of health measures.

A considerable number of new houses were erected throughout the Colony by settlers for their own use and by business concerns for the accommodation of staff.

Native Housing.

In Nairobi the Municipal Council completed the erection of 175 houses, with shops and ancillary buildings, in stone; designed to accommodate persons removed owing to the demolition of a temporary village.

Further extensions are the subject of close consideration; while the Railway administration has also greatly increased accommodation for Native employees, and provided an excellent type of permanent building.

In the Native Reserves great progress is being made in the campaign to improve housing and living conditions generally.

The very marked improvement in housing which is now noticeable has been accompanied by improvement in other important directions. For example, in addition to the provision of an increasing number of permanent dwellings, or sound and hygienic dwellings of a semi-permanent nature, there is a substantial advance in the provision of hygienic food stores, protected water supplies and clean villages.

Housing improvement, therefore, may be regarded as a part of the movement arising from a desire on the part of the Native for improvement of his general economic status.

VI.—NATURAL RESOURCES.

Land.

The administration and survey of land and the registration of titles are under the general control of the Commissioner of Lands and Settlement. There are District Offices at Nairobi, Nakuru, Mombasa, Kisumu and Kericho for local administration and collection of revenue.

The total area of alienated land in the Colony is 11,037 square miles (including 69 square miles in native reserves and 276 square miles of coast freehold), with only some 1,346 square miles surveyed available for alienation. Since 1915 grants of land surveyed for agricultural purposes have been for terms of 999 years. Nearly half the alienated land in the Colony is, however, held under the Crown Lands Ordinance, 1902, which provided for leases of only 99 years. Many grants of land, particularly in the vicinity of Nairobi, were made on freehold title under this Ordinance. Apart from the Ex-Soldier Settlement Scheme of 1919, land grants during the period 1912 to the end of 1936 were usually sold by auction. Leases under the Crown Lands Ordinance, 1915, carry rentals of 20 cents per acre, revisable in 1945 and every 30 years thereafter. For some time, in view of the diminishing amount of land available, the unsuitability of public auction as a method of alienating land had been recognized. During 1937 the method of disposing of Crown Land farms by way of direct grant to approved applicants was introduced.

Township plots are sold by auction for terms not exceeding 99 years.

The total revenue from land sales and rents amounted during 1938 to £81,180 (rents of land, £62,304; land sales, farms £13,372, and township plots £5,504). Farm grants comprising an aggregate of £83,772 (including an area of 5,179 acres the subject of exchanges) were sold during the year.

The Kenya Land Commission which submitted its report in 1934 made recommendations that the Native Reserves should be increased and should be proclaimed as Native Lands.

On the 31st December, 1937, Native Reserves covered an area of 48,345 square miles. With the passing of the Native Lands Trust Ordinance (Ordinance 28 of 1938) an area of 49,755 square miles was proclaimed Native Lands. This total is made up of the following Land Units:—

	Square miles.
Kavirondo	7,192
Nandi	736
Lumbwa	990
Kerio	6,462
Kamba	8,264
Masai	14,983
Kikuyu	6,151
Coast	4,858
North Pokomo	119

In addition 2,084 square miles of Crown Lands are reserved for native occupation. These comprise Native Reserves, 877 square miles, Temporary Native Reserves, 507 square miles, and a Native Leasehold Area, 700 square miles. Thus, the grant total of native areas is 51,839 square miles.

Further, there are 119,097 square miles comprising the Northern Frontier District, Turkana and an extension from Uganda which are occupied by natives.

Agriculture.

Of the main products of the Colony, sisal, tea, wheat and pyrethrum are grown exclusively by Europeans. Coffee was formerly grown exclusively by Europeans, but Africans are now growing both Arabica and Robusta coffee in small experimental blocks under licence and strict supervision in certain defined areas. Maize, sugar-cane, wattle, various kinds of beans, potatoes and fruit are produced by Europeans, Indians and Africans. Cotton, sorghums, millets and miscellaneous root crops are grown almost exclusively by Africans in their reserves.

EUROPEAN AGRICULTURE.

With regard to European production, the cultivation of cereals, pulses, pyrethrum and passion fruit, and the production of animal products, is chiefly in the hands of individual farmers. Coffee is produced partly by companies, but mainly by individual planters. The production of sisal, tea and sugar is conducted mainly by companies.

Much European-grown produce is marketed through co-operative marketing societies. Cereals are marketed mainly through the Kenya Farmers' Association. The marketing of pyrethrum is in the hands of the Pyrethrum Growers' Association, which employs the Kenya Farmers' Association as agents, and there is a similar arrangement for the marketing of passion-fruit juice, which is now being produced on a commercial scale. Coffee is marketed by individuals through the ordinary commercial channels, though there is in existence one co-operative society which undertakes marketing.

The latest statistical information relating to agricultural production by Europeans is that contained in the Agricultural Census Report, February, 1938. At the date of the census there were 5,053,448 acres in occupation by 1,890 Europeans, of which area 546,602 acres were under cultivation. The chief crops, with the area and production of each in 1937-8, are given below:—

	Area. Acres.	*Production.*	
Maize ...	113,103	968,076	Bags of 200 lb.
Wheat ...	57,174	185,731	,,
Coffee ...	93,772	308,398	cwt. (clean coffee).
Tea	13,564	11,023,511	lb.
Pyrethrum ...	6,670	19,742	cwt.
Wattle ...	19,662	716	tons, dry bark.
,,		3,724	tons, green bark.
Sisal	166,517	31,817	tons.
Sugar ...	15,544	317,720	cwt. crystallized sugar.
Passion fruit	982		

The greater part of the maize, coffee, tea, sisal and pyrethrum, and of the wattle and passion fruit products, is exported from the Colony; most of the wheat and sugar is consumed locally. The local market for maize and for tea is important.

Crops which are not at present produced in any appreciable quantity, but in which interest is now being aroused, are flax, both for the production of pedigree seed and fibre, kweme or oyster nuts (*Telfairea pedata*), derris root, cascara bark and tobacco for nicotine production. Mixed farming is becoming more general in those areas suited to it.

INDIAN AGRICULTURE.

Indian agriculture is limited to the Kibos-Miwani area of the Nyanza Province and to small scattered areas in the Central and Coast Province. No recent figures are available as to areas and production, but the total is small.

NATIVE AGRICULTURE.

In respect of African agriculture, production is almost entirely in the hands of peasant families who, in the main, cultivate sufficient crops and produce sufficient animal products to supply their food requirements, together with a surplus which they sell in order to obtain money for their other needs.

Considerable progress in agricultural development has been achieved during recent years through improved cultural methods, through improvement, by breeding, selection and importations, in the quality and variety of crops grown, and by means of produce inspection services and organized marketing. In the Central Province especially much progress has recently been made in mixed farming. The prevention of soil erosion and the reclamation of already eroded areas in the reserves receive considerable attention, and the native cultivator is gradually being educated to realize their importance. The successful reclamation of many swamps in the Central Province has aroused the keen interest of the natives. Attention was also given to the improvement of water supplies.

Improvement of crops largely depends upon ample supplies of seed of high yielding quality, and in the past this was provided from public funds. Local Native Councils have now provided land and funds for seed farms in most agricultural districts. These farms have proved their value and are extended as circumstances permit. Local Native Councils also vote funds for the payment of a certain number of African agricultural instructors.

Native agricultural schools are established near Nairobi, mainly for the Central Province, and at Bukura in the North Kavirondo District, mainly for the Nyanza and Rift Valley Provinces. At these schools improved methods of crop and animal husbandry are taught. Particular attention is devoted to mixed farming in small holdings, due regard being paid to a proper rotation of crops designed to maintain soil fertility. The pupils are also taught to make proper use on the land of the livestock kept in the farmyards. Instruction is given in the prevention of soil erosion.

An important branch of work in native reserves is the methods of marketing native produce. Inspection services now cover beans, maize, potatoes and wattle bark, over the whole of the Central Province; and beans, groundnuts, gram, sesame, cotton and maize in Nyanza. Marketing is being restricted to gazetted buying centres and to trading centres. At a number of large trading centres stores have been erected by Local Native Councils at which export produce is collected for sale in bulk at export parity prices. Legislation is in existence to provide for the issue of exclusive buying licences for a limited period in cases where such action is necessary in order to encourage the introduction of a new industry or process. Very few such licences have, however, been issued. The improvement in the standard of produce marketed has been very marked in the last few years.

Livestock.

EUROPEAN AREAS.

The census of 1938 showed that there were 307,091 cattle, 280,729 pure-bred and grade sheep, 16,673 native sheep, 1,689 goats, 13,192 pigs and 58,851 poultry in the possession of Europeans, while 190,387 cattle and 266,547 sheep and goats were kept by native squatters on European-owned land. Dairy produce remains the chief interest in the cattle-raising districts. During 1938 the number of pure-bred cattle imported into Kenya decreased to 84 as compared with 124 during 1937. Most dairy farmers dispose of their milk or cream to the Kenya Co-operative Creamery, Ltd., which manufactures butter and cheese for sale locally and abroad. A considerable amount of whole milk is sold as such in the towns. Most of the butter produced is exported, while the greater part of the cheese and ghee is sold in Kenya. A co-operative society is in operation dealing with cattle, sheep and pigs for slaughter.

During 1938 two consignments of bacon were exported to the United Kingdom, favourable reports being received in each case.

Livestock produce sold during the year ending 28th February, 1938, included the following:—

Whole milk	... ...	1,318,156 gallons.
Butterfat ...	... ...	2,201,588 lb.
Butter ...	... ...	272,464 ,,
Cheese ...	... ...	119,331 ,,
Ghee ...	... ...	68,703 ,,
Wool ...	... ...	1,146,245 ,,

The raising of woolled sheep is chiefly carried on in the districts of Laikipia and the Rift Valley. The value of wool exported during 1938 was over £51,000.

NATIVE AREAS.

Progress in the hide and skin industry was not fully maintained during the period under review, the chief causes, no boubt, being the uncertainty of overseas markets and the lowered prices of agricultural produce, both resulting in a decreased consumption of meat. Fewer serious outbreaks of animal disease also contributed to the decrease in hides available. Nevertheless the value of hides and skins exported during 1938 was £187,457.

The dairy industry on the whole made fairly satisfactory progress. In the drier areas, the prolonged dry weather caused a reduction of supplies. Production in the Nyanza Province in which the industry has reached its highest development showed a value of £40,940 during 1938.

The five Veterinary Training Centres continued in full work during 1938, instruction and demonstration following the lines found successful in 1937. A sixth Centre was provided for the Coast districts but is still mainly in the stage of construction.

Continued interest is shown in questions of disease control and animal husbandry by the Local Native Councils, and increasing financial assistance is being made to help in the work of livestock improvement.

A factory for the manufacture of beef products erected by Messrs. Liebigs commenced operations during the year, and purchased 14,718 cattle.

Fisheries.

The fisheries of the Colony are of three kinds: the sea fisheries of the Coast, the fresh water fisheries of Victoria Nyanza and trout fishing in the highland streams. Lakes Rudolf and

Baringo also held commercial potentialities, but have not so far been developed owing to lack of accessibility.

A preliminary survey of the sea fisheries of the Colony was made by Dr. C. von Bonde in 1928. An abundant supply of edible fish of at least fifty varieties is available, but the industry has yet to be developed. Fishing, mainly with hand lines, is done by native fishermen who sell most of their catches to Arab middlemen for distribution, often after sun-drying, to the local and up-country markets. One organization possesses its own motor craft, refrigerating plant and sales facility in Nairobi. Sea fish is shipped to various large centres in the Colony, but owing to lack of cold storage equipment on the Railway this trade has not progressed as it should. The approximate weight of sea fish sold in Nairobi is 83 tons 17 cwt. per year of an approximate value of £6,103, retail. A certain amount of fresh sea fish is used for revictualling ships. There are no figures available of the total quantity or value of salt-water fish caught off the coast-line of Kenya.

As a result of a survey of the fresh-water fisheries of Victoria Nyanza by Mr. Michael Graham of the Ministry of Agriculture and Fisheries in 1927-8, fishing on the Lake is governed by regulations concerning the mesh of nets and the registration of boats and fishermen. To enforce these regulations and control the fisheries a Fisheries Patrol is maintained on the Lake. Fishing in which nets are used is done by native fishermen, who now own the majority of the boats in use, the remainder of which are owned by Indians. The market for European consumption locally and elsewhere in the Colony is mainly in the hands of Indian middlemen, but there is a large native market locally for both fresh and dried fish which is supplied direct by native fishermen. The local value of fish, almost all of which were of the species *Tilapia esculenta,* caught in 1938, was approximately £31,978 of which just over half was accounted for by the catches of native-owned boats. 334 tons of fresh fish of the approximate value of £6,556 were railed from Kisumu to Nairobi, whilst 37 tons of fresh fish of the value of £1,031 were sent to Eldoret and mining areas. The income derived from fishermen's licences, registration of boats, etc., was £2,278.

Trout fishing is confined to the highland streams whose temperature is sufficiently low to enable the fish to breed plentifully. Eighty-seven rivers and streams in the Colony are stocked with brown or rainbow trout and there are over 2,000 miles of fishing water. Trout fishing is a sporting amenity of the Colony and the sale of trout is prohibited by law. Revenue from trout-fishing licences in 1938 amounted to £1,117.

Forest Resources.

The total area of permanent Forest Reserve is 5,322 square miles. In addition it is estimated that there are in the Colony a further 800 square miles of high forest on Crown and Native lands, which will in due course be demarcated for permanent preservation. During the year, 15 square miles were added to Forest Reserve mostly in the Coast Division, and 41 square miles were excised. The excisions were those recommended by the Carter Land Commission. Agreement was reached regarding the demarcation of further areas of native-owned forests.

The above-mentioned areas include practically all the existing forests of the Colony with the exception of about 100 square miles on private lands and the scrub and thorn forests of the arid country. The proclaimed forest reserves constitute about 2·4 per cent. of the total area of the Colony, but they form about 7·0 per cent. of the non-arid habitable portion in which they occur.

The Forest Reserves comprise Crown Forests 4,928 square miles and Native Forests 394 square miles.

There is still a shortage of official Survey staff, but local forest officers managed to survey certain small areas.

It is estimated that in the forest reserves there are approximately 1,385 square miles of merchantable forest. There are other areas of good timber at present inaccessible which may become exploitable in the future, but for the most part the remaining forests are of poor quality though valuable from the point of view of climate and water conservation.

About 680 square miles (not all merchantable) are the subject of sawmilling licences. Replanting by the department has followed sawmilling operations fairly closely, and as growth in plantations is remarkably rapid it can be said that these will be supplying all the Colony's timber needs long before the exhaustion of the virgin forests is in sight.

There are no statistics available of the total timber output or consumption in the Colony but probably not more than 10 per cent. of the total is cut outside forest reserves. In the forest reserves the department sold 966,546 cubic feet of timber in the log, the comparable figure for the previous year being 951,217 cubic feet. The increase was due to improved internal trade conditions as the result of the recovery in the export markets for agricultural produce.

The proportions of the various kinds of timber cut were approximately as follows:—

Softwoods.	*Per cent.*
Podocarpus	48
Cedar	25
Cypress (plantation)	3
	76

Hardwoods.	*Per cent.*
Kenya olive	4
Camphor	4
Muna	2
Other hardwoods	14
	24

All production is done by private enterprise on licence from the Forest Department. There are twenty saw-mills working in the forest reserves independently owned by individuals or private companies, but for marketing purposes they are practically all combined in the East Africa Timber Co-operative Society, Ltd. Cutting rights are normally sold by tender and are granted over areas of about 2,000 acres for periods of ten years. Royalties are paid on the logs which are measured by the department in the forest after felling. Single trees are occasionally sold to farmers and others for their own use or to native pit-sawyers where planting areas are being cleared.

Nearly all timber is consumed locally. Apart from pencil slats there is only a small export overseas at present, but the prospects of a market in England for high quality Kenya timber are undoubtedly improving. Exports amounted to 20 per cent. of the total production (allowing for conversion to round timber) and were made up as under:—

Cedar pencil slats	65,462 cubic ft.,	value £24,584
Other timber	78,901 ,, ,,	,, £11,595

Practically all the pencil slats went to Europe, but of the figure shown against other timber 70,620 cubic feet, value £10,395, were exported to Uganda and Tanganyika.

Timber production is mainly in the hands of European-owned saw-mills but there are a number of small Indian-owned mills. There are no native-owned saw-mills, but natives are showing increasing enterprise in endeavouring to build up timber businesses by pitsawing.

Game.

The indigenous fauna is abundant and varied: of it, over 50 species of mammals and a large number of birds are afforded some degree of legal protection and are thus classed as game animals, while a host of subspecies have been described.

The sale of game licences in 1938 realized £6,748. The amount obtained from this source tends to decrease year by year, as the popularity of photography increases and tends to depose big-game shooting from its pre-eminence as a sport.

Forty-eight elephants were shot on licence, the average weight of ivory per tusk being 75½ lb. The heaviest pair of tusks so obtained weighted 148 lb. and 136 lb. respectively. 13,902 lb.

of Government ivory obtained from animals killed under control schemes, from animals found dead, and from illegal ownership by confiscation, were sold by Customs auction at Mombasa and realized £3,683.

The total direct revenue of the Game Department, not including fines, arms licences or trout licences, amounted to £11,737.

The number of visitors to the Colony, attracted largely, if not chiefly, by the possibility of seeing game, maintained a normal level, the world situation notwithstanding; the Southern Game Reserve in particular was well patronized, offering as it does under normal climatic conditions easy access and a reasonable certainty of seeing elephant, rhino and lion in addition to many other imposing if less dramatic species.

Minerals.

Gold from the Nyanza Province and Masai Reserve continued to be the most important product during the year; and the gold-mining industry recorded income in excess of expenditure (on all items, including prospecting, machinery and capitalization) of approximately £84,000. The bulk of the gold production was from lodes (or reefs) and alluvial outputs continue only in a small way.

One company with an average monthly production of 800 ounces per month ceased operations, but this loss was more than offset by new producers, and the year closed with a production of £499,601, which reflects an increase over the previous year of 31 per cent. Gold moved from fourth place in value among the Colony's export commodities in 1937, to second place in 1938.

In addition to gold the following minerals were produced:—

Mineral.	*Value.* £	*s.*	*d.*
Marble	5,548	16	0
Asbestos	53	10	0
Sapphires	51	1	0
Soda Ash, etc.	127,401	0	0
Salt	11,671	0	0
Total	£144,725	7	0

Exploration licences for oil were granted over approximately 8,573 square miles.

At the close of the year approximately 31 square miles were held under mining location rights, 121 square miles under exclusive prospecting licence, and 1·2 under mining leases.

Mining continued to benefit employment; approximately 200 Europeans, 10,000 Natives and 120 Asians were permanently engaged throughout the year.

Conditions of employment are considered generally good and harmonious relations between all sections of the community have been maintained.

The number of accidents was slightly less than for the year 1937.

There were no mining court cases brought before the Comsioner of Mines during the year.

Liaison between Government and the East African Chamber of Mines was maintained and discussions on various matters took place.

268 square miles were geologically surveyed and 1,750 assays performed.

Manufactures.

Beer and Stout.—The manufacture of these beverages is in the hands of two companies, and the number of standard gallons produced in 1938 amounted to 187,899.

Sugar.—There are five licensed factories. The production in 1938 was 15,052 tons.

Tea.—Fourteen factories were licensed—the production of prepared tea during the year was 10,856,085 lb.

Tobacco and Cigarettes.—One factory was licensed. The production in 1938 was 58,207 lb.

Soap.—This is manufactured by companies mainly situated on the coast, and exports of local manufacture during the year amounted to 6,328 cwt. valued at £5.097.

Aluminium hollow-ware.—The progress of local manufacture is reflected in the following figures:—

	Imports into Kenya and Uganda.		*Exports of Local Manufacture from Kenya and Uganda.*	
	Tons.	*£*	*Tons.*	*£*
1930	89	14,470	3	444
1931	12	2,322	18	2,935
1932	2	957	21	4,771
1933	3	827	34	6,951
1934	2	667	66	12,602

1936	3	1,081	118	19,339
1937	4	1,310	143	24,031
1938	1	1,004	134	22,167

VII.—COMMERCE.

General.

Kenya and Uganda are one administrative unit for the purposes of Customs; for this reason an accurate estimate of the balance of trade of the territories individually is impracticable. On the one hand, Kenya is largely a distributing centre, and, on the other, the overseas trade of Uganda passes, in the main, through Mombasa, the principal port of Kenya.

The principal imports of Kenya and Uganda during 1938 consisted of cotton piece goods, motor vehicles and oils, machinery and building materials—the principal exports were cotton, coffee, pyrethrum, sisal, tea, carbonate of soda and gold bullion.

External trade during the year 1938 was satisfactory although the total values of imports and exports fell short of the figures for 1937 as a result of depressed commodity markets. The position was, however, counterbalanced to a certain extent by increased production.

(1) COMPARATIVE STATEMENT OF TOTAL IMPORTS, DOMESTIC EXPORTS AND RE-EXPORTS FOR KENYA AND UGANDA, 1934-8.

	Imports.	*Domestic Exports.*	*Re-Exports.*
	£	£	£
1934	5,708,025	5,683,637	1,821,505
1935	6,641,345	6,608,836	2,087,630
1936	7,377,279	8,354,774	2,191,124
1937	10,832,573	9,656,791	2,495,948
1938	9,667,030	8,504,650	2,308,521

(2) THE FOLLOWING STATEMENT GIVES PARTICULARS OF THE COUNTRIES FROM WHICH TOTAL IMPORT REQUIREMENTS HAVE ORIGINATED DURING THE LAST FIVE YEARS.

Inter-Territorial Trade.

In addition to the external trade referred to in the foregoing paragraphs, the interchange of imported and locally produced goods was as follows:—

Kenya to Uganda.

	1936.	*1937.*	*1938.*
	£	£	£
Imported goods... ...	1,703,607	2,519,319	2,009,360

Kenya and Uganda to Tanganyika Territory.

	£	£	£
*Imported goods... ...	932,553	1,121,546	952,868
Local produce	275,430	353,241	377,883

* Including specie value £236,045, £257,173 and £63,080 respectively.

Tanganyika Territory to Kenya and Uganda.

	£	£	£
*Imported goods... ...	206,082	826,212	205,138
Local produce	724,500	942,515	850,112

* Including specie value £143,410, £728,519 and £116,640 respectively.

Excise and Beer Duties.

The co-ordination and allocation of Excise duties between Kenya, Uganda and Tanganyika Territory is covered by the Excise Duties Agreements Ordinance, 1931, and the Excise Duties Ordinance, 1935. The rates of duty imposed during the year were as follows:—

	Shs.	*Cts.*
Sugar	1	00 per cwt.
Tea	0	10 per lb.
Cigarettes	1	25 ,,
Manufactured tobacco	1	25 ,,
Beer	40	00 per standard barrel of 36 gallons.

Ivory.

Two sales by public auction of Kenya and Uganda Government ivory were undertaken by the Customs Department during the year. The total weight of ivory sold was 42,310 lb. (Kenya 13,902 lb., Uganda 28,408 lb.) and the total amount realized was £12,273 (Kenya £3,720, Uganda £8,553).

VIII.—LABOUR.

Numbers Employed.

The average number of adult male registered natives in employment each month in 1938 was 172,760. The highest number employed monthly in any one period was 177,265 during the months of May and June. In addition to adult male labourers considerable numbers of women and juvenile labourers were employed, particularly in the pyrethrum industry where it has been found that juveniles are by far the most efficient pluckers. Juveniles engaged in pyrethrum picking earned from Shs.6/- to Shs.18/- per month, plus rations, but were employed on the average for four months only in the year. It was estimated that 5,000 juveniles were also employed on the tea estate, 4,000 in the sisal industry, and 1,500 on light work above ground in the mines. In addition a large number of juveniles are employed as domestic servants on farms and in the towns.

In the absence of a Special Labour Return during the year under review, it is not possible to state even approximately the number of natives employed in the various industries.

Supply and Demand.

From January until the end of May the supply of labour was adequate and during June and July it was, generally speaking, slightly in excess of the demand. This was due to the fact that a number of sisal estates reduced their labour as they run short of leaf, and the failure of the long rains in many parts of the country which resulted in a decreased demand for labour. In

September and October, however, a certain shortage of labour occurred. This was not because labour was difficult to obtain but was caused by a number of employers, who relied on recruiting to fill their requirements, failing to comply with the recruiting provisions of the Employment of Servants Ordinance, 1937, with the result that prospective employees collected by their native recruiters in the Reserve, were not allowed to proceed to the place of employment. The position improved in November, when employers had realized that it was essential to have a licence to recruit labour and comply with the Ordinance and, by the end of the year, it was satisfactory.

Recruiting.

The recruiting of labour from the three Kavirondo districts of Nyanza Province was actively continued throughout the year. The Employment of Servants Ordinance was applied to the Colony at the end of April and provided for closer control of the activities of recruiters, particularly private recruiters, upon whom up to that time there had been little check. It naturally took time for employers to realize what regulations they had to comply with but, by the beginning of September, it was considered that employers should have realized that recruiters' licences were necessary, and after that date a close check was kept on all labour passing through Kisumu. Licences and permits were inspected and, except in special circumstances, native recruiters not in possession of permits, or whose employers were not in possession of licences, were turned back. In all such cases a letter was sent to the employer concerned informing him in what way he was contravening the Ordinance. The same mistake was rarely made twice, when the loss of a batch of labour was involved, and after two difficult months, the system ran quite smoothly.

Most of the labour recruited was destined for the Central and Coast Provinces.

Professional recruiters and labour agents have always been controlled by regulations and the Employment of Servants Ordinance placed very few additional obligations upon them. As usual, the majority of labour recruited professionally has been forwarded to employment, after the natives have agreed to a contract of service, attested by a Magistrate, for a period of anything from three to eight months. Apart from complaints against each other, chiefly among the Indian professional recruiters, there has been no trouble in this connection. The Employment of Servants Ordinance, 1937, made an advance in excess of the amount of one month's wages illegal. This was a severe blow to some of the Indian professional recruiters who had always relied on being able to give an advance of two or three months' wages in order to obtain labour.

The number of natives recruited in Nyanza and placed on attested contracts of service were as follows, compared with 1936 and 1937:—

Year.	*North Kavirondo.*	*Central Kavirondo.*	*South Kavirondo.*	*Total.*
1936	1,555	4,753	3,140	9,448
1937	1,140	4,108	2,399	7,647
1938	1,495	4,614	2,604	8,713

Although not up to the figure of 1936, there is an increase of over 1,000 over 1937.

Staff.

The Principal Labour Officer was in charge of the Section during the year and was stationed in Nairobi.

One Labour Officer was posted at Kisumu, one at Nakuru, one at Nairobi and one at Eldoret for part of the year.

The following is a summary of the field activities of the Labour Section during the year:—

Number of inspections	1,233
Number of days on tour	322

This figure is the record number of inspections ever carried out, and it is interesting to set out the number of inspections made since a record was kept. The figures are as follows:—

1931	562
1932	855
1933	833
1934	863
1935	1,010
1936	976
1937	1,195
1938	1,233

Labour Officers had instructions to acquaint themselves with all labour conditions throughout the area in which they were stationed and they ensured, as far as their lawful authority permitted, that satisfactory conditions of employment were maintained throughout these areas and that the provisions of the Ordinances governing the employment of labour, were duly regarded by employer and employee. Subject to special instructions from the Principal Labour Officer, Labour Officers were responsible for arranging a comprehensive and evenly distributed programme of inspection. A concentrated inspection was maintained where unsatisfactory conditions were discovered, or where the work or climatic conditions were believed to be arduous or dangerous to health.

At every inspection labour officers investigated and took appropriate action regarding the following matters, provided that wherever unsatisfactory conditions were discovered in regard to housing, feeding, sanitation or medical attention, action was taken in collaboration with the Principal Labour Officer or the District Medical Officer.

Labour Officers directed their attention to the following matters during their inspections:—

(*a*) That wages were paid in cash and not in kind and that no delay in payment occurred when a rightful demand was made.

(*b*) That there was no undue accumulation of arrears of wages or other deposits of the native in the hands of the employer and that the wage tickets or registers were properly marked when each day's work was completed.

(*c*) That the labourers were not prejudiced by the imposition of unfair tasks.

(*d*) That the wages of deceased labourers were forwarded to the relatives through the Principal Labour Officer or District Commissioner.

(*e*) That sufficient space was provided for labour, that all housing was weatherproof and well ventilated and that the camps and compounds were free from rats and vermin.

(*f*) That the quantities of food issued were according to agreement, or any special regulations which may be in force.

(*g*) That the food was wholesome and, with regard to mealie meal, fresh and well ground and that the supply of water was pure and sufficient.

(*h*) That sufficient fuel was available and also utensils for cooking and carrying water.

It was also ascertained:—

(*a*) Whether the employer was in possession of the necessary drugs, etc.

(*b*) That the natives were lawfully residing on the farms.

(*c*) That they were fully employed according to their agreements.

(*d*) That a register of the natives and a register of cattle was kept by the occupier according to the specified forms.

(*e*) That the natives' cattle were branded.

(*f*) That no payment in money or kind was received by occupiers in consideration of the right to cultivate or graze stock, etc.

(*g*) That proper precautions were taken by employers to guard against accidents.

(*h*) That all labour recruited was voluntarily offered.

Legislation.

As already mentioned, the Employment of Servants Ordinance 1937 was brought into force in April, 1938. This Ordinance consolidated and amended the law regulating the employment of servants and gave effect to the ratification by His Majesty's Government of an International Convention covering the regulation and recruiting of workers.

Committee on Juvenile Labour.

The Committee appointed by the Governor to review the legislation relating to the employment of juveniles reported in October. The Committee recommended, *inter alia,* that the minimum age at which juveniles should be allowed to enter into employment should be raised to the apparent age of twelve years, and that no person below fourteen years should be employed in any industrial undertaking. Other important recommendations were that the professional recruiting of juveniles should be forbidden; that juveniles should be removed completely from the scope of penal sanctions under the Employment of Servants Ordinance, and that no juvenile should be employed away from his home unless in possession of an identity certificate embodying an endorsement by his parent or guardian consenting to the juvenile entering employment. Government accepted the report generally and proposed to introduce the necessary legislation early in 1939.

IX.—WAGES AND COST OF LIVING.

Wages.

An analysis of all natives in employment on the 31st October, 1936, was compiled during the first half of the year, and for all purposes the comprehensive tabulations then compiled may, in the absence of later figures, be taken generally as ruling in 1938.

There are indications, however, which point to a slight rise in the average wage during 1938, but not to a very marked extent.

The following schedule reflects the average wages earned by men employed in the various callings enumerated. Where previous tabulation existed for the same occupations, comparative figures have been furnished:—

SCHEDULE.

Average rates of wages (including value of rations) paid to natives employed by all races of employers in October, 1936, as compared with November, 1930.

Domestic Servants.

Occupation.	*Oct., 1936.*	*Nov., 1930.*
	Shs.	*Shs.*
House boys	20/—	27/—
Personal servants ...	26/50

Miscellaneous Workers.

Occupation.	*Oct., 1936.*	*Nov., 1930.*
Not specified	25/—	46/—

Cost of Living.

NON-NATIVE.

The minimum cost of accommodation, including food, in European boarding-houses is £6 10s. per month.

NATIVE.

The staple foodstuff of the native is maize meal, the average consumption being approximately 2 lb. per day, at a total cost of approximately Shs.3/- per mensem. Other foodstuffs including meat, beans, etc., also form part of the native diet, and the amount consumed by one native may be valued at roughly Shs.3/- per mensem. As rations for labourers are provided by employers in kind, the natives themselves are not affected by fluctuations in the price. This does not apply to natives living in the native reserves who, however, normally produce sufficient food for themselves and their families, though during times of famine, foodstuffs have to be purchased.

Detailed figures relating to the cost of living were collated by the Statistical Department annually from 1927 to 1933. At the end of the latter year, however, owing to the necessity for economy, the department, as previously constituted, was abolished. Consequently index numbers showing the general trend of the commodity price-levels since then are not available.

The following are the approximate retail prices of some of the more common commodities in Nairobi in December, 1938:—

Section 1.—Groceries.

Commodity.	*Cents of a shilling.*	*Sales unit.*
Bread, white (European bakery) ...	35	1 lb.
Flour, superfine	27	1 ,,
Jam, plum	90	1 ,,
Oatmeal	171	3 ,,
Rice, Mwanza	24	1 ,,
Sugar, best	16	1 ,,
Beer	112	bottle
Coffee, best quality ground ...	127	1 lb.
Tea, best quality	193	1 ,,
Soap, blue mottled...	33	1½ ,,
Soda, washing—Magadi	24	1 ,,

Section 2.—Dairy Produce.

Commodity.	*Cents of a shilling.*	*Sales unit.*
Butter, creamery	142	1 lb.
Butter, best farm	141	1 ,,
Cheese, local cheddar	131	1 ,,
Eggs, European farm—new laid ...	144	doz.
Bacon, average	153	1 lb.
Milk, fresh—Grade "A"	25	pint

Section 3.—Meat and Fish.

Commodity.	*Cents of a shilling.*	*Sales unit.*
Beef grade—average	95	1 lb.
Mutton grade—leg	95	1 ,,
Pork grade—leg	123	1 ,,
Lard	94	1 ,,
Suet	75	1 ,,
Fish, Kisumu—lake	75	1 ,,
Fish, Mombasa—sea	90	1 ,,

Note.—The price quoted for fresh milk is that charged when delivered to the customer in sealed bottles.

X.—EDUCATION AND WELFARE INSTITUTIONS.

The Education Department, in addition to its administration section, comprises the following four sections:—

European Education,
Indian and Goan Education,
Arab Education, and
African Education.

(i) The administration, which controls all Government schools, carries out all school inspections and conducts external examinations held in the Colony, consists of the Director of Education, the Chief Inspector of Schools and four Inspectors of Schools, together with the Head Office staff. The Inspectors of Schools are stationed in Nairobi, Mombasa, Nyeri and Kisumu.

(ii) European education is carried out in the Government schools by 63 European Education Officers and 16 Matrons.

(iii) In the Government Indian schools there are four European Principals and assistants employed in the secondary schools and 129 Indian Education Officers.

(iv) The Arab schools at the coast are staffed by five European Education Officers and 34 Arab and Swahili teachers.

(v) In the Government African schools and training institutions there are 27 European Education Officers, 10 European Technical Instructors and 151 African teachers and instructors.

The cost of the various sections in 1938 was as follows:—

	£
Administration	12,900
European Education	49,003
Indian and Goan Education	43,861
Arab Education	6,711
African Education	80,130
Extraordinary	1,878
Total	194,483

Included in this expenditure were grants in aid to private schools amounting to £51,515. Revenue amounted to £28,835, reducing the total net expenditure to £165,648.

Twenty-one Local Native Councils made grants to Government and mission schools on account of African education amounting to £17,937, and they received a total fee revenue from the Government schools of £466.

Organisation.

Four Advisory Councils for European, Indian, Arab and African Education, respectively, appointed under the Education Ordinance, 1931, advise on matters of policy and of major importance, and every Government European and Indian school has its own school committee.

In African Education eleven District Education Boards have now been established under the District Education Boards Ordinance, 1934, in the more densely populated districts. In this manner valuable assistance in framing and giving effect to educational policy is secured from Administrative and other Government officials and also from members of the public of all races.

European Education.

The average number of pupils at school during 1938 was:—

	No. of schools.	*Boys.*	*Girls.*	*Total pupils.*
Government Primary schools	9	541	319	860
Government Secondary schools	2	158	142	300
Private schools	22	401	556	957
Total	33	1,100	1,017	2,117

Of the above pupils, 1,139 were boarders, 622 in Government schools and 517 in private schools.

The two Government Secondary schools are the Prince of Wales School, Kabete, and the Kenya High School, Nairobi, for girls. Of the Government primary schools those at Nairobi, Nakuru, Eldoret and Kitale have boarding sections for both boys and girls.

Three of the private schools are large day and boarding schools taking girls up to School Certificate standard; three are schools preparing young boys for entrance to home public schools or to the Prince of Wales School, and many of the remaining private schools specialize in catering for the needs of small children.

Indian and Goan Education.

The number of Indian pupils at school in 1938 was as follows:—

	No. of schools.	*Boys.*	*Girls.*	*Total pupils.*
Government	13	3,383	859	4,242
Aided	57	1,848	2,897	4,745
Unaided	8	334	68	402
Total	78	5,565	3,824	9,389

Of these, two Government schools and one aided school are of secondary standard, taking the Cambridge Junior and School Certificate examinations.

There are two aided Goan schools in Nairobi and Mombasa respectively. The total attendance in 1938 was 331 (177 boys and 154 girls). One aided Catholic school in Nairobi and a second in Mombasa also admit Asian children. The combined rolls at these schools amounted to 528 pupils (233 boys and 295 girls).

Arab Education.

Nine schools are classified as Government Arab schools, namely, the Coast Secondary School at Shimo la Tewa, which has reached the stage of the Cambridge Junior Examination, the Arab School, Mombasa, the Ali bin Salim School, Malindi, a night school at Lamu, the Arab Girls' School, Mombasa, and village schools at Mambrui, Vanga, Msambweni and Takaungu. The average number of pupils at these schools was 904 (787 boys and 117 girls). In addition there are numerous private Koran schools at the Coast, the pupils of which are not at present included in educational statistics.

African Education.

The following was the number of pupils in attendance at Government schools and institutions in 1938:—

	No. of schools.	*Boys and men.*	*Girls and women.*	*Total pupils.*
Jeanes School	1	55	27	82
Native Industrial Training Depot	1	395	—	395
Primary schools	11	921	—	921
Village schools	39	3,401	203	3,604
Total	52	4,772	230	5,002

All pupils in the Government primary schools were boards, with the exception of 260 in one school.

Sixteen missionary societies and one independent society conducted schools as shown in the table below:—

	No. of schools.	*Boys.*	*Girls.*	*Total pupils.*
Elementary schools	1,765	82,603	38,573	121,176
Primary schools	37	2,271	374	2,645
Secondary schools	3	182	2	184
Total	1,805	85,056	38,949	124,005

The three secondary schools are the Alliance High School, Kikuyu, the Catholic High School, Kabaa, and the Church Missionary Society, Maseno.

Twenty-five of the schools had girls' boarding sections, with a total average roll of 1,321 boarders.

Examinations.

The following pupils from Kenya schools passed external examinations in 1938:—

Cambridge Junior.

	Europeans.		*Goans and Indians.*		*Arabs.*	
Year.	*Entered.*	*Passed.*	*Entered.*	*Passed.*	*Entered.*	*Passed.*
1930	47	25	47	21	—	—
1931	43	15	90	58	—	—
1932	44	26	109	52	—	—
1933	58	46	104	64	6	3
1934	48	31	143	56	5	3

1937	4	—	89	48	—	—
1938	5	2	39	18	—	—

* A pass with the necessary credits gives London Matriculation exemption.

Welfare Institutions.

The Lady Northey Home for European children is maintained by public subscription and fees collected. A scheme has come into force for utilizing and extending the training facilities so as to enable local probationers to work for a certificate and the Home is aided for this purpose.

A seaside holiday camp for European children is held annually at Mombasa and is financed by voluntary contributions.

The Lady Grigg Welfare Institutions for Indians and Africans continue to function successfully.

Valuable service of a charitable and social nature is carried out by such bodies as the League of Mercy, the British Legion, the Salvation Army and the East African Women's League.

XI.—COMMUNICATIONS AND TRANSPORT.

Posts and Telegraphs Department.

The Posts and Telegraphs Department of the combined territories of Kenya, Uganda and Tanganyika provides telegraphic and telephonic communications by land line, cable and wireless and mail services, internal, overseas and air, for the extensive areas which fall within the East African Postal Administration.

Financial.

The financial operations of the Department have again been satisfactory, the excess of cash revenue over recurrent expenditure in respect of Kenya being £62,863. The cash revenue amounted to £200,951 and the Recurrent Expenditure to £138,088.

Mail Matter.

The volume of mail matter dealt with in Kenya amounted to 16,123,000 articles (letters, postcards, book and sample packets, circulars, etc.) as compared with 15,391,000 in 1937. These figures include air mail postings.

Operation of Mail Services.

Empire Air Mail Service.—The service was further extended to include the India-Malaya and Australia section, Hong Kong, Canada and Newfoundland.

Some delay to mails occurred during the Christmas period, otherwise the service was satisfactorily maintained.

Internal Services.—All services were efficiently maintained throughout the year.

Overseas, Ocean.—The number of mails despatched to and received from the United Kingdom during the year amounted to 66 in each direction, the average time in transit between Mombasa and London being 18 days.

Parcels.

The number of parcels handled, including cash-on-delivery, was 158,458, a slight decrease compared with 1937. 10,544 cash-on-delivery parcels were dealt with, having a value of £30,247.

Money Orders.

The volume of money order business again showed an increase over the previous year, the comparative position being:—

	Issued.		*Paid.*	
	No.	*Value.*	*No.*	*Value.*
		£		£
1937	29,595	168,480	20,030	95,272
1938	33,126	179,112	20,971	103,033

Postal Orders.

Postal orders issued and paid amounted to 122,732 in number and £64,581 in value, the increase over 1937 being 4,910 and £1,609 respectively.

Telegraphs and Telephones

Telegraphs.—Revised charges on telegrams addressed to Empire countries on a flat rate basis were introduced on the 25th April.

The number of inland telegrams transmitted was 365,800, a decrease of 4 per cent. compared with 1937. External telegrams numbered 119,900, of which 45,800 were to or from Great Britain. 6,600 inland "greetings" telegrams were transmitted during the year.

Telephones.—The number of trunk calls made during 1938 was 164,600 as compared with 180,000 in 1937. Local calls totalled 5,103,400, an increase of 797,700 over the previous year's figures.

Engineering Section.

Telephones.—There was a steady demand for telephone services throughout the Colony during the year. The number of telephones in use at the end of 1938 was:—

Direct Exchange connections ...	2,483
Extensions	1,644
Private Wires	151

The construction of the Kericho-Kisii trunk, including the realignment of the route between Jamji and Chemagal, was completed. A subsidiary trunk from Lumbwa to Koru and Muhoroni was also completed during the year.

Telegraphs.—Reconstruction work over approximately 278 miles of telegraph route was carried out during the year.

Overseas communications operated by Cable and Wireless Ltd. were satisfactorily maintained.

The mileage of pole routes carrying telegraph and telephone lines was increased to 2,893 miles and wire mileage to 18,985 miles.

Broadcasting.

The local broadcasting service operated by Cable and Wireless Ltd. was satisfactorily maintained. The number of current licences at the end of the year was 2,995, and the total fees collected on behalf of the operating Company amounted to £4,873. Of this sum the Department retained £392. Sixty-two dealers' licences were issued during the year.

Roads.

Owing to the fact that the rains were below normal in most districts, the roads of the Colony were maintained in fair condition.

The report of the Central Roads and Traffic Board on road improvements was issued, but at the close of the year no decision had been made with regard to financing the proposals.

Experiments were continued in order to test out the most suitable form of bitumen surfacing that could be carried out at a moderate cost.

Meanwhile the traffic on the roads has increased considerably, and in one case alone has risen from 400 to 600 vehicles per day in the past two years.

A new road was completed, as a charge to Colonial Development Funds, from Kisumu to Kibos, thus improving the communication between Kisumu and Nairobi by avoiding the old route, which was impassable after moderate rain.

The Public Works Department expenditure on roads and bridges amounted to £70,999, of which £63,523 was on account of Maintenance and Improvement of Roads and Bridges. On capital works £12,992 was spent from Colonial Development Funds.

Harbours.

The total tonnages (imports and exports) handled at Kilindini Harbour during the years 1937 and 1938 are given below. Coal imports are shown separately.

COAL IMPORTS.

1937.	*1938.*
148,401 tons.	131,950 tons.

IMPORTS AND EXPORTS, OTHER THAN COAL.

Year.	*Imports B/L tons.*	*Exports B/L tons.*	*Total B/L tons.*
1937	491,941	608,659	1,100,600
1938	474,605	645,047	1,119,652

The total trade of the Port of Mombasa including Kilindini Harbour and the Old Port for the year 1938 as compared with 1937 is summarized in the following statement:—

	1937.	*1938.*
Number of steamships	738	711
Net tonnage of steamers	2,253,183	2,254,410
Import —B/L tons	627,494	599,660
Exports	573,245	610,779
Passengers landed :—		
European	7,642	8,427
Non-European	19,197	17,568
Passengers embarked :—		
European	6,882	7,600
Non-European	13,347	14,315

Shipping.

The registered tonnage (inwards and outwards) at all Kenya seaports during the year, as compared with 1937, was as follows:—

	1937.	*1938.*
Vanga	10,701	9,422
Funzi	9,203	9,434
Mombasa	4,589,135	4,574,907
Kilifi	6,079	15,862
Malindi	19,315	19,843
Lamu	77,562	65,307
Kipini	3,591	2,478

Railways.

The carriage of public goods provided a revenue of £2,347,835 and the tonnage of the traffic amounted to 1,050,881 tons, as compared with £2,400,697 and 1,008,128 tons in 1937.

Passenger Traffic.—Revenue from passenger traffic showed an increase on 1937 figures. In 1938, 892,471 passenger journeys contributed a revenue of £192,947, while in 1937, 771,471 passenger journeys contributed a revenue of £191,413. The following table indicates the number of passenger journeys in the various classes, as compared with 1937:—

	Passenger journeys.				
Year.	*1st Class.*	*2nd Class.*	*3rd Class.*	*Season Tickets.*	*Total.*
1937 .	8,764	37,688	716,809	8,210	771,471
1938 ...	9,299	37,302	839,438	6,432	892,471

The traffic on Lakes Victoria, Kioga and Albert, and on the River Nile, on which Administration services are maintained, is shown in the following table:—

	1937.	*1938.*
Earnings	£157,243	£141,713
Working expenditure	£69,977	£75,810
Tonnage carried	153,293	156,885

Fuel Consumption.—The following figures show the consumption of coal, wood and oil fuel on the railway during 1938 as compared with 1937:—

	1937.		*1938.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Coal	92,988	125,934	103,722	182,312
Oil	605	1,579	380	1,075
Wood	172,584	58,736	151,965	55,523

On the lake steamers the figures were:—

	1937.		*1938.*	
	Tons.	*Cost.*	*Tons.*	*Cost.*
		£		£
Oil	4,226	10,931	4,246	11,597
Wood	8,875	3,583	10,552	4,447

Railways and Harbours Working Results.—The results of working the Kenya and Uganda Railways and Harbours and ancillary services during 1938 are shown in the following table:—

	Railways.	*Harbours.*	*Total.*
	£	£	£
Earnings	2,659,176	508,925	3,168,101
Ordinary working expenditure	1,396,970	196,580	1,593,550
Surplus of receipts over ordinary working expenditure ...	1,262,206	312,345	1,574,551

Aviation.

Civil Aviation continued to progress during the year. Customs aerodromes exist at Kisumu, Nairobi and Mombasa, and thirteen landing grounds are established for regular use. In addition, twenty-three emergency landing grounds are maintained at various points, some of which are fit for use by all types of aircraft. There are also six licensed landing grounds maintained by municipal or private enterprise for regular use by the flying public, and approximately ten unlicensed privately-owned landing grounds also exist.

Kenya is served by a thrice-weekly air service between Great Britain and Kisumu, and a twice-weekly air-service between South Africa (Durban) and Kisumu, both operated by Imperial Airways (Africa) Limited, which calls at Kisumu. An air mail feeder service, linking Kakamega, Kitale, Eldoret, Nakuru, Nanyuki, Nyeri, Mombasa, Tanga, Zanzibar and Dar-es-Salaam, with Nairobi and Kisumu and the Empire Service, is operated by a local company, Wilson Airways Limited. This company also operates a twice-weekly shuttle service between Kisumu and Nairobi and a twice-weekly Central African Service connecting Kisumu with Nairobi, Moshi, Dodoma, Mbeya, Mpika, Broken Hill and Lusaka, and a goldfields service connecting Kisumu with Nairobi, Mara, Musoma, Mwanza and Geita. The company also undertakes an increasing amount of instructional and charter-flying. South African Airways also operates a weekly service between Germiston and Kisumu on the Central African Route.

The value of cargo landed and shipped in 1938 by aircraft at Customs aerodromes was £1,712,858, including bullion.

Of the thirty civil aircraft registered in the Colony, sixteen are owned by commercial companies. During the year, twenty-seven pilots' " A " licences were issued, twenty-one of the holders of which were trained " ab initio " under a subsidy scheme operated by the Aero Club of East Africa with some financial assistance from Government. Thirty pilots' " A " licences were renewed during the year, ten of which were held by persons trained under the subsidy scheme.

On the 31st December, 1938, the following licences were current:—

Pilots "A" licences	58
Pilots " B " licences...	16
Ground engineers licences	16
Aerodrome licences	6
Certificates of registration	31
Certificates of airworthiness	23

AIR TRAFFIC.

The following are statistics of air traffic for the year 1938:—

	No. of craft.	*No. of passengers.*	*Value of cargo.*	*Including bullion value.*
			£	£
Landed	832	1,224	515,535	502,956
Shipped	822	1,995	1,197,323	1,156,081

Note.—The above figures refer only to foreign arrivals and departures and do not include intermediary movements as did the 1937 details.

XII.—PUBLIC WORKS.

The total expenditure incurred by the Public Works Department amounted to £465,301, of which £309,560 was on account of revenue services provided under Public Works Heads, £103,427 from various extra departmental sources, £29,598 from Loan and £22,716 from Colonial Development Funds.

The revenue collected by the Department amounted to £62,306, which was mostly from water supplies administered by the Department.

The total expenditure on capital works amounted to £245,093 in direct charges, of which £91,611 was obtained from revenue, £123,884 from Colonial Development Funds, the Air Ministry and Military Extraordinary votes, and £29,598 from Loan.

The revenue expenditure was sub-divided as follows:—

	£
Buildings	21,130
Water and drainage	7,381
Roads and bridges	7,476
Aerodromes	5,793
Miscellaneous (including Unallocated Stores £33,532)	49,831
	£91,611

Expenditure on :—

	£
Colonial Development Funds—	
Roads in Mining and Tea Areas	12,992
Water Supplies, etc.	9,724
Air Ministry—	
Buildings—Nairobi Aerodrome and elsewhere ...	15,239
Royal Air Force Station, Eastleigh, Nairobi ...	78,140
Military Extraordinary	5,012
Kenya Royal Naval Volunteer Reserve Extraordinary	2,777
	£123,884

The most important works completed or in progress during the course of the year were the boarding block for the primary school, Nairobi; the Indian elementary school, Nairobi; European and Asian housing at Kisumu; automatic telephone exchange, Mombasa; a new post office at Kisumu; the new King's African Rifles cantonment at Nanyuki; the Thika and Kitui water supplies; the Kisumu-Kibos-Kibigori road and the Kericho-Chemagel road.

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

The Court of Appeal for Eastern Africa is a superior Court of Record and has jurisdiction to hear and determine appeals from the Courts of the Colony and Protectorate of Kenya; the Uganda, Nyasaland and Zanzibar Protectorates: Tanganyika Mandated Territory; and from His Britannic Majesty's Court for Ethiopia. The Judges of the Court of Appeal are the Judges and the Acting Judges for the time being of the Supreme Court of Kenya, the High Courts of Uganda, Nyasaland and Tanganyika and His Britannic Majesty's Court for Zanzibar. During the year the Court held four ordinary sessions and one special session. The total number of appeals filed was 242, of which 79 were from Kenya.

The Courts operating in the Colony are as follows:—

(1) The Supreme Court sitting at Nairobi, Mombasa and on circuit, in which the Chief Justice and three Puisne Judges have been actively engaged.

(2) The Courts of the Resident Magistrates at Nairobi (two), Mombasa, Nakuru, Kisumu and Eldoret, presided over by legally qualified officers or by officers seconded from the Administration.

(3) The Courts of the First, Second and Third Class, presided over by Provincial Commissioners, District Commissioners and District Officer.

(4) The Courts conducted by Liwalis, Cadis and Mudirs.

The Northern Frontier and Turkana Districts have been created Special Districts within the meaning of sections 14 and 15 of the Criminal Procedure Code and the officers-in-charge of these Districts are the officers specially authorized under the latter section. The District Commissioners in the Northern Frontier District have been given the powers of First-Class Magistrates.

Courts.

The number of criminal cases committed for trial to the Supreme Court aggregated 153, involving 301 charges against 277 individuals.

These figures compare with 180 cases and 231 charges during 1937.

Of the total of 294 charges actually tried during 1938, 286 were against males and eight against females. There were 157 convictions, 35 acquittals and 102 discharges. The convictions were against three Europeans, three Asiatics and 151 Natives and the punishments imposed were:—

Fine and Peremptory Imprisonment	2
Peremptory imprisonment	73
Whipping, with fine or imprisonment or both	6
Sentenced to death	62
Detained during Governor's pleasure	8
Committed to Remand Home	5
Deportation Order	1
	157

The number of Civil cases filed in the Supreme Court during the year was 335, an increase of 47 on the number for 1937. Probate and Administration causes numbered 204, which was the same number as filed in 1937, and 53 Bankruptcy petitions were filed, as compared with 58 for the previous year. In addition, five Trust Causes were opened and 23 Divorce Causes were filed.

There were 271 Civil and Criminal Appeals from Subordinate Courts, 166 Criminal Revision Cases and 826 Confirmation Cases.

During the year, 49,529 charges were brought in Subordinate Courts, a decrease of 1,330 on the figures for 1937. These charges were disposed of as follows:—

Convictions	44,925
Acquittals	1,646
Discharges	2,958
	49,529

Details of the sentences imposed are as follows:—

Fines	18,145
Detention camp in default of payment of fine or surety	9,083
Imprisonment in default of fine or surety	1,520
Fine and detention camp	172
Detention camp	2,862
Fine and peremptory imprisonment	555
Peremptory imprisonment	3,116
Whipping	241
Whipping, with fine or imprisonment or both	41
Whipping, with fine or detention camp, or both... ...	5
Bound over ; cautioned ; repatriated	4,371
Other punishments ; tax or compensation or wages paid; bail estreated	4,813
Detained pending Governor's orders	1
Total convictions ...	44,925

Police.

The Kenya Police.—The Kenya Police, composed of Africans with a small number of Asiatic personnel under the direction of European superior and subordinate officers, is distributed mainly throughout the settled and urban areas of the Colony.

Units of the Force, operating in municipal and district areas, are under the control of superior police officers or senior subordinate police officers, while, subsidiary to these units, there are police stations in settled and urban areas in charge of European or Asiatic subordinate officers.

African police are stationed in a few of the native reserves and Turkana where they operate under the direct control of administrative officers, but the enforcement of law and order in most of the native reserves is the responsibility of the local Tribal Police, to whom reference is made below; in addition, detachments of the Kenya Police Force are stationed in the Northern Frontier District, while the temporary increase of one Assistant Superintendent and 57 African ranks, sanctioned in 1935 in view of the additional duties in that district arising from the Italo-Ethiopian situation, was maintained throughout the year, as was the specal unit of two Assistant Inspectors and 150 African ranks established in 1937 for duties in connection with the Ethiopian Refugee Camp at Isiolo.

Police detachments in the gold mining areas of the Colony at Kakamega, Gori River, Lolgorien and Bondo remained unchanged and the police patrol, consisting of 18 African ranks, established to preserve order on the borders of the Kisii-Lumbwa native reserves continued to operate throughout the year.

Cognizable offences under the Penal Code reported to the police in settled and urban areas in 1938 totalled 5,133. Of that number 4,967 were true cases, a decrease of 139 true cases on the total of 1937. In 3,167 cases accused persons were prosecuted for offences before Subordinate Courts or the Supreme Court. Convictions were recorded in 2,825 cases. The total stated value of property stolen was Shs.379,298/-, of which Shs.105,777/- or 25·2 per cent. was recovered.

Tribal Police.—In the year 1927 the units of the Kenya Police Force stationed in native reserves were greatly reduced, in consequence of a decision by Government to inaugurate a system of village police, to be known as Tribal Police, and incorporate in that force the body of men previously known as Tribal Retainers. This class of subordinate native official was originally instituted to assist the Administration by the provision of messengers in the reserves, and through the supervision of communal services, and had proved its usefulness in the past.

By the Tribal Police Ordinance, 1929, powers were given to the Tribal Police enabling them to make arrests, guard prisoners, and generally act as a Police Force in the native reserves and support the official headmen in maintaining law and order in these areas.

The total strength of the Force in the native reserves now numbers 829 non-commissioned officers and men. In the more progressive reserves the force has achieved a high standard of discipline and efficiency, and from some reserves a small unit is lent to the Kenya Police to assist in the detection of crime in the settled areas.

Prisons Department.

The Prison establishments under the administration of the Commissioner of Prisons comprise the following three divisions:—

(1) 28 Prisons.
(2) 51 Detention Camps.
(3) 3 Approved Schools.

Details of the committals to these establishments during 1938 are as follows:—

Prisons:	
On conviction	7,383
On remand...	5,242
Civil debtors	237
Lunatics	324
	13,186
Detention camps, Total	17,945
Approved schools, Total	62
Total committals ...	31,193

There was a decrease of 642 in the total number of committals as compared with 1937, as follows:—

Prisons; an increase of	66
Detention camps; a decrease of ...	714
Approved schools; an increase of ...	6

The nationalities of the 7,383 convicted persons committed to serve sentences of imprisonment were as follows:—

Europeans	14
Eurasians	1
Seychellois	3
Goans	5
Indians	69
Arabs	76
Somalis	79
Africans	7,136

The number of female convicted prisoners increased and the number of juvenile convicted prisoners decreased as compared with 1937 from 587 to 644 and 289 to 248, respectively. Of these, 601 females were sentenced to short terms of imprisonment not exceeding 3 months, 35 were sentenced to between 3 and 12 months' imprisonment, and 8 to more than 12 months' imprisonment.

Of the juveniles, excluding those sentenced to detention in Approved Schools, 225 were sentenced to caning only and 23 to imprisonment.

Under the system whereby all sentences of seven years and over are brought up for review at intervals of four years during the currency of the sentences, the cases of 46 prisoners were submitted to His Excellency the Governor for consideration and eight of these prisoners were granted accelerated release conditional upon their continued exemplary behaviour.

Health.—The general health of the prisoners was good, the percentage of prisoners on the sick list being 3·9, the same as in the previous year—the lowest figure since 1933.

Deaths decreased from 83 to 63, and of this number 33 were due to pneumonia.

Administration.

Prisons.—The re-organisation of the III Class Prisoner of the Colony undertaken in 1937 was almost complete by the end of the year.

The prison motor-van " Brown Maria " ran regular fortnightly journeys throughout the year to District prisons in the Central Province, bringing all but the shortest term prisoners into Nairobi Prison, where if passed fit by the Medical Officer they were employed at the quarry and concrete works.

The Ngong River prison, established in connection with the quarry and concrete works of the Railway administration, was maintained at a daily average population of 350 throughout the year. The work undertaken at this camp provides real hard labour for those convicts medically fit to undergo it.

The production of prison industries again showed an increase and the revenue derived amounted to £14,851 as compared with £12,805 in 1937.

The discharged prisoners' aid committees set up in Nairobi, Mombasa and Kisumu again rendered valuable assistance throughout the year. The total number of prisoners interviewed prior to discharge by these three committees amounted to 752.

Detention Camps.—The total number of persons sentenced during 1938 was 17,945. This is a decrease of 714 on the previous year's figures.

The scheme, which was introduced in 1936 for seconding prisons N.C.O.'s and warders to detention camps to improve the discipline in these camps, to increase the deterrent effect of detention and to make detainee labour more efficient and productive, and which was extended to further camps during 1937, has proved satisfactory.

Approved Schools.—Committals to the Class III and Class II Approved Schools at Kabete and Dagoretti respectively continue to increase, there being 62 committals in 1938 as against 54 in 1937. More first offenders are now being committed, but the average age of such committals is higher, being 14·12 years as compared with 13·33 in 1937.

The combined daily average population at these two schools for the year was 151, an increase of 25 over the figures for 1937.

There was one committal during the year to the Class I Approved School, which was established in January, 1937, in conjunction with the Salvation Army. This school is for the reception of juvenile vagrants or those suffering from ill-treatment or neglect or found in circumstances likely to lead them into criminality.

XIV.—LEGISLATION.

Forty-six ordinances were passed during the year 1938. A summary of the more important enactments not referred to elsewhere is given below.

No. III.—The Marriage (Amendment) Ordinance, 1938, amends the Marriage Ordinance so as to permit a minor, consent to whose marriage has been refused by the person empowered to give such consent, to apply to the Supreme Court for consent.

No. VI.—The Public Trustee's (Amendment) Ordinance, 1938, constitutes Commissioners for the purpose of advising the Public Trustee as to the investment of trust funds, and the disposal of such investments, administered by him.

No. VII.—The Lighting Control Ordinance, 1938, enables the Governor in Council to make regulations providing for the total or partial cessation of lighting in the Colony on occasions of emergency or public danger, or by way of experiment or practice for such occasions.

No. VIII.—The Stamp (Amendment) Ordinance, 1938, reduced he stamp duty on warrants for goods from fifty cents to twenty cents.

No. IX.—The King's African Rifles (Amendment) Ordinance, 1938, deletes the provision which empowered Commanding Officers to award corporal punishment to African soldiers, as it was considered advisable that that power be confined to courts martial.

No. XI.—The Immigration Restriction (Amendment) Ordinance, 1938, makes provision for controlling the importation into the Colony of unskilled manual labourers from territories outside Kenya, Uganda and Tanganyika.

No. XIV.—The Sugar (Control) Ordinance, 1938, gives effect in Kenya to the International Sugar Agreement which was signed at London on the 6th day of May, 1937.

No. XVI.—The Bills of Exchange (Amendment) Ordinance, 1938, affords to bankers in the Colony the same protection in regard to drafts as is afforded to them in England by section 19 of the Stamp Act, 1853.

No. XVIII.—The Public Holidays (Amendment) Ordinance, 1938, gives legislative effect in Kenya to the proposal that a public holiday should be held annually in Kenya, Tanganyika and Uganda on the second Monday in October, to be described as "King's Day," in substitution for the public holiday observed on the day of the official celebration of His Majesty's Birthday.

No. XXII.—The Refugees Ordinance, 1938, regularizes the residence in the Colony of certain refugees from Ethiopia.

No. XXVI.—The Penal Code (Amendment) Ordinance, 1938, brings the law relating to sedition and importation of undesirable publications into general accord with that of the other British dependencies.

No. XXVIII.—The Native Lands Trust Ordinance, 1938, together with the Crown Lands (Amendment) Ordinance, 1938 (No. XXVII), is designed to give effect to the recommendations of the Kenya Land Commission which was appointed to inquire into and report upon the claims and needs in respect of land of the native population in Kenya and certain other matters.

No. XXXII.—The Liquor (Amendment) Ordinance, 1938, extends the provisions of the Liquor Ordinance, 1934, to Abyssinians in the same manner as they are applicable to natives, Somalis, Malagasies and Comoro Islanders.

No. XXXIII.—The McMillan Memorial Library Ordinance, 1938, is designed to enlarge, extend and revise the objects and scope of the charitable trust known as the McMillan Memorial Library and the powers and responsibilities of the trustees thereof; to make certain further amendments and additions to the constitution and trusts of the said charitable trust and to divers documents subsidiary thereto; and to consolidate and declare the constitution and trusts as so modified.

No. XXXIV.—The Pyrethrum Ordinance, 1938, re-enacts with minor amendments all the provisions of the Sale of Pyrethrum Ordinance 1935, and provides for a further measure of control of the pyrethrum industry.

No. XL.—The Museums Trustees Ordinance, 1938, establishes a Board of Trustees for the purpose of administering museums in the Colony which may be vested in the Board, and provides for the management and control of the museum carried on in the Coryndon Memorial.

No. XLI.—The Financial Officers (Change of Titles) Ordinance, 1938, provides for changes in the titles of the principal financial officers. In consequence of the abolition of the office of Treasurer and the division of the statutory administrative duties of that office between the newly created posts of Financial Secretary, Accountant General and Commissioner of Inland Revenue, numerous amendments in many existing enactments have become necessary. The Ordinance enables these amendments to be made.

No. XLIII.—The Asian Civil Service Provident Fund (Amendment) Ordinance 1938, provides for the admission of Asian members of the British East African Meteorological Service, who elect to become contributors to the Asian Provident Fund Scheme of Kenya and when such members elect to become contributors make them subject to the scheme, as if they were members of the Kenya Asian Local Civil Service.

No. XLV.—The Kenya and Uganda Railway (Amendment) Ordinance, 1938, extends the powers of the High Commissioner for Transport in regard to various matters which are not provided for in the Principal Ordinance, the Kenya and Uganda Railway Ordinance, 1927. More especially the Ordinance enables the High Commissioner, when necessary, to make provision for road motor services and for air services.

XV.—BANKING, CURRENCY AND WEIGHTS AND MEASURES.

Banks.

The following banking institutions are established in the Colony:—

The National Bank of India, Limited, with branches at Mombasa, Nairobi, Nakuru and Kisumu;

The Standard Bank of South Africa, Limited, with branches at Mombasa, Nairobi, Nakuru, Kisumu, Eldoret, Kitale, Nyeri, Kakamega and an agency at Nanyuki.

Barclay's Bank (Dominion, Colonial and Overseas) with branches at Nairobi, Mombasa, Nakuru, Eldoret, Kitale and Kakamega.

An increase in the Colony's Savings Bank transactions was recorded during 1938. At the close of the year there were 12,218 African depositors compared with 10,623 in 1937. The total number of all classes of depositors and the amount to their credit increased from 24,158 and £509,917 in 1937 to 27,209 and £559,847, respectively, in 1938.

In 1931 a Land and Agricultural Bank was inaugurated in terms of the Land Bank Ordinance, 1930, with a capital of £240,000. This capital was increased to £500,000 in 1933 and in 1936 a further £250,000 was provided, of which latter a sum of £100,000 was earmarked for administration under the Farmers' Assistance Ordinance, 1936, the Land Bank acting as agents for the Government in carrying out the decisions of the Farmers' Conciliation Board appointed under that Ordinance. The Land Bank makes advances to farmers for specified purposes repayable over periods up to thirty years, on first mortgage security, charging interest at the rate of 6½ per cent. per annum. Up to 31st December, 1938, the Bank had made 682 long-term advances aggregating £832,189 and 152 short-term loans aggregating £43,733.

Currency.

The standard coin is the East African shilling (silver), with subsidiary coinage of the following denominations—50 cents (silver) and 10 cents, 5 cents and 1 cent (bronze). A note issue is maintained and notes of the following denominations are in circulation:—Shs.10,000, 1,000, 200, 100, 20, 10 and 5.

The currency is controlled by the East African Currency Board, London, which replaced the old local Board of Currency Commissioners in 1921. The Board is represented in the Colony by local Currency Officers.

Weights and Measures.

Weights and measures legislation has application to the whole Colony and Protectorate, but in practice the staff now available only permits of supervision in the larger business centres. Any extension of such activities would necessitate an appreciable increase in the cost of the services.

The pound, yard and gallon, identical with those used in the United Kingdom, are the standard weights and measures of the Colony, while the prescribed degrees of accuracy are similar to those required in Great Britain.

Weights, measures and instruments numbering 16,528 were stamped, rejected or adjusted during the year. In addition, approximately 6,000 weights, measures and instruments were examined during visits of inspection. Revenue collected for stamping and adjusting amounted to £450. Prosecutions for infringements of the Weights and Measures Ordinance were instituted in a number of cases.

All Administrative and Agricultural officers are deputy inspectors under the Weights and Measures Ordinance in order to permit verification and stamping under their supervision of half-bushel measures of volume which have been introduced in native reserves.

XVI.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

Statement of Revenue and Expenditure for five years ended 31st December, 1938.

Year.	*Revenue.* £	*Expenditure.* £
1934	3,182,939	3,180,795
1935	3,304,026	3,252,784
1936	3,496,389	3,350,381
1937	3,667,393	3,565,976
1938	3,776,030	3,876,952

The above are gross figures. The net figures are obtained by deducting reimbursements from neighbouring territories in respect of joint services from Kenya and Uganda Railways and Harbours in respect of loan interest and from other sources on account of services which are not a charge against the local revenues of the Colony. In consequence the annual accounts for 1938 show an actual net local revenue of £2,545,775 and a net local expenditure of £2,646,697. The figures for 1938 are not strictly comparable with those for 1937, because of a change in accounting procedure, whereby certain non-liquid assets were charged to expenditure. On a basis comparable with the 1937 figures, there was a surplus of £126,660 for 1938.

STATEMENT OF LOAN POSITION OF COLONY AT 31ST DECEMBER, 1938.

PUBLIC DEBT AND SINKING FUND.

Floated.	*Amount of issue.* £	*Rate of Interest. Per cent.*	*Price of Issue. Per cent.*	*Redeemable.*	*Expenditure at 31st December.* £

* Poll tax only.

Section 3 of the Northern Frontier Poll Tax Ordinance, 1930, empowers the Governor to order that the poll tax prescribed under section 4 shall be paid by the tribesmen of any tribe which is ordinarily resident in the Northern Frontier District. The Governor has power to reduce the amount of the tax payable by the natives of any specified area, and in certain districts temporary reductions have been made.

Method of Assessment.—A tax at the prescribed rate is payable on each hut (dwelling-house) owned or occupied by the taxpayer.

The age of liability for payment of poll tax was raised from 16 to 18 years by the Native Hut and Poll Tax (Amendment) Ordinance, 1936, and the Northern Frontier Province Poll Tax (Amendment) Ordinance, 1936. A poll tax at the prescribed rate is now payable by all able-bodied male natives of the apparent age of 18 years who are not liable to pay the hut tax.

Hut and Poll Tax is collected mainly by District Officers, assisted in the more advanced areas by Headmen. The taxpayer is given a receipt in the form of a hut and poll tax ticket for each tax paid; at the same time the payment is noted in the register of taxpayers. During 1936 a system was introduced, designed to assist individuals to accumulate their tax by means of stamps known as Kodi stamps. Revenue stamps, similar in size and shape to postage stamps, have been printed. They bear a special design and are of the denomination of Shs.1. These stamps are for sale at all post offices, administrative offices and certain other centres, and are purchasable in bulk by large employers of labour. At the time of the tax census, natives liable to pay are issued with a tax stamp collection card which is endorsed with the native's name and certain particulars. The design of the card provides separate spaces for affixing twelve stamps, representing a sum equivalent to one hut of poll tax. At any time at which a contributor has completed his total of twelve stamps, or when he is prepared to hand in a sum of money representing the cash difference between the number of stamps already affixed and the amount due on the card, he is entitled to a tax receipt in respect of one hut or poll. Provision was made in the Native Hut and Poll Tax (Amendment) Ordinance, 1937, for the payment of tax by means of these Kodi stamps and for the payment of wages partly in Kodi stamps if both employer and employee agree to this course.

Yield.—The vield of native hut and poll tax in 1938 amounted to £532,278.

APPENDIX.

List of Selected Publications.

Annual Reports of the several Government Departments. Government Printer, Nairobi, and Crown Agents for the Colonies.

Blue Book. Annually. 10s. Government Printer, Nairobi, and Crown Agents for the Colonies.
